a train came along and killed him. He was the victim of his own criminal folly and that of his companions. As this is a serious matter, it will be strange if they are not punished with a term in prison, like other homicides.

We are aware that these boys were only following ignorantly and stupidly the example of older men; perhaps of their fathers, who are members of secret societies which compel candidates for initiation to "ride the goat," or which toss them in blankets, and do other silly and sometimes dangerous things in the way of ridiculous or perilous practical jokes, to get amusement out of the fright or surprise of their victims. There is no apology for this nonsense. Men who respect themselves should not submit to such initiations. When they find what is required they should withdraw, and declare that they will not be members of such a society. Equally is this true of college freshmen. There are decent societies in all our colleges that may have serious, but have no farcical initiations. A student before accepting membership in a society should assure himself that he is not to be mocked and abused for the amusement of its members. It is not manly to submit; it is barbarous to inflict such conditions of membership. It belongs to the period of savagery, which some pedagogians tell us children have to pass thru before reaching a civilizable age, just as does a race—a circle of wild Indians enjoys seeing a captive tortured, and so, it seems do sophomores.

But not all sophomores, much less all college students. Where there are college societies, as at Kenyon and Columbia, which require "stunts" and which duck or drown, or tie or murder their postulants, they should be broken up and forbidden. And this happens to be a "religious" college, under the control and patronage of a Church, to its shame and disgrace. Perhaps this consenting and confessing martyr will not have died in vain. His death will be a fit sin-offering if it teaches our colleges to put an end to the criminal folly of these useless, mischievous, barbarous societies.

Such is our hope; but we remember the boy at Yale who was put blindfolded in the street and killed by the pole of a wagon; and the boy in Cornell who was

run off of a cliff and killed several years ago. Will nothing teach these lessons? Perhaps it is too much to expect it of silly boys, but have their teachers and their trustees no sense?

Denominational Boasts

"Do you know," says the Rev. Minot J. Savage, in his last published sermon, "that in the old Virginia Colony before the Revolution, and, I think, in the Massachusetts Bay Colony, to be a Unitarian was a crime punishable by death?" It would be well to verify this statement, and we would like to see a list of the Unitarian martyrs who suffered death in those two colonies. We may learn that the witches were Unitarians.

Dr. Savage tells us another thing, that "during the last seventy-five years more fine, sweet, loving, tender, worshipful, reverential hymns have been written by Unitarians than by all other denominations in the world put together." This is also interesting. No one would wish to deny that a number of such hymns have been written by Unitarians. There is no reason why Unitarians should not be devout worshipers of God, and should not express their devotion in praise. We are all glad to sing "Nearer, My God, to Thee," by Mrs. Adams; Bowring's "God is Love; His Mercy Brightens," "How Sweetly Flowed the Gospel Sound," and "In the Cross of Christ I Glory"; Wreford's "Lord, While For All Mankind We Pray"; Holmes's "Lord of All Beings, Throned Afar," Sears's "It Came Upon the Midnight Clear," and, perhaps, several others; but we fail to see that the hundreds of hymns composed for scores of Unitarian hymn-books have added the main bulk to modern hymnology. They can be more than balanced by numbers of hymns of the same period written by those of other faiths, such as Baring Gould's "Onward Christian Soldiers;" Newman's "Lead Kindly Light;" Palmer's "My Faith Looks Up to Thee;" Baker's "The King of Love My Shepherd Is;" Cox's "Oh Where Are Kings and Empires Now;" Charlotte Elliott's "Just As I Am Without One Plea;" Bonar's "Far Down the Ages Now," "A Few More

Years Shall Roll," and "I Heard the Voice of Jesus Say;" Miss Waring's "Father, I Know that All My Life," and "In Heavenly Love Abiding;" Hastings's "Hail to the Brightness of Zion's Glad Morning;" Smith's "My Country 'Tis of Thee;" Keble's "Sun of My Soul, Thou Saviour Dear," and others of his, and Neale's wonderful translations, and a multitude of others of similar rank. Dr. Savage's claim that the Unitarians have surpassed all other Christians put together in this field is simply claiming nearly all, when it would have sufficed to claim much.

Dr. Savage goes on, in this sermon, directed against the late action of the committee which failed to invite the Unitarians to the Inter-Church Conference for Federation, to describe the present evangelical faith:

"Nearly all the people in the world today, those that are dying every moment in the year, are being lost—the wisest, the tenderest, the truest, the most intelligent, the most faithful, loving mothers, brave, self-sacrificing fathers, devoted philanthropists—all hopelessly lost because they did not believe the statement of a metaphysical, unchangeable, cruel, hideous, immoral creed."

We wonder that a man who believes this, but who complains that even Unitarians have criticised his extravagant language, should desire to be received into federation with such hideous people.

The New York Elections Next week there will be elections, some of them important, in various States and cities, but none will attract more interest in the country than those in New York and Philadelphia. Of the latter election we have spoken elsewhere. In New York there have been developments since we expounded the situation two weeks ago. Strangely enough Jerome is the center of the situation, the man whom both parties rejected, and whom the Republicans were compelled to put back on their ticket. He will probably be elected by the people and by no party. We can only repeat our previous declaration that Mr. McClellan has made a fair Mayor and could be voted for, but for his backing and his necessary bondage to Tammany. For Tammany now understands that in order to keep her hold of the offices she must put

up a fine figurehead as Mayor, and then she can do what she will. The Republican ticket shows the best man for mayor of the three, for Mr. Ivins is able and learned and has a will of his own; but the Republican ring controls the rest of the ticket. As with the Democrats they had to put up a fine man for the head of their ticket. The Hearst ticket fails or excels in just the other way. Mr. Hearst is sincerely earnest for Municipal Ownership, but his history does not commend him to all sober-minded citizens. His associates on the ticket are all that can be desired. It is by no means impossible that Mr. Hearst will be elected. The people seem to be disgusted with Odell and Murphy.

President Roosevelt to the Negroes How Mr. Roosevelt would treat the negro question in the South was the one delicate matter before him. He went South as President of the whole country, of the white South, which rules the South, as well as of the negroes; and his object was to get the sympathy and help of Southern Democrats in Congress for his policy as to the Navy, the Philippines, reciprocity, and the control of railroad tariffs. It was right that he should emphasize these matters where he could accomplish something, and it was not to be desired and expected that he would talk Crum or Indianola, altho he did avoid Mississippi. But when Governor Jefferson Davis did refer to the negro question the President spoke with no doubtful voice against lynching for any crime. The other speech, which was addressed to negroes, was at Tuskegee, and there he satisfied his hearers. He began—and it is noticeable—by addressing the head of the school by the title denied to negroes in the South, "Mr. Washington," and he repeated it. He told them that it is doubly important to train every available man to be of the utmost use, by developing his intelligence, his skill and his capacity. That covers both manual and higher education. He told them that industrial training, important as it is, does not embrace all that the negro, or any other race, needs, and that it is to the interest of the white man to see that the negro is educated, and that he is pro-

tected in all his legal rights. And here again he spoke against lynching. While his immediate political purpose was with the dominant race, he did not neglect his duty to the negroes, nor his desire that they have equal privileges and rights in education and before the law.

The Pace That Kills Our rush of life was moving at a tremendous pace, said Joseph H. Choate the other day, when he left us to be an Ambassador at London, but on his return he finds we have "set up a pace that kills." He would have more of that "repose and relaxation that prevails in certain other countries." We question whether he is quite correct. The pace that kills is not hard work; it is lack of sleep and exercise. On the farm the hours of work, or the intensity of work, are no greater than they always were, and in the city the eight-hour rule prevails to an increasing degree. There seems to be no lack of "relaxation" at our various Coney Islands, and there is plenty of "repose" on the bleacheries, where the simmering thousands sit to watch the spasmodic activity of eleven men spluttering on a gridiron. It was no "repose" that earned for Mr. Choate his fame and wealth; but when a man has gained his success and has become a social lion, it is easy for him to talk of the "pace which kills," but which did not kill him, and will kill nobody who has the ambition to work, and finds life is not long enough to do all that he wants to do, and who obeys, at the same time, the ordinary rules of health, which include regular hours for sleep and physical exercise.

The Philippine Tariff One of the most important duties of the coming Congress, supported heartily by President Roosevelt and Mr. Taft, is the reduction of our tariff against Philippine products. Mr. Taft urges that all Philippine products, except sugar and tobacco, be admitted here free, and that on those the tariff be 25 per cent., instead of 75 per cent. of the Dingley tariff. But why not admit all Philippine products free to this country

—sugar and tobacco included? Partly because our sugar growers and tobacco growers object to it, and partly because of what may be called a sentimental reason. Until 1909 the Philippine Government has to raise its budget by a special tariff, different from ours. By the Treaty of Paris Spain has the same commercial privileges in the Philippines as the United States until 1909. We cannot impose the Dingley tariff in the Philippines, because we should have to pay it there also, as well as Spain. Now, it may seem not quite fair for us meanwhile to have the United States pay a tariff on goods sent to the Philippines, and to have the Philippines get their goods in here with no tariff. To be sure the objection has only the semblance of force, but it can be used against our removing all duties on Philippine products. We agree with Secretary Taft, that it is desirable, as soon as possible, to have absolute free trade with our colonies, and that will be possible in 1909, when we shall be at liberty to impose the Dingley tariff on the Philippines, if we choose, in place of the tariff fixed by the Philippine Commission; and that will give them the necessary income.

Crete The situation in Crete, which was serious enough in the spring, has gone from bad to worse. The attempt made by the foreign Consuls to arrive at an understanding with the insurgents has resulted in failure, and to all appearance the four protecting Powers are now confronted with the necessity of crushing the insurrectionary movement by force. The interest in the situation now lies in the attitude which the Powers may decide to adopt toward the insurgents. It seems desirable that the international troops should occupy the strategic positions in the interior. When once the Powers have given evidence of their determination to act, they will be in a position to present their terms. These will doubtless be accepted by the insurgents, whose main object is to bring their grievances effectively to the notice of Europe. These measures would probably suffice to bring about relative tranquility, but it must always be remembered that the situation is transitional, and that

union with Greece will eventually prove the final solution of all difficulties. The union will probably be brought about by instalments, by successive concessions, and in offering to withdraw half their forces the Powers appear to have this policy in view. Too many cooks spoil the broth, and the sooner that Crete can be united to Greece the better for all concerned.

Menace in Turkey

The conditions in Turkey are far from reassuring. Private correspondence and the reports of the press agree that there is menace of massacres even in Constantinople. There have never been any massacres of Christians in Turkey that have not been purposely provoked by the Government. Usually the Turkish censorship is extremely careful to forbid any account of threatened uprisings or outrages, but now the newspapers are encouraged to report discoveries in various places of bombs and infernal machines, all intended to stir up the passions of the Moslems. This appears to be a part of the scheme to prevent the European Powers from carrying out their plans for reformation in Macedonia. It was agreed between the European Powers that they should undertake to manage the finances of Macedonia, but the Porte has refused to allow the European officers to begin their work; and his usual means is here employed, the threat that the fanatical Moslems will rise and kill the Christians. In order that this may work, it is necessary to rouse the Turks to the proper pitch of passion, and this is done by these stories of discovered bombs. This plan may work, for it is clear that Germany now hesitates to carry out her part in the agreement, always aligned, as she is, with the "Unspeakable Turk," and against the Armenians and against the sympathies of France and Great Britain. For Germany is playing a deep game for her aggrandizement, looking to the break-up of the Austrian Empire, when German Austria shall become a part of the German Empire; also to Russia, when she shall get the consideration due for aid against the revolutionists; also to Turkey, where commercial supremacy is the end immediately looked for.

Conditions are evidently not quite what they ought to be in South Africa since the Boer War. Altho the natives behaved with most commendable prudence, they seem to suffer the most. The missionaries in Natal, one of the more quiet and progressive of all the colonies, have gathered their representatives of all societies in a conference to try to defeat the policy of the Government, which forbids the erection of any native church, or the residence of any native pastor where there is not a white missionary in residence. Under this policy a number of chapels, built by the Zulus, have been destroyed by the police. We ask what British Christians will say to that. It is an unspeakable tyranny.

That figure of speech by which we add emphasis by understatement is well understood by accomplished writers, and President Roosevelt has employed it a number of times in repeating the statement in his Southern addresses that the average American is "a pretty decent fellow." We like the expression with its show of moderate praise. To say that one is "a decent woman" is more than to say that she is "a very decent woman." Mr. Roosevelt also knows how to use the other and less artistic kind of emphasis when he thinks the occasion calls for it.

We could not believe the story that in applying the "third degree" to compel a thief to divulge the hiding place of his booty the Pinkerton officers compelled him to walk up and down the floor, not allowing him to sleep. That would be torture, forbidden by our primary laws, and the story of mischievous reporters was as false as it was incredible.

We never use the words *Romish*, *Romanist*, *Popish*, etc., which seem intended to express discourtesy. We observe, however, that Mr. W. H. Mallock, himself a Catholic writer of much distinction, indeed, now the most distinguished Catholic literary man in England, does not hesitate in his article on "Christianity as a Natural Religion," in the September *Nineteenth Century*, to speak of "Romanists and Protestants."

Insurance

The Insurance Investigation

INTERESTING developments regarding the Mutual's Literary Bureau were brought out last week before the Armstrong Committee. Inquiry reports at \$1 or \$2 a line, according to the testimony, appeared in certain papers throughout the country. These were always favorable to the company interested in having the reports published. The spirit of investigation being in the air the Mutual Company has now resolved to investigate itself and a committee of three has been appointed for this purpose. This committee, as originally constituted, was made up of the following members, viz.: W. H. Truesdale, President of the Lackawanna Railroad; Effingham B. Morris, President of the Girard Trust Company of Philadelphia, and John W. Auchincloss, a director of the Illinois Central Railroad and other corporations. Mr. Morris later announced his inability to serve in this capacity, which fact is regretted by all those interested, as it was felt that his high standing in Philadelphia's financial circles made him a particularly desirable member of the investigating body. The committee has power to fill vacancies in its membership, however, and it is not expected that any permanent difficulty will be encountered in obtaining a good man to fill the place of Mr. Morris. The name of H. McK. Twombly has been among those mentioned in connection with the existing vacancy.

The committee will probably meet for organization, for the transaction of other business and to take up the matter of the proposed investigation within the next few days or upon the return to this city of William H. Truesdale, who is now expected to have the chairmanship of the committee. The meetings of the committee will, according to the present program, be kept secret. In the publication of the committee's report, the matters considered by it will first have publicity.

Richard A. McCurdy, the president

of the Mutual Life Insurance Company, will probably be the first witness. The plan and scope of the Mutual's self-examination and investigation is to be large and the investigation will doubtless be continued during the sessions of the Armstrong committee—possibly longer.

Formal notice of the proposed investigation has been given to the public by Mr. McCurdy, and he has issued the statement which follows:

"The President called attention to the inquiry by joint committee of the Legislature of the State of New York into the affairs of the company and to the widespread public interest and comment with respect thereto.

"He urged that the board should take cognizance of the testimony elicited with a view to such action as might be found advisable in the interests of the company and its policyholders.

"The President then offered for the consideration of the board the following resolution:

"Resolved, That a committee of three be, and they hereby are, appointed as a committee to examine into the organization and management of the affairs of the company and to report from time to time to this board their recommendations in reference thereto, with power to add to their number and to fill vacancies.

"The resolution was then moved by a member of the board, with the additional suggestion that Messrs. Truesdale, Morris and Auchincloss constitute the committee and, being duly seconded, was unanimously adopted.

"The committee will proceed at once to discharge its functions and to report speedily to the board.

"RICHARD A. MCCURDY, President."

THE Auditor of Nevada, as well as the Superintendent of Insurance of Missouri, have reconsidered their decision to revoke the license of the New York Life to do business in those States, to which reference was made in these columns on October 12th. Both officials will await the outcome of the New York legislative committee's investigations before taking any action. John R. Hegeman, President of the Metropolitan Life Insurance Company, will be the first witness to be examined by Mr. Hughes before the Armstrong Committee when it reconvenes.

Financial

Railway Rate Conventions

POPULAR interest in the President's railway rate policy will be stimulated by the two conventions held last week in Chicago. A convention was called by the Interstate Commerce Law Association with the avowed purpose of supporting the President's policy by formal indorsement. Five hundred commercial organizations were invited to send delegates, upon the basis of one for every one hundred members, and Governors were asked to appoint a delegate for each Congressional District. Just before the date of the meeting (the 26th) the leading members of the Association ascertained, as they believed, that an attempt to pack the convention in the interest of the railroads had been made. Therefore they decided that no delegate should take part who would not approve, by his signature, the President's policy, as set forth in an extract from one of his messages. The result was that two conventions were held. Nearly half the delegates, under the leadership of David M. Parry, of Indianapolis, were excluded from the meeting because they would not sign the prescribed pledge at the entrance door. These then went to another hall and held a convention of their own. In the regular convention it was asserted by ex-Governor Van Sant and other prominent speakers that the delegates thus excluded had been sent in the interest of the railroads.

On the following day, the regular convention passed resolutions declaring its agreement with the President. The other convention's resolutions express confidence in the President's wisdom, integrity and high purpose, ask for the most rigid enforcement of existing laws against discrimination by rebates or otherwise, and then declare unalterable opposition "to conferring upon the Commission, or upon any other appointive agency, the power to prescribe specific rates for transportation." Both conventions provided for organization in all the States and for work in support of their respective platforms. The old association's executive committee will be led,

as heretofore, by E. P. Bacon. If statements made by Chicago newspapers are well founded, it is true that a considerable number of the excluded delegates represented railroad interests directly or indirectly. The competitive efforts of the two organizations will promote discussion of the important question involved, and the effect of such discussion will be beneficial. Due weight will eventually be given to motives as well as to arguments.

....The number of passengers carried in the New York Subway during the first year of operation, which ended on the 27th, was 106,000,000.

THE value of special franchises in the State of New York, as appraised for taxation, is \$356,829,555, against \$302,688,757 one year ago. For New York City, the value is \$302,193,550.

....Returns for the nine months ending with September indicate that for the full calendar year the imports of manufacturers' materials, together with the exports of manufactures, will for the first time amount to \$1,000,000,000.

....A bulletin issued by the Interstate Commerce Commission shows the following accident record for our railways in the year ending on June 30th: Passengers killed, 350 (an increase of 117); injured, 6,498; employees killed in train accidents, 798 (a decrease of 106); injured, 7,052.

....Dividends announced:

Atch., Top. & S. F. R'way (Common), \$2 per share, payable December 1st.

Buff. & Susq. R'way Co. (1st Mort. 4½ per cent.), Coupon No. 5, payable November 1st.

Nassau Bank (Semi-Annual), 4 per cent., payable November 1st.

Fourteenth St. Bank (quarterly), 2 per cent., payable November 1st.

Minn. & St. Louis R. R. (Consol. Mort., 5 per cent.), Coupons payable November 1st.

Am. Chiclé Co. (Common), 1 per cent., payable November 20th.

U. S. Leather Co. (Debenture Coupons), payable November 1st.

Rome, Watertown & Ogdensburg R. R., 1¼ per cent., payable November 15th.

The Independent

VOL. LIX NEW YORK, THURSDAY, NOVEMBER 9, 1905

No. 2971.

Survey of the World

Senator Knox on Railway Rates At the White House, last week, the President conferred with Senators Cullom and Dolliver as to the approaching contest in Congress concerning his railroad rate policy. These gentlemen will probably be leaders on his side of the question in the Senate debate. Another Republican, Mr. Clapp, stands with them in the Senate committee, where Messrs. Elkins, Aldrich, Kean, Foraker and Millard are counted in opposition. The attitude of the five Democratic members is not yet clearly defined, but it may be that all of them will be found with Messrs. Cullom, Dolliver and Clapp.—An address delivered by Senator Knox (formerly Attorney-General) at a dinner of the Pittsburg Chamber of Commerce on the 3d has attracted much attention. It was completely in accord with the President's views. From the time, he said, when the railroads began to concentrate in the hands of a few men their power to tax transportation it was evident that the National Government ought to exercise supervisory control over this tax. The abuse of this power, under any circumstances whatever, should be prevented by comprehensive legislation:

"It is the duty of Congress to regulate commerce so as to prevent injustice and imposition by the carriers. The proposition to correct unreasonable railroad rates and practices goes no further than this. It is tantamount to the proposition to correct injustice and imposition. If you provide the remedy, the evil will largely disappear. The tendency for some time has been toward fairer dealing by the railroads with the public. One makes a mistake who assumes that the best railroad conscience of the country approves the extravagant propaganda now being carried on to convince the public that any regulative legislation would be unjust to the railroads. There is no railway

in the United States that can be in the slightest degree affected by legislation giving relief from unreasonable rates and practices unless it is guilty of unreasonable and unjust practices. There is no practice of any railway that it adopts or sanctions that can be declared to be unreasonable or unjust until it is challenged in a quasi-judicial proceeding, and proved to be unjust and unreasonable after the fullest hearing and argument."

The railways, he continued, enjoyed a complete remedy against injustice, and it was not proposed that this should be taken away; but the public had no effective remedy. Every order of the Commission, under the proposed legislation, would be subject to review in the courts. "Probably no law could be enacted that could prevent the courts, if satisfied that injustice had been done to the railroads, from staying the operation of the order until the courts had passed upon the merits of the controversy." Congress supposed that in the original Interstate Commerce act it had provided an effective remedy to be used by the public, but the Supreme Court decided that it had not done so:

"The administrative features of the power inhering in Congress to fix reasonable rates for transportation may lawfully be vested in the Interstate Commerce Commission. This includes the power to vest in the Commission authority to substitute a reasonable rate for one found by it to be unreasonable."

Congress could not vest the power to fix tolls in any constitutional court, that being a legislative act:

"It is equally clear that Congress cannot give an appeal from a non-judicial or administrative body to a judicial body for the purpose of reviewing administrative acts by correcting them by decreeing a new act, as in a judicial appeal; and this disposes of what I understand to be the main contention between the advocates of the proposition that a rate fixed by the Commission should go into effect at once, and the advocates of the proposition

that it should not go into effect until approved by a court upon appeal. It is perfectly evident that if the court in the first instance could not perform the legislative act of fixing a reasonable future rate it could not perform the same act upon appeal. No device can cure the objection to suspending the operation of the Commission's finding until passed upon by the courts."

Of course, however, the court, in an independent proceeding, could enjoin the enforcement of a decision until a final hearing. It was not proposed, he continued, that the Commission should be empowered to initiate rates. Enlightened by the evidence of experts, it would be competent to pass upon the reasonableness of challenged rates:

"A very short and simple law would reach the root of the trouble. It should provide that the tolls collected by common carriers and the practices pursued by them should be just, fair and reasonable. The power to determine these tolls and practices should rest with the railroads and not be interfered with except upon complaint and after full hearing before the Interstate Commerce Commission. The Commission should have the power, if it finds the complaint well founded, to declare what shall be a just, fairly remunerative and reasonable rate or practice to be charged or followed in place of the one declared to be unreasonable. This order of the Commission should take effect within such reasonable time as shall be prescribed by the Commission in the order and should be final, subject only to attack for unlawfulness in the Federal courts, where it would have to stand or fall upon its merits."

He was sincerely convinced that the time had come when Congress, in justice to the public, must exercise more fully its power in respect to railway rates, and he believed that no relief would be obtained in the immediate future unless some such simple measure should be adopted.

Private Car Companies At a hearing concerning the practices of private car lines, before the Interstate Commerce Commission, on the 1st, J. S. Leads, general manager of the Santa Fé Refrigerator Dispatch, which operates 4,550 cars, testified that his company gave rebates to certain shippers. The practice was of such long standing that he could not undertake to end it, and it could not be stopped without causing a war of rates. Other companies, as he knew, gave rebates. The 4,550 cars are owned by the Atchison, Topeka and Santa Fé Railroad Company.

The stock of the two corporations is controlled by the same interests, and both have the same president.—Two days later George B. Robbins, the president of the Armour Car Lines (a corporation operating 12,500 cars), refused to answer the Commission's questions as to the practices and business of this company, upon the ground that the Commission had no jurisdiction over it. When asked whether the company gave preferential rates to Armour & Co., he replied that even if it did so, this was a private matter as to which the Commission had no right to inquire. Traffic Manager Sproule, of the Southern Pacific, refused to answer questions concerning a pooling agreement (forbidden by law) alleged to have been made by that company with other companies in California, and to be in force now.

National Topics In his proclamation setting apart Thursday, the 30th, as a day of thanksgiving, the President speaks of the hardships and privations of the early settlers among whom the custom originated. "We live in easier and more plentiful times," he continues, "than our forefathers, the men who, with rugged strength, faced the rugged days; and yet the dangers to national life are quite as great now as at any previous time in our history." Turning to "the abundant mercies received," he says:

"During the past year we have been blessed with bountiful crops. Our business prosperity has been great. No other people has ever stood on as high a level of material well being as ours now stands. We are not threatened by foes from without. The foes from whom we should pray to be delivered are our own passions, appetites, and follies, and against these there is always need that we should war."

—Charles A. Stillings, formerly of Boston, but for some time past the manager of the Printers' Board of Trade in New York, has been appointed Public Printer, to succeed Oscar J. Ricketts, who has been the acting Public Printer since the removal of Mr. Palmer. Mr. Stillings is 34 years old, is a practical printer, has had a varied experience in business, and was recommended by many of the large printing houses of the country. The appointment was made

without regard to political influence.—Seven well known residents of North-eastern Colorado, including Peter Campbell, formerly Register of the land office at Akron, have been indicted for getting possession of public land by forgery and perjury. Additional indictments are expected, altho the official investigators report that many offenses discovered by them are now outlawed.—William Warner, the new Senator from Missouri, in a public address last week announced his purpose to support the President's railway rate policy. He also said:

"I am not a pessimist. I have no patience with those who cry out against the accumulation of wealth. But I believe there should be a limit upon the getting of wealth—that limit is reached when wealth is accumulated unlawfully. Today there are trusts that arbitrarily fix rates and prices, stifle competition, and strike down the opportunities of your sons and mine. Such trusts are one of the evils of the age. And I do not believe it a compensation for wealth wrongly acquired to give princely gifts to the charities of the country."

—By order of Secretary Hitchcock, when Indian lands inherited from those to whom they were allotted are sold hereafter, the deeds must contain provisions forever prohibiting the sale of intoxicating liquor on them.—During the five months ending with August, the officers appointed by our Government to collect customs dues in Santo Domingo deposited in New York \$462,496, to be used in making payments on the foreign debt.—State Senator T. J. Emmons, of San Francisco, convicted of receiving a bribe designed to affect legislation concerning building and loan associations, has been sent for five years to the penitentiary, where two other Senators, bribed at the same time, are undergoing similar punishment.—The Canadian Tariff Commission has decided to adopt in its revision the principle of a maximum and a minimum tariff.—Another interesting plea in bar has been filed by the indicted beef companies at Chicago. They assert that Commissioner Garfield promised them that, with respect to such information as they should give him without being under oath, and such documentary evidence as they should voluntarily submit to him, they should have the same immunity as would be given if they should testify under compulsion. The understanding was, they

add, that the evidence was not to be used as a basis for prosecution. They declare that it has been so used, and therefore they claim immunity under the pending indictment.

The Anglo-Cuban Treaty

It appears that the ratification of the treaty with Great Britain is desired by many in Cuba because, in their opinion, such an agreement would tend to perpetuate the independence of the island by preventing the United States from obtaining control of the shipping interests. The Agrarian League supports an appeal to the Senate in behalf of the treaty, written by Rafael Fernandez de Castro, a prominent sugar planter, who says that plantation interests would oppose any differential allowance on goods carried in ships of the United States. He has been appointed a member of the committee representing the seven economic associations and instructed to work for a new treaty with the United States providing for such differential concessions as he opposes. The discussion of the pending treaty has been marked by bitter attacks in the press upon our Minister, Mr. Squiers, who is accused of being engaged in a plot to promote annexation. He has found it expedient to assert that he has never advocated annexation. Opponents of the treaty express the opinion that if it should be ratified the United States would not renew the present treaty of reciprocity at the expiration of its term, two years hence.

Reception of Prince Louis Rear Admiral Prince Louis of Battenberg, commanding the second cruise squadron of the British Navy, arrived at Annapolis on the 1st, and the reception of his ships was one of the most interesting and brilliant naval spectacles ever seen in American waters. Eight of our battleships (the "Maine," "Missouri," "Kentucky," "Kearsarge," "Alabama," "Illinois," "Iowa" and "Massachusetts") lay at anchor in single column, 200 yards apart. Outside of this column were the armored cruisers "West Virginia," "Colorado," "Pennsylvania" and "Maryland," and at some distance, near the shore, was a flotilla of five destroyers. The visiting cruisers came to anchor in line parallel

to the column of battleships, and there was begun a series of the salutes prescribed for such occasions. Passing from the "Drake," his flagship, to the "Maine," Prince Louis was received there by Rear Admiral Evans. On shore he was welcomed and entertained by Rear Admiral Sands, Superintendent of the Academy, and Governor Warfield. Accompanied by his staff and many American officers the Prince went to Washington by special train on the 3d, and was formally received at the White House, where he delivered to the President a written message of good will from King Edward. A round of brilliant entertainments followed. Among the guests who dined with the Prince that evening at the British Embassy were Secretary Root, Admiral Dewey, General Chaffee and Rear Admiral Evans. It was at a luncheon given on Saturday by General Chaffee that the Prince said: "Next to their loyalty to their King, every British officer cherishes the President of the United States. The King first, but the President next." That evening he was the guest of honor at a state dinner in the White House. Having passed Sunday quietly in Washington, he returned on Monday to his flagship.

Philippine Problems

It is now expected that efforts at the coming session of Congress to reduce our tariff duties on imports from the Philippines will be made in connection with two bills—that of Mr. Curtis, making the duties on sugar and tobacco one-quarter of the present Dingley rates and placing all other Philippine products on the free list; and that of Mr. Payne, making all the products of the islands free of duty in 1909, when the treaty agreement with Spain will expire. Mr. Curtis's bill will have the approval of Secretary Taft, and the Bureau of Insular Affairs is preparing evidence in support of it. The Denver Chamber of Commerce has invited other similar organizations in the West to send delegates to a convention, whose purpose will be to prevent the proposed removal or reduction of the duty on Philippine sugar.—It is provided by statute that our coastwise navigation laws shall be applied to trade between the islands and the States in July next. This

restriction, excluding foreign ships, would increase freight charges, it is said, by at least 25 per cent. Secretary Taft will strive to secure a delay of three years. Notice is given by representatives of the Merchant Marine League, interested in the promotion of subsidy legislation, that delay will be sharply opposed by the shipping interests.—Owing to the depressed condition of agriculture in the islands, the Commission has decided to suspend the land tax during 1906. It amounts to about \$1,000,000 a year.—Governor Wright sailed for San Francisco on the 4th. Speaking at a banquet given in his honor, he said that he had been true to the policy of President McKinley. Filipinos, he continued, should trust Americans and welcome the investment of foreign capital. The purpose of his journey, he added, was to get rest and to advocate in the States measures for the good of the islands.—Major Kennon, who had charge of the construction of the road from Manila to Bagio, in the highlands of Benguet, has arrived at San Francisco. He is reported to have said that the cost of this road was in the neighborhood of \$2,000,000.—Dispatches from Rome say that Vatican prelates explain that the Vatican was unable to require the friars to leave the land money in the islands because the greater part of it was paid to corporations to which the friars sold the land several years ago. In explanation of the fact that the agreement as to the withdrawal of the friars has not been fully kept, it is said that there is a great scarcity of other priests, and that the Church finds it necessary to keep all the parishes covered, owing to the Aglipay secession and the work of Protestant missionaries. Appeals to the courts for the property held by Aglipay have not been made, it is said; because the Church cannot bear the expense of litigation, but if our Government will settle the claims for Church property occupied during the insurrection, the money so obtained will be used in supporting suits against Aglipay and his followers.

Finland Regains Her Liberties

A general strike in combination with a well managed revolutionary movement resulted within five days in

the practical overthrow of the Russian authority in Finland, and the restoration by the Czar of the constitutional rights of the Finnish people. A meeting of the Constitutionalists, held in Helsingfors on October 31st, sent a deputation to Prince Ivan Obolensky, the Russian Governor-General, demanding that the administration of the Grand Duchy of Finland be conducted in accordance with the agreement made by Czar Alexander I, on March 27th, 1809, when he became its ruler and confirmed by the coronation oath of every succeeding Czar. They also demanded the convocation of a Diet, and the abolition of the Senate, an appointive body which had become a mere tool in the hands of the Government for the Russification of the country. The Senators handed in their resignations and joined in the petition to the Governor, who promised in the name of the Czar that the Diet should be immediately called, and that in the meantime the troops should not interfere with public meetings and peaceably disposed persons. The strike put a stop to all methods of communication; telephone, telegraph, postal, railway and steamboat service was interrupted. A citizens' guard of several thousand men was organized and armed for the maintenance of order. The Russian flags were hauled down from the public buildings and the Finnish flag substituted. Processions of students and workmen visited the vestibule of the Senate as tho it were a shrine, to see the spot where Shaumann last June killed the Governor-General, Count Bobrikoff. Ten thousand Russian reservists were started for Finland from St. Petersburg, but were recalled because they manifested revolutionary sympathies and could not be trusted. Prince Obolensky sent a report to St. Petersburg on a torpedo boat, with the result that on November 4th an imperial manifesto was signed which granted all the demands of the Constitutionalists. All the legislation which has been passed in the last six years for the purpose of destroying the independence of Finland, and making it an ordinary Russian province has been abrogated. The resignations of the Senators have been accepted, and elections

will be held soon for a Diet to meet December 20th, which will have power to extend the suffrage. The Diet will henceforth have control of the budget, which has hitherto been arranged by the Russian Government. Four warships conveying 10,000 troops have been sent to Helsingfors, and artillery is so posted as to command the city to prevent any movement toward complete independence. The city is in the control of a Committee of Public Safety appointed by the Municipal Council, and acting in concert with the Strike Committee. The Socialists are not satisfied with the concessions, but demand universal suffrage immediately.

Massacre at Odessa

The publication of the Czar's manifesto, so far from pacifying the people, was followed by outbreaks of almost unparalleled atrocities in many Russian cities. The extent and causes of the riots are yet imperfectly known, altho the conditions are such as to render some disorder inevitable. The authority of the autocracy has been weakened by successive and obviously forced concessions. The Government, under Count Witte, is not yet organized, and its policy is uncertain. The local authorities are unwilling to use strong measures to suppress mobs because their acts may be disavowed by the new Government. The revolutionary Socialists are intoxicated with power, and insist upon impossible demands. The bureaucracy is pleased to have their prophecies of the uselessness of concessions and the need of a strong hand demonstrated by this increase of disorder. The Liberal leaders distrust Witte, and refuse to take office under him. The patriotic and religious feelings of the orthodox and loyal Russians were in many cases shocked by the public insults to the Czar's portrait which accompanied the rejoicings of the Socialists in the streets over their victory, and, since many of the Socialists are Jews, the slumbering anti-Semitic hatred, based on racial, religious and financial antipathies, has been aroused to fury, and resulted in massacres exceeding in ferocity those of Kishnef. The worst of these took place in Odessa,

Odessa, the Scene of the Recent Massacres.

where, it is estimated, that in the four days of riot 3,500 persons were killed and 12,000 wounded. At first the city was given over to a general jubilation on account of the Czar's proclamation. Crowds filled the streets and passed before the palace of the Governor, where General Kaulbars, Commander-in-Chief of the military district, appeared in a balcony, saluted the red flag and congratulated the people upon the attainment of political freedom. In accordance with a demand of the Committee of Public Safety, formed from the city council and the delegates of the revolutionary societies and trades unions, he withdrew his troops from the city. A citizens' police force was organized, but proved inadequate to prevent the mob violence which at once began to break out. The streets were left in darkness thru the failure of the gas and electric lights. The pillaging of the Jewish shops was not checked by the Cossacks or police, and the vigilance committees

and students who attempted to defend the Jews were powerless against the thousands of infuriated roughs, incited; it is claimed, by priests and police in disguise. The large dry goods and department stores were looted, causing a loss of several hundred thousand dollars. The mob spared neither women nor children in their attack upon the Jewish quarter. Women were disemboweled, killed by driving nails into their heads, or cast from the roofs of their houses. The ruffians dashed out the brains of children against the walls, or tore them asunder by pulling their legs apart. Many aged and sick of both sexes were hidden by relatives in cellars, but they were found by the mob, who poured petroleum upon them and burned them alive. The Jews barricaded their homes and defended themselves as much as they could with bombs and revolvers. Martial law was again established in the city by November 4th, and the Civil Governor returned to his post.

Count Witte's Task Count Witte is working hard, day and night, to reconcile the warring factions of the empire and to establish an efficient government on lines laid down by the Czar in his recent manifesto, but so far with no certainty of success. The revolutionists denounced the manifesto as an attempt to mislead the people by introducing dissension, and presented their ultimatum as follows:

"The manifesto of October 30 is proclaimed without political amnesty, to the accompaniment of martial law. The rights bought by the people at the price of countless lives can be assured and promulgated only by them, and the sole way effectually to give real appeasement to the land and the people lies in the immediate convocation of a Constituent Assembly, elected by the universal, equal, direct, and secret suffrages of all adult citizens without distinction of sex, creed, or nationality, and by the provision of all the guarantees of civic freedom."

The Zemstvoist committee, which Count Witte summoned for consultation from Moscow, took the same ground. Many of the leading Liberals to whom he has offered positions in the new cabinet have refused to take office. Nevertheless, he has made some excellent appointments. Constantine Petrovitch Pobiedonostseff, Chief Procurator of the Holy Synod, who has exercised a powerful reactionary influence on three Czars, has resigned, and the Liberal Prince Alexis Obolensky has been appointed to succeed him. Count Witte's experience in railroad matters enabled him to come to an agreement with the strike leaders on the following terms:

"First—The remuneration of all railroad employees is increased and the budget of 1906 will be revised to provide therefor.

"Second—The creation of a commission, on which the employees are to have elected representatives, to consider questions of improvement in their condition.

"Third—Permission is given to railroad employees and workmen to have a co-operative organization based on models in Western Europe and the United States.

"Fourth—The abolition of military regulations applying to railroads.

"Fifth—Freedom of meeting for employees of railroads to discuss strike questions without notice being given to the police.

"Sixth—Inviolability of the persons of strikers and the re-employment of men dismissed for striking.

"Seventh—The canceling of all circulars limiting the employment of Poles on the Polish Southwestern and the Western Railroads and

the giving of permission to use the Polish language in private."

The trains are again running on most of the roads. He explained that the omission of a mention of amnesty in the Czar's manifesto was an oversight, and secured from his imperial master on November 4th a new manifesto, granting pardon to many classes of political prisoners, and promising immunity for participating in strikes and breaking contracts. Persons convicted of crimes committed over ten years ago will be released from prison and sent to Siberian colonies. Persons arrested by administrative orders are to be released. On two points demanded by the Revolutionists Count Witte is inflexible: He refuses to permit the organization of a national militia, and will not dismiss General Trepoff, who has so far succeeded in maintaining fair order in St. Petersburg.

The Report of the Kongo Commission

The Commission appointed by King Leopold of Belgium to investigate the charges of the English and American missionaries as to the brutal and oppressive treatment of the

Constantine Petrovitch Pobiedonostseff, Who Has Been for Twenty-five Years Chief Procurator of the Holy Synod and Has Now Been Removed by Count Witte.

natives in the Kongo Free State has made its report. The inquiry has been in progress for fifteen months, of which five months were spent on the Kongo, in taking testimony from officials, commercial agents, missionaries and natives. Some of the evidence brought before the Commission is given on another page of this issue of THE INDEPENDENT. In general the report confirms the charges of cruelty made by the missionaries and the British agent, Mr. Casement, but exonerates, as far as possible, the administration from responsibility in them. The cutting off of hands is said to be an ancient custom of the natives, and no whites were concerned in the mutilation of living natives. The Commission condemns the detention of women as hostages for the payment of taxes. The requirements of timber cutting and transport from the natives are held to be excessive and onerous. The rubber tax is not regarded as unjust, altho it may be made easier by extending the times of payment. The labor tax is approved as the only practicable method, but the statutory limit of forty hours a month should not be exceeded. Most of the abuses are traced to the use of native foremen and military expeditions by the commercial companies. The work of the Government is eulogized in the following language:

"Our voyage to the Kongo produced an impression of admiration and wonder. Security reigns today in a country which twenty-five years ago was plunged in barbarity, plundered by Arab tribes and strewn with markets for human flesh.

"The slave trade has now disappeared, cannibalism seeks hiding, and human sacrifice has become rare. Villages have sprung up, railroads have been constructed to the head of the equatorial forests, steamers navigate the rivers, the post and telegraph operate, hospitals have been established, and Governmental administration proceeds effectively in that vast territory.

"The State was warranted in appropriating large tracts of vacant lands, but this led to abuses by which the natives were confined in narrow limits."

American Missionaries Murdered

The mission of the Presbyterian Church at Lienchau, a city of 20,000 inhabitants, 300 miles inland from Canton, was attacked by a Chinese mob and five of the party killed. The specific cause is not known, but it is undoubted-

ly another manifestation of the prevalent anti-American hostility. Practically all the Chinese in the United States came from the Province of Kwang-tung, in which Lienchau is, and the people have been roused to hatred of all Americans by the harsh methods of enforcement of our exclusion laws. It is reported that Dr. Machle requested the removal of a street theater, which had been erected near the hospital, on account of the noise. The crowd entered the hospital and, finding a skeleton, paraded the streets with it as an example of what the foreigners did to their patients. The mob then attacked and burned the hospitals, residences of the missionaries, and schools, mostly new buildings, and including a church just completed, seating 700 persons. Dr. Machle, Mrs. Machle, their ten-year-old daughter, Amy, Dr. Eleanor Chestnut, Mr. and Mrs. Peale, and Miss Patterson, took refuge in a cave. The mob followed and killed all of them except Dr. Machle and Miss Patterson, who escaped to the Yamen of the Prefect for protection. Dr. Machle is a graduate of Jefferson Medical College, Philadelphia, and was sent out with his wife, formerly Miss Ella M. Wood, on January 21st, 1899. Miss Eleanor Chestnut was graduated from Park College, Mo., and Women's Medical College, Chicago. She has been a missionary since 1893 and has treated over 5,479 patients in the Women's Hospital at Lienchau. The Rev. Mr. Peale is an honor graduate of Lafayette College and Princeton Theological Seminary. He married last May Miss Gillespie, of Port Deposit, Md. Consul-General Lay, with two American missionaries and a doctor, have gone up the river to Lienchau in a gunboat to investigate. The Chinese Government has ordered the Viceroy of Canton to inflict exemplary punishment upon the perpetrators and guilty officials.—Rear Admiral Charles J. Train, commander-in-chief of the American Asiatic Fleet, with his son, Lieutenant Train, were attacked by a Chinese mob near Nanking, where they were shooting pheasants, because the Admiral had accidentally hit a Chinese woman with birdshot. The American marines rescued them with some difficulty.

Group Showing Mutilation by Native Soldiers Because the Townspeople Failed to Furnish a Sufficient Quantity of Rubber to the Kongo State Officials.

The Evidence Before the Kongo Commission

BY THE REV. C. B. ANTISDEL

[The appalling facts published in this article were presented to the Belgian Commission to investigate the Kongo atrocities in consequence of the exposures of Mr. Morel and Dr. Morrison. The latter's articles appeared in our issues of July 9 and Dec. 3, 1903. Mr. Antisdel is a missionary of the American Baptist Union and is now in Liverpool on his way to his mission field. These advance extracts from evidence given to the Commission are obtained from an authentic source and have not hitherto been published. In the face of such testimony as this it is no wonder that the Commission found difficulty in whitewashing the Kongo administration as completely as it was expected to do. We give an abstract of the report of the Commission in our "Survey of the World" and discuss it editorially in this issue.—EDITOR.]

A CONSTANT and ever increasing stream of charges of misdeeds perpetrated in the Kongo Free State has been pouring in upon the world for years. These were denied or explained. Finally the British Consul to the Kongo, Mr. Roger Casement, was instructed by his Government personally to investigate conditions. In his official report Mr. Casement more than confirmed the reports of misdeeds, so grave as to be justly called "atrocities," committed in forcing the natives to supply provisions, rubber, etc. The British Government, as one of the signatory Powers that had appointed Leopold, King of the Belgians, to be Sovereign of the Kongo Free State, thereupon made representations to the Kongo Government, which resulted in the appointment of a Com-

mission to go to the Kongo to investigate conditions.

This Commission went to the Kongo last year and returned to Belgium early last March. Its report has not yet been made public, but the evidence furnished to the Commission by many witnesses has been obtained from those witnesses themselves and part of it is summarized in this article.

The Commission seem to have heard with fairness and impartiality the evidence placed before it. Their coming was heralded far in advance of their arrival, however, so there was ample opportunity for the accused to have everything in their district most favorable for the investigation. For example:

"On Sunday, December 4th of 1904, when the Commission of Enquiry was expected, the

white agents at Boyeka endeavored to bribe the surrounding villages in the matter of atrocities committed upon the people. They sent the sentries (Noongola and Loyeka) to call natives from the village of Ingando to come to the station to be given 100 blankets, but the villagers, knowing that the Commission was coming, refused to go or to receive the blankets."

Also at some places important native witnesses had been sent hither and thither. "On the arrival of the Commission the sentries went to the towns of Bavaka and Boyela and compelled the rubber men to go to the bush at once." These witnesses were thus gotten out of town and to places where they could not be summoned. Nevertheless, much valuable testimony was obtained at many places.

The first of real importance was at Bolobo. This is where Mr. George Grenfell is located. He, it will be remembered, has frequently been quoted by the Kongo State as having testified in its behalf. I believe at times in past years he has said some good things about certain features of the Government. From those past statements in regard to particular things the State has endeavored to make the world believe that Mr. Grenfell unqualifiedly approved the entire administration. This is what Mr. Grenfell said to the Commission:

"He expressed his disappointment at the failure of the Kongo Government to realize the promises with which it inaugurated its career. He declared he could no longer wear the decorations which he had received from the Sovereign of the Kongo State."

Mr. Scrivener, of the same station—Bolobo—confirmed published reports from him, relating the horrible conditions in the *Domaine de la Couronne*, as seen by him in a journey through part of it. He produced native witnesses.

"One of the saddest incidents in the examination occurred when the Commissioners asked a rather youthful witness: 'How is it you know the names of the men who were murdered?' This unexpected reply came: 'One of them was my own father.'"

The investigation brought out the fact that the country was being depopulated very, very rapidly. Bolobo, in 1887, had a population of about 40,000; in 1900 it was less than 8,000. The population of Lukolela, in the same time, was reduced from 5,000 to 352. In every place from which I can obtain statistics 60 per cent.

to 80 per cent. of the people have disappeared. Testimony brought out that this was due directly and indirectly almost exclusively to methods of enforcing the enormous "taxes."

The State has declared that only forty hours labor each month were required of each native. However, the Commission was told that

"The forty hours' work supposed to be given to the State is entirely a misrepresentation of the facts. The collecting of fire wood alone occupies more than that time."

Some of the testimony by Mr. Harris brought out conditions even worse than the British Consul reported. These occurred in the territories controlled by the trading society known as the A. B. I. R. In this Society the Kongo Government has held all these years one-half the stock and has even placed its military forces at Bassankusu at the disposal of the A. B. I. R. The Government has not only known that this trading company has compelled the natives to bring in stated quantities of rubber, by imprisoning natives (called taking hostages) in case of failure, who are held and misused even to death, at times, until demands are complied with by the other people of the towns, but the Governor-General in Africa has even authorized this Society to "take hostages" to secure the rubber.

I wish to quote a few extracts from Mr. Harris in regard to his testimony before the Commission:

"I stated that no village in the district had escaped murders under Mons. Tagner's régime; called attention to the public floggings of practically any and every one; quoting, for instance, seeing with my own eyes six Ngombe men receive one hundred strokes." Another man, Mr. Charles Padfield, writes that because a chief, Jongi by name, of the village Boyeka, did not work rubber himself on the ground that he was a chief and that his people were supplying fish, minsumbu, etc., he was seized by the white men at that village "and furiously thrashed. When they had finished with him, as he did not rise, they kicked him, but found that he was dead. One white man was charged with holding the chief and the other with beating him."

Mr. Harris confirmed all of the often repeated charges, such as herding hostages, men, women and children, in one filthy shed where many had died, and imposing on them excessive and indiscriminate fines. (A village of 40 males and 50 females was fined 4,000 rods be-

cause they failed to trap the pig (wild boar) required of them).

Then Mr. Harris tells graphically how the natives testified:

"Sixteen Esanga witnesses were questioned one by one. They gave clearly the details of how father, mother, brother, sister, son or daughter was killed in cold blood for rubber. Then the big chief of all Bolima stood boldly before all, pointed to his twenty witnesses, placed on the table his one hundred and twenty twigs, each twig representing a life for rubber. 'These are chiefs' twigs, these are men's, these shorter are women's, these smaller still are children's.' He tells how the white man fought him, and when the fight was over

"Lomboto shows his mutilated wrist and useless hand, done by the sentry. Isekansu shows his stump of a forearm, telling the same pitiful story. Every witness tells of floggings, rape, mutilations, murders and imprisonments of men, women and children and of illegal fines and irregular taxes."

The Commission despaired of getting thru the crowd of witnesses and accepted as proved

"That hundreds of people have been killed in this district alone for rubber."

I wish to quote from the testimony of Mrs. Harris, also, given before the Commission.

State Soldiers.

handed him his corpses and said: 'Now you will bring rubber, won't you?' To which he replied, 'Yes.' The corpses were cut up and eaten by Mons. Forcie's fighters.

"Here Bonkoko came forward and told how he accompanied the A. B. I. R. sentries when they went to murder Isekifasu and his wives and little ones; of finding them sitting peacefully at their evening meal; of the killing as many as they could; also the cutting up and eating the bodies of Isekifasu's son and his father's wives; of how they dashed the babies' brains out, cut the body in halves and impaled the halves. Again he tells how, on their return, Mons. Forcie had the sentries chicotted (beaten) because they had not killed enough of the Bolima people.

"Whilst the men were in the forest trying to get rubber their wives were outraged, ill treated and stolen from them by the sentries." Boali, a woman of Ekorongo, appeared before the Commissioners and showed her maimed body. Because she wanted to remain faithful to her husband, who was away collecting rubber, and would not submit to be outraged by a sentry called Ekolonda, she was shot in the abdomen, which made an awful wound; the intestines partly protruded, and it seems a miracle that she survived. The scars are plainly visible, and the sight of the old wound has the appearance of an enormous tumor. She fell down insensible, and the wretches were not yet satisfied, for they then hacked off her foot to get the anklet she was

Women of Ikoko, Opposite Bikoro, Who Had to Clear Roads Two Days in Every Week.

wearing. It is a pity that woman's mutilated body cannot be seen at home as we have seen it and her pitiful story reach the ears of all."

The testimony of Mr. Weeks was especially valuable, as it not only cited cases similar to the instances given above, but also showed that white men, even proven guilty, are not punished. The last defense of the Kongo Government, being forced to admit that atrocities did occur, so conclusive were the proofs, is that those proven guilty shall be punished. How they are punished is seen from the testimony of Mr. Weeks before the Commission:

"I then referred to the killing of twenty-two men, women and children by M. Mazy (Mabata was the name given him by the natives) in the Bokongo section. They (the Commissioners) said that M. le Juge Grenade had fully confirmed my accusation and had sup-

plied more details than I had given. Charge proven."

Mr. Weeks got his charges in the hands of the authorities at Boma, which place it will be recalled is the capital of the Kongo Free State, and is near the mouth of the Kongo, thru which all persons must pass in leaving the country, and where all whites must be tried. But Lieutenant Mazy, with these charges filed against him at Boma, was not held for trial, but allowed to proceed to Europe; and once outside the Kongo Free State no one, no matter how great a criminal, can be called into account for his misdeeds on the Kongo.

Mr. Weeks also testified to the futility of attempts to get justice for the natives. Mr. Weeks had written a strong appeal to the Commissaire of the district that he

should relieve the natives of some of the grievous burdens.

"I told them that three officers of the State came and investigated my complaints, found my charges true, but nothing was done to relieve the natives.

"I then referred to my letter of the 13th of June, 1903, which I sent to the Commissaire, and received no answer. I then forwarded a copy to the Governor, and after waiting ample time for an answer, I then forwarded the letter to the public press. The Commission said I was fully justified in so doing.

"I then pointed out the date of the publication of my letter, relative to the excessive character of the taxes, the date of the arrival on the Kongo of the published letter (Dec. 11, 1903), and the date of the reduction of taxes (January, 1904). I gave them a list of the old tax, as instanced in the case of sixty-seven men, women and children in the Creek towns, who paid 4,000 odd rods fortnightly formerly, now reduced to 200 odd rods for the same period. They thought that the result had justified my action and that if I had not published my letters there would have been no reduction."

Publicity seems to be the only thing that will move the Government, hence the efforts to acquaint the world with conditions on the Kongo, that civilization may bring pressure to bear upon Leopold.

How much less can the natives themselves get justice is shown by Mr. Padfield's testimony before the Commissioners.

"When they (the sentries) reached the village, the rubber was short, and two men were seized. One of the men caught possessed 200 rods (native currency), and these the sentries took, but one of the native paddlers (Yambolenga) tried to return the rods to the man to whom they belonged. The sentries ordered him to desist, and thrashed him severely with the chicotte, also striking him in the back and chest with the butt of a gun. When they returned to Boyeka the paddlers reported the outrage to the agent, who replied that they were telling lies. Two days after the paddler who had been thus treated died from the effects. His relatives took the corpse to the agent, who dismissed the matter, asserting that the man had died from ordinary sickness."

How difficult it is to convict a white man is seen from the following:

"White men must be tried at Boma. Natives sometimes must travel 1,000 miles if they wish to act as witnesses, and have at times been

absent from home ten months on this mission. Mr. Scrivener writes: 'The witnesses I sent down to Boma last December, in connection with the trial of Massard, are still there. (They may be on their way up, but I think not.) I have written to the Director of Justice, beseeching him to use his best endeavors to bring about their speedy return to their homes. For the poor old chief this long absence is very trying. One of the boys I sent down has died there.'

Mr. Harris writes as follows in regard to the alleged re-arrest of Messrs. Pilaet and Thomson:

"In these cases a hundred native witnesses have been asked for. This has had the effect of closing the mouths of all those aware of atrocities. In the case of a white man charged all witnesses must go to Boma, which is equiv-

Woman Carrying Supplies to Soldiers.

alent to a white man going from Europe to China—different language, different food, different customs, &c. It is a monstrous iniquity, devised to conceal the truth and liberate the subordinate officials."

Last year the British Government was assured by the Kongo Government that it would send a Royal High Commissioner to the Kongo, who would effect all necessary reforms. Until his arrival the Commissioners thus interpreted the Kongo law:

"Before a tax was fixed an enumeration of the people must be made.

dicted. In the meantime what effect has the visit of the Commission had upon the treatment of the natives? The Royal High Commissioner, M. Malfeyt, has arrived upon the Kongo, but instead of effecting reforms he announced that he "had no power to act, and only came to see and hear."

After the Commission had left Baringa, Mr. Harris wrote the President of the Commission some new facts. He said:

"The people were killed by hanging, spear-

State Station on Lake Mantumba Near the Kongo River at the Equator.

"No native was to work more than forty hours a month.

"The paying of their taxes in either of certain commodities was at the option of the natives."

As has been already said, the Commissioners seemed very fair and ready to do all in their power to ameliorate conditions. Of course an investigating committee can do little else than investigate and report fairly. The world, however is patiently awaiting the publishing of their full report. Unfortunately, the publishing rests in the hands of King Leopold, who is so strongly in-

ing, cutting the throat, but mostly with the rifle. Some of the women were tortured to death by forcing a pointed stake into the abdomen. I knew of other such instances, but in order to test the chief who was reporting murders committed in his town, I asked him for an example. 'They killed my daughter Nsinga in this manner; I found the stake in her!'

I now quote from a letter sent by Mr. Harris on January 17th to the Vice-Governor-General:

"The young woman Imenenga was tied to a forked tree and chopped in half with a machet, beginning at the left shoulder, chopping down through the chest and abdomen and out at the

side; this was how the sentries punished the woman's husband."

Bolumba, wishing to remain faithful to her husband, was treated with a pointed stake as the women above mentioned; as this did not kill her, she was shot. Thus it is seen that affairs are not improved. In fact, the following extract from a letter of Mr. Stannard's, of April 4th, in which he relates an interview with M. Delvaux, director in Africa of the A. B. I. R., indicates that the Commission was not even properly respected.

"He spoke of the Commission of Inquiry in a contemptuous manner, and showed considerable annoyance about the things we had said to the Commission. He declared the A. B. I. R. had full authority and power to send out armed sentries, and force the people to bring in rubber, and to imprison those who did not."

And the A. B. I. R. Trading Society so does. The law as interpreted by the Commissioners is disregarded. On April 20th, Mr. Harris wrote:

"It is terrible to watch these poor people being massacred almost daily to force the rubber. Undoubtedly things are worse today."

One more extract from the letter of Mr. Harris to the Vice-Governor-General. Mr. Harris had visited some natives and then wrote:

"The chimpanzee is better housed and fed than these people, and in greater safety, too. The old chief said: 'White man, I am full of shame; I cannot give you a fowl to eat for yourself, or manioca for your men; I am ruined.' The only present the mother of a boy with me could give her son was a few leaves of pottage. Before I came away, one young chief stepped out and said: 'Tell them (the rubber agents) we cannot find rubber and therefore will not; we are willing to spend our strength at any work possible, but rubber is finished. Our mothers, fathers, sisters, brothers have been murdered in scores for rubber; every article of any value has been stolen from us—spears, knives, bracelets, fowls, dogs, &c., and we are now ruined; if we must either be massacred or bring rubber, well, let them finish us right off; then we suppose they will be satisfied.'

"It was touching to see the old chief as he wrung my hand again and again. 'Oh, Inglezia, don't stay away long; if you do they will come; I am sure they will come, and then these enfeebled legs will not support me; I cannot run away. I am near my end; try and see to it that they let me die in peace; don't stay away.'"

The British Government is bringing some pressure to bear upon Leopold to put a stop to these atrocities; if the United States would do likewise the combined effect of such action on the part of these two powers could not be resisted by Leopold.

LIVERPOOL, ENGLAND.

Life's Vision

BY NATHAN HASKELL DOLE

I READ that in the vanish'd days of yore
 Ten thousand Greeks, victorious, tho defeated,
 Across the Asian table-lands retreated,
 Beset by insolent foes behind, before;
 Fierce heat and fiercer cold, and dearth they bore,
 And then, at last, their long, hard task completed,
 The far faint blue line of the Sea they greeted,
 And shouts of "Thálassa!" the welkin tore

So I, who have these many years contended
 With Sin and fierce Temptation's hosts assailing,
 While ragged rocks and poisoned brambles tore me,
 With weakened powers, with Hope and Courage failing,
 At last have reach'd Life's hight:—a vision splendid,
 Eternity's vast Ocean lies before me!

OCUNQUIT, MAINE.

President Roosevelt and the South

BY WILLIAM GARROTT BROWN

AUTHOR OF "THE LOWER SOUTH IN AMERICAN HISTORY," "GENTLEMAN OF THE SOUTH," ETC.

IF the President's Southern tour had been nothing more than the sentimental pilgrimage which it partly was, the country would nevertheless have followed it with interest. Mr. Roosevelt is by no means the first President since the war, he is not even the first Republican President, to visit the South, and to be received there with enthusiasm. As far back as 1877, President Hayes crossed Mason and Dixon's line on a distinctly conciliatory mission, and found nothing churlish in his welcome. When President McKinley visited Atlanta, he was welcomed still more heartily, and there was no mistaking the signs of a real liking for him among his overwhelmingly Democratic hosts—a feeling which, it may be added, has not died out or even diminished since his death. Nor was this President Roosevelt's own first essay, as President, of the South's hospitality. But his spectacular progress through the heart of the old Confederacy was a bolder and more direct challenge to the Americanism, the sense of nationality, of the Southern people than any of these earlier presidential visitations.

That, no doubt, was what he meant it to be, whatever other and more specific objects he may have had in mind, a kind of reconnaissance in force of Southern public opinion, a test of the attitude and animus of the South towards the National Government, towards the policies of his administration, towards himself. No President since the war has been without a strong desire to be somehow assured that the entire country is one in sentiment and aspiration, but Mr. Roosevelt has doubtless felt himself peculiarly drawn to an adventure, not of nationalism only, but of the force and

charm of his own personality, against the conspicuous recalcitrancy of the South. Always frankly solicitous of popular approval, he was the last man in the world to disregard the South's marked dissent from the country's otherwise well-nigh unanimous acceptance of him last Autumn. Neither, it is safe to say, has he forgotten the Southern people's uncommonly friendly disposition towards him when he succeeded McKinley. He has made no concealment of his concern over the many manifestations of their swift change of heart the instant he touched the race issue. He is himself half Southern by birth; he is the first President since the war young enough to have had no part whatever in the great sectional conflict; he is undisguisedly, and no doubt unaffectedly, fond of Southerners. Quite likely, he has taken the South's intense resentment of certain of his acts and moods more deeply to heart than any other of the rebuffs to his administration. It is reasonable, therefore, to treat his tour as a characteristically intrepid thrusting forward of his personality into the only serious breach in his popularity yet effected by the opposition to any of his policies.

Viewed that way, it would seem to have been brilliantly successful. If crowds and plaudits, if popular demonstration of every imaginable kind, if the fervid oratory of Southern Mayors and Governors, and countless other equally fervid expressions from Southerners, are not altogether meaningless, the excursion went far to overcome whatever dislike of Theodore Roosevelt the man there may have mingled with the detestation of the Republican President who appointed Dr. Crum Collector of the Port at Charleston, closed the post office

at Indianola, and sat at meat with a negro in the White House; who by these acts, and by certain utterances bearing on the race question, stirred up a frenzy of race feeling such as the South had not exhibited since Reconstruction. Since none of the President's speeches contained anything that can be considered a distinct recantation or apology, we may perhaps infer that the South is willing not merely to ignore party but to forget its peculiar problem when it is called on to attest its nationality by doing honor to the nation's Chief Magistrate.

If this were the only inference to be drawn from the entire episode, it would still have been quite worth while. The good feeling it evoked does not need to be justified by any practical results. Stirring occasions serve a good enough purpose in life if they do no more than lift participants and spectators out of themselves, quicken sluggish sympathies, broaden narrow horizons. The South is entitled to the exhilaration to be got from merely seeing and hearing our buoyant President; one need not begrudge the President his delight in the new flavor of the incense of the South's applause. Least of all need one look about for any practical justification of occasions that have served to warm the hearts of veterans of the great war, Union and Confederate alike, with fresh assurances of honor and remembrance.

The President played his part in a way to confound such as have always thought him wanting in tact. He seems to have captivated all his many audiences, not by eloquence, for that he has not, but by mingling caution with boldness, and particularly by the wisdom of treating the Southerners as like other Americans, like other men, and appealing constantly to their most broadly human sympathies. He went among them, apparently, in a spirit even more catholic than that in which Lowell, nearly sixty years ago, remonstrated against the narrowness in the anti-slavery propaganda. "Hath not a slave-holder hands, organs, dimensions, senses, affections, passions; fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same summer and winter as an abolitionist is?" The Southerners, on the

other hand, if they are right in their own interpretation of their enthusiasm, found nothing else in the President so likable as his likeness to themselves, the warmth of his temperament, the quick and boyish way he had of responding to situations—in a word, the Southerner in him.

All this is pleasing and encouraging. But it is not novel, not to be greatly marveled at. Similar recognitions of kinship and discoveries of mutual liking have been going on between Northern and Southern people ever since the war. "Bridging the bloody chasm" is a somewhat hackneyed emotional experience. Novelists and writers of short stories are deserting the theme, while *per contra*, the irresponsible newspapers on both sides seem to be finding it less and less profitable to pander to the old sectional animosities.

But this is not all. There was more, one feels confident, in the President's appeal, and more in the South's response, than sentiment and a keen appreciation of a somewhat dramatic political situation. The President, by his speeches—by what he left out of them as well as by what he put in them—may fairly be said to have taken a new attitude on the Southern question, even tho he has announced no new policy nor expressly renounced the old; the South's enthusiasm was something more than a mere rattling of the rusty chain of its provincialism.

What above all else had made such enthusiasm possible was the fact of material prosperity. It is impossible to imagine a poverty-stricken, despairing South welcoming any Republican President as Roosevelt was welcomed. A busy, prosperous, hopeful South accepts him as part of a political and industrial situation which it finds decidedly endurable. This new mood of hopefulness is a thing worth dwelling on.

For forty years, keenly as the Southern people have been concerned about things political, they have been much more keenly and constantly concerned about things material. Most men everywhere give to politics, to the public affair, but a slight residue of the time and energy they mainly devote to the struggle for existence, for wealth. In the South, since the war, that struggle has

been exceptionally absorbing, because it has been exceptionally hard. The outlook has often been to the last degree dismal. Progress has been slow and halting. But of this side of Southern life the North for a long time knew little. It heard more of the South's political unrest than of the radical and difficult transformation of its system of agriculture, more of its race riots than of its railroads, more of its lynchings than of its beginnings in manufactures. Only such as have observed the long struggle closely, from within as well as from without, can understand how it has changed the Southern people themselves—their standards, their aspirations, their whole habit of thought. Thru it all, it is true, they have clung, with a tenacity that compels admiration, to certain social and political ideals that differentiate them from other Americans. But the mass of them no longer hold those ideals fanatically. They have come naturally to appreciate highly—perhaps too highly—the good things of life. Nowhere will one now find a keener sense of the advantages of wealth. Tho they do not neglect politics, it is the effect of political policies on business that they consider first. Now that better times have come at last, they are more than ever minded to "play the game" as it is, to make the best of their ever-improving industrial opportunities.

The effect on their attitude towards the North, and towards the Republican party, is marked. Frankly covetous of the prosperity of other sections, they nevertheless take their relations with the rest of the country less and less in the temper of political controversy, more and more in the temper of business. They no longer look on the Republican party merely as the instrument of Northern malevolence, but perceive it to be chiefly an agency for promoting economic ends, and consider its policies with an eye first of all to the probable effects on their own economic future. Thirty years ago, a President who had angered them over the race issue would have found it hard to divert their attention to such topics as rate-fixing and the Panama Canal. Today, more confident of their ability to control their own peculiar social arrangements, they listen with as much interest

as the people of any other section to the discussion of practical problems in which the whole country is concerned. By devoting so much of his time to such subjects, the President in fact paid them the compliment which in their hearts they most desired, for he thus recognized their full membership in the Republic in its character of a vastly successful industrial community.

Moreover, they sympathize strongly with his views and aims on the two subjects which he presented most prominently. The South is mightily concerned over railroad rates. It is, like the West, dependent on railroads for the prosperity of most of its industries. Comparatively free from the corrupting power of other kinds of corporations in its politics, it feels and resents the political power of railroads all the more keenly. Anti-railroad agitation is easily effective. Almost equally keen, tho not so widespread, is the interest in the Canal. The behavior of Southern Senators and representatives, and of several legislatures, when the Panama Treaty was under discussion, has already showed how much the South has the enterprise at heart, and how little disposed it is to let partisanship or constitutional theories and scruples interfere with a great material interest.

On the entire subject of our foreign policy, it may be added, and particularly on the question of expansion, the President and his party doubtless represent the Southern people better than the opposition does. Apart from their interest in the growth of our Pacific commerce, they feel instinctively that every extension of our political system Southward and Westward makes against interferences with their own social order. An aged Southern public man, a man of national reputation, being asked once for an explanation of his consistent jingoism ever since the war, put it on the ground of sectionalism, pure and simple. The South, he maintained, can hope to regain its old weight in national politics only by the annexation of regions with race problems like its own, which will naturally fall into alliance with it.

Here is sufficient explanation of the South's readiness to hear President Roosevelt, without imagining so vain a

thing as that it is converted from its way with the race question. If there has been any conversion on that subject, it is rather the President than the South that has seen a new light. If there is, as has been said, nothing in his speeches expressly contradictory of his earlier pronouncements, there is nothing inconsistent with the general views in which an increasing number of Northern people seem to concur with the mass of intelligent Southerners. The negroes, one would infer from the Tuskegee speech, are to look to their own exertions and to private philanthropy, rather than to government and to party, for the betterment of their state and perhaps for the gradual recovery of their political rights. It is hardly conceivable that the President will countenance any attempt of his party, either to restore the ballot to the mass of them at once, or to carry out the plank of the party platform which demands a reduction in the South's representation in Congress.

What the episode seems to foreshadow politically is rather a *modus vivendi* between the South and the Republican Party. Whether or not the

President gains among Southern representatives and Senators the allies he needs in the approaching contest with the Stalwarts in his own party in Congress, we may look to see less narrow partisanship among the Southern Democrats at Washington. They will, let us hope, co-operate more and more with the more liberal Republicans, and waste less of their own time and the country's patience with shrill defenses of a social order which no considerable body of Northern public opinion now seriously threatens. If, meanwhile, the negro shall seem to be sacrificed, it may be well for his political champions to consider whether, after all, political championship is what he at present most imperatively needs. Many, to whose professions of friendship for the race we need not deny sincerity, hold that in the present stage of its development it would profit less from any share it could conceivably have in the political control of the Southern States than from the vision of political privilege held out as an incentive to steady progress, in industry, in education, in right living.

CAMBRIDGE, MASS.

The Crisis in Hungary

BY FRANCIS KOSSUTH

[Our readers will remember several articles we have already published by the son of the famous revolutionist, Louis Kossuth. He is now the leader of the Independence Party in the Hungarian Parliament and was one of the five Hungarian statesmen who, as he mentions, were in September called before the King at Vienna to receive the royal rebuke and refusal.—EDITOR.]

THE struggle which is being fought out at the present moment in Hungary is the struggle of parliamentary government against the will of the sovereign, and of constitutional rights against the "*Sic volo et sic jubeo*" of kings.

The struggle has shifted its position since it began; it is no longer merely a battle for national rights; it has become a collision between royal autocracy and the liberty of a people.

Now, what is the state of affairs that prevails at the present moment? The

great majority demands for the country a right which is not only a right innate in all the countries of the world, but is, furthermore, founded, in Hungary, on laws that are enacted and that are yet violated and thrust aside, as if they were of no account.

After the last general elections those who demand the exercise of this right obtained a large majority in the lower branch of the legislature. Nevertheless, this majority is not allowed by the Crown to hold office unless it consent to abandon the program which constitutes

the foundation upon which it was elected.

The majority naturally refuses to commit an act of such political immorality as to change its program by order of the King, and thereupon the royal autocracy, rather than accept the will of the great majority of the nation, prefers to have the country governed by a ministry which has not a single adherent in the Chamber, and which, in order to govern, must violate, every day, the laws in force.

The leaders of the majority were summoned, quite recently, to meet the King, who handed them a sheet of paper, without signature or initials, upon which were transcribed conditions in accordance with which they were invited to form a government; as to some of these conditions it would not be easy to harmonize them with the constitution in force, and not a single one of them was in agreement with the program of the majority.

It is evident that it was one of the gravest faults, regarded from the standpoint of the principles of constitutional royalty, to bring the King and nation face to face in this manner, without shielding the person of the King and the responsibility of the Crown behind a responsible ministry.

And it was a still graver fault to set down in writing matters that come into collision with the constitution and the existing laws.

Luckily for the public peace, constitutional sentiment is so deeply rooted in Hungary that the people have always abstained (and still abstain) from attributing to the sovereign the responsibil-

ity for these faults; they are satisfied with condemning, in the name of the laws and of the constitution, the unknown advisers who prevailed upon the constitutional King of Hungary to give such an invitation to the majority of the Chamber elected in accordance with the laws, an invitation implying the renunciation of their principles and their program.

Some time ago the F  j  r  y Cabinet, on the suggestion of Kristoffy, the Home Secretary, determined to try to divert public opinion from the national

cause by springing the watchword of universal suffrage, which the so-called "Liberal" party, of which F  j  r  y was for more than ten years one of the ministers (and all his colleagues have been members of it ever since their appearance on the political horizon), has combatted so violently that this same party and all those same gentlemen with it would never consent even to the enlarging of the suffrage. As a consequence, the total number of electors, amounting to 1,200,000 in 1848, when

FRANCIS KOSSUTH.

Louis Kossuth liberated the serfs and, at the head of his colleagues, proclaimed civil and political equality, fell as low as 800,000, and the number of electors has since been increased only once, under the Sz  ll ministry, and then not by the free will of the Liberal party, but as the result of an agreement forced on the party of the Government by the triumphant opposition. The effect of this was to introduce a reform which carried the number of electors up to 1,000,000.

The Minister Kristoffy was one of those who made violent speeches in the Chamber against the principle of uni-

versal suffrage, and it is only now that he has been, at length, suddenly struck, as if by a divine inspiration, with the grand truth of the rights of man.

The principle of universal suffrage has, moreover, for many years been one of the articles of the program of the party of Independence, and yet this converted minister succeeds in hurling the mass of Anarchists and Internationalists, who are numerous in Budapest (80,000, all workmen) on that very party of Independence which for thirty-eight years has been persistently struggling for the rights and liberty of the people.

Indeed, it is with the party of Independence especially that this unscrupulous minister has a quarrel, in view of the fact that it forms two-thirds of the coalition.

So, after the famous royal audience, at which we were summoned to turn our backs on our principles and on our political program, upon the basis of which we were elected, it appeared to this most malignant of ministers that it would be advantageous to prove to the world that a part of the people was opposed to the coalition, and, as he did not know where to find this people, he repeatedly incited the Anarchists and Socialists against us at Budapest.

To cap the climax, every day, in the open daylight, along the streets of our capital city, printed matter is distributed with impunity, signed by the leaders of the subversive party and bearing the name and address of its publishing house, in which the Anarchist workmen are encouraged to stab our deputies and break the heads of patriots. The police stand unmoved during this distribution, and even the Royal Attorney General does the same.

It has come to this with us, then, that it has grown possible, in a civilized country, for printed sheets, signed by their authors' names, and urging the people to commit crimes against the law, to be circulated in the full light of day. The civilized world may well ask itself, as, indeed, we ourselves are constantly asking, whether it can be possible that the authorities are ignorant of the fact that hundreds of thousands of such documents are being distributed openly in the public thoroughfares, often within a few feet

of the police, who remain quite impassive while this distribution is going on.

In the meantime, the Anarchistic Socialists who break the windows of the hall where the deputies of the majority assemble, and who break the heads of the people and of the university students that applaud the defenders of liberty, are baptized, as if by enchantment, in the press of every country by the pompous name of Nationalities in a state of revolt against the "arrogance" and oppression (a thing that never has existed in Hungary) of the Magyar race, which has always granted to all the nationalities every right it has won and preserved for itself, aye even to those nationalities that in their time aided tyranny in its struggle with liberty. And the liberty, torn from the hands of tyranny by the Magyars, was shared with *them*.

In fact, all the political and civil rights possessed by the Magyars in Hungary are equally possessed by all the nationalities, whose languages and customs have been so scrupulously respected that some of them (as, for instance, the Saxons of Transylvania, the occasion of so much outcry by the malevolent), numbering only 211,000, have been able to keep intact for eight hundred years (they entered the country in 1141) their language, religion, customs, schools and autonomous institutions. What other country is there in which the dominant race would have respected so scrupulously, and during so many centuries, the rights of a race so small and isolated? Hungary is the only land in which such a state of things has ever existed.

A few words further on the subject of the cardinal point of the crisis.

The Hungarian army forms forty-three per cent. of the common army; it is recruited in Hungary and maintained by Hungary. The King has the supreme command of it, in virtue of the sovereign rights conceded to him by the law of 1867, and he is bound to exercise it constitutionally, for such is the tenor of the law.

The Emperor of Austria has the same rights over the Austrian army, which, with the Hungarian army, forms the common army, except that these imperial sovereign rights are considered of "right divine."

The two rights, then, are not of the same nature. Every right springs from the national will in Hungary, and the Hungarian constitution has never been *granted* by the kings; it has been voted in due form by the nation and sanctioned in the same way by the kings. In Austria the constitution was *granted* by the Emperor.

The law which concedes to the King the supreme command of the army says nothing on the subject of the language in which the words of command are to be given.

I ask where is the law in the United States which ordains that the American army should be commanded in English? It is a natural right of every country, and has not been enacted in the laws of any country, because it is regarded everywhere as an axiom.

The King of Hungary, however, has kept up an abuse, which first began to worm its way into the Hungarian regiments in 1740; this abuse was maintained in spite of a fundamental law of the country (1790), which is still in force and which ordains that in all the services of the realm the official language must be the Hungarian.

The majority of the country has tolerated this state of things, tho opposed to natural right and the written law; it was afraid of engaging in a long and painful struggle with the Crown.

However, in 1901, the military government wished (at the very moment when there was an agricultural crisis so acute that corn had to be distributed among the inhabitants of the fourteen provinces to save them from starvation) to increase the number of recruits and to increase the taxation also, in excess of the \$112,000,000 for new cannon.

All this aroused great emotion in the country, the new law excited the strongest dislike, the opposition resisted

it, and its resistance was backed by the whole people. The Government, nevertheless, was unwilling to give way; it refused even to allow the budget to be discussed before the bitter pill was swallowed. Certain fundamental laws were, therefore, violated by the Government, and the right of the country (granted by law, 1867) to settle the conditions with regard to the vote for recruits was audaciously violated.

Then began the struggle which still continues, altho it was interrupted in 1904 by an agreement between the Tisza Government and the party of Independence, which ceased obstruction upon the formal pledge of Tisza to reform the electoral law and make a considerable extension of the suffrage.

When everything was peaceful, Count Tisza upset matters by attempting to change the rules of the Chamber in such a fashion as to limit considerably the rights of debate on the budget and on recruiting, and, when the Chamber opposed him, he made his *coup d'état*, which resulted in the dissolution of the Chamber and the new elections. The elections gave the opposition, which was defending the laws in force, a large majority, and, ever since, the constitutional *régime* has come to an end in Hungary.

The conflict is becoming daily more intense; on the one side there is a violent assault on the laws of the country; on the side of the coalition, a desperate defense of the laws, the constitution and liberty, and in this defense the humblest citizens are united with the proudest magnates, names the most obscure with the most illustrious. All have only one thought, the thought of the Fatherland abused, and all have only one desire: to defend the rights of Hungary and the liberty of all, without distinction of nationality or of race.

BUDAPEST, HUNGARY.

Rear Admiral Prince Louis of Battenberg

Prince Louis, nephew of England's ruler and the bearer of a special message from King Edward VII to the President of the United States, who, with his fleet of six armored cruisers, arrived at Annapolis on November 1st, is a son of Prince Alexander of Hesse, who married Countess Hauck of Poland. One of his brothers was Prince Alexander of Bulgaria and the other married Princess Beatrice, daughter of Queen Victoria. Prince Louis is somewhat tall in stature, with well set shoulders. He wears a black beard just beginning to thin and turn gray. The Prince is of a very democratic manner, and has naturally become a great social attraction. From Annapolis the Prince, with the admirals and captains of the British and American squadrons, went to Washington, D. C. New York City and other places will be visited by the Prince during his present trip.

The Principles of Osteopathy

BY DR. A. T. STILL

[Nine months ago we called attention to the fact that no American has yet received one of the five prizes of \$40,000 each, which are annually awarded by the Nobel Foundation of Sweden to the men who have made the most important discoveries in chemistry, physics, physiology and medicine; have produced the most distinguished work in idealistic literature, and have done most to promote peace. This naturally raised the interesting question whether we have in this country men sufficiently great to rank with the twenty-four Europeans who have received these awards, and we asked our readers to nominate those among our American scientists, authors and peace-makers whom they considered most worthy of this honor. This invitation was most enthusiastically responded to by the osteopaths, who circulated petitions and postal ballots with such zeal in behalf of the claims of Dr. A. T. Still, as the American citizen most deserving of the Nobel Prize for discoveries in physiology and medicine, that all other candidates were soon "snowed under." In consequence of the great interest in Osteopathy, as indicated by this, we have asked its founder, Dr. A. T. Still, to contribute an article to THE INDEPENDENT on his discoveries. In the following issue, November 16th, we will print a reply by a "regular" physician, and on November 23d we will report the result of the voting for candidates for the Nobel Prizes. Dr. Still was aided in the preparation of this article by his nephew, Dr. G. A. Still, one of the instructors of the American School of Osteopathy.—EDITOR.]

WHICHEVER side of the case, "Religion vs. Charles Darwin et al.," one wishes to take; whether one believes that man was made from dust, in a finitely short time, by an infinite being, or whether he was made from protoplasm, in an infinitely long time, by the action of finite forces, one must admit that the result has been a practically perfect creation. The wonderful mechanical arrangement of the human system was a marvel to me from the time I studied the meager course in anatomy as prescribed by the medical schools of my day; and yet as I continued to study and took a "special" course in dissection on the "borrowed" bodies of Indians, on the plains of Kansas, I was also struck with the wonderful simplicity of the system. No matter how complex a structure or function was, it was explainable, when thoroly understood, by the simple principles of mechanics.

In this little description of my science I intend to give the reader, in a small way, the facts on which and the reasoning by which, thru many years of adjustment, I finally evolved Osteopathy. I believe that if the reader will follow me he will find I am stating nothing as a fact that science will deny, and I also believe that the thoughtful reader will admit that with these facts my conclusions are inevitable. As for the prac-

tical side of the question, the thousands of "incurables" that I have treated and cured speak for themselves.

My examination and study of the human mechanism showed me that it differed from the jelly-fish and such animals in but one respect—it had a bony skeleton. The jelly-fish had a brain and nervous system, muscles, organs, blood-vessels, etc. The difference here was only one of degree. The jelly-fish had no bones, and I found that for any high development in the animal world bones were essential. They constitute the stability of the system, and just as the "osteons" or bones differentiate man from the jelly-fish, so is Osteopathy differentiated from the jelly-fish systems of therapeutics which, like the boneless ink-fishes, hide their weakness and stupidity in a cloud of long, meaningless words and outlandish symbols taken from the Greeks, Romans and Egyptians. I found these bones to consist of a fibrous tissue, compactly infiltrated with the phosphates and carbonates of lime, with traces of other salts. Two hundred and six of them adjusted together went to make up the so-called skeleton. They were arranged according to the very best mechanical principles: the long bones, whose function was to act as pillars or supports, were hollow, the lines of cleavage were arranged to give the least possible chance

of fracture and they were slightly curved when needed to lessen the jar of locomotion or other physical contact. When needed, I found that motion was arranged for perfectly acting, self-lubri-

tionally light and elastic; the bones of the skull, with the brain to protect, were made with the correct curves, were composed of two plates, overlapping each other, and in every detail constructed to

Dr. A. T. Still, Founder of Osteopathy.

cating joints; such bones as the vertebra, with the extra strain on them and the delicate organs to support, were supplied with elastic connective tissue pads, or bumpers, between them which entirely prevented any jar; the ribs, constantly moving in respiration, were made excep-

best withstand external injury and force. Thruout the entire normal body, in fact, I found the construction to be according to the highest laws of mechanics.

Attached to the bones, I found a set of contractile organs whose function was to move the body; to help it secure food

and other needed substances; to protect it from its enemies, either by fight or flight, and to help it build dwellings for protection from the elements. They were, in other words, the muscles which, using the bones as levers, fulcrums and points of attachment, made complicated motion possible, and distinguished the animal from the vegetable.

The continued source of energy and, in fact, the nourishment of the entire system I found to be a dark red fluid called blood, which was laden with oxygen from the lungs, combustible food from the digestive system and various strange chemicals from the several internal organs—all necessary to the healthy functioning of the system. This blood was brought by a system of elastic tubes called arteries, and after exchanging the oxygen and food for carbon dioxide and waste material, was carried away to a central, four-valved force pump, passing through the lungs on the way for reoxidation and purification. I found that thruout life this pump sucked in its cavity full of blood from the veins of the lungs and forced it out again into the main artery at the rate of seventy times per minute. From the main artery this blood passed thru smaller ones until, by way of the tiny capillaries, it either directly or thru its serum bathed every tissue cell in the body. In its course I noticed that it gave an extra good supply to the various glands or internal organs situated thruout the body. These organs, it seemed, each had its own particular substance or list of substances to take from or give to the blood. Some, like the kidneys, with their thirteen miles of microscopic tubules, would select urea and other waste or poisonous products and discharge them from the system, while other organs perfect chemical laboratories, furnished some essential substance for the system, which substance it made out of the ordinary foods which it selected from the general blood stream. Some of these chemicals helped regulate the general blood pressure, some helped in the intermittent production of normal sleep, some furnished special food for the muscles, some for the brain and nervous system, some for the sexual and reproductive organs; and one system of glands,

called the lymphatics, connected by tubes almost as extensive as the blood system, furnished the blood stream itself and the other tissues with millions of tiny cells called phagocytes, constituting the organized scavengers and germ-killers of the entire system, and also the tissue serums filtering thru the glands were made aseptic and antitoxic.

In all, I found the human body to be a self-feeding, self-cleaning, self-oiling, self-governed mechanism, provided with organs for the selection and procuring of its food or fuel; an alimentary system which could extract from the crude foods all the needed elementary chemicals for the system, while the four groups of elementary chemicals—carbohydrates, fats, proteids and inorganic salts—could be transformed into every needed complex chemical by the various glands or synthetic chemical laboratories of this complex system. The haemolymph and lymph glands, the red marrow, the pituitary body, suprarenals, thyroid, spleen, liver and pancreas, each furnishing its quota of substances, some for reagents at other places, some for energy production and others for antitoxic and bactericidal action, were all more or less interdependent on each other for various compounds, and the disease of any of them would affect, to an extent, all others, while the death of any essential gland would cause death of the entire organism. The interchange of all these thousands of compounds, and the chemical equilibrium of the system depended entirely on a stream of ever changing fresh blood, propelled thru all the organs and tissues by the life-long "lubb-dub" of the little engine in the thorax. The very structure and characteristics of the individual, I found, were dependent on one set of tissues getting essential elements from the most remote organs; for instance, the growth of the long bones and the height of the individual depended on a secretion formed in a gland in the neck called the thyroid. The blood stream was the common carrier for the entire system, enabling the different specialized tissues to help each other in the formation of essential chemicals and carrying away from them all their waste products. Its cessation of movement for even an instant, I learned,

meant death, and this applied not only to the individual when the entire blood stream was stopped, but if the supply to an organ or part were entirely occluded, the death of that part followed, and the line of demarcation between life and death was the exact place where the occlusion occurred.

Understand that I do not claim to have discovered the circulation of the blood and such other known facts that I have mentioned. Others did that before me and were punished for it. Dr. Harvey

of post-mortem specimens, I found this to be true in every case: that is, there was some derangement of the blood supply, either causing or accompanying all disease processes. From this fact came the first postulate of Osteopathy: "An unobstructed, healthy flow of arterial blood is life." With this in mind I began to treat my patients by manipulations, to stir up the blood supply of those organs, such as the liver and bowels, which were easily reached. I got some results, but realized that I was only on

American School of Osteopathy. Main Building and Students.

was turned out of the English medical societies and burned in effigy when he demonstrated the circulation of the blood, and if I, building on these facts, demonstrated others and was therefore unpopular, why should I complain? Knowing that the death of any structure depended on the cessation of its blood stream and that death could not occur without this, I reasoned that disease, which is really a fractional death, must be due to a partial cessation of the blood flow from some mechanical obstruction to the artery or vein of the organ primarily affected. Studying hundreds

the first round of the ladder. I had not yet found the real underlying cause of disease.

I knew that it was due to the comparative purity of the blood in three men who, when exposed to the same disease, one died, one recovered and the third did not even become ill; but what was back of this condition of the blood? In my day very little was known of vaso-motor nerves, sympathetic ganglia, brain and spinal centers for the different viscera and organs and special centers for special functions. Nerves were supposed to carry motor impulses to the

muscles and to carry back sensations from the periphery, and beyond this little had been worked out.

To the men who have demonstrated in the laboratory by hard work the recently discovered cord tracts, brain centers and ganglionic functions, I and my followers give due credit, just as we expect credit from all true scientists for what we have demonstrated. From my dissections and studies, then, I learned that the spinal cord gave off thirty-one pairs of nerves which joined with the gangliated cord or sympathetic nervous system lying in front of the spinal column, and then penetrated every organ and tissue in the body, whether there was any apparent need for it or not. I found that in general the nerves accompany the blood-vessels, and then I learned that the size of the blood-vessel and the amount of blood it was to furnish to any part or organ depended on the vaso-motor nerves.

The nervous system controlled the rate of the heart and lungs; it controlled the selection and absorption of the food; it attended to the internal digestion and activities; it told each gland how much of its secretion to discharge and how much of another to take up. Every process in the entire organism was under the control of this all-penetrating telegraph system, with its great central battery and its multitude of smaller sub-batteries or sympathetic ganglia. If, then, there were any disease processes in the system they must be due to very strong mal-influences or the nervous system must be out of order—some mechanical derangement must exist. The system has but three enemies, namely, the unorganized poisons or chemicals, the organized poisons or bacteria, and traumatism. Its ability to cope with these depends at all times on the health of the nervous system, which, controlling the internal secretions and the blood stream, must furnish the elements to counteract the poisons, both organized and unorganized, and also to repair the injury done by trauma. Under ordinary conditions, then, there must be some mal-condition of the nerves to an organ or to the bactericidal organs before there could be local or general disease, and if there was such a condition disease would

soon appear, because the body is always exposed to more or less disease producing elements.

Further study of the nervous system showed me that all the bodily functions were carried on by and had centers in the cord which gave off from these a pair of nerves between each pair of vertebræ to control the sympathetic system and the organs and viscera of that segment of the body. These nerves passed out thru very small openings, called foramina, and thru these same openings between the vertebræ passed in the blood-vessels supplying the cord. Thru these tiny openings, then, went all the vital impulses between the cord and viscera, and also the gross nourishment of the cord. Thru them went life.

Here, as nowhere else, would an apparently minor condition cause widespread results, and here I found most of the mechanical derangements that I knew must precede disease. I say most, because other mechanical lesions, such as contracted muscles, tumors causing sciatica, constipated colon causing varicocele, etc., do occur, but at these foramina we find the seat of ninety-five per cent. or more of the lesions. The lesion consists of a slip or sub-luxation of a vertebra causing a change in the size of the foramen and consequent interference with the nerves and vessels. This theory has been proven a fact by examination, treatment and cure of thousands of cases. That it is possible, no one but a fool can deny; that it is a fact, no one who has thoroly investigated will deny.

The basis of Osteopathy seems simple, but to understand it, to prove it, to be able correctly to practice it, one must thoroly understand the entire system, one must study it like the best men of other systems of therapeutics study it, and so in our schools we teach all that they do, depending principally on normal and morbid anatomy and physiology, leaving out only materia medica. Our course is twenty-seven months—as long as the average medical school. We are not masseurs and we don't "rub" any more than the artist "dabs" the paint on the canvas for a Madonna, or the sculptor "chops" on a block of marble. We believe that man is mortal, and that if he

drinks or absorbs enough prussic acid he will die; if he has his head cut off he will die; some time after senility begins he will die of old age in spite of any treatment, but we believe that the diseases of which most people die today before their time are due, not to a lack of some sort of a pill or tincture, but to the mal-working of some organ or set of organs, and that this, in turn, is due to mechanical interference with the nerve supply, and we have found most of these interferences at the vertebral foramina, and that we

can remedy them is shown by the thousands of otherwise incurables that we have cured.

To end with, believing as we do, that the mechanical displacement of the bony vertebræ constitutes most of the lesions causing disease, and since the vertebræ are bones, and since *osteon* means bone, we do not think that "Osteopathy" is such a misnomer for our science as some critics would try to indicate by saying that we believe all diseases start in the bones and are cured by rubbing them.

Waiting for the Verdict in England

BY JUSTIN McCARTHY

HERE in the British Islands we represent just now such a condition of things as that illustrated by a once popular English picture called "Waiting for the Verdict." Our political parties do not seem able to turn themselves with genuine earnestness to any plan of campaign while waiting for the opportunity for a trial of strength thru the medium of the General Election. The one thing certain is that the General Election must come before very long, but then, nobody knows how soon it may come, or how long it may be put off, and in the meantime our leaders of parties do not seem to know very well what to do with themselves. On both sides of the field there appears to be an equally strong conviction as to the result of the election. I have not heard from any lips or read in any newspaper the slightest expression of a doubt as to that result. The Liberals, the Tories and the Liberal Unionists seem alike possessed with the conviction that there can be only one issue to the coming struggle, come when it may, and that that must be the complete defeat of the present government. One must, indeed, amid all this unanimity of conviction recall to mind the aphorism that the unforeseen always comes to pass, but most assuredly, if the proverb could be justified in this instance it will be the very culmination of the un-

foreseen's triumph. Assuming, however, as I think we may all fairly assume, that the Conservatives are destined to be defeated at the General Election, and that the Liberals will come into power, a very serious question then arises as to the sort of Liberal Government we are likely to have in the first instance, and how long it will last.

For myself, as an outer observer, not, however, altogether unacquainted with politics, I cannot see how the new Liberal Government is likely to hold together long, or while it holds together to be popular with the greater number of the Liberal constituencies. It seems to me that the new Government will at the outset have to include some men who, while influential among their own immediate supporters, have not for a long time been popular among the Liberals generally. These men are still professing Liberals, and have held high offices in former Liberal administrations, and I do not see how they can well be left altogether outside the door while the new administration is being arranged, and on the other hand I do not see how any Liberal Ministry can go on for long with such men controlling some of its departments.

I am referring now, of course, to such men as Lord Rosebery, and to those who are commonly described as Liberal Unionists, statesmen who drew back

PERCY WHITE.

from the Liberal party during its struggle for one of its most important reforms, and have ever since been drawing farther and farther back from the front of Liberal politics. We have now no statesman whose genius could hold a great party together with power like that exercised by Mr. Gladstone, and we have seen how Mr. Gladstone himself was not able to keep the Liberal party together while it still had in it such men as Lord Rosebery, Mr. Chamberlain, and others of a like uncertain Liberalism. Just now we have no man who can lay claim to anything like such a commanding authority over the Liberal constituencies. Such a man will, no doubt, come in time, but he has not shown himself as yet, nor is it even easy to venture on conjectures about him, and in the meanwhile one can hardly expect that the most triumphant victory for the Liberals at the coming elections will make everything safe, steady and smooth for the Liberal Government then to come into office.

Even since I began to write this article I have heard the sad news that Earl Spencer has been stricken down by a sudden attack of illness. Now, it has been understood for some time that Lord

Spencer was to be the Prime Minister of the expected Liberal Government, and Lord Spencer is undoubtedly the one man who could hold, if anyone could, the Liberal Party together at present, and in whom all sincere and advanced Liberals could put an absolute trust. Only the other day, as chairman of the committee charged with the ar-

EARL GRANVILLE.

rangements for the opening of the national monument to Mr. Gladstone, Lord Spencer issued invitations for the ceremony, which is to take place in London on Saturday, the 4th of November. There is something peculiarly melancholy about this sad coincidence at the present crisis. The whole country, and, indeed, the whole civilized world, will join in the sincerest hopes that Lord Spencer may come safely out of his present danger, and be spared to his people and to the Liberal cause. I am relieved to hear that later accounts become more and more hopeful.

Mr. Henniker Heaton, who has made himself conspicuous by his most valuable services to the cause of international postal reform, is now exerting himself in the creation of a league for

the establishment of universal penny postage. The object of the league as he describes it himself is:

"that any inhabitant of our planet, white, black or yellow, may be enabled for the sum of one penny to communicate with any other, at the lowest possible rate and the highest obtainable speed; Englishmen with Frenchmen, German, Italian or Russian; European with American; Asiatic with Australian or African; so that when one soul has something to say to another, neither color, nor religion, nor greed, nor diplomacy, nor national antipathy, nor latitude, nor longitude, nor poverty, nor any other barrier shall stand between them."

Twenty years ago I had the honor and the satisfaction of voting in the House of Commons in support of Mr. Henniker Heaton's motion for a system of universal penny postage, and since that time he has carried his work to complete success so far as the English and the Colonial system is concerned, so

LORD EDMUND FITZMAURICE.

that now a penny postage stamp will carry a letter from England to Canada, to India, to the British settlements in China, and all over Australasia. Complete success cannot surely be far off.

One of the most interesting books we have had for a long time in this country is the "Life of Lord Granville," by Lord

Edmonde Fitzmaurice. The book, which is in two volumes, has just been published by Messrs. Longmans. The late Lord Granville was a Liberal statesman all thru his remarkable career, and he held some of the highest offices in Liberal administrations. He was intensely earnest in all his political convictions, but, like some other very earnest men with whom history makes us acquainted, he appeared to the outer world as a man full of genial humor, taking all things pleasantly, smiling at difficulties, and making danger the subject of a bright jest. He accepted the principle of self-government in some form for Ireland even before Mr. Gladstone had become a convert to that faith, and, like Mr. Gladstone, he remained a fearless Home Ruler to the end of his life. It was my good fortune to have some opportunities of meeting with Lord Granville during the later years of his career, and I shall ever retain the impression made upon me by his genial manners, his delightful humor, his sparkling wit. Lord Edmond Fitzmaurice, his biographer, has already had a political career of some distinction, for he was Under Secretary of State for Foreign Affairs during a Liberal administration, and was entrusted with impor-

EARL SPENCER.

tant powers in the rearrangement of the European provinces of Turkey under the Treaty of Berlin. He was for a time private secretary to the late Robert Lowe, Lord Sherbrooke, whose life he has written, and he has indeed won distinction in literature as well as in politics. Lord Edmond Fitzmaurice had the immense advantage of being allowed to publish a great number of letters passing between Lord Granville and many men of the highest influence and position, and many letters even passing between Lord Granville and the late Sovereign, Queen Victoria. It is easy to see that in many instances the writers of these letters never could have imagined at the time of writing them that there was the slightest likelihood of their ever being published for the edification of the general reader, and some of them are indeed delightfully and humorously characteristic. Some of the letters of the Duke of Devonshire, when, as the Marquis of Hartington, he held office in a Liberal Government, are particularly amusing because of the frankness with which the writer describes the continual puzzlement of mind brought upon him by the suggestions and the arguments of Mr. Gladstone in Cabinet council. The piquancy of some of these letters would of itself secure readers for Lord Edmond Fitzmaurice's volumes. But the volumes could not fail to impress their value on the reading public, even if they had not contained any of these unexpected revelations. The work is, in fact, an admirable specimen of biography, and will probably make known thoroly to the world at large for the first time the full capacity and the highest qualities of the eminent statesman who was so commonly regarded in his own time by the outer world as a brilliant wit and a careless humorist. Lord Edmond Fitzmaurice has a style at once clear and vivid; can make a shrewd and sound estimate of capacity and character, and altho not given to mere outbursts of enthusiasm, he is ever ready to warm with a full and generous admiration for political earnestness and for genuine statesmanship. Some of the London critics have already said that this "Life of Lord Granville" will take rank fairly with John Morley's "Life of Gladstone." The English states-

men and parliamentary orators who were great in Lord Granville's time have now all, or nearly all, passed away, and it is a satisfaction to know that some of them at least have found biographers capable of accomplishing such a task. Lord Edmond Fitzmaurice is himself, I must say, a man held in close esteem and warm regard by all who have had the good fortune to be admitted to his friendship. He was out of the House of Commons for some years because of the weakly condition of his health; but he has lately recovered his physical strength, has found again a seat in Parliament, and is already regarded as certain to be offered a place in the forthcoming Liberal administration.

I have just heard the sad news—news which will fill the American as well as the English world with sadness—that the great English actor, Henry Irving, is dead. The death seems to have been sudden and utterly unforeseen. Some little time ago Sir Henry Irving made public announcement of his purpose to retire from the stage, when he should have completed the fiftieth year of his dramatic career, and it was then understood that another season in America was to be accomplished by him before his withdrawal into private life. And now, on the very eve of that intended American visit, the great dramatic career has come to a close. I had the honor of knowing Sir Henry Irving well since the earlier days of his renown in London, and I had the highest admiration for his sincerity, his unselfishness, his many exalted qualities of character, as well as for his artistic genius. He ever devoted himself to the genuine advancement of the dramatic art and the theatrical profession, he was always anxious to give a chance on the stage to any young man or woman of genuine promise, and he had ever a ready, helping hand for a distressed brother or sister in the profession. Long years have passed since so heavy a loss has befallen the English stage as that so suddenly brought about by Henry Irving's death. I have just had an opportunity of conversing on the subject with Sir Squire Bancroft, and that eminent actor and manager expressed to me his full conviction that no man in our time had accomplished such

great work for the tragic drama in its presentation on the stage as had been done by Irving, and that no man was ever more ready to hold out a hand to his comrades in the profession, and to those who showed good claim to be welcomed into such companionship. The name of Henry Irving will be ever remembered in the history of the English stage. The remains of the great actor are, it is now announced, to repose in Westminster Abbey.

I wrote in my last article for *THE INDEPENDENT* that a new novel had just been published by Mr. Percy White, "The Patient Man" (Methuen & Co.), and that from what I had heard it would seem to be one of his best. I had not read it at the time, but now that I have read it I certainly think it is one of his best, altho the story is in itself more serious, and more actually painful, than any of his that has gone before it. The story has what one always finds in Percy White's novels, some wonderful character drawing and bright, realistic pictures

of contemporary social life. The men and women whom the author brings before us are, whether good or bad, always real living men and women, and never seem out of the range of our sympathy, or at least of our comprehension and recognition. Stephen Gale, the patient man, is, I fear, a somewhat unusual type of personage, but Mr. White succeeds in making him seem human and natural, and one sympathizes so much with his romantic and unselfish love for Drucie that one is rejoiced when the story ends happily for him. The other characters are effectively drawn, Drucie's mother, Reggie Heathcote, and "Pete" Hunter, look at us out of life.

Mr. Robert Hichens, author of the famous "Garden of Allah," has just published thru Messrs. Methuen, a new volume. It is called "The Black Spaniel and Other Stories." I have not yet read it, but I hope to give the readers of *THE INDEPENDENT* my opinion of it in my next article.

LONDON, ENG.

Books Post Mortem

BY AMOS R. WELLS

I CARE not that some other man,
When I am dead and gone,
Will play my part upon the stage
That I have trod upon;
Will lord it in my very house,
Will tend my bit of ground,
Will do my work in just the same
Perpetual pleasant round.
I'll let him use my desk, my pen,
And all my household nooks;
But I shall haunt him if he dares
Lay hands upon my books!
To think that some unheeding boor
May soil my Aldrich fair,
Or break my Chaucer's back, or mar
My Hazlitt debonair!
To think that some unhallowed thumb
May dogsear all my Lamb,—
My soul will shiver in dismay,
No matter where I am!

I see them in their piteous plight,
Their pages torn and frayed,
Their binding loose, their covers bent,
I see, and cannot aid.
I even see them—at the sight
My heavenly harp will fall—
Exposed among the "second-hands"
Upon a sidewalk stall.
I see them marked a paltry dime,
I see the careless throng
Pause casually to tumble them,
And sneering pass along.
Ah me! Ah me! I do not mind
That shrouds are pocketless;
My little gold, my bank account,
I leave with willingness;
But oh, that some celestial van,
Some spacious van were given,
That I might put my books therein,
And pack them off to heaven!

AUBURNDALE, MASS.

The Story of a Handicapped Life

[The minister who tells this story is now in the Methodist Itinerancy of one of the great Southern States. For obvious reasons he does not care to sign his name. We comment upon his story in our editorial columns.—EDITOR.]

I WAS born in a fine old county of one of the Southern States. My father was a German, and came to this country when a young man. He was a steady, industrious, frugal man, and made many friends in his new home. He worked on one of the first railroads built in the South, serving in the capacity of a "track-raiser," or section foreman, for more than a dozen years. He then bought a farm and moved to it when I was about five years old, and it was on this farm that my childhood was spent. My mother belonged to one of the oldest families of the county, and was a woman of good sense and decided character. There were eight children of us, three sons and five daughters. My mother had two brothers who were afflicted with cataract. And this same infirmity showed itself in our family in one of those strange freaks of heredity. My oldest brother developed cataract on his eyes several years after birth, while in my younger brother and myself it was congenital. And my case was the worst of the three, and worse than either of my maternal uncles. One of my earliest and most vivid recollections is the first of four operations on my eyes for this trouble. It was before I was five years old—and long before the days of local anesthetics. I was placed full length on a bench, tied hand and foot, my head was grasped firmly, and my eyes, first one and then the other, were held open, while the doctor inserted a sharp needle, and attempted to cut up the cataract, hoping that the particles would be taken up by absorption. It was only after the third of these operations that I experienced any great benefit. I was then thirteen years old, and large enough to submit quietly to the operation. I remember it all so well. It was a day in May. I sat down before a window, and the doctor inserted his needle in the right eye. A moment later he had pressed the cataract from over the sight. And then, as if a dense fog had suddenly rolled

away, there burst upon my view such a vision of field and sky and sunlight as I had never looked upon before. I forgot the pain of the operation, and broke out into rapturous exclamations of delight. That was over forty years ago, but that day in May and that afternoon hour marked an epoch in my life. Afterwards I could see to read ordinary print.

But the sight these successive operations left with me was far from perfect vision. The reading I was enabled to do, and that which I have done all my life, was with the right eye—there is still some cataract on the left eye—and by the aid of the strongest glasses that could be had. These glasses were double convex, and looked like the lenses of a microscope.

I entered school at thirteen. The teachers were very kind to me, and took much interest in putting me forward in my studies. These were war times in the South, and spectacles, like many other things, were not easily obtained, so my younger brother and myself were forced to use the same pair of glasses in school. But I learned many of my lessons thru the eye of others, especially two girl cousins of mine, and got on pretty well. By the end of the first year I could read readily, and had taken some lessons in geography and history, as well as arithmetic.

I attended school a part of every year after this until I was twenty-one years old, during which period I read some, or all, of the works of Hume, Sir Walter Scott, Charles Dickens, Washington Irving, and many books by authors of less note and ability, and acquired a fair knowledge of Latin, a little knowledge of Greek, went into geometry in mathematics, and gained a pretty thoro acquaintance with the English branches. It was my hope that when I should be ready to go, I could enter the old college, whose bell we could almost hear from our home. But my father died very suddenly in June, when I was in my twenti-

eth year, and while he left an estate of several thousand dollars, our affairs were not well managed, and I did not have the opportunity of completing my education in this way.

When I reached twenty-one I was confronted by a serious question: What should my life work be? Farm work was out of the question, the printer's trade, which I should have preferred to everything else, was equally so; no merchant wanted a clerk who was too blind to wait on his customers, and school-teaching seemed as impracticable as any of the rest. Thru the help of an uncle, I got a little school, which was taught in one end of an abandoned log cabin. This lasted only a few months, and was the beginning and end of my experience in the work of a teacher.

Ours was a religious home. Family prayer was one of the institutions of the home, and my part in this—after I was ten years old—was to set the hymns, which my father lined out in the good old way of our ancestors. And I was a religious child. I often prayed that I might see well, and it would have been no surprise to my childish faith if the Heavenly Father had taken me at my word, and allowed me to open my eyes on the world with the sight that others had. I was consciously and satisfactorily converted when I was in my sixteenth year, and some time afterwards connected myself with the Methodist Church. Because I showed a religious bent, perhaps, and possibly because they could see nothing for me but the work of the ministry, my friends and family used to tell me that they thought I ought to preach. But what they said rather hindered than helped me. I believed then, as I do now, that every true preacher is called of God, as was Aaron, and to preach because I could do nothing else, seemed little less than sacrilege. But after a hard and very honest struggle over the question, I decided to give my life to the ministry, and was licensed to preach at twenty-two. A year later I was recommended for admission on trial in the itinerancy, but the presiding elder under whom I was licensed to preach, told me very plainly that he did not think I could see well enough to be a traveling Methodist preacher. He was a brother

of one of the bishops, and a man of much influence, and there seemed no appeal from his decision.

This decision quite upset me. My mother's affairs were in such a condition that I could no longer depend upon her for my living. But what should—rather, what could—I do? There was still left to me my license as a local preacher; but there was nothing in this work in the way of an occupation, and no compensation whatever. And while I was willing enough to preach the Gospel "without money and without price," I must live the while. For some months this year I had the very uncomfortable consciousness of living a useless life. In the Spring, however, a distant kinsman, whom my father, several years before, had set up in business, offered me a position in the railroad station and post office in the village, two miles away, saying as he did so: "I will give you your board at first, and if everything works well will give you some clothes later." I accepted the place at once, and went to work in five minutes after the offer was made. I worked here nearly six months before I received more than my board. I remained here three years and a half, the highest salary I received at any time being only twelve dollars a month, out of which I paid seven dollars a month board. My duties were miscellaneous. I helped to load and unload freight, handled many a bale of cotton during the season from September till April, lifted numberless bags of highly scented commercial fertilizers, looked after the post office, and did just anything my employer could find for me to do. I had much leisure in the Summer, which, with odd times at other seasons, I spent in reading and writing. I went over the Bible every year, took up the course of study for young preachers, and did what preaching I could, often walking five or six miles to an appointment. All the time I was longing and hoping against hope that one day I might be admitted to the Conference, and give my whole time to the ministry. At last this longed-for opportunity came. Some of my friends took it into their heads that I could see sufficiently well to do the work of an itinerant preacher, used their influence with the presiding elder, the

same one who had kept me waiting over three years, and just as I was nearing my twenty-seventh birthday I found myself enrolled as a member of one of the Conferences of my Church—and about the happiest man in it.

My experiences at the first annual Conference I ever attended were of the superlative degree. I alternated between hope and fear at first as to whether I should be received, and after this suspense was over, I wondered with fear and trembling what my appointment would be. And when, on the last day of the session—appointments are always read out just before the Conference adjourns *sine die*—I sat with two hundred men, who, like myself, were waiting for the Bishop to announce our fields of labor for another year, I think I must have had some of the feelings of a soldier just on the eve of battle. The Bishop read slowly, allowing the secretary to copy his announcements—first the name of the charge and then the name of the preacher. I was sitting with a neighbor-boy who, like myself, had just been accepted by the Conference. The Bishop came to his name first, giving him a place as junior preacher on the hardest work, perhaps, in the whole territory embraced in the Conference. And then, after some time, which really seemed very long, he came to me. “———,” he read, and then, after the secretary had written the name, he read out my name. And I was delighted. The town was only twenty-five miles from my home, the circuit seemed very desirable for many reasons, and I really felt flattered by the appointment. But my rejoicing was not for long. I discovered in a little while that the course of the itinerant is like the course of true love, in that it doesn’t always run smoothly.

I left home about the 1st of January with a small trunk that held a few clothes and a small number of books, and about three dollars in money, which some of my friends were kind enough to give me. The welcome I received was about as cold as the day’s ride in an open buggy had been. Things were in confusion. The town church had been cut off from a strong circuit, and associated with it were three weak churches. The people

of the town church had held a meeting and passed resolutions to the effect that, “if they were not restored to their original circuit, they would withdraw from the connection.” There was nothing for me to do but to wait until the proper authorities decided the question at issue, and to go on with my work with as little friction as might be. On Saturday before the first Sunday I walked four miles thru the snow, facing a bitter northwest wind, to one of the country churches, and found two brethren awaiting me. To these I talked on some verses of the Thirty-fourth Psalm. The next day more came, and I preached on Philipians 3: 13, 14. That first week I visited and prayed with fifteen families, walking five and six miles a day thru the mud and melting snow.

I remained on this circuit about three weeks, when I was ordered by my presiding elder to go to the ——— mission. Here I had some new towns on a new line of railroad, with two country churches, to which I walked over roads that were little better than bridle paths. The country was hilly and much broken, the people outside of the towns lived in very plain houses, often with only one room, my fare for days together, when away from home, was only coarse corn bread, fat bacon, and coffee without cream or sugar—and not a church on the work had a stove, or was ceiled. One of them was even without a door shutter. But the people were kind, open-hearted folk, my boarding place was very agreeable and I was quite contented. I remained here two years, receiving an average salary of about \$165 a year. I paid my landlady ten dollars a month, from which she deducted the time that I was away from home. I bought as many books as my salary would warrant, but it was years after this before I had a full set of commentaries on the Bible, or anything in the way of an encyclopedia. This lack forced me to be my own commentator, which I have continued to be most of my life since. I have found that it is better to read the Bible than to read about it.

The next year I had a circuit with two towns and four country churches, and which paid me less than \$150. The fourth year, however, I got on better. I

had a charge that embraced six churches, all in a rough country, and twenty-five miles from one extreme to another. I rode this circuit on a mule, which, together with board, washing and the kindest attention, was furnished me by Brother H——, for eight dollars a month. My home was in the country, three miles from the post office, and I did the most satisfactory year's reading of my whole life. Brother H's wife was the hardest worked woman I have ever known, I think. She cooked, did her washing and house-cleaning, milked a cow or two, looked after three small children, and found time to help her husband in the field. I received about \$300 this year, and saved enough out of it to buy a beautiful pony the next year.

I spent the next three years in the county of ———. Here I had much success in my work. A great revival swept over the county, in which others were more useful than myself, and I received about 175 into the Church. Five young men, who are now preachers, took their start in religious work during these years, and I call them "my boys."

After being in the itinerancy nine years, I decided to marry. I had received an average salary of \$200 a year, but I was assured by my presiding elder that if I would marry, better provision would be made for me. I found a sensible, religious country girl, who, after some persuasion, consented to share my itinerant lot, and so, just before Conference met, we were married, and went to the session a very happy bridal couple. And we got a good appointment.

Our first parsonage was a three-room cottage, unpainted, with only one room ceiled, and a little veranda, on which morning glories were trained to grow in great luxuriance that summer. We remained here two years, during which the church prospered greatly. About a hundred members were taken in, and the finances of the charge improved considerably; and our salary of some \$450 a year gave us a comfortable support. Our first child was born this year, a boy, who is nearly eighteen now.

The most trying period of my life came some years later. We spent some

time in a malarial section of the State, and my nervous system was so much affected by this poison, that I was unable to preach for several months. And before I had fully recovered from this attack the mother of my children sickened and died of rapid consumption. She left me with three children, six, nine and twelve years of age respectively, with no settled home, and health much broken. But I was among my kindred at the time, my old mother came to my house, and after a year and a half, I found another good woman as my wife, and the mother of my children.

I have now been an itinerant Methodist preacher almost twenty-eight years. My salary, since I was married, has averaged \$380 a year, exclusive of house rent. I have only once or twice left a circuit in debt to any one in it, and am today free from financial embarrassment. I am now serving my twentieth pastoral charge, and these frequent changes from one pastorate to another, which have in one or two instances involved moves of two hundred miles or more, have greatly added to the expenses of the work. I have paid out three or four hundred dollars in railroad and hack fares, and in freight charges, besides the loss incident to breaking up and moving from one place to another. I have kept a horse fifteen years, and a buggy about a dozen, have had one horse to die and another to go blind, and the buggy I now have is almost like the wonderful one-horse chaise, just before that classic vehicle went to pieces. My sight is sufficient to enable me to drive over plain and familiar roads.

We find it necessary to be economical. Our living is simple. In the morning we have biscuit and butter and bacon gravy, with a little ham now and then, and chicken in the Summer, and fresh pork—when our neighbors furnish it—in Winter. We also have coffee for my wife and myself, and "kettle tea" for the children. At dinner, we have vegetables, such as beans, potatoes and corn, during the summer, with good bread, home-made, and sometimes a simple dessert. At supper, which we generally have about night-fall, we have bread and butter, with fruit, when we can get it, and milk or tea. We have occupied nine

different parsonages, and attached to these have generally been lots large enough for a good garden and sundry patches. On our present lot we hope to make a light bale of cotton this year. I usually buy one good suit of clothes every two or three years, which I save for marriages, funerals and strictly Sunday wear, making less costly clothes answer for everyday wear. These best suits usually cost about fifteen dollars, and I get them ready-made out of the stores. My wife usually makes her own dresses, and does most of the sewing for the family. We keep no servants, but put out the washing and ironing, which costs about fifty cents a week. We generally rise about six, have breakfast an hour later, the little girls go to school, after washing the dishes—my son has been away from home most of the time for a year, attending school—and my wife and I put things to rights in our room, and then sit down for a quiet morning's work. I find the hours before twelve o'clock in the day much the best time in the whole twenty-four for study. I find it hard to be regular in my habits of study. A trip of six to twelve miles in the country must be made every other week to preach at the churches away from my home, and the demand for visiting is a constant draft on my time. My preaching has been plain, and extemporaneous, after careful general preparation. I have tried to take the great themes of the Bible and present them in such ways and words as would bring them within the comprehension of the common people. I have had pastoral connection with about one hundred different congregations, in twenty-four different counties of my native State, and I am sure I have preached to at least fifty thousand different people. I have received about one thousand members into the Church, and have seen a number of gracious revivals. I have reason to know that I have done some good and reason to believe that I have done some of which I have had no knowledge. A few years ago, at a Conference session, I was introduced to a young preacher, who said, "Why, I know you already. At ——— campground, some ten or twelve years ago, I heard you preach on Sunday night. Under that sermon I

was convicted and converted, and so were fifteen others." And this man had been preaching several years, tho I had never met him before.

I have gathered a collection of good books, but have not been able to buy many new works as they have come from the press. I have not yet gotten over my penchant for literary work, and recently have written a novel, which seems not good enough, or mayhap, bad enough, to meet the demands of publishers. It deals with a living question, tho it is not a "problem" novel. The scene is laid in the South, but there is not a "Colonel," nor a "Judge" in it, a fact which ought to commend it to the favor of intelligent people.

I suppose I have been hindered in my work by my defective sight. At any rate, I have been told a number of times that nothing but this stood in the way of my promotion. But it has not hindered me from traveling some of the largest and hardest circuits in my Conference. But it has saved me from the envy and jealousy of other preachers, and that is something to be thankful for. This same defective sight has had its compensations in many ways. The world in which I have lived has had more mysteries in it than the world of those who see well, and larger room for imagination, and for those poetic fancies which give the earth and sky and sun and stars a beauty that is not otherwise their own. And there have been other compensations. The very effort necessary to acquire the knowledge that I have gathered has made me husband it all the more carefully. I could not lightly throw away that which cost me so much.

I have been a conservative in thought and faith. Two great facts in my experience, my conversion and my call to the ministry, have served as mordants to my faith. I have believed that it was my business to find out the truths, and not the errors of the Bible. My observation of men, and my reading of history, have taught me that the men who have had largest influence with God and their fellows, have been the men who have adhered most steadfastly to the standards of faith. Upon the whole, as Horace Bushnell says, it has been a great thing to me to have lived.

Literature

A History of Egypt*

PROFESSOR BREASTED has unusual qualifications to write a history of Egypt. He has not only made prolonged study of the monuments in the museums of Europe and in Egypt, but has edited a series of four volumes of Egyptian historical texts translated into English. He is a student not merely of the hieroglyphic texts, but also of the figured monuments.

It is to be expected of every student that he will emphasize, if not exaggerate, the importance of his own department of study. We see an instance of it in Professor Breasted's Preface, in which he speaks of the influence of the Valley of the Nile on the earliest civilization of Southern Europe. He says:

"Had the Euphrates flowed into the Mediterranean likewise, our debt to Babylon would have been correspondingly as great as that which we owe to the Nile Valley. It is to Egypt that we must look as the dominant power, in the Mediterranean basin, whether by force of arms or by sheer weight of superior civilization thruout the earliest career of man in Southern Europe, and for long after the archaic age had been superseded by higher culture."

This is an extreme statement. The Euphrates Valley, including Chaldea and Assyria, controlled and influenced the Asiatic and Ionian coasts and islands for a much longer time, and much more intimately than did Egypt. Greek mythology and art owe more to the Euphrates than to the Nile. To be sure, for a period of two or three centuries of the Eighteenth and Nineteenth Dynasties, Egypt ruled Syria, but even then Egyptian correspondence with her subject rulers was by the Babylonian writing and language. One is surprised to see how little Egyptian influence there is in the early Minoan period of Cretan art, and even down to the close of the Mycenaean period. Professor Breasted finds an Egyptian priest holding a sis-

trum and leading the agricultural procession in the wonderful bowl of Phaestos, but we can see no more Egyptian influence in it than in the shouting figures that follow. Indeed, the early Cretan art surprises us by its native originality.

This is a most valuable and interesting work. It gives us what, until very lately, it was impossible to get—a sane idea of the prehistoric period, and of the first dynasties. The earliest recorded date the author makes to be 4241 B. C., when the people of the Delta introduced the calendar year of 365 days. Menes, founder of the First Dynasty, united the two kingdoms of the Delta and the Upper Nile about 3400 B. C. It will be seen that these figures are not as preposterous as those which we used to hear of, and which depended on Manetho.

Perhaps the most interesting figure in all Egyptian history is the Heretic King, whom the author calls, Ikhnaton, but who has usually been called Khuenaten. To his reforms especial attention is given, and his attempt to introduce a purer monotheism, the worship of the Supreme God, under the form of the rays of the sun. The author considers him as a religious dreamer, at a time when a statesman was needed. But dreamer as he was, he did more for both religion and art than any other man Egypt ever produced, and is a fascinating character in history, altho the time was not ripe for such a reformer.

We must not fail to mention the wealth of illustrations excellently selected. For special features we must go to other volumes, such as those that figure for us, as does Budge in his two sumptuous volumes, the representations of the gods. But nowhere can we find a clearer account of the general history of Egypt, as known to us by the latest studies and excavations carried on by the numerous societies and individuals at work in the Nile Valley. Fortunately the rule of Great Britain now makes it easy to do this work, and the Government gives free permission, under wise supervision.

* A HISTORY OF EGYPT FROM THE EARLIEST TIMES TO THE PERSIAN CONQUEST. With two hundred illustrations and maps. By James Henry Breasted, Ph.D., Professor of Egyptology in the University of Chicago. 8vo. Pp. xxix, 634. New York: Charles Scribner's Sons. \$5.00.

The Principles of Heredity*

THERE is no department of the biological sciences in which there are more loose ideas with regard to heredity than in medicine. As the general public derives not a little of its information and most of its suggestive expressions, with regard to this important subject, from physicians, this is especially unfortunate. It is not unusual to hear it said: "It is not surprising that So-and-so is suffering from stomach trouble or from heart disease, since his mother or his father before him suffered from the same affection." It is not realized that this suggested relation of cause and effect presupposes that acquired characteristics are the subject of inheritance; that is, that some accidental modification of a living being can be transmitted to the immediate descendants. For this there is absolutely no evidence in biology, and the whole problem of heredity, so complex in its details, would be wonderfully simplified if such expressions were true.

It seems especially fortunate, then, that Dr. Reid should have written his book on heredity mainly for the members of the medical profession. As he says, little or no direct instruction in this important subject is given to medical students, and, in English at least, there does not exist even a text book on heredity to which they may refer. It is with the idea of supplying this unfortunate lacuna that his book has been written. There is no doubt that he has made an extremely interesting and suggestive volume. Most of the wonderful details of inheritance, of structure and instinct that are the very fairy tale of biology find their place in his treatment of the subject, and what he has written is evidently the result of wide reading and serious logical thinking with regard to the many intricate questions involved. At the same time his work is seldom technical, and will be nearly always readily intelligible even by those who are not familiar with the strictly biological terminology of the subject.

In treating of heredity for physicians certain medical aspects of questions have been very naturally insisted on. The

facts of acquired immunity and consequent evolution against disease are used to make clear certain of the underlying principles of a correct theory of heredity. There is no doubt that after a time nations acquire a certain immunity to disease by exposure, and that, on the other hand, tribes and peoples like our Indians, and the South Sea Islanders, who have not been so exposed, fall ready and almost infallible victims even to such comparatively mild diseases as measles and whooping cough. Even the severer diseases of civilization, such as tuberculosis and smallpox, rage with excessive virulence among peoples that have not hitherto been exposed to their ravages.

Dr. Reid's unflinching application to social problems of Weismann's theory of the non-inheritance of acquired characteristics has aroused a great deal of discussion because some of his deductions cast grave doubts upon many of our sociological, educational and philanthropic methods. For example, he opposes all prohibitive legislation on alcoholic liquor on the ground that the only safety is the acquired immunity of the race which comes from long "exposure" to alcohol, causing the extirpation of the drunkards by bringing them to early graves:

"We have seen that just as all races undergo protective evolution against other stringently selective agents of elimination, so various races of mankind have undergone evolution against certain narcotics" [and] "are now happily injured by the presence of almost unlimited supplies of alcohol (or other lethal narcotics). Nature, in effect, has carried on a great and successful scheme of temperance reform, but on lines opposite to those advocated by human reformers. She has eliminated drunkards; temperance reformers propose to eliminate drink."

Another of his paradoxical conclusions challenges the common opinion that a race degenerates by living in cities:

"Country blood does not strengthen city blood. It weakens it, for it has been less thoroughly purged of weak elements. . . . The history of civilization is, in effect, the history of the gradual evolution of the power to resist the lethal influences which surround the town dwellers. . . . Slum life weakens individuals exposed to it; but this acquired weakness is not transmitted to offspring. On

* THE PRINCIPLES OF HEREDITY, with some applications, By Archdall Reid. New York: E. P. Dutton & Co. \$3.50.

the contrary, owing to the increased elimination of the unfit, slum life strengthens the race."

For Tourists in Great Britain

WE are not a nation of walkers for walking's sake; our trolley systems have spoiled us, and most of us are strangers to the wayside. To Wordsworth and his sister, a twenty to thirty mile walk was a mere bagatelle; yet only the other day we exclaimed marvellously because a college president went from New York to Princeton afoot.

The literature of travel becomes much more vital when connected with personal interest. Who would not rather read Dorothy Wordsworth's journals, than the most accurate matter-of-fact record of the Scotch Highlands, accounting for every stick and stone? And all this as a preamble to the statement that in the new volume belonging to the "Highways and Byways Series." J. B. Firth¹ has described sympathetically the Derbyshire country, so that he who walks may read. There are maps to point the roads, there are detailed scene pictures, there are pen drawings by Nelly Ericksen, done with feeling, but not with the delicacy of Joseph Pennell—and there are literary allusions that sprinkle the way with legendary and human interest—but above all, there is a style that stamps the book as more than a guide, yet takes nothing away from its usefulness. The author loves the region he describes.

We are yet too young for our cities to realize their history; we tear down landmarks and put up new steel structures in their stead. New York is a notable example, and it is whispered even in England, that trade is rapidly producing a new London. Mr. Hemstreet has, in his "Literary Landmarks of New York," given us the city of Irving's day, of Poe's day—so changed from that of the present. But in such a book as *Shakespeare's London*,² written by Professor Stephenson, of Indiana University, the historical value is all in all to the tourist who attempts to trace the town of Queen Bess's time. The streets are very faithfully detailed, and fact is sup-

plemented by ample quotations from various writers. And for general reading interest, the chapters on the Elizabethans, the theatres, and taverns and tavern life, prove themselves of uncommon value. The volume is compact, and is intended more for the library than for the satchel.

There is another way of taking a section of a country; by applying the methods of Cuvier, in constructing that far-famed annual of his. This is what Gordon Home, in text and picture, has done in his *The Evolution of an English Town*³—where he tells the story of Pickering in Yorkshire. We are carried from glacial times to 1905, while forest and vale are discussed, century by century, and legends are unfolded generation by generation. The book is one of student spirit, and tho Mr. Home is himself very close to the region he describes, the antiquarian value overshadows the natural feeling and the sociological unity. The book commends itself to special readers more than to the general traveler.

The historical perspective of Edinburgh is admirably given by Oliphant Smeaton⁴, who surveys the city from Arthur's Seat to the Castle, and from King Edwin of the Seventh Century to King Edward of the Twentieth. Like all the other volumes of this "Medieval Towns Series," the book is compact, comprehensive and portable, and conveniently arranged in walks to points of historic, literary and ecclesiastical interest in the city and its environs.

Yet in these several accounts we detect a happy departure; the tourist literature must, or ought to, create feeling as well as supply fact, foster interest as well as meet utilitarian need. And these new books seem to do this. The interest in travel they create is a good influence, for the intimate knowledge of foreign countries and strange peoples is in itself a liberal education. There has always been discussion with us about reducing carfare from five to three cents. On our suburban lines, let us raise the fare exorbitantly in the hope of creating *walkers*. Then away with the dry-as-dust guide books!

¹ HIGHWAYS AND BYWAYS IN DERBYSHIRE. By J. B. Firth. New York: The Macmillan Co. \$2.00.

² SHAKESPEARE'S LONDON. By Henry Thew Stephenson. New York: Henry Holt & Co. \$2.00 net.

³ THE EVOLUTION OF AN ENGLISH TOWN. By Gordon Home. New York: E. P. Dutton & Co. \$3.50 net.

⁴ THE STORY OF EDINBURGH. By Oliphant Smeaton. New York: The Macmillan Co. \$2.20.

Shelburne Essays. Third Series. By Paul Elmer More. New York: G. P. Putnam's Sons. \$1.25.

This new volume of literary studies, originally published in the *Atlantic Monthly*, *THE INDEPENDENT* and the *New York Evening Post*, following so soon after the Second Series, gives reason for hoping that American literature may yet have twenty-seven volumes of *Lundis* to compare with Sainte-Beuve's. In many respects Mr. More is of the same type of mind, and when we find in his essay on Sainte-Beuve the following passage on the importance of the work of the literary critic, as compared with the creative writer, we are justified in regarding as in some degree Mr. More's *apologia pro vita sua* in devoting his talents to criticism.

"No stigma attaches to the work of the historian who recreates the political activities of an age, to a Gibbon who raises a vast bridge between the past and the present. Yet, certainly, the best and most durable acts of mankind are the ideals and emotions that go to make up its books; and to describe and judge the literature of a country, to pass under review a thousand systems and reveries, to point out the meaning of each, and so write the annals of the human spirit, to pluck out the heart of each man's mystery and set it before the mind's eye quivering with life—if this be not a labor of immense creative energy the word has no sense to my ears. We read and enjoy, and the past slips unceasingly from our memory. We are like the foolish peasant: the river of history rolls at our feet, and forever will roll, while we stand and wait. And then comes this magician, who speaks a word, and suddenly the current is stopped; who has power like the wizards of old to bid the tide turn back upon itself, and the past becomes to us as the present, and we are made the lords of time."

If Mr. More is able to realize his ideal of the high calling of the critic he will eventually be able to exert an influence on American literature like that of Brunetière on French. His method is, however, very different from what Brunetière's professes to be, "impersonal, objective, scientific." It is Mr. More's personal austerity of mind which leads him, for example, to revolt at Browning's glorification of the physical nature of man, and to hold that an uncloistered nun like Christina Rossetti is a more normal type of womanhood than Mrs. Browning, with her frankly expressed passion. The last essay in the book on the quest for something per-

manent in this universe of flux and change is of especial interest because it follows closely the lines of Karl Pearson's familiar argument in "The Grammar of Science," yet he comes to a very different practical conclusion.

Five Years in a Persian Town. By Napier Malcolm. New York: E. P. Dutton & Co. \$3.00.

Mr. Malcolm does not profess to write a book of travels; but he has lived in Yezd, one of the most important cities of Central Persia, long enough to form an accurate conception of the character of the inhabitants and to study their manners and customs, their material organization and their social, economical and religious life. He has done so with a thoroughness that would have been impossible if he had to deal with a wider arena. The picture he draws of the Yezdi is not very flattering, and perhaps he is a little too much inclined to judge them according to European standards. But he has the seeing eye and the capacity to make us see what perhaps we might not have been able to see for ourselves if we had his experience. There are some charming descriptions of the scenery and scenic surroundings of the city. Mr. Malcolm believes that the peculiar landscape and atmospheric effects of the desert in which Yezd is situated influence the character of the people. A keen, but quiet and unobtrusive, sense of the humorous aspects of things runs thru the author's pictures of Yezdi life and enhance the attractiveness of the volume.

American Insects. By V. L. Kellogg. New York: Holt & Co., pp. 673, 812 text figures, 13 colored plates. \$5.

In this book Professor Kellogg, of Stanford University, endeavors to provide, in a single volume, a general systematic account of all principal groups of American insects, together with special accounts of their structure, functions, embryological development, metamorphosis and their economical and environmental (ecological) relations. The general principles of insect structure and function are set forth in the first three chapters, which the author strongly recommends to those readers who want to dip here and there into the ac-

counts of habits and kinds of insects given in later chapters. However, it is true that, open it at random, the book is "easy reading" and entertaining to one who has a general interest in insects. Following twelve chapters devoted to the description of American representatives of the various insect orders, there are interesting chapters on the relation of insects to flowers, colors and their uses, insects as carriers of diseases affecting man and certain domesticated animals, and notes on collecting and rearing insects. In short, it seems that nothing needed to make this a complete guide to the study of our American insects has been omitted. The style of the book is in general popular and adapted to the average intelligent reader. Technical terms are used when necessary, but they are fully explained in the text, with convenient references in the index for the use of casual readers. *American Insects* will be useful to the enthusiastic amateur entomologist, who wants a general natural history of insects, to the library where a popular reference book is needed, and to the special laboratory of zoology and entomology. In this special library the book may well take its place beside the famous "Guide to the Study of Insects," by the late Professor Packard, and the "Manual of Insects," by Professor Comstock, of Cornell University, which for a number of recent years has been the standard reference volume for students of American insects.

✧

Kipps. *The Story of a Simple Soul.* By H. G. Wells. New York: Charles Scribner's Sons. \$1.50.

Was Mr. Wells ever a draper's apprentice? He must have been, to get the intimate knowledge of the psychology of this species of human being, which he shows in "The Wheels of Chance" and this new novel. It is a picture of English life, with all its snobbery and conventionality, as-seen thru the eyes of one of a despised class, who suddenly finds himself, like Christopher Sly, raised above his "proper station." Kipps's misery in the London hotel where, in spite of his newly acquired wealth, he felt the contempt of those around him, who all knew how to eat and what to wear, and where he could not maintain

his self-respect by the most lavish tipping, is vividly described in a chapter wherein humor and pathos are mingled, or rather combined, in a manner worthy of Dickens. The futile attempt of his wife, Ann the ex-housemaid, to build a little house and convenient for work, is one of many amusing incidents which show how impossible it is to have one's own way in this world, even tho one has plenty of money. Doubtless they do things better in Utopia. Altho Mr. Wells has promised to stop making excursions into the future in his time machine, he has not dropped his interest in social questions, for the sharp satire, which underlies this amusing tale, shows that he is still the reformer.

Mount Desert. *A History.* By George E. Street. Boston: Houghton, Mifflin & Co. \$2.50.

Many who have visited the interesting island of Mount Desert, have wondered what the early history of that region might be. Most timely is this book by Dr. Street, which is the only history of the island ever written. The first colony in Mount Desert was established by the Jesuit priests at Somesville, in 1613, but was destroyed next year by the English. A century and a half passed before the first permanent settlers came from Massachusetts. In 1814 an attempt by the English to land and burn the ships, drawn up on the beach, was repulsed with heavy losses by the scanty but loyal population. In recent years the island has become one of the favorite Summer resorts on our Atlantic Coast. The book is well illustrated with views of the island and contains also an excellent map.

Persons and Places. By Joel Benton. New York: Broadway Publishing Co. \$1.25.

"And did you once see Shelley plain?" is the constant demand of each generation upon the preceding. It is this desire to form a living connection with distinguished individuals that calls forth such reminiscences as these. Mr. Joel Benton came into casual contact with many people we want to know about—Emerson, Thoreau, Matthew Arnold, Horace Greeley, Barnum and Bryant—and he chats about them in a pleasant

way, tho without contributing anything very novel or important to our knowledge of these men.

Literary Notes

THE "Martineau Year Book," published by J. H. West Co., Boston (75 cents), contains extracts from the sermons of Dr. Martineau for every day in the year.

.... McClurg & Co., Chicago, are publishing a "Library of Standard Biographies" in light, convenient volumes at 50 cents each, in stamped red cloth binding. Recent issues are Agnes Strickland's "Queen Elizabeth," Lockhart's "Sir Walter Scott," Carlyle's "Oliver Cromwell" and Lockhart's "Robert Burns."

.... Adirondack Murray, the apostle of outdoor life, should not be forgotten now that his call to the wild is obeyed by so many thousands. Mr. Harry V. Radford's brief biographical appreciation of the man and his work should therefore find a welcome. (Broadway Publishing Co., New York. 50 cents.)

.... The announcement that Scribners have published a new edition of "Fisherman's Luck," by the Rev. Harry Van Dyke, is not startling news. Many editions have been coming out in the six years since it first appeared, and will continue to be published for an indefinite number of years to come, for it is one of the most charming books of outdoor life ever written.

.... Tourists in Italian art galleries generally find their chief deficiency is a lack of knowledge of ecclesiastical history and legends, which prevents them from understanding and appreciating what they see. "Franciscan Legends in Italian Art," by Emma Gurney Salter (Dutton, New York. \$1.50), is very complete in its account of the Franciscan pictures in the chambers and galleries of Italy.

.... "The Rulers of the South," Marion Crawford's delightful history of Southern Italy and Sicily, has been reprinted by the Macmillan Company, in one volume for \$2.50, with the original illustrations and maps. It was first published in 1900, and reviewed in THE INDEPENDENT in volume liii p. 677. Nothing has appeared since to displace it as the most readable history of Southern Italy.

.... Stevenson lovers—and this term includes all sensible people—will be glad to be reminded again of Scribner's "Biographical Edition" of Stevenson's complete works, with prefaces by Mrs. Stevenson. Three new volumes recently issued contain "The Wrong Box," the strange adventures of a corpse, written in collaboration with Lloyd Osborne; "Complete Poems," and "St. Ives," his last and, as he thought, his greatest work, which is here completed by Mr. Quiller-Couch. These handy volumes are sold at \$1.00 in cloth, or \$1.25 in limp leathers.

.... A book which we earnestly desire should have a large circulation is Frank Vizetelly's

"The Preparation of Manuscripts for the Printer." (Funk & Wagnall's, New York, 75 cents). It would save editors a great deal of trouble if the information it contains were more generally known to those who write. (An author would not have to make very many corrections in his proof sheets to find his bill for such avoidable changes amounts to a dozen times the price of his book.) We are glad to see that the author lays emphasis upon the recommendations of the American and British Philological Associations and United States Board of Geographical Names, to secure simpler and more uniform spelling

Pebbles

BART HASWELL, who was married last week, came out on his front porch this morning and kicked the dog twice. Is marriage a failure?—*Waitsburg (Mo.) Record*.

.... A number of people were seated at a hotel table eating dinner. A man put cream on honey. "That's a funny dish," a woman said. "Well, if it's funny," the man replied, "let's laugh."—*Atchison Globe*.

.... A man wished to sell a pig. So he wrote a bookseller, "I have an animal for sale, do you buy animals, and what do you give, and if you buy, how do you pay, in cash or trade, and do I pay the freight or do you? Answer quick as I have quoted the animal to five or six other dealers, and the one that will give the most takes the animal. Yours to command. G. Wash. Spooks." N. B. (By dealer). Note that he does not mention the animal by name. How tender hearted!—*The American Grocer*.

.... Once upon an evening dismal.

I handed her a paroxysmal
Kiss, and spoke her name baptismal,
Spoke her name—it was Lenore;
Ah, she was a scrumptious creature,
Glib of tongue and fair of feature,
But, alas! I couldn't teach her,
For she had been there before—
And she winked at me and murmured,
Murmured the one word: "Encore!"
Only that—and nothing more.

—*Chicago News*.

.... The Bishop of Manchester, at the Episcopal Church Conference in Weymouth, England, last month, defending religious instruction in the schools, and urging that it should be specific church teaching, solemnly warned his hearers that "fear of proselytism waters the weekly religious lesson down into the dry bones and dust of a somewhat hazy Jewish history." That is rather more complicated than the prayer of an evangelist welcoming the first fruits of a revival: "We thank thee for this spark of grace. Water it, O Lord. water it." But both these efforts were outdone by a political speaker warning the public against the imposition of heavier tariffs on imports, when he said, "If you don't stop shearing the wool off the sheep that lays the golden egg, you'll pump it dry."—*Congregationalist*.

A Further Hope for Russia

WE still believe and hope the best for Russia. We still believe in Witte. We still believe that out of this horrible confusion, out of these warring factions, these riots and massacres, the young century presages liberty, political reorganization and peace.

Why do we believe it? Partly because it is what we want to believe. We have faith that what ought to be, will be, if there can be half a chance for it. When a country is aroused the right has essential force beyond its share of physical force. There is a general law of God that right shall prevail. Mightier even than the sword of Launcelot, is that of Galahad, "because his heart is pure."

And it looks as if the hour has come for the victory of liberty in Russia. This week has seen rapid progress. Last week we rejoiced to chronicle the announcement of representative constitutional government. This week we have to add, under the same compulsion of the people, amnesty for political prisoners and the full restoration of her ancient rights to Finland. Here again the Czar submits to the clamorous will of his people. We believe—we choose to believe—that Witte does this willingly. Whether the Czar Nicholas does it willingly is no matter for consideration, because he has no will to be considered. Of course, the Grand Ducal cabal of corruptionists and enemies of all good are bitterly against it, and are fighting it all they can. We choose to believe that in this year of grace for Russia Liberty is stronger than Despotism.

There are two extremes of antagonism to the present movement for constitutional government led by Witte. One is the party of Socialists, the radicals, guided by exiled patriots, who have no faith in Nicholas or Witte, who wish to overthrow the entire structure of monarchy and put in its place an absolute republic of their own making. They declare the constitution to be a coward's pretense, and they resent and resist it

with violence and refuse to be pacified. On the other hand are the reactionaries, who trust in gatling guns when the policemen's whips fail. They would rule by Trepoff. They are enraged at the concessions, and they join hands of violence with the radicals to discredit Witte's whole policy. It is their cue to prove to the Czar that these concessions will not bring tranquillity, and tranquillity they will not have if they have to provoke uprisings and massacres to prevent it. In no other way is it easy to explain the disturbances in southern Russia. It is not so strange that in the Baku region the Moslems should attack the Armenians, but that in Odessa and Kishnef the mob should pillage and murder the Jews, was at first surprising. The Jews would be sure to be with the revolutionists, and ought to be safe from their associates. But here some one stirs up the mob to attack the Jews, and the police look on with pleasure; so that they seem to have had orders from above. Those orders could not have come from Witte, who married a Jewess. They are believed to have come from the Grand Ducal officials, who still hold the offices and are slow to give up their power. So here are two extreme factions opposed to peace, whose interest it is to keep the pot boiling, violence and murder in the centers of population; the one party that they may overthrow the dynasty, the other that they may restore its privileges and perquisites.

Between them stands Witte, who seems to be the only man that has yet risen above the horizon. If the radicals had only developed a man they might have driven the Czar to Denmark. Or if one of the opulent Grand Dukes or any minister of theirs had shown any force equal to the emergency, he might have dominated the Czar and the situation. But only Witte there is, who possesses sense and will, the two elements that make a man. He knew enough to yield, and he, the man who knew not how to yield at Portsmouth, has known enough now to yield further. He had to

prove to the better and saner people that the Russian Reformation had come, the renaissance of liberty. It took a brave man to create the constitution when it was almost too late; it took a brave man to accept immediately the verdict of the people that if he were in earnest in granting the constitution he must prove it by liberating the political prisoners and exiles; and he added to the proof by restoring her rights to Finland.

With Witte will stand the middle class, the most influential, we believe and hope. They are putting an end to the strikes; they have set the railroads running. They are the ones who rejoiced and sang in the streets and filled the churches with joy when they first heard the great announcement. The next day the revolutionaries had their innings and tried to persuade the people that they could not trust the promises so often broken. Now, we believe, in St. Petersburg and Moscow, the two cities which will decide the matter, peace seems to be returning, and there are soldiers enough to prevent any such violence as has killed a thousand men in Odessa. The provinces do not count for much, so long as the army finds no leader, such as seized thrones in the time of the Roman Empire. That would be civil war; but here it is only seditious violence, which will not disturb the two capitals, but only adds noise as accompaniment to the tune which Witte sings.

The people, we believe, will give these promises one more trial to learn if they will be kept. If within one month the prisoners are released; if elections to the Duma are ordered on the basis of a general suffrage; if Trepoff is removed and a firm man with a gentle hand takes his place, and really allows freedom of the press, freedom of worship, freedom from arbitrary arrests; then the people of Russia will be content to leave the semblance of power in the feeble hands of the Czar. But woe to the Czar, and to Witte also, if the people have to rise again, and again use that now terrible weapon of the political strike, and fill the streets, and call the soldiers to fraternize with them, and send the last of the Romanoffs to end his peaceful days on a foreign shore.

More Martyrs in China

BUT why were they killed? That is the question for us.

It was chiefly a medical mission. Now hospitals are popular in China. The natives come to them in multitudes. Thousands had been treated in this hospital at Lienchau. There was no local ill will towards this hospital or these missionaries. We only have the first, most unsatisfactory reports of the occasion of this outbreak. One report has it that a female missionary tried to take an idol away from people that were worshipping it. Other reports are as improbable as this. All we seem to know is that there was a great celebration in the city, which probably brought in a number of outside people of the turbulent sort, and in some way they were excited against the missionaries and the hospital; that they attacked it and found there a skeleton used for instruction, and carried it into the street as a proof of the cruelties to Chinese practiced in the hospital. They then tried to kill the entire force of Americans. The missionaries fled to a cave, and there five of them were taken and killed, and two others escaped, wounded, to the prefect's house. One of those who escaped was Dr. Machle, who had lived peaceably as a medical missionary for thirty years, but his wife and daughter were killed; also the female physician, Dr. Chestnut, and the Rev. Mr. Peale and his wife. The buildings were destroyed.

But, again, why were they killed? It is impossible to doubt that this was an ebullition, stirred up by fanatic patriotism, of the fresh outbreak against all Americans on account of our treatment of Chinese. A letter was received in this country from Mr. Peale, just after he had been killed, which anticipated trouble. He said:

"The interest in the boycott is vital to the missionaries. Heretofore the Americans always enjoyed special favor, and to fly the American flag meant protection; but it is different now. No personal violence has been attempted, but the people are less cordial and more suspicious. People in China are not asking that their coolies be allowed entrance into the States, but they only ask that the Americans cease treating the Chinese with contempt and allow her merchants and students the same privileges that other foreigners receive."

This letter throws light on the matter. Some trifling affair was the excuse for the outbreak, but the occasion back of it was the general anger against the United States, expressed in the universal boycott, and aroused by the treatment which our United States laws and United States officials have given to respectable Chinese visiting this country. It is the San Francisco Sand Lots that are responsible for this massacre, and the politicians who are afraid of these political hoodlums. We are glad to recall that THE INDEPENDENT has from the beginning opposed and condemned the legislation which has had the approval of both parties. We have seen no reason why a yellow man should not have the same right to come here and work and live as has a German or an Englishman, nor any reason why a yellow man should be forbidden the privilege of American citizenship. On this matter we make no compromise, no concession.

These five men and women were murdered by our American Congress. This boycott which is now costing our merchants so much was fomented by our American Congress. Every man who voted for exclusion and humiliating treatment of Chinese at our ports of entry, and every delegate in national conventions who urged Congress to take this action, must accept his share in these murders and this boycott. We take none.

This movement in China against America is no act of a minority; it represents entire China, in all its ranks, protesting against a treatment which dishonors the yellow race. The highest officers of the Chinese Court are in this matter, are with the common people. We ask our readers to read between the lines the following communication sent last August to the American Minister at Peking:

"The Chinese merchants have full liberty to buy or refuse to buy American or other merchandise. Altho we have exhorted these merchants not to act as they have, our appeal has been without effect. We declare that this opposition is not directed by our Court, and we beg your noble Government not to charge us with it. We strongly desire that our Empire maintain friendly relations with your mighty Republic; and we earnestly pray that your generous President will interpret as liberally as possible the Chinese-American treaty rela-

tive to the immigration of Chinese laborers in America, in order that the Chinese-American commerce may remain prosperous."

Thus the court officially acknowledges that it cannot prevent the boycott, and in the same breath says that it is justified. Thus the entire people, from top to bottom, are turned against this country. Not in China alone, but in Japan, Tonkin and Cochin China the Chinese merchants have joined in the boycott. In China itself we hear of meetings called against the Americans even in small towns; of children running thru the streets and crying, "We will have no more American merchandise"; of a girl tearing off her garments on a public road because she learned that they were made of American stuff, and of placards against Americans affixed to the walls. And now comes the mischievous report that the Russians are charging that the boycott is organized by the Japanese so that they can drive out American competition. Meanwhile a Chinese writer in a native Tien-tsin paper congratulates his people that they "have shown themselves so civil and courteous in their opposition to the prohibition of Chinese laborers in America." We make no complaint of the civility or the justice of the Chinese boycott; but murder of Americans is another thing, and our Government will take a strong course in the matter, as we did when, five years ago, American citizens were murdered in Paoting-fo. And yet we are ashamed before China for our country in this matter. We have not been Christians. It is we that, by alien hands, have slain our own citizens.

Economic Independence

THE deepest feeling entering into the revolt of the people against "the money power" is the passionate love of every strong man and woman for independence. Whatever circumstance or tradition makes one human being the creature or "man" of another, arouses and should arouse the instincts of rebellion.

To men and women of the right sort it seems incredible and intolerable that slavery, serfdom and ecclesiastical tyranny should have been destroyed thruout the civilized world, only to make way for an economic dependence. The man who is

induced by existing industrial conditions to ask for employment, or to work for a salary, at the pleasure of an economic superior may have chosen his lot, but he is free only as a man is free on an ocean steamer. More comforts he undoubtedly does have, but he is even less secure. And we have to face the fact that modern industrial evolution is forcing a larger and larger proportion of the productive population into economic dependence.

Thus far in human history perfect economic independence has been enjoyed only by those individuals and communities that have obtained their livelihood directly from nature. Fisherfolk, hunters, pastoral communities and farmers owning the land that they till are in the strictest sense independent, so far as the economic life is concerned. Rarely have they been well-to-do. Nature has yielded them scant reward for much toil and brave daring. But they have been their own masters.

The desire for a more comfortable existence moves the many, and visions of wealth allure the ambitious few, to attempt other ways of livelihood. Men with the instincts of the trader develop business enterprises and draw around them craftsmen and laborers to work for hire. For a time the business man is as independent, in most respects, as the woodsman or the yeoman farmer, while his employee has sold his birthright of independence for a pottage of gewgaws and conveniences. But sooner or later the business man himself, the employer, the entrepreneur, ceases to be economically free. He finds that by his enterprise he has stimulated rivalry and built up busy towns and cities. These react upon him with resistless pressure. They subject his operations to rules and restrictions. He is told when, how and where he may trade. He is forced to combine with his competitors, to become a factor in a corporate whole. From that moment he is no more his own man than the wage earner is. He may any day be forced out of the very business that his own brain and enterprise have created.

All this transformation has its good side. Combination and the division of labor increase productive power and material well-being. The necessity of "getting on" with one's fellowmen de-

velops the social and moral sympathies. But these gains are bought at the price of an increasing subordination, and increasing uncertainty of employment.

There are two possible ways of resisting the tendency toward economic dependence. One lies thru combination among those whose initiative and security are endangered. It may be industrial or political. Sooner or later it becomes both industrial and political, and takes the form of a socialistic movement. The other way is the more radical program of a return to nature.

The socialistic plan is now ascendant. It is making a tremendous appeal to hard-pressed millions in every civilized land. It seems to offer both independence and material well-being. Its promise is great, and much of its promise will be made good. But it has its unalterable limitations. It can never restore full independence to the individual. By its very nature it demands a large absorption of the individual in the mass.

It is an interesting question, therefore, why there is so little zest for the radical reassertion of independence thru a return to Nature. There still remain enormous areas of workable but unoccupied land on the earth's surface, and the occupied land, not half tilled as yet, can be had for absurdly low prices. Why is there not a strong and swelling current of fearless, liberty-loving men from the dependent occupations into the great natural opportunities for independent life?

The trite answer to this question is, that "farming doesn't pay." Crops must be gotten to market, and the railroads and the middlemen, standing between the farmer and the consumer, absorb a large part of the husbandman's product. Now, this answer, perfectly true from one point of view, is from another, and far more important point of view, not true at all. It is not necessary to send crops to a market. The pioneer settlers of the Atlantic coast, of the Mississippi basin, of the Pacific slope, did not depend upon markets. They were not robbed by middlemen or by transportation companies. They produced for their own consumption, and consumed what they produced. The prevalent belief that under such conditions there can be no division of labor, no specialization, and,

therefore, no production beyond the bare necessities of life, is fallacious. In John Stuart Mill's "Political Economy" there is an interesting account of the extended barter and division of labor in Swiss agricultural communities that practically neither buy nor sell beyond the boundaries of the Canton. Yet they enjoy not only abundance, but also substantial comfort. Every mechanical craft is represented by its skilled artisans, every farmer exchanges produce with his neighbors. This is the home market idea and practice in its legitimate form. It is a spontaneous and natural co-operation "on the spot," whereby producer and consumer are really brought together, and all middleman's profits are saved.

It is not therefore because of any objective impossibility in the plan that thousands of economic dependents in modern industrial towns do not achieve independence thru the return to nature. It is because the imperious wish and the efficient will are lacking in themselves. They have lost the pioneering spirit of their forefathers. They have been dependents so long that they dread to act for themselves. They do not care enough about independence to enter upon a healthily strenuous life in order to get it.

We have no great fear of the socialistic movement, and we anticipate that it will achieve much by way of restoring independence to the multitude. But we also believe that the socialistic movement itself will need to be chastened by forces of quite another sort, if it is not itself to become tyrannical. We should like to see it balanced by a strong and steady movement back to nature and the primitive independence that life in immediate contact with nature insures.

The Salt of the Earth

THE stories of the lives of real men and women, which appear from time to time in THE INDEPENDENT, have, in many instances, been founded upon unhappy experiences. Apparently the authors choose to illustrate by the disappointments and hardships of their own lot the reason why the whole scheme of things is wrong. Reading the chronicles

of the women, the question is how they can possibly endure the martyrdoms they describe, as servants, or wives or even church workers. And it will be remembered that one man explained that he left the ministry in order to preserve his self-respect. There is nothing stimulating in the contemplation of such existences, no matter how much they appeal to our sympathies. It is not even healthy to wish to be like the best of them. One might wish to emulate the life of a hero, but it is morbid to want to become a martyr.

But in this issue the "Story of a Handicapped Life" shows why things hold together in spite of the fact that so many people are unhappy, abused or discouraged. There is a heroic leaven among us, men and women who know the power of overcoming. And more particularly the story shows in what elements the strength of the Methodist itinerancy really consists. A church composed of Bishops and prospective "great preachers" would not last from one General Conference to the next, because there would not be enough "good appointments" to go around. This is no reflection upon the head lights of the Methodist Church, nor of any other Church. A bishop may be, and often is, as good as any other good man; but he has his peculiar limitations. He is not fitted by grace to travel a "one-horse" circuit composed of six churches on a salary of \$150 a year. And nobody ever heard of one getting called to do such a thing. He may accomplish harder, greater things, but not that kind. It is only God who calls a man to the missions and poor churches described by the author of "A Handicapped Life." And no one but God can keep him in such service for twenty-eight years on an average salary of \$380. He could have earned more money making brooms and escaped the hardships of the roads which lay between those "one hundred congregations."

But it is not what a man wins always that makes him great; it is what he can afford to miss. And this preacher has missed most of the glories of this present world. He has never had even the "hope of advancement" which stimulates many a man in the ministry to

study harder and preach better than he would have done otherwise. But since there was no high place for him to look forward to occupying, he could afford to put his whole heart and mind in that "call" from just God. Doubtless he has enjoyed as many spiritual luxuries as any presiding elder he ever had. And he has been "a conservative in thought and faith." That is to say, he has missed the intellectually titillating sensation of enduring faith by the rational process. And possibly he has some erroneous ideas about the Old Testament Scriptures. But what does that matter to a man who has discovered that "the men who have had largest influence with God and their fellows have been men who adhered steadfastly to the standard of faith"! Many a philosopher who knows everything else does not know that. And it is not what a man knows that counts for so much, but it is what he hopes for and what he believes in.

He thinks he may have been "hindered in his work by his defective eyesight." Really it was a great help, because he was thus enabled to travel cheerfully "the largest and hardest circuits," when, if he had been less hindered by his misfortune, he might have been praying for "better appointments." This same defective sight, he has been told, is the only thing that stood in the way of "promotion." But it has "saved him from the envy and jealousy of other preachers." Being human, preachers are subject, like other men, to these infirmities of disposition; but it is especially fortunate to be delivered from their short-comings along this particular line; because, just to deceive themselves, preachers mix the finest kind of piety with their expressions of "envy and jealousy." They are never so disinterested in their opinions, so charitable in their criticisms, so damagingly right in their judgments, as when they take a notion to fetch a brother minister back who succeeds in getting too far ahead in the ecclesiastical procession.

But returning to our friend with the blessed handicap. He imagines people have been kinder to him because of his infirmity. It is astonishing how much good a blind man can find out about his fellows in this

wicked world which others with better vision never discover. The stories that have been told in THE INDEPENDENT harrow the mind with the revelations they contain of cruelties inflicted by everybody from husbands to deacon pillars in the church; but here is a man who has had to live and bring up a family upon a pittance, who has staggered blindly from one hard job to another because his more able-sighted brethren had the advantage, and *he* knew that people have been kinder to him because of his infirmity! The point is, he belongs to the number of those elect, for whom all things work together for good.

When God "calls" a man, he does not see an easy time even if he has good eyes; but there are compensations. If he holds "steadfastly to the standard of faith," it is not such a terrible thing to be blind, and not to have much to eat, and to be obliged to wear cheap clothes. Hereafter he shall be fed on manna, he shall have vision of the heaven of heaven, and he shall have the wings to match.

Finally this preacher's life is exceptional only in his lack of sight. There are thousands in the Methodist itinerancy and in the ministry of other Churches, and out of them, whose lives are as hard, whose hearts are as faithful, and who, being so abundantly blessed of God, have just as little to complain of. That is one of the evidences by the way of their high calling—they do not whine. It is the ambitious, clear-sighted ones, thinking they are not "promoted" fast enough, who are most likely to complain of injustice and a lack of appreciation. And of course the wayfaring disciples have their limitations, too. They do not know much except along the hidden way they have to go. Many of them have never gotten proper control over their religious emotions. Now and then one will shout over the conversion of a hardened sinner, for the same reason that his secular brother yells at a "political rally"—because he is so informally glad. But no braver men are to be found in the battle-lines of this world than these shabby-looking, eager-faced preachers who serve backwoods churches, and no other class of men make as little fuss about being brave.

Salaried Daughters

"How to Keep the Boys on the Farm?" was a question much debated a few years ago. Many solutions were offered; none very adequate, if we may judge from the census returns of the growth of cities. "How to Keep the Girls in the Home?" is a very similar and more important problem now demanding attention. That it is desirable that a daughter should remain in her father's house during that period of indefinite length that comes between the end of school life and the beginning of matrimony is generally agreed. She is better protected there, physically and morally, and her parents feel that they have a right to her companionship, since they have, perhaps, deprived themselves of it for years while she was at school, and they must anticipate another and more complete separation in the course of the next few years.

At the same time the feeling that leads the young woman to leave the home to seek economic independence is a normal and creditable one. Every adult, able-bodied and capable individual ought to earn his or her own living and in such a way as to realize it. No matter how useful a daughter is in the home she usually thinks, and usually not without reason, that her work is not appreciated at its full value. To ask a father for money is as disagreeable as to ask a husband. If she earns it, she ought not to have to receive it as a gift. When we are young we clamor for justice; when we get older we are more humble and glad to be treated with generosity. The daughter in the home knows that she will receive the same treatment whether she is good natured and helpful or disagreeable and lazy, and who has an ethical nature so stout as to resist such a demoralizing influence as this?

At this period of her life, when she is most energetic and ambitious, and most needs work and responsibility, the young woman is either not given anything of importance to do, or receives no specific compensation for her indefinite and voluntary services. Feeling that she is not appreciated or needed at home, she listens favorably to any young man who professes to appreciate her and declares

that he needs her. Or she is tempted by her talents into the professional study of art or music, not realizing that fingers that are nimble at the piano can usually be made more useful in other ways, and that she can exercise her gift for acting without going on the stage, in making herself agreeable when she is feeling cross.

If there is nothing for the daughter to do in the home except to amuse herself, she had better get out of it as soon as possible. It must be acknowledged that household industries are being taken away by the factories so fast that it is increasingly difficult to find really profitable employment for women in the home. But in many cases where the daughter leaves home wholly or for the day to do teaching, typewriting, or other work in office, shop or factory, there is need of her work in the home, and often help has to be hired to take her place. In such cases, the daughter should be given a regular salary, approximately the equivalent of what she could earn outside after making allowance for board, room rent and the numberless privileges a girl has in her father's house. The salary should be at least equal to what would have to be paid for the same work if a stranger were called in to do it, and the duties should be as distinctly defined and as promptly and efficiently performed. This is a very different thing from an allowance without definite duties.

We know of several families where this plan has worked successfully. In one instance the daughter, while unmarried, became a capable housekeeper and manager, buying all supplies and relieving both parents of care and annoyance, for which she received a housekeeper's wages at the end of every month. Another, whose mother is an invalid, gets a weekly envelope containing the same amount that would have been paid a nurse. Both these salaried daughters were happy, contented and efficient, and each had a feeling of independence and self-reliance never to be attained under the "allowance" system or the usual haphazard appeal to father for money to gratify needs or whims.

Her earnings the salaried daughter can use as she pleases, spending it for

her clothes, and in gifts, charity and pleasures. If she puts part of it in the savings bank, as she should, she provides her own dowry, just as many girls now do by outside work. This is a return in a novel way to the good old plan of primitive times, when no girl was eligible to marriage until she had a "hatching-chest," full of linen and clothes of her own spinning, weaving and sewing. In those days daughters were thus given an opportunity to earn their own dowry in the home, altho they received no cash. Whether the work of the salaried daughter be as housekeeper, nurse or social secretary, it is a better preparation for married life than most outside occupations. The plan does not in any way abrogate filial affection or its implied duties. Where a daughter stays at home from a sense of duty to her mother, the approval of a good conscience and the verbal recognition of her value are not always sufficient to alleviate the feeling of dissatisfaction and unrest caused by her desire to realize her economic entity.

It is, after all, only a phase of the general difficulty that parents, and mothers especially, have in knowing that their children have grown up. Mothers are apt to try to prolong the little Lord Fauntleroy period as far as possible, and they keep their daughters in short dresses until they look like ostriches. It is a rare woman who can delegate responsibility, even to hired help, and it is much harder for her to take her daughter into partnership than it is for a father to take his son.

Opening the Railway Books

AFTER the admissions made last week by certain officers of railways and private car companies, and the refusal of other officers to answer the reasonable questions of the Commission, it is difficult to see how any member of Congress can oppose legislation for an effective supervision of railway rates and practices.

The General Manager of one private car company which uses 4,550 cars, said that he had given rebates and was still giving them, because this was the common practice of all corporations like his. The separate existence of his company

appears to be a kind of corporate fiction. The 4,550 cars are owned by the Atchison, Topeka and Santa Fé Railroad Company, as to whose practices Mr. Paul Morton has testified. Both companies have the same president and are controlled by the same group of capitalists. The cars move across the continent, from one ocean to the other, but the amazing claim is made that they are not engaged in interstate commerce, and that for this reason the Commission has no right to inquire whether the company that operates them is violating the law!

By the Armour Car Lines, a company operating 12,500 cars, and moving them from one State to another, the same extraordinary claim was set up, and on account of it the President, Mr. Robbins, refused to answer the Commission's questions about this company's business. Did the company give rebates or special low rates to Armour & Co.? No, he replied, but if it did, this was a "private matter," as to which the Commission had no right to seek information. Questions about the company's secret telegraphic code book (now in the possession of the Commission), containing instructions as to the giving of rebates, were resented with some indignation, Mr. Robbins not asserting that the book was a forgery, but complaining that it had been stolen from the company's office. And then the Atchison Company's traffic manager declined to say whether that company had recently been a party to a pooling contract (in violation of law), or whether such a contract between it and other companies was still in force.

It was a timely exhibition of the defiant attitude of those whose transportation business the Government seeks to control in the interests of justice. This claim of the great car lines that they are not under Federal jurisdiction seems to us to be an absurd one. But if there is any legal foundation for it, a bill subjecting them to the Commission's supervision should be passed by unanimous vote in the first week of the coming session of Congress.

There should be no delay about extending the Commission's jurisdiction over all such lines, all incorporated side-tracks

and private terminals, and all other devices by which the requirements of existing laws may be evaded and unjust discrimination may be concealed. It is by means of such devices that a few men have been unjustly enriched at the expense of many competitors and the public.

But after every device of this kind, and every subsidiary corporation engaged in interstate transportation shall have been surely placed under Federal authority, how shall the rate discrimination now concealed (except when admitted by the officers who are guilty of practicing it) be prevented? It must first be detected. If the Commission be empowered to substitute one general and published rate for another challenged and found to be unreasonable, this will not enable it to ascertain whether its substituted rate, or any other, is reduced secretly for the benefit of one or more favored shippers. How could the Commission have found out that these rebates were being paid on the Atchison road, if General Manager Leads had not told about them, last week, on the witness stand?

Only by examination of the railway companies' books can the information be obtained. This we pointed out in *THE INDEPENDENT* last year, and now provision for such examination is to be made in the bill which the supporters of the President's policy will ask Congress to pass. "We want Government auditors who can go into the railroad offices and find out from the books whether they are discriminating," said President Stickney six weeks ago. He is a railway officer of thirty-five years' experience. At Raleigh three weeks ago President Roosevelt said:

"I hope that by law power will be conferred upon representatives of the Government capable of performing the duty of public accountants, carefully to examine into the books of railroads, when so ordered by the Commission, which should itself have power to prescribe what books, and what books only, should be kept by railroads. If there is in the minds of the Commission any suspicion that a certain railroad is in any shape or way giving rebates or behaving improperly, I wish the Commission to have power as a matter of right, not as a matter of favor, to make a full and exhaustive investigation of the receipts and expenditures of the railroad, so that any violation or evasion of the law may be detected."

No part of the new rate bill which

Congress will be asked to pass will be of greater importance than the section embodying the provisions thus recommended by the President. It will have greater practical value than the section empowering the Commission to substitute a maximum rate in place of one challenged and found to be unreasonable. Such a grant of power would not enable the Commission to reach and suppress the greatest of railway evils, which is unjust and unlawful favoritism in freight charges. Only by expert and searching official inspection of the accounts can the laws which forbid such favoritism be enforced.

The Inter-Church Conference

THE great Conference for Federation will meet in this city next week. It is pregnant of more good for our Christian Churches than any other religious meeting ever held in this country. We have had great meetings, such as the International Evangelical Alliance over thirty years ago, or the International Missionary Conference three years ago; and we have had great meetings of the Pan-Presbyterian, Pan-Methodist and Pan-Congregational bodies, but those were limited in their interest and scope. But this Conference includes the representatives, some five hundred of them, appointed by the national bodies of our principal denominations, representing eighteen million communicants. The largeness of such an embracing constituency is most impressive.

And what will this Conference seek to do?

While doing its business and preparing a plan for wide fellowship it will hold public meetings for eight days, at which the most representative men of these denominations will take part. They will reach the great public, and will show the need and value of union in Christian life and work, both for the Church itself and for the State. This is something for immediate popular effect. It calls attention to the importance of the union in some form of the dissevered branches of the Church.

But the chief work of the Conference will be its decision as to the organization of a permanent Federation of our Prot-

estant Churches. We need a visible bond of union between them. They should be brought together, formally, officially, as one solid body, for the influence they may exert and the work they have to do. It is said to be a serious question now whether the Christian Church has lost its influence in the world. We do not believe it has. We believe that it never had more power than now. But a good part of that influence is dissipated. When we consider the sad exposures of the last year in public life in St. Louis, in Philadelphia, in New York, involving great financial institutions controlled by many church members, as well as in political life, we begin to wonder if we are not mistaken in supposing that the Church can control the moral tone of the community. We need to bring the total religious power of the country to bear on the great problems that are before us, and which not only concern the comity of denominations and the conversion of the world, but the moral quality of our whole community. What the several denominations attempt to do raggedly and discordantly, they can plan to do harmoniously and far more effectively by federated fellowship in the nation and in their several localities. Such a work is well worth an attempt, and we believe it will succeed and accomplish great results.

Sir
Purdon Clarke We welcome Sir Caspar Purdon Clarke, no longer as a British knight, but as an intending American citizen, and Director of our great Metropolitan Museum. The museum has had a splendid history under General di Cesnola; it will have a greater one under Sir Purdon. General di Cesnola was by habit and taste a collector; Sir Purdon is an educator. General di Cesnola brought together a great collection, of course not balanced and even—that could not be in the beginning, and depending on gifts—a show place to the admiring multitude. Sir Purdon will make it a school of both arts and crafts. It will do what South Kensington has done for British instruction, and what Professor Ives has best done in this

country in the St. Louis Museum. And yet we do not anticipate that he will fail to see the value of the historical side of our museum. For we do not yet divorce the department of instruction from that of history and archæology, as South Kensington is divorced from the British Museum. The extension of the building will give room for both. We do not want to have Egypt and Greece supply us simply with models of architecture and sculpture for present day use. The museum begins its new career with the first number of a quarterly *Bulletin*, which will describe important additions, and explain how the museum can be made to serve the public.

The Kongo Investigation We publish this week an article which outlines some of the evidence presented to the commission appointed by the King of Belgium to investigate the alleged horrible cruelties inflicted by the Government of the Kongo Free State. During the week we have the cabled account of the report made by the commission. It was appointed to gloss over everything as far as possible, and it has done so; but it has been obliged to recognize some cruelties inflicted, but not, it is careful to say, by white men, but by native soldiers. But these soldiers were appointed and directed by white men. Some reforms are recommended of evils that could not be denied. An attempt is made to discredit the testimony of prejudiced missionaries. But who else is there to take the side of the natives if not the missionaries? We now look to see what the British and other Governments will do which are responsible for recognizing the Kongo Free State, and which have a duty to see to it that the conditions are fulfilled. We fail to see what right the King of the Belgians has to come into the country of these natives and, under pretext of keeping order, compel every native to pay a heavy rubber tax or labor tax, such as the commission approves. The Belgian rule has been a horrible disgrace which discredits Christian civilization. It is no improvement on paganism.

Insurance

The Dryden Inquiry

SENATOR DRYDEN, of New Jersey, the president of the Prudential Insurance Company, has submitted four questions relating to Federal supervision. We subjoin the inquiries, with such replies as express our opinions:

Q. 1. Do you endorse the suggestion of President Roosevelt, that insurance companies engaged in interstate insurance business should be regulated and brought under the control of the Federal Government?

A. No, unless that means Government ownership and operation of all insurance, for which we are not yet ready.

Q. 2. Do you hold the insurance business to be a national rather than a local interest, and properly entitled to the solicitude and care of the National Government?

A. The question is complex, its terms irrelevant. Insurance in this country is a business carried on by private corporations created under the laws of the several States. It is not of more interest, locally or nationally, than any other business and, therefore, not more "entitled to the solicitude and care of the National Government." As a sociological institution, however, it should be of universal interest.

Q. 3. As a matter of personal opinion, do you hold the business of insurance to be commerce, or an integral and indispensable element of commerce, in the sense in which this term is used in everyday language?

A. Particularly "in the sense in which this term [commerce] is used in everyday language," insurance is neither an integral, nor an indispensable, element of it. The common acceptation of the term embraces the handling, buying, selling and exchanging of tangible commodities. Insurance is not a commodity. It is a system of contracts, providing, in a more or less scientific manner, for the equitable distribution of losses. In "*Hooper vs. California*," and in "*New York Life vs. Cravens*," the United States Supreme Court went so far as to declare that not only was insurance not commerce, but that "the contract of insurance is not an instrumentality of commerce." In "*Nut-*

ting *vs. Massachusetts*," marine insurance is described as "a mere incident of commercial intercourse."

Q. 4. Are you in any way apprehensive that it would be inexpedient or inadvisable to increase the power of the Federal Government to the extent implied in the regulation of insurance by Congress?

A. Yes. It could eventuate in the subversion of popular liberty by centralizing in the control of a few individuals not directly responsible to the people the vast wealth accumulated by policy holders. The net result of increasing the power of the Federal Government in this direction would probably be to render impregnable the positions and power of a comparatively small number of men in the insurance business who would co-operate in controlling the Federal Bureau, just as they have controlled, during a long series of years the insurance commissioners and legislatures of certain States. The strength of the present system of State supervision lies in the fact that the supervisory power is wielded by fifty State officials whose terms of office are constantly expiring. Finally, we are not aware that there is any concerted demand on the part of the policy holders of the United States for Federal supervision of insurance.

Some of the Largest Fires in This Country

THE following interesting and highly instructive table has been compiled by *The Insurance Agent*. A glance at the figures entering into it will show that the conflagration hazard is ever present as a possibility. It certainly is a factor to be carefully considered in the fine art of rate-making:

Date.	Place.	Loss.
1835	New York.....	15,000,000
1845	New York.....	7,500,000
1845	Pittsburg, Pa.....	10,000,000
1851	San Francisco, Cal.....	13,000,000
1871	Chicago, Ill.....	168,000,000
1872	Boston, Mass.....	75,000,000
1889	Seattle, Wash.....	5,000,000
1889	Boston, Mass.....	6,000,000
1892	New Orleans, La.....	6,000,000
1893	Boston, Mass.....	4,500,000
1899	Dawson City, B. C.....	3,000,000
1899	Ottawa and Hull, Can.....	15,000,000
1901	Jackson, Fla.....	11,000,000
1902	Paterson, N. J.....	7,000,000
1904	Baltimore, Md.....	75,000,000
1904	Toronto, Can.....	10,000,000

Financial

To Avert a Trade War

GERMANY desires to make a new treaty of commercial reciprocity with this country. Unless one is made before March next, our export trade with Germany will not only be subjected to heavy new taxes but also be exposed to depressing competition with the exports of several other countries which will enjoy preferential tariff rates. Germany's new tariff will go into effect in March. It consists of maximum and minimum rates, and the latter are granted to seven Continental countries, with which, in connection with the new general tariff legislation, Germany has made reciprocal agreements. Even in the lower of the two schedules the duties upon our chief exports to Germany, and notably upon agricultural products, are considerably higher than those now imposed. But only by means of a new treaty of reciprocity can we obtain these rates for our products. If there be no such treaty, the higher rates, in many instances prohibitive, will be imposed.

The German Ambassador at Washington, under the instructions of Prince Von Buelow, formally gave notice to Secretary Root, last week, that he was ready to negotiate a treaty, and the Prince has given to the press a long statement, saying that he desires to reach an agreement. The Secretary will try to find out what kind of a treaty, if any, the Senate would accept. In all probability the Senate will not grant such concessions as Germany will demand. But if our products are excluded from Germany by the very high duties of the new maximum schedules, Congress may retaliate. In that case the two countries would be involved in a tariff war.

Such a war ought to be avoided, but certain German economic writers, among them Prof. Julius Wolf, of Breslau, err in asserting that it would be far more injurious to this country than to Germany. Our exports to Germany last year were \$214,000,000, of which \$194,000,000 represent food in various forms and the raw materials of manufacturers, including \$109,000,000 worth of raw cotton. On

the other hand, our imports from Germany were only \$109,000,000, distributed over a large field of production. The \$27,000,000 worth of raw materials and the \$76,000,000 worth of manufactures we could obtain elsewhere with little inconvenience and possibly at no greater cost. But the exclusion from Germany of our cotton, breadstuffs and provisions would be extremely inconvenient to German manufacturers and the German people. Still, we should strive to prevent a tariff war, for we should surely suffer in some degree during the progress of it, and it would embitter our relations with Germany, and possibly with other countries. Prince Von Buelow suggests that an agreement might quickly be reached by a mixed commission composed of ten competent men from each country. It is a suggestion that deserves consideration at Washington.

Financial Items

CAPITAL invested in Southern cotton mills amounts now to \$225,000,000, against \$60,000,000 in 1890, and \$21,000,000 in 1880.

.... Since the passage of the supplemental national bank act of March 14th, 1900, 2,702 national banks have been incorporated. During the same period the authorized capital has been increased by \$195,717,000, and the outstanding circulation by \$270,005,000. There are now 5,858 national banks.

.... Net earnings of the United States Steel Corporation for the quarter ending with September were \$31,240,582, against \$30,305,000 in the second quarter of the year, and \$23,025,000 in the first. In the corresponding quarter of 1904 they were only \$18,773,000. Unfilled orders on hand October 1st were for 5,865,377 tons, a quantity which breaks the record.

.... Dividends announced:

Niles-Bement-Pond Co. (Preferred), 1½ per cent., payable November 15th.

Rubber Goods Mfg. Co. (1st Preferred), \$2.29 per share, payable November 1st.

Rubber Goods Mfg. Co. (1st Preferred), 2 per cent., payable October 31st.

Rubber Goods Mfg. Co. (2nd Preferred), \$1.50 per share, payable October 31st.

VOL. LIX

NEW YORK, THURSDAY, NOVEMBER 16, 1905

No. 2972

Survey of the World

The Elections National questions were laid aside at the elections that took place on the 7th, except in Massachusetts, where tariff revision was involved. In other States, and in the cities, purely local issues engrossed the attention of voters. The results show a general and powerful protest against the rule of party machines and Bosses, as well as a determination to stamp out corruption. This protest caused some interesting political reverses. For example, in Ohio, a Republican Governor whose plurality two years ago was 113,000 will be displaced by a Democrat whose plurality is 43,000; and in Pennsylvania a Republican State Treasurer who was elected by a plurality of 268,000 in 1903 sees a Democrat now chosen for the office by a plurality of nearly 100,000. In Philadelphia the reformers have overcome the ring. In New York, Tammany's Mayor has a plurality so small that investigation of charges of fraud may reduce it to nothing, and District Attorney Jerome shows a plurality of 13,000 to the Bosses who would not have him on their tickets.—The rule of Senator Gorman in Maryland appears to be ended. His Constitutional Amendment for the disfranchisement of negroes, which was the sole issue of the State campaign, was rejected by a majority of about 30,000, and 20,000 of this was given in Baltimore, where the Republican city ticket (one nominee excepted) was elected, and more than half the city's members of the State Legislature will be representatives of the same party. In the Legislature the Democratic majority will be so small that it will not be able to pass any similar Amendment over the Governor's

veto. Mr. Gorman and his disfranchising project were opposed in his own party by Governor Warfield, Senator Rayner, the Attorney-General, and many who followed them. It was asserted that the Amendment gave registrars power to disfranchise many whites as well as the negroes.—Altho John M. Pattison, Democrat, has a plurality of about 43,000 over Governor Herrick, the Republicans of Ohio retain the remaining State offices by pluralities ranging from 27,000 to 35,000. Owing to his course with respect to a local option bill, last year, and to a widespread belief that he was in political alliance with George B. Cox, the Republican Boss of Cincinnati, Governor Herrick was opposed by the churches and the advocates of temperance, while Pattison had their support. After Secretary Taft's memorable speech at Akron, in which he said he would vote for Herrick but against Cox and Cox's ticket in Cincinnati, the protest against bossism gained force in the campaign. Cox's recent majority of 40,000 in Cincinnati was swept away, and Judge Dempsey, a Democrat, was elected over Cox's candidate by 6,500. Whereupon Cox announced his permanent retirement from active politics. A Constitutional Amendment providing for biennial elections was adopted. Governor Herrick says to the public that the people of Ohio have been "swept away from the moorings of truth by a wave of prejudice and suspicion," and that "the greatest danger now confronting the American people is the readiness in response to some sudden whim or pretext to desert party principles and allow some individual who claims, sometimes with sincerity, often with hypocrisy, to

represent a cause that is higher than party fealty." Senator Foraker says that the party must return to the old-fashioned practice of having real conventions in which the people's wishes are fairly represented.—In Massachusetts the Republicans elected their candidate for Governor, Mr. Guild, by a plurality of 23,000, but E. S. Draper, their candidate for Lieutenant-Governor, had only 2,300 more votes than his opponent, Henry M. Whitney, an earnest and competent advocate of tariff revision and of reciprocity with Canada, which were the leading questions of the campaign. Boston produced another Jerome in the person of John B. Moran, who made a successful independent canvass for the office of District Attorney of Suffolk County (which includes the city), altho his opponent, District Attorney Sughrue, had been nominated by both of the great parties and was supported by the bar and the press. Moran made an aggressive campaign against bossism and graft, promising to prosecute the guilty, whether they were rich or poor. His plurality was 4,300.—Dr. Garvin was beaten again in Rhode Island, where the Republican plurality was increased. George H. Utter was elected Governor. A Constitutional Amendment, providing for a reapportionment in the direction of more equitable representation in the Legislature, was lost.—In New Jersey the election of county officers and members of the Legislature showed large Republican gains. Everett R. Colby, who defied the Bosses and stood for reform in franchise legislation, was elected to the Senate from Essex County by a plurality of 20,000. Mayor Fagan was re-elected in Jersey City, altho opposed by corporation influence and a party machine. The Republican plurality was increased in Nebraska.

Reform Victory in Philadelphia

To a decided victory for the reform party in Philadelphia was added the defeat of the Republican nominee for State Treasurer, J. Lee Plummer, by William H. Berry, a Democrat, who was supported by the Prohibitionists, the Independent party, and the Lincoln party, the latter being an organization of Republicans thruout the State, who desired

to assist the Philadelphia reformers. Berry's plurality is nearly 100,000. Mayor Weaver and the City Party carried Philadelphia by 43,000, against the ticket (for sheriff, commissioners, etc.) of the local Republican organization, which was still controlled by Boss Durham and the ring, and whose plurality two years ago was 136,000. Two days before the city election, Sheriff Miles, one of the Durham group, announced his purpose to appoint deputies for the preservation of order at the polls. Whereupon Mayor Weaver in a long proclamation denounced him as "the official head of a criminal combination" that was "planning unlawful acts," showed that the law forbade him to appoint deputies for service at the polls, warned him to desist from his "lawless purpose," and gave notice that "resistance to such pretended authority was both the right and the duty of the citizen." Miles, who is chairman of the Republican Committee, then decided to appoint no deputies. The Mayor appointed 2,000 special policemen, among whom were sturdy college football players, other students and prominent business men. These, with the regular police, who worked as earnestly for justice as in past elections they had worked to promote fraud, gave the city an election in which not many fraudulent votes were cast. But attempts to commit frauds caused hundreds of arrests to be made. Mayor Weaver was warmly congratulated by Secretary Root and Governor Folk. In February next there will be an election to fill about half the seats in the City Councils.—For the first time in twenty-five years the State Treasury will be taken from the control of the Republican party, and Mr. Berry promises that "the whole plum-tree system shall come down." His election was promoted by the recent and disastrous failure of a bank in the Western end of the State, with which, altho it had only \$300,000 in capital and surplus, more than \$1,000,000 of the State's money had been deposited, apparently for the use of Republican politicians, one of whom, William L. Andrews, is Delegate from New Mexico. Mr. Plummer had voted in the Legislature for the bills of the Philadelphia ring, and his associations were such that it was believed

that under his management there would be no change for the better in the disposition of the State's surplus of over \$12,000,000.—Following the election, Governor Pennypacker, who had publicly assisted the city ring's political projects, experienced a change of heart and called a special session of the Legislature (for January 15th), to consider bills providing for personal registration, for repealing the Philadelphia ripper act (which he approved some months ago), for reapportioning the State, and for guarding the State's money by preventing the use of it by favored banks for the benefit of politicians. Such legislation the reformers have demanded for years past.

The Contest in New York

At the close of an exciting campaign in the city of New York, the election gave Mayor McClellan a plurality of 3,485, on the face of the returns, over William R. Hearst, candidate of the Municipal Ownership League. The Republican nominee, Mr. Ivins, had only 137,000 votes, or 88,000 less than the number of those counted for Mr. Hearst. The latter asserts that he really was elected, and has taken measures for a thorough investigation. In Brooklyn Borough his plurality was 16,000, and several of the League's candidates in that borough were elected, one of them being ex-Comptroller Coler, to be Borough President. Tammany, with the re-election of its Mayor in doubt, has lost the Board of Aldermen, in which the Republicans and the League have a good working majority. In the city's Board of Estimate, which will dispose of more than \$800,000,000 during the coming four years, in addition to franchises probably worth hundreds of millions more, Tammany (if Mayor McClellan has really been re-elected) will have twelve out of sixteen votes, but in the minority will be Mr. Coler, who has done good service in the past in opposition to objectionable projects. By local alliances with the League, the Republicans gained several members of the State Legislature, and these alliances are believed to have reduced Mr. Ivins's vote. It is also understood that a considerable number of Republicans deserted Mr. Ivins for Mayor McClellan when it was

seen that Mr. Hearst was to receive a very large vote. The latter's canvass was marked by notable enthusiasm. After the election, Mr. Ivins volunteered to assist him in procuring a recount and in exposing frauds alleged to have been committed in the interest of Tammany. A large mass meeting has been held, at which addresses in support of the demand for investigation were made by prominent clergymen and others. Resolutions were adopted for the appointment of a committee of seventy to assist in the movement. Upon the application of Mr. Hearst, Judge Gaynor ordered the ballot boxes to be transferred from the custody of the police to the Board of Elections. The transfer was attempted in the middle of the night, and the boxes were on trucks in the streets for hours, because the Board was not ready to receive them. It is charged that some of them have been tampered with or lost, and that frauds of various kinds were committed. Probably the contest will be taken to the courts. About 600,000 votes were cast.—The independent campaign of District Attorney Jerome for re-election in New York County attracted more attention outside of the city than the Mayoralty contest. No one of the parties would nominate him, and therefore he was nominated by petition. He was triumphantly re-elected by a plurality of 11,450. There will be a vigorous attempt to amend the present ballot law, which assists party tickets and makes independent voting difficult and dangerous. Although Mr. Flammer, Republican nominee for District Attorney, had withdrawn in favor of Jerome, 13,348 votes were cast and counted for him because his name remained on the straight party ticket.

In Other Cities

In San Francisco Mayor Schmitz was elected for a third term by the workingmen, who gave him a majority of 11,500 over John Partridge, the nominee of both the Republican and Democratic parties. On the other hand, in Bridgeport, Conn., Denis Mulvihill, known as "the stoker Mayor," failed by 800 votes to gain a re-election, and in Ansonia Mayor Stephen Charters, another workingman, was defeated by the son of a wealthy manufacturer.—The American Party, organ-

ized for the express purpose of overcoming the influence of the Mormon Church, in local politics, elected Ezra Thompson Mayor of Salt Lake City by a plurality of 925 and obtained control of the Council. A Republican ticket was supported by Senator Smoot, but a majority of the Mormons appear to have voted for the Democratic nominees. Dissension in the governing body of the Church is said to have been caused by the Senator's political controversy with Apostle Penrose.—In Chicago the Republicans elected their entire ticket, but the prominent municipal officers were not involved. Constitutional Amendments adopted prolong the Mayor's term to four years and empower the Council to fix the price of gas and electric light.—The followers of the late Mayor Jones in Toledo elected Brand Whitlock, lawyer and novelist, Mayor by a majority of 6,000 over his Republican opponent.—In Cleveland, Mayor Tom L. Johnson was re-elected by a majority of 13,000. He gave notice that his efforts to procure three-cent railway fares in that city and the municipal ownership of street railways thruout the State would be continued.

Diplomatic and Consular Reform

By executive order two new rules of considerable importance affecting appointments in the diplomatic and consular service were adopted last week. One relates to the office of secretary of embassy or legation, and provides that vacancies shall be filled hereafter either by transfer or promotion from some branch of the foreign service, or by the appointment of a person who, "having furnished satisfactory evidence of character, responsibility and capacity, and being thereupon selected by the President for examination, is found upon such examination to be qualified for the position." The examinations are to be both oral and in writing, and they will relate to international law, diplomatic usage, and modern languages. Familiarity with at least one foreign language will be required. This one may be French, or the language of the country in which the embassy or legation is located. The other rule, which affects the consular service, requires all candidates for appointment in

that service, except for those posts which pay less than \$1,000 a year, to take examinations conducted by a board of three persons to be appointed by the Secretary of State. It is the purpose of the Administration to take the consular service out of politics and make promotion as well as appointment dependent upon merit alone. Secretaries of embassy or legation are to be selected with great care, and the new rule relating to the appointment of them has been adopted with the view of making in the service an opening for diplomatic careers to those who desire to qualify themselves for the work.

Relations With Cuba In his message to Congress, which assembled on the 6th, President Palma added no comment to his mere mention of the negotiation of the Anglo-Cuban treaty. Information at hand led him to believe, he said, that the long pending treaty with the United States concerning the Isle of Pines would be ratified at Washington. The chief opponent of this agreement has been Senator Penrose, of Pennsylvania, whose influence has been affected by the defeat of the ring in Philadelphia and of the nominee supported by him for the office of Treasurer of Pennsylvania. Some think that the fate of the Anglo-Cuban treaty may depend upon our Senate's action with respect to control of the Isle of Pines. Referring to the recent political controversies, President Palma expressed a conviction that Cuban patriotism would never permit a few extremists to disturb the nation. Praising the conduct of the Rural Guards, he urged that the number of them should be increased from 3,000 to 5,000. The island's death rate last year was only 16.57. Imports were increased by \$14,000,000, and exports by \$6,000,000.—In the House, after a sharp debate, it was decided by a vote of 28 to 7 to discuss in the near future the recent killing of Enrique Villuendas, a prominent Liberal member, in Cienfuegos. The motion was made by his brother, a member from Santiago, who asserted that Enrique had been treacherously and designedly murdered by the police, at the instigation of persons in high authority. It was urged by the Moderates that the affair should

be left to the courts.—On the 6th Senator Cullom directed the attention of President Roosevelt to the Platt Amendment, alleging that the Cuban Government was not keeping its promises as to sanitary improvements. Minister Quesada, in reply, pointed out the low death rate of the island, saying that for more than two years no case of yellow fever had originated there, altho in this country we had had an epidemic in Louisiana. On the 10th, however, three cases in Havana were reported. One was that of an American who had recently arrived from New York and who has since died, and the other was that of an Italian, who had come from Spain by way of New York. It appears that the source of infection was one Lopez, a Spaniard, who had come to Cuba from an infected Mexican port.—Delegate Larrinaga, of Porto Rico, will ask our Congress, at the coming session, to impose a duty of five cents a pound upon coffee (for the benefit of his island), to make Porto Ricans citizens of the United States, and to give them an elected Senate with power to confirm or reject the appointments of the insular Government.

The Visit of Prince Louis Coming North, Admiral Prince Louis of Battenberg and his ships were received last week in New York harbor by the same fleet of eight battleships and four cruisers that had greeted him at Annapolis. These had preceded him and were at anchor in the Hudson River. After the formal courtesies attending his arrival, the Prince became the chief figure at a series of banquets, luncheons and private dinners. On Saturday he went to West Point and saw a football game. On Sunday he dined with the Mayor at the latter's home. The following evening saw him with Admiral Evans at Coney Island, attending the dinner given by 1,200 American bluejackets to as many from the British ships. Thousands of visitors have been attracted to the long line of warships in the river. In the Prince's brief public addresses he has gratefully expressed his appreciation of the warm welcome given to him, as well as his admiration for President Roosevelt. On the evening of the 9th there was a large meeting of Irish-Americans

at Cooper Union, protesting against any attempt to involve the United States in an alliance with Great Britain. The presiding officer was Justice Dowling, of the Supreme Court, and the resolutions adopted called King Edward "a disturber of the peace of the world."

Labor Questions

The Supreme Court at Washington, sustaining a decision of the highest Court of Missouri, upholds a law of that State making eight hours a day's work in mines. The court's reasons have not been made known, but it is thought that the power of the State to enact and enforce such legislation is confirmed because the work to which the law refers is hazardous and unhealthful.—A canvass of three of the anthracite districts shows that the miners at the convention to be held in December will refuse to be bound after April 1st by a renewal of the terms of the Strike Commission's decision or award unless the operators formally recognize the union. They will insist upon this, in addition to the eight-hour day. The bituminous miners of Pennsylvania have decided to demand a wage increase of 12 per cent. in January.

Norway Elects a King

On Sunday and Monday, November 12th and 13th, the Norwegian people voted on Prince Charles of Denmark as King of Norway, and he was chosen by an overwhelming majority of nearly four to one. The returns are not all reported as we go to press, but in 418 precincts 233,935 votes were cast for Prince Charles and 62,739 against him. The Republicans are greatly disappointed in the small vote against the monarchy, as they hoped for at least 33 per cent. of the votes and they only got about 21 per cent. The country districts of the interior and the north furnished most of the Republican votes, while in the city and coast districts, especially in the vicinity of the capital, monarchical sentiment predominates. In Christiania a large crowd assembled in the streets at night when the returns were being received, and cheered the portraits of Prince Charles and Princess Maud. Premier Michelsen and President Berner, of the Storting,

addressed the crowd from a window of the palace and congratulated them on the victory. The Republicans complain that the shortness of the campaign, two weeks, did not give them time enough to educate the people upon the momentous question, and that the issue was not presented to them in such a way that they could vote on the form of government. On the other hand, the Monarchists hold that Norway is by its constitution a monarchy, that the Storting is not empowered to change the form of government, nor to submit such a question to the people, and that to make any unnecessary changes in a crisis like the present would throw the country into a chaos. Dr. Fridtjof Nansen, the Arctic explorer, and Dr. Björnsterne Björnson, the poet and dramatist, who are Republicans in principle, and leaders in the movement for secession from the Union with Sweden, have exerted a strong influence in the present campaign thru their speeches and letters in favor of a king for Norway. Minister of Foreign Affairs Loevland said that if the monarchy were abolished there would be the choice between the three kinds of republic: the monarchical Republic, as in France, where the President is a king with a limited reign, the Czarist Republic, as in the United States, where the President is an autocrat, and the republican Republic, as in Switzerland, which would be the preference of the Norwegians.

Mutiny at Kronstadt

A mutiny among the sailors at Kronstadt, Russia's strongest fortress, and the key to the capital, caused great alarm in St. Petersburg because the chief barrier

against the flood of revolution has been the steadfastness of the military. It was at first reported that all the soldiers had joined the mutineers, and that together with the workingmen, armed from the arsenals, they were marching to the Peterhof Palace, where the Czar now is, and afterwards the city would be attacked from the southwest, while its own garrison in the barracks on the east would simultaneously revolt. But the mutiny, like that on the warships in Odessa, failed for lack of purpose and organization. The outbreak started with the sailors of

the Seventh Equipage, who revolted on account of mistreatment. They left their barracks, raided four vodka shops, and then, crazed with liquor, set fire to the buildings of the town and the shipping in the harbor, and seized arms and ammunition. One battalion of artillery also revolted and mounted their machine guns behind the barricades. Altogether some 3,000 joined in the mutiny. The Russian officers are reported to have deserted their posts almost to a man and fled to Peterhof. Some wealthy residents of Kronstadt and the wives of offi-

PRINCE CHARLES OF DENMARK.
Elected King of Norway.

cers paid hundreds of rubles to be taken to Oranienbaum, a few miles across the bay. The Cossacks as usual remained firm and showed no hesitation in firing upon their fellow soldiers. As soon as the news of the mutiny was received in St. Petersburg a force of some 7,000 Cossacks and troops of the Imperial Guard were sent to Kronstadt, and before morning, November 9th, the uprising was under control, altho the Fourth and Seventh Equipages held their barracks for three days against the loyal troops by means of machine guns in the windows. The commander of the

Seventh Equipage committed suicide at the beginning of the outbreak. Ten of the officers were killed by the mutineers, and altogether some 200 lives were lost in the affair. The naval vessels at Kronstadt left the harbor in order to prevent their own sailors taking part in the mutiny, and the sailors of the Seventeenth and Eighteenth Equipages, stationed in St. Petersburg, were locked in their barracks and surrounded by Cossacks. Court-martials condemned 151 of the ring-leaders to death, and the sailors as a whole will be punished by being taken on a long, hard cruise. Vice Admiral Birileff, Minister of Marine in Count Witte's Cabinet, admits that the sailors had some just grievances and that the contractors had robbed the Government and furnished the crews with food unfit to eat. The demands of the sailors were for a reduction of the term of service from seven to five years, two dollars a month pay, proper food and clothing, permission to attend meetings and better treatment by the officers. A new mutiny is reported among the infantry at Krasnoë Selo, a great military camp near St. Petersburg. The Czar is about to leave Peterhof for Tsar-

koë Selo, but will not return to the Winter Palace in the city, because, it is said, he fears the fate of Louis XVI in leaving Versailles for Paris.

The Nationalist Movement in Poland

During the war and since there has been much disorder and bloodshed in Poland, but it has been chiefly due to industrial causes and the incitement of the revolutionary Socialists. The Polish Nationalists, whose ultimate aim is the independence of Poland, have held aloof from the agitation, feeling that the time was not opportune for open rebellion, altho they have taken advantage of the embarrassment of the Government to obtain many concessions, such as the use of the Polish language in the schools. Now, however, the ease with which Finland has recovered its lost liberties by the industrial strike has demonstrated the weakness of the autocracy, and has incited the Poles to attempt to regain, by similar methods, the autonomy which was taken from them after the rebellion of 1863. The city of Warsaw is decorated everywhere with Polish flags, and a procession of

Map of St. Petersburg and Its Environs.

250,000 recently paraded the streets with bands playing the national airs so recently prohibited. Among the speakers was Henryk Sienkiewicz, the author of "Quo Vadis," and the trilogy of Polish historical novels which were avowedly written to revive the patriotism of his people. The Socialists take little interest in nationalistic movements in Poland or elsewhere, and since many of them are Jews and workingmen, while the leaders of the Polish party belong to the Catholic aristocracy, the racial, industrial, political and religious antagonisms between the two classes have kept them apart. If, however, as is reported, they are now working in harmony for a freer Poland, the movement is formidable, and is very likely to spread to the Polish subjects of the Kaiser, who would probably have no hesitation in using his troops to quell disturbance on either side of the boundary. His speeches of late have had a very warlike tone, and he is believed to have offered the services of his army to the Czar on several occasions recently. As soon as he heard of the mutiny at Kronstadt he sent a wireless message to the Czar placing the German Baltic Squadron at his disposal. It is supposed to be due to his influence that Count Witte, who is more German than French in his sympathies, rejected emphatically the petition brought to him by a delegation of Polish political leaders, and that an imperial ukase was issued on November 13th, declaring all Poland under martial law. General Trepoff has at last resigned his position of Minister of Police of the Empire, and has been made Governor of the Palace at Peterhof, where he will guard the person of the Czar.

Chinese Labor in South Africa Very conflicting reports continue to come from the Transvaal in regard to the practical workings of the experiment in the use of Chinese labor in the mines, and these are being made the most of in England as party weapons. Those who favor Chinese labor call attention to the increase in the prosperity in the Transvaal in consequence of the opening of the mines. According to the Government reports during the year ending June, 1905, the value of the Trans-

vaal imports rose thirty-three per cent. and railway receipts forty per cent. Machinery to the value of fifteen or twenty million dollars has been brought in, and, so far from driving out white labor, as the opponents of the measure foretold, the number of white laborers has increased at the rate of 300 a month for seventeen months. The supply of black labor fluctuates considerably, and has recently dropped ten per cent., about what it was before the Chinese came. There are now less than 100,000 natives employed in the mines, and about 45,000 Chinese. It was anticipated by some that their wages would be a dead loss to the country, as the money would all be sent back to China, but it is found that they spend their money freely. Out of \$1,585,500 paid to the Chinese in wages during the first six months only \$80,000 was remitted to China thru the Government Bureau. On the other hand the outcry in England against "slavery under the British flag" does not cease, and is fed by rumors of the brutal treatment of the coolies in the compounds. At the Witwatersrand Mine the average number of Chinese flogged daily, including Sundays, was forty-two. At the Nourse Deep every boy who did not drill his thirty-six inches per shift was whipped unless he could show that he was physically incapable of doing it. When flogging was stopped by orders from England, the coolies were tortured by stringing them up to a beam by the wrist so they had to stand upon their tiptoes for two hours. Many of the Chinese have deserted and, wandering in small bands thru the country have put the people on the farms in such peril that they have asked the High Commissioner, Lord Selborne, to furnish rifles for self-defense. The total number of Chinese convicted of desertion up to July 31st is reported to be 1,735, not counting 21,205 cases of unlawful absence from work not prosecuted. Mr. Lyttleton, the Secretary of State for the Colonies, in a recent speech defended the Government in permitting the introduction of Chinese into the Transvaal, stating that only 275, or less than one per cent., of the Chinese had deserted, and that most of these had simply wandered away from the mines thru curiosity and got lost.

A Federal Congress of Churches

BY WILLIAM HAYES WARD, D.D., LL.D.

[The portraits accompanying this article are of men who have been active in calling the Inter-Church Conference in Carnegie Hall this week. Dr. Cady is President of the National Federation of Churches, which has invited the Conference. Dr. Roberts is Chairman of the Committee that has made the plan and arrangements for it, and Dr. Sanford is its Secretary, as also of the National Federation. Dr. Tipple, of the Methodist Theological Seminary, Madison, N. J., is Chairman of the Hospitality Committee; Dr. Devins, Editor of *The Observer*, of the Press Committee; Dr. Ward, Editor of *THE INDEPENDENT*, of the Program Committee; and among other active members of the Committee of Arrangements are Dr. North, Secretary of the New York City Church Extension Society; Dr. Calvert, an editor of *The Examiner*; Dr. Thompson, Secretary of the Presbyterian Board of Home Missions, and Dr. Wenner, President of the New York Lutheran Evangelical Synod. Bishop Greer represents the speakers at the Conference.—EDITOR.]

THE present Inter-Church Conference for Federation represents our main American Protestant Churches, with 18,000,000 communicants. It is the first attempt ever made to unite these Churches officially in a single body. This Conference cannot itself accomplish this. All that the representatives of the denominations invited can do is to draw up and recommend a plan for federation, and refer it to the national bodies of the several denominations, to be approved by them. The last of these will meet in 1908, after which time the representatives chosen by them can meet and organize the first Federal Council of our American Protestant Churches, and the various smaller bodies, a hundred of them, can be invited to join, if in sympathetic fellowship.

This is an attempt to bring the Church partially back to its condition of unity in the time of the Apostles.

Our Lord's last prayer, "That they may be one, that the world may know that Thou hast sent me," seemed to anticipate the greatest evil that threatened the early Church, and that has for centuries paralyzed its activities. Very soon did the danger of schism appear. The first Church Council at Jerusalem was a victory of union over division. There was imminent peril that the Church would be torn asunder in its very infancy; and that would have meant its death, as truly as in the case of Solomon's decree to divide the infant between the two mothers. No question of difference that has since separated Christians has been deeper than that

which separated Paul and Barnabas and Titus from the Jews at Jerusalem, of the sect of the Pharisees who believed, presided over by all the Apostles who had followed our Lord in the flesh. It was the question whether, or not, Christians must be Mosaic Jews, whether Christianity was ceremonial, or only spiritual. Over that question they came together, and Paul debated it, first privately with them that were of repute, and then publicly in the great Council of the Church, until finally they agreed on a temporary compromise, Peter and James and John yielding as to circumcision, and Paul yielding as to things sacrificed to idols, things strangled and blood, and all guided in their decision by divine inspiration. "It seemed good to the Holy Ghost and to us," they said, in a letter which is not only the earliest written portion of the New Testament, but out of the whole Bible the section most thoroly accredited by inspiration. Of this only are we told that "it seemed good to the Holy Ghost and to us"; for we know that the word "us" embraced both parties in the Church, and the inspired writers of nearly all the New Testament, certainly Paul, Peter, James and John, and probably others. All this inspiration was devoted to the maintenance of Church fellowship; and for Church fellowship compromise was necessary and allowed.

But still more, the principle accepted and announced was not uniformity, but liberty. The liberty then allowed was something amazing. It seemed to overthrow, and it did annul, the most sacred code of Sinai. We can hardly conceive

anything more revolutionary. But such was the necessity of unity, and such the force of the spiritual element as the root of Christianity, that even this amazing concession was inscribed on the banner of religious liberty. The lesson was then taught to the Church—what a pity it was not learned!—that disciples of Jesus Christ could yet differ in serious matters of doctrine, and in the chiefest modes of worship, and yet be in the communion of the one Christian Church.

But in a century or two the immediate memory of those who had walked and

question of the date of an event, and the dominant Church created new dogmas, and enforced personal centralization under the name of Peter, and enforced conformity by the rack of the Inquisition. No man was allowed to stay in the Church who doubted or disobeyed its accretionary decrees, and those who dared to disobey and could flee its tyranny hid in "mountains cold" or fled across the seas—driven to separate from, because not allowed to remain in, the old Church. Only liberty within the essential faith, such as Paul and Peter al-

REV. W. H. ROBERTS, D.D., LL.D.
Chairman of Executive Committee.

talked on earth with Christ passed away, and the yielding spirit of liberty in union gave way to the intolerance of enforced uniformity and subordination. Then came the period of what we usually call Church History, which is the history of separation, division, and damnatory decrees. Sects were driven off, generally to perish, to lapse into heartless compulsory submission, or into paganism, or to organize new Churches like the Nestorians. The great Eastern and Western Churches divided on a miserable

lowed, can give us a united Church.

No book, no library, has yet written the story of the hundreds of sects of Christendom. Not even a list of them would it be easy to make. The Census of 1890 found 140 in this country, and they nearly all sprang up a hundred years ago, or in sections of the land still belated and medieval. That was the age of division; we have now come into the era of union, tolerance and liberty.

It is a fact, not sufficiently considered, that the spirit of unity has grown out of

the zeal for evangelism. These are the two notes of the Church of the present day—evangelism and union—which distinguish it from the Church of a century ago; the sense of the duty to convert the world, and the sense of the duty to come together that we may convert the world—"that they may be one, that the world may know that Thou hast sent me." So our first home and foreign missionary societies were union societies, supported equally by the Congregational, Presbyterian and Dutch Reformed Churches of the Northeastern States, and such they remained, union societies, for over sixty years, until another union, that of the Old and the New School Presbyterian Churches, by a sort of back-action, put an end to this earlier, if not premature, union. But other wider union societies, organized about the same time, the Bible, Tract and Sunday School societies, still held their principle of fellowship against a strengthening denominational spirit.

The first effect of a growing sense of the duty of evangelism is the effort to spread one's own pattern of organization. A restricted vision cannot look abroad. It imagines that its churchianity is the only true Christianity. So the magnificent denominational growths of the beginning and middle of the last century were blessed, if imperfect, effects of that spirit of consecration which attempted to convert the world, each of the dozens of denominations holding practically, if not confessedly, that its own organization was the one correct Church, and must have its own boards of missions for extension at home and abroad. A certain indefinite common basis was blindly admitted to exist—as if Christ were something indefinite!—but in few cases was it considered fit that a minister could freely pass from one denomination to another.

Yet propinquity leads to love, and common needs which no one Church could supply compelled union in certain lines of common effort. Hence the magnificent growth of the Young Men's Christian Association, which, in all our cities and most of our larger towns, has its stately and well-equipped buildings, and extends its activity now all over the world. In all this there is no official action of denominations, but individuals,

locally consenting, organize themselves on the simple basis of fellowship, disregarding their minor differences of faith and polity, and combine to do their part in common evangelism. It is a beautiful illustration of the two notes of the true Church, evangelism and unity.

And from the young men the spirit passed to the youth, to the children, indeed, of both sexes. The Christian Endeavor and its allied organizations wholly or partly ignore denominational barriers. In many tens of thousands of churches are they found, and millions of young people are banded together, refusing to be shut in walls of sect, fellowshipped in praise and service, led by the hand gently into the public confession of Christ, which they had already learned to make, in their little circles, by word of Scripture and utterance of consecration. A blessed example have they given to their fathers and teachers.

Equally impressive has been the movement for the union created by the spirit of evangelism in the foreign mission field. It is especially marked in its progress at the present day, while its history is forming. At home we somehow fail to see immediately the ridiculousness of having a hundred denominations with a hundred mission boards and a hundred secretaries, but when the missionaries meet in the presence of militant idolatry, each separately resisted by the united force of false religions they ask, Why should not we, too, unite? Why should we set up church against church? Why should we not help instead of hindering each other? So before the boards at home were ready the missionaries abroad began to ask for union, and now the boards are learning and consenting. In China, in India, in Japan, they unite first in conferences like this; they agree, as we shall agree, to harmonize their action, to fix their bounds, and as far and fast as possible to consolidate their colleges and seminaries, their publishing work, and to establish great national Churches that shall have no memory of Western divisions, or names that mean nothing to Orientals, but shall give the people a great Christian Church of Japan, or China, or India. All this is partly done; it is partly in the process of doing, but it is moving, it is coming. Why should the

Hindu cling to the names of Luther and Calvin and Cranmer and Wesley? Why even of Paul and Cephas? Only Christ!

In the mission fields union is coming both by federation in work and by the corporate union of denominations. This is true also in Christian lands. Dr. Glad-den's articles in *The Century* some years ago gave an ideal picture of the beauty of union of churches in the service of a town or city. Soon Federation began to organize itself in this and other cities, thru

and federation. There the Christian connection, the Baptists, Free Baptists, Methodists and Congregationalists—united on a recognized basis, with representatives from each body, agreeing to prevent unnecessary interference of churches and hurtful rivalries. This has continued thirteen years with the happiest results, and has been partially repeated in Vermont and Michigan. Perhaps the brethren in Maine do not know how widely their example has been rec-

MR. J. CLEVELAND CADY, LL.D.

Chairman National Federation of Churches and Christian Workers.

E. B. SANFORD, D.D.

Secretary of the Executive Committee.

voluntary action, and then was formed the National Federation of Churches and Christian Workers to establish State and city federations. But all these, and other movements that might be mentioned, besides numerous conventions, published articles and addresses, represented mostly voluntary work rather than official federation of denominations. In Maine, however, a beautiful example was set of absolutely official co-operation

and what has been its influence leading to the present Conference.

But on a larger scale a federation of the Free Churches in England has been doing a similar work. It has brought the Churches embraced in it close together, and has given them enhanced power for the social and religious reformation of their country.

The examples thus set have been followed and even bettered in many direc-

tions; for while federation is good, corporate union is better, whenever it can bring together those Churches that are nearly allied. The union of the Lutheran and the Reformed Churches of Germany in a single German Church is an example in point. More lately, only five years ago this month, with great rejoicing, the Free Church and the United Church of Scotland came together, greatly to the benefit of both. In Canada we see the process of an extraordinary consolidation going on of Presbyterian, Congregational and Wesleyan Churches in a single organization. Similar unions are being accomplished in Australia and New Zealand. The same spirit which has brought the colonies of Australia into a single Commonwealth is bringing equally the denominations together. But to return to this country, the two Reformed Churches have been seriously considering union with each other, or with some other body; and the Presbyterians and the Cumberland Presbyterians, and one or two minor bodies are approaching corporate union, which is sure to come in the end. The Congregationalists, United Brethren and Methodist Protestants will meet in February next to settle how nearly they can combine in some way their forces, and other denominations have a similar union under serious consideration. In some way or other the blessed spirit of union seems to have descended like a dove upon our Churches, and all are asking how they can come closer together.

There have been other attempts at union, which might, perhaps, be better called propositions for union—on some general basis. These have taken the form of "quadrilaterals," so called, and have had much value, notwithstanding their failure, and, perhaps, the expectation that they would fail. But they have brought before the Christian world the simplicity of the essential Christian faith. First, the Episcopalians in Chicago, in 1886, approved by the Bishops of the Church of England, at Lambeth, suggested four conditions of union: the Holy Scriptures, the Apostles' Creed, the two Sacraments, and the historic Episcopate. Then the Disciples, in 1891, followed with three propositions as a basis for unity. Congregationalists,

in 1895, followed with their four conditions as a basis. Of these only the Episcopalian received any serious attention. For several years there was conference on the basis of the Lambeth Quadrilateral with the Presbyterians, but it came to nothing accomplished, beyond the increased desire for some basis on which the essential unity of the great Christian Church could be expressed. The attempt at formal, organic unity was shown to be for the present impossible, except in the consolidation of two or more allied denominations, so that the alternative remained of a federation, in which there should be no compromise of the several creeds or forms of government, of the full right of each to serve God in its own way, while fellowshipping and aiding all the others. Out of this desire has come the present Conference, in which no denomination takes the lead, called by a body representing all the denominations, and in which no company of believers is asked to yield one whit of its cherished faith or inherited customs or autonomy.

This rapid and general view of the movement of the Christian Churches toward closer fellowship shows us the various ways in which fellowship may be achieved. It may be by compulsion of law, whether by the supreme force of the Inquisition, the less stern repression of Russian sects, or the milder social attraction of a State Church. But all these methods are sure to fail, and they only make more positive the action of a free conscience, and the schism of the separated sects. Nowhere are the Jews so rigid as in persecuting Russia. Fellowship may also be sought by absorption. So has the Roman communion taken in Eastern sects, and is seeking further accessions. This means submission, and destroys the differentiations of liberty, except when, as is sometimes happily the case, changes of formula or feeling have obliterated old distinctions. The great and successful fellowships and unions that we are now achieving at home and abroad are on the old basis set by the example of the Apostles at Jerusalem, on the liberty of the several bodies of believers to wear their own colors, whether they choose to march as separate companies, or consent to lock step

in the same regiment. Thus we express both sound fellowship and yet the consent of separate convictions. On this basis of individual freedom as established at Jerusalem, it is now proposed to create a visible and recognized expression of our essential oneness. Something more organic and permanent than the Evangelical Alliance which blazed out so magnificently thirty years ago, and then gradually departed into cometary space, or than the admirable great Missionary Conference which lately met in this hall. This present alliance could never be accomplished, except as the spiritual forces of the Church, working outward for the conversion to Christ

of the multitudes of unevangelized souls in so-called Christian lands and in the dense populations of paganism—unsaved after nineteen centuries of separation and schism—have brought us closer together, union by evangelism, as of old. Out from Christ, as from the sun, radiate multitudinous forces of life in multitudinous directions. But as we accept that life and grow in it, we are drawn closer to our central Sun; and the closer we come to Him, by force of that nearness we come closer to one another; and we shall come closer together until we shall know and see that we are one; and, then, the world will know it, and knowing it, will know the Son and the Father.

NEW YORK CITY.

Osteopathy and Practical Medicine

BY JAMES J. WALSH, M. D., PH. D.

[Last week we published an article by Dr. Still, the founder of Osteopathy, on his discoveries. This week Dr. Walsh, a "regular" physician, replies. Next week we shall report the result of the voting for the candidates of the Nobel Prize, in which contest the Osteopaths entered with such zest. Dr. Walsh is Adjunct Professor of Medicine at the New York Polyclinic School for Graduates in Medicine, Professor of Nervous Diseases and of the History of Medicine at Fordham University Medical School, New York City, and of the Editorial Staff of the *Medical News*, New York, and of the *International Clinics*, Philadelphia.—EDITOR.]

DR. STILL'S article on Osteopathy is typical of that recent departure in medicine in many ways. Altogether there are probably about 2,000 words in his contribution, and considerably more than one-half of it is taken up with what every medical student knows at the end of his second year, while not more than 500 words are employed to state the supposed groundwork of Osteopathy, its methods of treatment, and its claims for recognition. Dr. Still tells the public so glibly that

"The nourishment of the body I found to be a dark red fluid called blood, which was laden with oxygen from the lungs, combustible food from the digestive system and various strange chemicals from the several internal organs—all necessary to the healthy functioning of the system. This blood was brought by a system of elastic tubes called arteries, and after exchanging oxygen and food for carbon dioxide and waste material, was carried away to a certain central four-valved pump, passing thru the lungs on the way for reoxidation and purification. I found that thruout life this

pump sucked in its cavity full with blood from the veins of the lungs and forced it out again into the main artery at the rate of seventy times a minute. From the main artery this blood passed thru smaller ones until, by way of the tiny capillaries, it either directly or thru its serum bathed every tissue cell in the body."

But this precious information has been with us for several centuries at least. It is nearly 300 years since Harvey discovered the circulation of the blood, tho he waited twenty years to publish his discovery; about 250 since Nicholas Stenson taught us that the heart was a muscle, and some 200 since Malpighi demonstrated the existence of the capillary connections between veins and arteries.

With regard to these older medical teachings Dr. Still is sufficiently correct. This is not quite so true, however, when there is question of some of the more recent advances in medicine. For instance, he suggests "that the growth of the long bones and the height of the indi-

vidual depends on a secretion formed in a gland in the neck called the thyroid." Now, there may be some truth in this, but it is not the whole truth. There is a small gland situated at the base of the brain and called the hypophysis, or pineal gland, which certainly has as much to do with the growth of the skeleton as the thyroid. Practically all of the giants are found to have had an enlargement of this gland. Patients who suffer from a disease of this gland in later life usually present a distinct enlargement of all the ends of the body, the hands, the face, the feet, and there can be no doubt that this comparatively unimportant looking organ, of which we know so little, has a great deal to do with the regulation of the growth of all parts of the body.

To pass over these details, however, that may seem unimportant, tho they are characteristic of the half-knowledge which professors of the various "pathies" outside of regular medicine are so ready to display ostentatiously, we may come to Dr. Still's declaration of the essence of Osteopathy. Dr. Still says that he found in the vertebræ "most of the mechanical derangements that I know must precede disease." "At these foramina" (the holes for nerves and arteries in and out of the spinal canal), to quote his own words, "we find the seat of ninety-five per cent. or more of the lesions" (the bases of disease). That is to say, ninety-five per cent. of all the diseases to which human nature is heir is due to some pathological condition of the spinal column. To quote Dr. Still once more: "The lesion consists of a slip or subluxation of the vertebræ, causing a change in the size of the foramen and consequent interference with the nerves and vessels." All that is necessary, then, for the medical attendant in ninety-five per cent. of human diseases is to correct this subluxation or slip of the vertebræ. This is, according to the founder of Osteopathy, the whole secret of his school of explaining and treating disease. Practically all that has ever been discovered in medicine has been a delusion, or at least it has been so superficial as to be useless. Here is absolute truth at last—ninety-five per cent. of all disease is due to a slip of the parts of the backbone. This new etiology is at least simple enough for all to understand.

Is it possible that physicians all down the centuries, notwithstanding their careful investigation of diseased conditions, have missed this casual factor for ninety-five per cent. of all disease, until it was revealed to the investigating genius of the father of Osteopathy? It is perfectly true that in the history of medicine discoveries almost as revolutionary as this have been made, tho not in recent times. They met with opposition, too, at first, but the conservative spirit of the medical profession has by this disinclination to novelty kept 999 absurdities from being foisted on mankind for every real discovery whose acceptance it has delayed for a time.

Has the attention of the medical profession ever been especially directed to the spinal column and to the lesions that occur in connection with it? Have many autopsies been made by investigators long before Dr. Still began his studies, in which attention was devoted mainly to the condition of the vertebræ and to their possible interference with the nerve supply to the various organs, or with the blood supply to the spinal cord itself?

I may say at once that the vertebral column has been the subject of much careful study. The condition of subluxation and of slipping of vertebræ in various degrees occurs constantly in the various forms of tuberculosis of the spinal column, which is usually called Pott's disease. The subjects of this affection are very frequently seen. The disease was even more common in the past than it is at the present time. Practically all of the people whom we see on the streets with humped backs have suffered at some time, usually in very early years, from tuberculosis of the bones of the spine. As a consequence of this, the bodies of the vertebræ, the main portion of these bones, have been eaten away and the vertebræ have slipped over one another, producing luxations, subluxations and the most curious twisted deformities.

Now here are a set of cases in which it might be expected that the symptoms which the osteopaths claim to cure by manipulation of the spinal column would surely appear. If the principle that even very slight deformities of the spinal column surely lead to serious symptoms in the abdominal organs, because of inter-

ference with their nerve supply, then we would expect humpbacked victims of Pott's disease to be invalids of the worst kind. As a matter of fact, they are usually quite healthy. It is true that they often suffer from a special form of heart disease, spoken of as the Kyphotic Heart, from Kyphosis, which means hunch-backed, but this is because of the mechanical difficulty which the heart experiences in performing its function in the crowded position which it has to occupy because of the bent back. As a rule, these people continue in good health unless the tuberculous process begins over again, and then, of course, they are likely to fall victims. Here we surely have the lesions suggested by Dr. Still, but the symptoms supposed to be due to them are absent.

The man who runs and reads might think from Dr. Still's article that there had been very little time and study devoted to diseases of the spinal column before osteopathy began its work. As a matter of fact, however, medical literature teems with investigations of all kinds devoted especially to the spinal column and its various pathological conditions. Some three years ago, in writing the article on "Tumors of the Spinal Cord" for the "Reference Hand Book of the Medical Science," I was surprised to find how much medical literature in the various languages had accumulated with regard to affections of the spinal column in the five years since I had previously reviewed the subject, tho in the meantime I had considered that I was keeping myself reasonably familiar with the details of contributions to this subject. The medical journals show hundreds of careful studies of the spinal column made every year with the most careful search made for any such causes of disease as Dr. Still speaks of, with young men in every country only too anxious to obtain reputation by some such startling observation, yet without confirmation of his ideas.

Dr. Still refers to the number of cures that have been made by osteopaths as the incontrovertible proof of the truth of his doctrine of the origin of disease, and of the efficaciousness of his method of treatment. He must know very well, however, that it is always to the cures

effected by him that every quack and charlatan in medicine appeals. A century ago, when Perkins' Tractors were so popular, it was exactly because of the number of so-called cures they had effected that their inventor succeeded in making a fortune. About the same time the famous John St. John Long was making a wonderful series of cures of chronic rheumatism and pains and aches of many kinds by means of his wonderful liniment. This remedy was thought to be so efficacious that the British Government finally bought the secret of it from him, paying many thousands of dollars for it, in order that it might be given to the public and enable them to free themselves from most of the chronic ills to which flesh is heir. The mysterious remedy proved to be only a combination of turpentine and white of egg, with some other equally familiar substances, and, of course, just as soon as it lost the power that its mystery had commanded for it, it ceased to be effective.

As a matter of fact, most people who suffer from chronic ailments can be cured by almost any means from which they confidently expect relief. It is from among this class of persons that the cures made by Christian Scientists are recruited. The healers only persuade their patients that they have nothing the matter with them, and straightway they begin to get better, and eventually are entirely relieved. At least as many patients have been cured by Christian Science as by osteopathy in this country. Were the ailments of such persons, therefore, imaginary? Not entirely. Their sense of discouragement, however, prevented their nervous system from exercising sufficient control over certain tissues to enable them to throw off low grade pathological processes. If the mere influence of suggestion, the only remedy of Christian Science, can accomplish so much, it is easy to understand how much may be expected from similar suggestion aided by the influence upon the mind of the repeated, systematic manipulations of an osteopath in whom confidence is reposed. The chronic sufferers who become the vaunted cures of the osteopath now belong to the same class that have always in all

ages enabled the irregular practitioner of medicine to point with pride to his cured patients, and so gain new adherents for his system. In all the history of medicine, however, not a single therapeutic measure of enduring value has ever been introduced to the notice of the medical profession in this way.

The general public seems to think as Dr. Still hints, that the regular medical profession is opposed to Osteopathy as a method of treating disease. Any manipulations that will aid in the cure of disease, any rubbings that by favoring the circulation to certain parts will relieve symptoms, any massage or other physical measures that will help suffering humanity, the medical profession is not only perfectly willing, but ever ready to

accept and adopt. There is only one reason for the opposition to legislation that would allow osteopaths to treat disease. The human body is, as Dr. Still says, an extremely complex machine. Those who spend a lifetime in its study are only too ready to acknowledge how little they know about it at the end. If physicians are to practice medicine and treat disease with any hope of success, they must as far as possible know all that is known up to the present time about the body and its diseases. If the osteopaths will but pass the ordinary State Board examinations in medicine, the regular profession will be only too willing to let them practice the cure of disease as they think best.

Soul vs. Body

BY F. S. DAVIS

Tho Age is fifty years from me,
And Youth as close to me as breath,
My Soul too clearly can descry
Whither by Body journeyeth.
Whither my Body journeyeth:
A level land, a sober land.

Where I shall walk with stumbling feet
And listless eyes and groping hand;
Where I shall half forget my name,
And stand an hour long, seeking it;
Where I shall freeze, and o'er the flame
Half shuddering, half scorched, shall sit,
Thither my Body journeyeth.
Blood, drop by drop, for toll I pay:
Tho rich with that red coin to-night,
Youth wastes it bravely day by day.

But, oh, my Soul, my ageless Soul,
Already winged for voyaging,
Why canst thou not fly far, to Youth,
When Body grows a dreary thing?
And as to-night thou mournest Age,
Although my Body laughs and leaps,
Why canst thou not laugh up to Heav'n
When Body aches, and numbs, and creeps?

My Soul! I trust my joy to thee;
More strong art thou than aged Death!
With thee I fear not to descry
Whither my Body journeyeth.

PITTSFIELD, MASS.

The Real Biography of Count Witte

BY SOPHIE WITTE

[We are pleased to give our readers this brief and authentic biography of Count Witte, the man of the hour in Russia, from the pen of his gifted sister, Sophie Witte. In Miss Witte's letter to Mr. Herman Bernstein accompanying the article she says: "I am sending you the true biography of my brother. Somehow or other the truth as to his ancestry has always been distorted in the accounts of his life. No one should be ashamed of his ancestry, however humble it may have been, and in the case of a man who has attained the highest honors in public life it is even flattering; but the truth is dearer than all, and therefore I consider it but proper to deny *flattering untruths*."—EDITOR.]

SERGE YULIEVICH WITTE belongs to the ancient nobility which has given many useful and gifted people to Russia. He was born in Tiflis on June 17, 1849. His father, actual Councilor of State, Yuly Fedorovich Witte, was director of the Imperial estates in the Caucasus. A descendant of the highest nobility of Courland, he was in spirit and in faith a true Russian, who was greatly esteemed and loved by all classes in the Caucasus, where he is to this day remembered for his high qualities as an administrator and as a sympathetic man.

Serge Yulievich's mother, Catherine Andreyevna Witte, is the daughter of Privy Councilor Andrey Mikhailovich Fadeyev, whose memoirs, published in the *Russky Archiv*, testify to his sterling qualities as a man.

Serge's grandmother, Yelena Pavlovna Fadeyev, a daughter of Count Dolgorukov, the last representative of the older branch of this historical family, was well known in the scientific world for her extensive knowledge and education. Serge's uncle, General Rostislav Andreyevich Fadeyev, a brave warrior during the last twenty years of the Caucasian war, was widely known throughout Europe for his

writings on military subjects. Another uncle of his, Privy Councilor, Senator, Superintendent of Public Instruction in the Government of Warsaw, Fedor Fedorovich Witte, whose noble efforts in

the spirit of the highest Russian ideals were fully appreciated by Emperor Alexander II, died in the prime of his life, before he had carried thru his great educational projects. Serge's older brother, Alexander, was a young colonel of the Niznigorodsky Dragoon Regiment, whose heroic exploits during the Turkish war in 1877-1878, in Asiatic Turkey, won him the Orders of St. George Vladimir and Anna. He died from contusions on the head, caused by one of the enemy's bullets. Serge's second brother, Boris, is

COUNT SERGE Y. WITTE.

Assistant Public Prosecutor in the Department of Justice at Odessa.

From his very early childhood Serge Yulievich was instructed at home by the best teachers in Tiflis, even while he studied at the classical Gymnasium. The greatest attention was given to the spiritual and religious education of the children, and thus Serge naturally grew up a true Christian, a Russian in soul and mind.

In the middle of the sixties Serge and

Boris entered the Novorossisk University at Odessa. Serge chose for himself the physico-mathematical faculty—he always showed unusual ability in mathematics—and he graduated with honors in 1871.

Altho by birth, by the station of his relatives, by his education and his natural endowments he could always count upon a successful career, yet, following his own inclination, he connected himself with the steamship and railroad company

then under the supervision of Admiral Chikhchov, and at the same time entered the Government service in the office of Governor Kozebu.

Since then Serge Yulievich Witte owes his advancement his great popularity as a railroad expert, and as a statesman entirely and exclusively to his natural endowments, to his indefatigable activity, to his inexhaustible moral energy, and to his boundless devotion to his work.

ODESSA, RUSSIA.

The Smart Set in Winter

BY ONE OF THE FOUR HUNDRED

[We have published many sociological studies of life in the slums and we add as a supplement to them this authentic account of how the ultra fashionable people pass their time during the season in town, which opens this week with the Horse Show, "the great gilded cage in which society is posed for the populace to gaze at." The author of the article is one of the Four Hundred and consequently speaks with authority.—EDITOR.]

AS it is women who set the key note of fashionable society, the diary of a woman's day will serve as my introduction to the doings of the smart set.

The following, in substance, is the diary of an ultra-smart woman at the height of the metropolitan season.

Coffee served at eleven a. m., before rising. Breakfast consisting of fruit, rolls and coffee and eggs or a chop served in room. Two maids in attendance, one to assist with the toilette and the other with the breakfast. The hair-dresser and the manicure come today by special appointment, the former to retouch with a "regenerator" a few strands of my lady's golden locks, which have faded within a week. The last thing before retiring, her face was massaged and enameled with cold cream by her own French maid, who now causes its color to be heightened with an application of a liquid beautifier—"Venus tint," a first aid to the complexion, the secret of rosy cheeks. The luxurious matron skims hurriedly over the contents of the *Herald* and the *American*, the latter to see if its pages contain anything satirical about the smart set. No

matter, if it be the day of a Presidential election, or wars be raging in the four quarters of the globe, it is the society columns in both these sheets which are scanned before the big headlines of the day's important news.

Ensconced in her cozy boudoir, or in the living room, our queen of the mode peruses her morning's mail and her book of engagements in the company of her secretary and dictates replies, if any are urgently needed. The secretary, who is well versed in the art of being agreeable, and is often a person of fashion who has fallen from grace, for financial reasons, manages to have as few charitable appeals as possible come to the notice of the mistress of the mansion. Next in order, the housekeeper or *maitre d'hôtel*, is commanded to appear to receive a few directions, perhaps, about the menu for the dinner, or the marketing, or any special entertainment to be given in the house. When the grande dame herself thus takes a personal interest, there the best cuisine is almost always to be found. To live like the Gerrys, for instance, has become the Lucullan proverb of the day.

If the day be Monday, my lady as likely as not, will while away an hour or

so at Bagby's musical morning, at the Waldorf-Astoria, of course always coming late and having only a jumbled up idea of the music. Afterwards she is prone to lunch informally with friends at Sherry's or the St. Regis, or at the Waldorf, if in a publicity mood.

Perhaps her morning program has been altogether different and there has been an appointment with the dressmaker or with the modiste, or she has taken a general shopping tour. A word about shopping. Not a few ultra-fashionable women, I regret to aver, are overbearing and difficult in the extreme in their dealings with tradespeople. A woman who will graciously draw her check for a couple of thousand for the services of a soloist from the Metropolitan Opera for a musicale or dinner, as likely as not will dicker with her dressmaker to an exasperating degree about the cost of making a gown. "You must stop to consider the value of our name to you," she will argue, when haggling about the price.

But to get back to our diary. In six out of a dozen fashionable houses, the daily lunch is a light *negligée* function. The men are down in Wall Street in the throes of the stock market and the women of the family will seize upon any pretext to pick up a few intimates and drop into the St. Regis, or Sherry's, instead of lunching at home. Of course, elaborate lunches in one's own house, followed by bridge, are from time to time given for women. The spell of the remorseless god of chance—the bridge whist craze—has taken hold of the smart set in America with a degree of fervor far in excess of that of London and Paris. The American temperament is so much more extreme anyway. Furthermore, the London ultra set have generations of baccarat and poker playing for high stakes behind them. Americans, on the other hand, have not had an ancestral backing of society gamblers and rush in hot-headed, and having much more money to spend than Englishmen, they play for proportionately higher stakes. And one must play high, or be set down as mean or pharisaical. A fashionable woman at a lunch the other day, having lost all her pin money at the bridge table, was trying to pledge a superb jewel-bedecked watch, an almost priceless heirloom, as collateral

for a thousand dollars, and at a recent house party a young man, trying to make a hurried exit after losing two thousand dollars at the game, which he had not paid up, was practically held up by a daughter of the house.

But to revert to the daily routine of the town house. Tea is regularly served at five o'clock. And to people whom the hostess does not wish to receive, she blandly says, "You will find me in any day from five to six o'clock," and goes her own sweet way for a drive or to an afternoon musicale. To those whom she really wishes to see, she will say, "Drop in on Sunday afternoon at five o'clock for a cup of tea," but issues no cards to that effect. Evening calling has gone out of fashion. Some complain that the change makes life unsocial. It does for straying aspirants whom the smart set does not care to receive. Of an evening, a modish woman, as likely as not, will don a *negligée* gown after dinner, if at home, and deny herself to all callers, for in the season she is supposed to be giving a dinner, or attending one, or be going to the opera or the play. Of the opera, she invariably cuts the first act, for she must be supposed to have dined fashionably. There is no greater social desideratum than to be the fortunate possessor of a parterre box at the opera. But it is better to occupy orchestra chairs down in the parquet than to be cynosures in a box in the "grand tier," above the parterre boxes, for that is looked upon as simply aping the real thing. The smart set is admirably clever in various ways, but as a rule densely ignorant about music. On the other hand, the amount of erudition numbers of them have about pictures, architecture, house decorating and furnishing, and even about landscape gardening, is at times surprising. But music is the most ideal and spiritual of the fine arts, as Hegel truly observed. And many a member of the ultra-smart set is anything but ideal and spiritual. The talk is largely about stocks, horses and the things that money will buy.

One of the signs of the times is the tendency of the smart set to dip into the multiform kinds of trade and "side-business." One is a paint manufacturer, another a wine merchant, another a florist, and even a drummer on the road—a

commercial traveler—made a bid for social recognition at Newport last Summer! To the student of social life, it will be of more than passing interest to note the effect which the two great fortunes in dry goods of Marshall Field and Henry Siegel will have upon metropolitan society within the next three years. Both these merchant princes and wizards of finance have wives who by birth, personal beauty and social talent are fitted to become leaders of society. Mr. Marshall Field is soon to have a sumptuous house built in this city. And last year the Henry Siegels kept up the following list of establishments: one of the handsomest villas in the Riviera near Cannes, a London town house in Park Lane, a country house near Taplow-on-the-Thames, a country house on Orienta Point at Mamaroneck, N. Y., and a town house at Madison avenue and Eighty-second street, for whose furnishings half a dozen palaces on the continent of Europe have been despoiled of some of their choicest tapestries and other works of art.

What with the automobile races and horse shows galore in various quarters of the great Republic, society has evinced, especially within the past twelve months, a tendency to broaden out and recruit its ranks with material which a couple of years ago would have been thought quite alien. The social policy of the youngest Vanderbilts, for instance, is neither conservative nor snobbish. Society, at the present hour, is goaded on by a feverish and voracious activity—an uncontrollable impulse to be here and there and everywhere, almost symptomatic of physical neuritis, to indulge in a paradox. It is largely due to this geographical malady of healthy men and women that our metropolitan social season is so chopped up. On the psychic side, conservative nerves are receiving harder jolts than ever before, resulting in all sorts of reversals of ordinary social judgments. A redeeming feature of the ultra-smart frame of mind is its merited degree of tolerance. Of course, society never before had so much to tolerate. Still society is far more forgiving and not nearly so touchy as it was under the Knickerbocker ascendancy, when bitter family feuds were ever and anon engendered. Nowadays fashionable memories have

grown weaker and diplomacy is given loose reins, leaving friends to adjudicate their own quarrels. The young Duchess of Marlborough, during her recent stay in the United States, was the guest of her mother, Mrs. Belmont, but her itinerary of other visits at the country seats of several of her mother's avowed and bitter enemies, affords a pleasing commentary on the prevailing social diplomacy of today.

To such an extent has the ultra-fashionable set succeeded in making a fine art of social life that crowned heads are heaping social honors upon its representatives, thus cheapening their thrones in the eyes of their subjects and really paving the way for their final downfall.

To speak of a different matter, an ultra-fashionable woman vies with the classic Greek in the physiological care of her figure and physical charms. She will subject herself to the strenuous ordeal of the Sandow exercises, to reduce weight, if fashions decree. The new Colony Club, now being built in Madison avenue, under the patronage of Mrs. John Jacob Astor, the Vanderbilts, Whitneys and other women of the smartest set, with its swimming pools and gymnasium, will reach the high water mark in feminine athletics in this country. Of course, its members will not bear even a faint analogy to what is termed a club woman on the upper west side of New York City, for a society woman and a club woman are two totally distinct creations of Almighty God, altho the latter often tries to palm herself off for the former.

A word about ultra-fashionable manners. Altho not so stately and ceremonious as those of our forefathers, they are more simple and direct and facilitate social intercourse in these days of storm and stress, of telephoning, automobiling and annihilation of time and space. An up to date member of society will either treat another cordially, or have nothing to do with him, and is quite devoid of snake in the grass New England stiletto heart to heart and hand to hand dispositions. Formal introductions are exceedingly difficult to obtain among the smart set. But if an introduction is granted, a person of fashion never indulges in the

offensive practice so rife among Bostonians and Knickerbockers of following the presentation up with an artfully devised set of questions, which go to show that he is judging and sizing you up. In six out of a dozen fashionable houses, as in England, the *entrée* to the house as a guest virtually introduces one to the other guests, who are perfectly free afterwards to drop the acquaintance, without inflicting the slight which might follow a formal introduction.

I am asked time and time again whether one needs to keep a yacht, to have a box at the opera, or how many dinners one needs to give in a season, to move in the ultra-smart set. There are plenty of people who are invited to the notable social events of the highest fashion the year around, who have never owned a yacht or even leased one, or had a box at the opera, and whose dinners are few and far between. Aside from the personal qualities which one possesses, one thing is exacted above all others—one must be well dressed. The average man is expected to spend any amount varying from one to five thousand a year for clothes; a woman, from three to ten thousand, not inclusive of jewels. Another prime necessity is that a family shall live in genteel quarters in a fashionable section of the city, as near the Fifth avenue court end of Central Park as possible; the upper West Side of the city means practically ostracism from the smart set. The women of the family must have horses, or an automobile hourly at their command. Aside from these other externals, nothing is more helpful socially than being able to own or lease a parterre box at the Metropolitan Opera. Social power and influence, as well as money, are requisite to secure one in the parterre horseshoe, for it is tacitly assumed that such a box holder belongs to the *crème de la crème* of society. As for fashionable dinner giving, it is better to abstain from it altogether, unless one's entertainments can be fully up to the standard of the set in which one moves.

In view of the short and more and more peripatetic society season in town, an increasing number of ultra-smart matrons, especially those who have grappled with the vexed servant problem, are be-

ginning to chafe and fret over the care of keeping up so many establishments. An ideally complete *ménage* requires at the lowest estimate, besides a chef, a cook and kitchen maid, a second kitchen maid known as a scullery, one or two laundresses, a parlor maid, and three or four men, viz., a butler, second man, third man and fourth man; the third man to do dining-room work and valeting, the fourth useful work like cleaning. For such a simple act as serving a cup of five o'clock tea to a solitary guest, there must be two grooms in attendance, one to bring in the tea things and the other to wait on the door.

Now, no matter how competent one's housekeeper or *maitre d'hôtel*, all this means responsibility for the mistress of the manse. And almost the only deliverance from it is the palatial family apartment hotel, such as the St. Regis or the Warrington. As a social leader said the other day, "I want a few months' rest. Between our week-end house parties, which we expect to keep up out at our place on Long Island, to say nothing of our taking up bag and baggage for Aiken or Europe in Lent, we just want a *pied à terre* in town. Our friends will accept twice as eagerly an invitation to dine with us at the St. Regis as they would if the dinner were prepared by our own chef in our own house." The Alfred Vanderbilts set the fashion of living in a family apartment hotel in Winter by taking a suite at the Warrington a season or two ago and the precedent is slowly but steadily gaining adherents among the smart set.

The week-end Winter house party out on one's estate in the country, which has lately been imported from England, will be more than ever the correct thing to do this season. By parity of reasoning with the smart set of London, it is beginning to be no longer thought exactly ultra-smart to pass Sunday in town—and, above all, Easter Sunday. The ultra-smart host and hostess, alike with the rest of the men and women with whom they move, are so goaded on by the anxiety to crowd into one life the pleasures and experiences of two or three existences, that as likely as not, on the arrival of some of their week-end guests, they may be out fox hunting or golfing, and

the guests will be shown to their rooms by the footman or maids. A Knickerbocker, -or conservative host or hostess, thinks it a point of honor to be punctiliously present to receive guests, and to personally conduct them to their rooms. It is not always specified nowadays by what train one is to arrive, and he is often left to provide his own trap, instead of finding a carriage in waiting. One thing is definitely posited about a week-end visit—when it is to end—and one needs to acquaint himself with his railroad time table in advance, or he may be asked about his train on Monday morning in a way somewhat different from the old-time sentimentality of speeding the parting guest: but that is the English of it. It is irreproachable form to ask a guest point blank what train he is going to take.

A country house over a week-end, if we are up to date, is treated in some ways more like an hotel than a private residence. If a woman is really modish, she takes her own maid along with her and her husband his valet. There is no place where the young man of slender purse feels more on pins and needles and altogether *de trop* than at a house party of this description, unless he be such a surpassing bridge player that he is almost indispensable to help keep things moving along. To say nothing of the high stakes he is expected to wager at bridge, contemplate the fine look of disdain depicted on the faces of the servants who have ministered in any way to his comfort if a tip of less than five dollars apiece be forthcoming upon his departure. The house party has entailed extra-hard work on these menials. The servants who accompany guests give themselves grand airs and sit about and do nothing for the common weal. Take, for example, one item of drudgery for the servants of the house into the computation—the work of

preparing breakfasts for, say, twenty guests. More than likely, fifteen or sixteen different breakfasts have to be served to the guests in their rooms. These repasts, when of the simplest description, consist of fruit, coffee and rolls and eggs. Besides these, a much more hearty breakfast, made up of a variety of hot dishes, has to be served down in the dining-room for those who wish it, from half-past nine to eleven o'clock.

On Saturday night the real state dinner of a week-end is given, where the most elaborate dressing is *en règle*, and it is followed by a tournament at bridge which lasts close up to the Sunday morning danger point. In consequence most of the guests rise very late on the Lord's day. Of course, certain athletic enthusiasts of the house parties will be early risers and stroll out to the golf links, if the weather be propitious. But at a suitable hour the big family omnibus will be in waiting for such as desire to go to church. In common with the etiquette of the English country house, few omissions are held to be more of a breach of decorum than a failure to provide the means of transportation for guests who desire to attend church.

After lunch on Sunday, however, there is nothing to prevent the bridge tables from being as thronged and the scene of as much wrangling and dissension as they were the Saturday night before, when it has more than once happened that the winnings of the hostess have more than defrayed the expenses of giving the house party, and at the finish of the game she is clutching such a roll of greenbacks that she is unable to shake hands good-night with her guests, several of the female portion of whom will take flyers in Wall Street by telephone early Monday morning to try to recoup themselves.

NEW YORK CITY.

A Review of the Important Books of the Year

It is our custom at this season to give a succinct and comprehensive survey of the more important or significant books published during the past year in certain departments of literature, in order that they may be briefly discussed in a comparative way. Such a review of reviews or literary crop report has been found very useful in the past to many of our readers in the selection of books for their own reading or public libraries. Those who are interested can refer to the more detailed reviews which have been published in back numbers of THE INDEPENDENT of most of the books here listed

Fiction

- The House of Mirth.* By Edith Wharton. Scribner. \$1.50.
Our Best Society. Putnam. \$1.50.
A Servant of the Public. By Anthony Hope. Stokes. \$1.50.
A Dark Lantern. By Elizabeth Robins. Macmillan. \$1.50.
Miss Bellard's Inspiration. By W. D. Howells. Harper. \$1.50.
The Marriage of William Ashe. By Mrs. Humphry Ward. Harper. \$1.50.
The Dryad. By Justin Huntley McCarthy. Harper. \$1.50.
The Beautiful Lady. By Booth Tarkington. McClure, Phillips. \$1.00.
The Conquest of Canaan. By Booth Tarkington. Harper. \$1.50.
The Fool Errant. By Maurice Hewlett. Macmillan. \$1.50.
The Divine Fire. By May Sinclair. Holt. \$1.50.
The Shining Ferry. By Quiller-Couch. Scribner. \$1.50.
The Secret Woman. By Eden Phillpotts. Macmillan. \$1.50.
The Garden of Allah. By Robert Hichens. Stokes. \$1.50.
Pam. By Bettina von Hutten. Dodd, Mead. \$1.50.
The Mother. By Duncan Dutton. \$2.00.
The Missourian. By E. P. Lyle. Doubleday. \$1.50.
Return. By Alice MacGowan and Grace MacGowan Cook. Page. \$1.50.
Isidro. By Mary Austin. Houghton. \$1.50.
Memoirs of an American Citizen. By Robert Herrick. Macmillan. \$1.50.
Pole Baker. By Will Harben. Harper. \$1.50.
The Little Hills. By Nancy Banks. Macmillan. \$1.50.
Sanna. By Mary L. Waller. Harper. \$1.50.

When we contemplate the year's fiction, there is much for which we should be thankful, not in the fiction, but in the people who read it. Few of them have been injured by it—not that the authors have preserved anything like a decalog attitude toward the issues of life, but most of us are sufficiently sophisticated by this time to overcome the suggestions

of romantic writers in the conduct of real living. It is several years now since the young woman confessed that she "went wrong" because she read Swinburne's poetry and Balzac's novels. In fact, if there is anything in literary line upon line and precept upon precept, Mrs. Wharton's novel with the scenes laid in the Vanity Fair circles of New York life should detain many a belle in her downward course in that world of splendid shams and hollow mirth. The heroine, who was the most beautiful woman of the year in books, lies dead on the last page, but not before she had suffered her way up thru more shortcomings of nature and ambition than any other, and held out against greater odds of the world, the flesh and the devil. But it was a sort of blind, disabled survival of the good over the strong. And the sequel is in the form of a warning, not a hope. And, when we consider the damnation threats which surround us all from the cradle to the grave, that is the flaw in Mrs. Wharton's splendid sermon. People rise quicker to a hope. To offer a warning is like giving a stone when they ask for bread.

Society novels are the clever books this year. That is their distinction, just as it is the chief distinction of the men and women who "move" in society. It requires wit to found a life or an art upon pastime and nothingness, the two elements which go further than any other toward making up such existence. *Our Best Society* is an illustration to the point. This is not a great novel, nor even a good one, but it counts because the author has caught the real levity of mannerism in that filmy world. It is another pagan "Potiphar" testament to the foolishness of such living, written without those pangs of regret which makes Mrs. Wharton's novel almost painful to read. There are more undercurrents to be considered in producing his kind of fiction than the author would have in writing the wildest story of intrigue and adventure, more distinc-

tions to be made between right and wrong than our clergymen suspect, and Anthony Hope gets them all in when he presents his *Servant of the Public*. She is an actress whose gift consists in showing off all the charms of innocence and virtue which she does not really possess. She has a dramatic talent for producing the illusion of what she is not, and it is one found in other women besides these servants of the public. The actress, however, has become an essential character in the society novel. She is no longer "off

the part she undertakes. This is a new way of dispensing with modest, not to say moral, scruples, and it is very cleverly done. We are getting badly mixed these days. People do wrong so beautifully in fiction that it has become a literary art to make what they do seem right. *Miss Bellard's Inspiration* is mentioned merely chronologically in these connections, and not because Mr. Howells ever would or could offer a lady to the public in a manner unbecoming a father and a gentleman. But this young woman shows the

From Booth Tarkington's "The Conquest of Canaan." Copyright, 1905, by Harper & Brothers.

color" there as she used to be, but she is the color, the rainbow of personality in which society shows all its shades. She is the star, who entertains us by making virtue fly out of every man; and she is the cocktail element in this year's fiction, of which the novelists appear to have imbibed very freely. The heroine is simply the good little lay-figure around which the author weaves the decent threads of the story.

A Dark Lantern is a novel of English society which offers a pathological explanation of why the beautiful and virtuous heroine goes to live with her doctor without being properly married for

kind of inspirations that still cling like entangling fairy-webs to a woman's mind who has evolved into the poetically philosophical altitude.

The Marriage of William Ashe is the most notable book of the year, and will perhaps be the only one to survive. For two reasons: It has an historical value, because of the veracious presentation the author makes of London society a hundred years ago. And the interpretation of Lady Kitty Ashe's character is the first ever given of the type which she represents. With them passion is a form of mental excitement. They are Circe souls, deformed in that they have no

physical sense, no right apprehension of sex. Their self-consciousness is incomplete. There is a secret which Nature withholds from them, and they pursue it in all their flirtations with men. To claim, as some have, that Mrs. Ward's purpose was to show the relations and obligations of a wife to her husband's political career is to take a superficial view of this novel. It is a great study, and a real contribution to the sum of the little we know about that eternal stranger in us all, human nature.

A certain class of novels are founded upon fancy and inspiration. The author's purpose is not to improve or excuse any one's morals, but simply to write a story without much wisdom of words. It is a delightful form of romantic adventuring and never fails to interest the reader. *The Dryad* is a notable example of this fairy art in fiction. But Booth Tarkington, who has always been a master hand at it, is disappointing our expectations, which we confess may have been improperly high. He is beginning to imitate himself, and in *The Beautiful Lady* to accentuate his own little French mannerism of expression. His *Conquest of Canaan* does not read as well in book form as in the magazine, for this reason; it contains some admirable chapters of life in a small, gossipy, spiteful town, and the characters, all of them, including the dog, are alive and interesting, but it is clumsily put together and weakly conventional in the concluding portion. Like Mr. Tarkington himself, the book begins better than it holds out. This novel is not so much better than "The Gentleman From Indiana" as it should be. He should hire a rigorous critic to sit at his elbow and keep him up to his best work.

In his story *The Fool Errant*, Maurice Hewlett has simply amplified the chivalric idea upon which his short story, "The Lion Chase," was founded. Many think this author comes nearer making a fine art of fiction than any other living writer, but he is in danger of portraying the same subjects and of producing the same effects too often.

It is the fashion now for characters in fiction to discuss art in all its forms of madness with more wit than people ever bestow upon the subject in real life.

This is a way the poor authors have of freeing their minds and justifying their existence. This acid is to be found in May Sinclair's *Divine Fire*. But aside from the literary shop talk in this novel, the author has touched the heights and depths of inspiration. This is why parts of the book seem to sag so wofully. She goes further occasionally than she can carry the whole burden of human dross in the tale. Only the greatest writers among us can ever afford to interject religious spirituality in their books. This is why so many novelists have trailed off into a more convenient agnosticism; it does not call for such high imaginative powers. But we have a genuine revival of religious emotions in *The Shining Ferry*. The book is a heavenly hymnal written out in a few human hearts. *The Secret Woman* is a great story of the wrong kind, and it has a fitting background in the wild wastes of Dartmoor. Phillpotts would be at his wits' ends if he were obliged to write a story and lay the scene of it in a healthy, good-tempered landscape. His people carry the sad, tragic, sullen hearts of the old Dartmoor tors in their frail human bosoms. *The Garden of Allah* is another illustration of how significant natural scenery may become in the portrayal of tragedy. The passion-stained monk could have found no more fit setting for his love and remorse than the Great Desert, with its terrible loneliness, its dreadful nights and its burning days. Wilful, capricious, unfortunate *Pam* is one of the living characters in this year's fiction, so much alive that it should be condemned as an unwarrantable case of vivisection to crush such an attractive creature in the wheels of iron circumstance in order to prove the trite thesis that free love entails penalties upon the second generation.

The Missourian is that vintage of manhood in the South which matured during the period of the Civil War. But the scene of his adventures is laid in the golden eddies left by that great struggle on the shores of another country. The McGowan sisters have written the most accurate and entertaining Colonial novel of the year, but the sequel of *The Return*, which they made up out of the romantic ends of cer-

Elizabeth Robins, Author of "The Dark Lantern."

tain social traditions, is a sort of anticlimax. *Isidro* is an old-world epic dealing with Indian and Spanish legends in the West, and is a masterpiece in the particulars of literary style, and time-old spirit.

The socio-political novel is a popular, but inadequate way of conveying unpleasant impressions of our national life. Mr. Herrick wrote the most significant novel along this line last year, but his late book, *Memoirs of An American Citizen*, is not in so happy a vein. The author sees things too big, and he has not enough confidence in the virtue of the American people, which will outlast transient vices.

And, finally, there are a few novels of homely, simple life, good to read. The characters are real human beings, who will never be known in the world of fiction because they belong to the corners and cross-roads of life itself. Some are to be found in Harben's new story, *Pole Baker*, and *Among the Little Hills*, and especially in *Sanna*.

We have never outgrown our early pioneer relish for the life of adventure, and no American novelist knows this better than does George Barr McCutcheon. He can write better stories of another kind, but in his last novel, *Nedra*, he has swung out more fully than ever in the

brisk business-like manner of expression which often takes the place of literary style in this country, and he has given us the kind of story Americans like, incredible, daring, delightful and a little absurd.

History and Biography

- The Cambridge Modern History*. Vol. III. The Wars of Religion. Vol. VIII—The French Revolution. Macmillan. \$4.00 each.

The demand for historical literature, which seemed to have reached high-tide last year, has not yet begun to ebb—or, if the demand is less, production and supply have not yet heeded the changing conditions. The great boom given American history by the national pride in the outcome of the Spanish-American war, and the consequent elevation of our position in the world's eyes, has extended still further to the increase of our interest in the history of other nations.

Still prominent among the general history enterprises is the *Cambridge Modern History*. The volume on the "Wars of Religion" has the characteristics of preceding volumes—a fine, scholarly catalog of events, with little sense for literary form or emphasis. It is learned and fair, but cold and unsympathetic; useful as an encyclopaedia, and having little dramatic interest. Of more service to the lay reader is the *Historians' History of the World*, which is a mosaic of bits taken from many well known historians. Tho the choice of materials shows a greater sense for literary than historical merit, yet, for popular use, that is more essential. Larned's *Seventy Centuries of the Life of Mankind*, a shorter attempt to tell the world's history, makes the serious error of a chronological arrangement regardless of the logical sequence of events, and he divides time into periods measured by the lives of great men—a method destructive of real historical unity. The *History of All Nations*, a carefully edited translation of the *Allgemeine Weltgeschichte*, has not developed far enough to be judged as a whole, but the first ten volumes are authoritative and a much needed guide to the study of ancient history. It is very handsomely printed and illustrated. *Hill's History of Diplomacy* is a carefully written summary of European international history.

Two important and original contributions to Egyptian history are made by Dr. Flinders Petrie's new volume and Dr. Breasted's more complete and popular work. Dill's *Roman Society* is so interestingly written and contains so much that is new to the ordinary reader that it is reaching a remarkably wide audience.

Of general histories of the United States the year has brought forth nearly every kind, long or short. The most elaborate undertaking is the *American Nation Series*, edited by Professor Hart. Ten volumes of the total twenty-eight have appeared, each written by a specialist in the particular field treated by that volume. With one or two exceptions the writers thus far have shown literary skill as well as special study. Nearly all are teachers of history in some one of our largest universities, and as their work compels them to take a survey of the whole field of American history they have not exaggerated the importance of their own specialty in its relation to the whole subject. Tho the series cannot escape some of the limitations of the monographic method, yet it has already taken the place which it will hold for many years of the most important reference history of our country. Professor Channing, of Harvard, has at the same time issued the first volume of his *History of the United States*, which promised to be the most scholarly work, covering our whole history, produced by a single author. It is the ripe product of long and deep research, masterful in

Edith Wharton, Author of "The House of Mirth."

scholarship, and clear and simple in its literary style. As a study of the growth of the nation, from the political, institutional, industrial and social point of view, it stands without a rival. Mr. Avery's like attempt falls far short in depth of knowledge, and, while accuracy of detail has been secured thru several revisions by specialists, the emphasis is bad and the literary style often stilted. There is no effort to settle controverted points, all positions being stated and none chosen. Of shorter attempts to tell our nation's story that of E. E. Sparks is of the greatest value. It is chiefly a study of the westward movement, the increase of the sentiment of union, and the material growth of the nation. Thorpe's *Constitutional History* exhibits an immense amount of learning on that subject, ill arranged and almost devoid of historical sequence.

One of the most notable facts about the publication of American historical literature is the printing of original documents and the reprinting of valuable Americana. The Blair & Robertson translations and reprints of documents relating to the Philippine Islands, and Ford's new edition of the *Journals of the Continental Congress* are fine examples. Six or eight volumes more of Thwaites's *Early Western Travels* have appeared during the year, and they continue to furnish the most vivid accounts of Western social and economic conditions before 1850. The *Trail-Marker's Series* offers in cheap form good and well-edited contemporary accounts of heroic first explorers of the interior of our continent. A fine reprint of Lahontan's *New Voyages to North America*, edited by Thwaites, makes generally available the most entertaining and instructive—in many respects—of the early accounts of the Canadian and

Northwestern wilderness about Lake Michigan and the upper Mississippi. Most interesting of all the reprints, perhaps, is Olmsted's *A Journey to the Seaboard Slave States*, the most faithful picture of the worst side of the South in slavery days (1852-3). It still has a value in the study of the great problem of our time, and for historical purposes is invaluable.

Besides the general histories of the United States and reprints of documents, there has been some very valuable work upon limited periods and phases of our

history. The fifth volume of Rhodes's monumental work, *History of the United States from 1850*, has all the thoroness of scholarship and excellence of literary execution that has marked the earlier volumes. In this volume closes the story of the Civil War, and this masterful accomplishment entitles Mr. Rhodes to the first place among American historians. The minds of the most competent critics are made up, and difficult, indeed, will it be for any future historian to displace Mr. Rhodes—certainly in his own field. The

Herbert Paul, Author of "A History of Modern England."

other histories of special subjects are more modest in their character. Mr. Lowery has added another scholarly work to his studies in Spanish colonization by the publication of his *Spanish Settlements: Florida*. A worthy place among these special studies is held by Friedenwald's *Declaration of Independence*, which is a careful and deep study of the evolution of the spirit that produced that famous document. Other studies of this character are the biographies of eminent Americans. Miegs's *Life of Benton* is, perhaps, the best of these, written by a student for students. Clay, as a statesman and country gentleman of impulsive and chivalrous Kentucky, is studied by Mr. Rogers in

an interesting way, but lacking in dramatic arrangement and wanting in painstaking accuracy of statement. A charming work, which should be read by every Northern man who finds himself intolerant of Southern heroes is *Recollections and Letters of General Robert E. Lee*, by his son, R. E. Lee. Barrett's *Lincoln* is the last of four lives of the great President written by the same author, and shows calmer judgment than those written as campaign documents or the one issued after Lincoln's death.

England's history in recent years has been interestingly written by both Herbert Paul and Sir Spencer Walpole. The former, beginning with 1846, with the triumph of free trade, gives a brilliant review, tinged with the convictions of a pronounced free-trader, a liberal in politics, and an opponent of the Church of England. Walpole's work is diffuse and wordy, but interesting and useful, showing wide use of the original sources. His personal experience in administration lends to the book the charm of intimate knowledge as to much that is told. Trevelyan's *England Under the Stuarts* is one of the best pieces of historical writing that has appeared in recent years. The younger Trevelyan is evidently a chip of the old block. McKechnie's very readable book on the *Magna Carta* is not so much a history as a commentary from the point of view of a constitutional lawyer. In biographical work in the English field there is at least one notable contribution, Frederic Harrison's *Life of Chatham*.

Sociology, Economics, Politics

- The Foundations of Sociology.* By Edward A. Ross. Macmillan. \$1.25.
Elements of Sociology. By Frank W. Blackmar. Macmillan. \$1.25.
A Text Book of Sociology. By James Q. Dealey and Lester F. Ward. Macmillan. \$1.30.
General Sociology. By Albion W. Small. University of Chicago. \$4.00.
History of Matrimonial Institutions. By G. E. Howard. University of Chicago. 3 vols. \$10.00.
Studies on Anglo-Saxon Institutions. By H. Munro Chadwick. Macmillan. \$2.50.
Democracy and Reaction. By L. T. Hobhouse. Putnam. \$1.50.
A Modern Utopia. By H. G. Wells. Scribner. \$1.50.
Betting as a National Evil. By B. Seeböhm Rowntree. Macmillan. \$1.60.
The Liquor Problem. By the Committee of Fifty. Houghton. \$1.00.
The War of the Classes. By Jack London. Macmillan. \$1.50.
The Diseases of Society. By G. Frank Lybston. Lippincott. \$3.00.
The Americans. By Hugo Munsterberg. McClure. \$2.50.

- The Women of America.* By Elizabeth McCracken. Macmillan. \$1.50.
Poverty. By Robert Hunter. Macmillan. \$1.50.
The Principles of Relief. By Edward T. Devine. Macmillan. \$2.00.
Modern Methods of Charity. By C. R. Henderson and Others. Macmillan. \$3.50.
The History of the Standard Oil Company. By Ida M. Tarbell. McClure. 2 vols. \$5.00.
Trusts, Pools and Corporations. Edited by William Z. Ripley. Ginn.
Government Regulation of Railway Rates. By Hugo Richard Meyer. Macmillan. \$1.50.
Restrictive Railway Legislation. By Henry S. Haines. Macmillan. \$2.50.
Rise and Decline of the Free Trade Movement. By W. Cunningham. Macmillan. 75c.
The Bank and the Treasury. By Frederick A. Cleveland. Longmans. \$1.80.
Lynch Law. By James E. Cutler. Longmans. \$1.50.
Industrial History of the United States. By Katherine Cowan. Macmillan. \$1.25.
The City the Hope of Democracy. By Frederick C. Howe. Scribners. \$1.50.
Labor Problems. By Thomas S. Adams and Helen S. Sumner. Macmillan. \$1.60.
The Industrial Problem. By Lyman Abbott. Jacobs: Philadelphia. \$1.00.
The Negro. By Thomas Nelson Page. Scribner. \$1.25.
The Problem of the Immigrant. By J. D. Whelpley. Dutton. \$3.00.
The Russian Jew in the United States. Edited by C. S. Bernheimer. Winston. \$2.00.
The Principles of the Administrative Law of the United States. By Frank J. Goodnow. Putnam. \$3.00.
Civics: Studies in American Citizenship. By Waldo H. Sherman. Macmillan. 90 cents.
International, Civil and Commercial Law. By F. Meili. Macmillan. \$3.00.
The National Administration of the United States. By John A. Fairlie. Macmillan. \$2.50.
The Civil Service and the Patronage. By Charles Russel Fish. Longmans. \$2.00.
Constitutional Law in the United States. By Emlin McClain. (American Citizen Series.) Longmans. \$1.50.
A History of Political Theories From Luther to Montesquieu. By W. A. Dunning. Macmillan. \$2.50.

Social and industrial subjects come in for a greater contribution even than that of last year; and the character of the contribution is on the whole higher. The public is concerning itself increasingly with these subjects, and an army of writers is busily engaged in supplying the growing demand for books. We can mention only a part of the year's publications.

Under General Sociology we have Dr. Ross's brilliant but somewhat capricious *Foundations of Sociology*, which will doubtless take high rank as an inquiry into the nature and scope of the science, and a criticism of much that has heretofore been laid down as sociological truth. Dealey and Ward's volume is a popularization of the matter in Dr. Ward's great work on *Pure Sociology*, which appeared two seasons ago. The abridgement has been excellently done. Dr. Blackmar's contribution is arranged in the form of a working manual for students. It is comprehensive in scope, is written in simple and direct diction,

and the arrangement of its parts is sequential and orderly. Professor Small's *General Sociology*, just received, is a work of such importance that we shall be compelled to review it at length in a few weeks.

There are several important numbers in the class of what may be called Sociological Studies. Professor Howard's *History of Matrimonial Institutions* is a scholarly and profound inquiry into the various forms of marriage, and their environing social conditions. Chadwick's *Studies on Anglo-Saxon Institutions* is another notable work. Mr. Hobhouse's inquiry into the apparent reaction from democracy has attracted great attention in America, as well as in England. Mr. Wells reaches probably his highest work as a theorist on the future state in his *A Modern Utopia*. Mr. Rowntree treats of the evil of betting in the thoro and dispassionate manner he has employed in his other studies. London's *War of the Classes* develops the Socialist attitude on modern social antagonisms in his characteristically forcible and striking style, while Professor Münsterberg gives himself free rein in a comprehensive description of the American people, especially as compared with the German.

Under Economic Studies (tho the dividing line between this and the previous class is often difficult to fix), we have Mr. Hunter's remarkable volume on poverty in the United States, and a long list of other entries, many of them of marked excellence. The most approved methods of organized charity are explained and discussed by Dr. Devine, the head of the Associated Charities in New York in *The Principles of Relief*, and by a group of experts in *Modern Methods of Charity*, both valuable aids to the philanthropist. Dr. Ripley has collected a number of monographs on particular trusts, pools and corporations, and has built up a book of very considerable value. Miss Coman supplies an old want by her *Industrial History of the United States*, a carefully executed work, packed with information. The Adams-Summer volume on *Labor Problems* is comprehensive in scope and thoro in treatment, and will be found indispensable to all students of industrial questions. The negro is discussed from a moderate

Southern standpoint by Mr. Page, while the immigration problem claims two notable entries. Dr. Howe, in a spirited and striking description of the American city, interprets its myriad phases from the economic standpoint. The increasing interest in railway regulation is indicated by two notable contributions. Dr. Meyer's work reveals a marked reaction toward the more individualistic attitude, and maintains that any phase of Government regulation of railways is unwise. Professor Haines takes a more progressive view. The substance of this book was delivered last April and May in twelve lectures before the Boston University School of Law. A critical attitude toward State regulation is evident thruout, but it is conceded that Federal regulation of some sort may be beneficial.

Religion

- Die Quellen des Lebens Jesus.* By Paul Wernle. Jesus, by Wilhelm Bousset. Paulus, by William Wrede. Halle: Gebauer-Schwetschke. Each, 40 pf.
- The Beginnings of Christianity.* By Paul Wernle. Putnam. \$2.50.
- Christian Life in the Primitive Church.* By Ernst von Dobschütz. Putnam. \$2.50.
- Expansion of Christianity in the First Three Centuries.* By Adolf Harnack. Putnam. 2 vols. \$2.50 each.
- The Religion of the New Testament.* By Bernhard Weiss. Funk. \$2.00.
- Messianic Hope in the New Testament.* By Shailer Mathews. University of Chicago. \$2.50.
- The Eschatology of Jesus.* By Lewis A. Muirhead. Armstrong. \$1.75.
- St. Paul's Conceptions of the Last Things.* By H. A. A. Kennedy. Armstrong. \$2.25.
- Messages of the Apocalyptic Writers.* By F. C. Porter. Scribner. \$1.25.
- Jesus and the Prophets.* By Charles S. Macfarland. Putnam. \$1.50.
- Who Then Is This?* By Harris G. Hale. Pilgrim Press. \$1.25.
- The Witness to the Influence of Christ.* By W. B. Carpenter. Houghton. \$1.10.
- Christ.* By S. D. McConnell. Macmillan. \$1.25.
- The Story of St. Paul.* By B. W. Bacon. Houghton. \$1.50.
- The Letters to the Seven Churches of Asia.* By W. M. Ramsay. Armstrong. \$3.50.
- Bible Problems.* By T. C. Cheyne. Putnam. \$1.50.
- The Criticism of the Fourth Gospel.* By William Sanday. Scribner. \$1.75.
- A Commentary on Amos and Hosea.* By W. R. Harper. Scribner. \$3.00.
- The Priestly Element in the Old Testament. The Prophetic Element in the Old Testament.* By W. R. Harper. University of Chicago. \$1.00 each.
- Early Hebrew Story.* By John P. Peters. Putnam. \$1.25.
- The Religion of Israel.* By R. L. Ottley. Macmillan. \$1.00.
- The Jewish Encyclopaedia.* Vols. IX, X, XI. Funk. \$6.00 each.
- Primitive Traits in Religious Revivals.* By F. M. Davenport. Macmillan. \$1.50.
- The Gospel and the Church.* By Alfred Loisy. Scribner. \$1.00.
- The Freedom of Authority.* By J. MacBride Sterrett. Macmillan. \$2.00.
- The Church and Its Organization, in Primitive Times*

and Catholic Times. By Walter Lowrie. Longmans. \$3.50.
Die Doppelhe des Landgrafen Philipp von Hessen. By William Walter Rockwell. Marburg: N. G. Elwert. Seven marks.
John Knox and the Reformation. By Andrew Lang. Longmans. \$3.50.
John Knox: His Ideas and Ideals. By James Stalker. Armstrong. \$1.00.
John Knox. By Henry Cowan. Putnam. \$1.35.
The Twentieth Century New Testament. Revell. \$1.00.
Introduction to the Bible for Teachers of Children. By Georgia Louise Chamberlain. University of Chicago. \$1.00.
How to Conduct a Sunday School. By Marion Lawrence. Revell. \$1.25.
The Wonders of Life. By Ernst Haeckel. Harper. \$1.50.
Ideals of Science and Faith. Longmans. \$1.60.
De Profundis. By Oscar Wilde. Putnam. \$1.25.
From Epicurus to Christ. By Wm. DeWitt Hyde. Macmillan. \$1.50.

No one who considers fairly the output of religious books of the past twelve

life of the present. Perhaps nothing in English equals the very remarkable series of *Religionsgeschichtliche Volksbücher*, popular treatises based on the historical method, which have been appearing in German. Brief and clear, of abundant mastery of the facts of the subject, full of sharp formulas and illuminating criticism, such works as Wernle's *Introduction to the Gospels*, Bousset's sketch of the *Life and Work of Jesus*, and Wrede's essay on Paul, are as illuminating and helpful presentations of the results of scholarly Biblical research as have ever been made. They have had large sale in Germany and are exceedingly

Arabe Veillant le Corps de Son Ami—Fortuny. From Sturgis's "Appreciation of Pictures." Copyright, 1905, by The Baker & Taylor Co.

months can doubt the fruitfulness of the critical and historical method. The time has gone by when treatises on Biblical and religious subjects can be sneered at as "Sunday School literature," and the sarcasm of George Eliot in her treatment of "Evangelical Teaching: Dr. Cumming" would be very unjust if applied to the theological productions of the past year. Instead of the "unscrupulosity of statement" and the "alliance between intellectual and moral perversion" with which the keen essayist treated the evangelical preacher to an unmerciful flaying, we have today in the religious writers whose works secure most consideration thoroughness of research, carefulness of statement, and real grip of vital questions in religious history and in the religious

cheap, costing in America only about ten cents a volume. Unfortunately they have not been translated, but works of the same critical skill and insight are available in English in the translations of Wernle's *Beginnings of Christianity* and Von Dobschütz's *Christian Life in the Primitive Church*. The former is taking its place as a standard work on the rise of Christianity, and the latter is interesting as a study in the neglected field of early Christian morals. Prof. James Moffatt has completed his translation of Harnack's *Mission und Ausbreitung des Christentums*, which, since its appearance in 1902, has won recognition as a standard and authoritative work on the missionary character and missionary efforts of Christianity to the time of

Constantine. It is an indispensable work of reference as to Christian activities in that period.

Dr. Weiss's *Religion of the New Testament* is from an older generation of the German theological faculties, and will not be found so illuminating.

One of the sure results of historical criticism is the recognition of the large place which apocalyptic and eschatological ideas held in the thought of Jesus and his apostles. A very able treatment of this theme, conservative in spirit, yet thoro in research, is Professor Shailer Mathew's *Messianic Hope in the New Testament*. Two Scotch scholars, apparently without pre-arrangement, divided the subject, Mr. Muirhead writing on the *Eschatology of Jesus*, and Professor Kennedy on *St. Paul's Conceptions of the Last Things*. Both works are of high merit, the latter securing for its author his transfer from a manse in Callendar, Scotland, to a theological chair in Toronto.

Professor Porter's *Messages of the Apocalyptic Writers* borders on the same fascinating and important topic of Jewish and Christian population on the future, and is, perhaps, the best introduction to the study of Daniel and Revelation available.

A further enlightening contribution to the study of the life of Christ is found in Dr. Macfarland's *Jesus and the Prophets*, a careful and scholarly examination of the relation of Jesus to Old Testament prophecy, and an endeavor to distinguish between Christ's own use of the prophets and that of the evangelists. Mr. Hale's endeavor to set forth the mind and spirit of Jesus is on many pages suggestive, and Dr. Carpenter's *Witness to the Influence of Christ* exhibits his well-known versatility and literary skill. The Rev. S. D. McConnell interprets Jesus as a teacher of the dogma of conditional immortality.

For many years the relation of the Acts of the Apostles to the Epistles of Paul has perplexed New Testament scholars. Professor Bacon's *Story of St. Paul* is the clearest and ablest presentation of this subject yet made by an American. Professor Ramsay endeavors to throw light on the *Letters to the Seven Churches of Asia* by consideration of

political and social conditions in Asia Minor at the time of the writing of the book of Revelation. Some of his interpretations may be questioned, but the wealth of information and fact makes his book valuable for reference. Canon Cheyne's *Bible Problems* seeks to prove that the accounts of the Virgin Birth, the Descent into Hell, and the Resurrection and Ascension of Jesus had their origin in Babylonian myths.

The authenticity of the Fourth Gospel has been very ably and earnestly defended by the learned and distinguished Oxford Professor, William Sanday, under the title *The Criticism of the Fourth Gospel*. Stress is laid upon the internal argument for the authenticity.

If one may judge from the books issued, the center of interest is passing from the Old Testament to the New. The contributions to the Old Testament study are not as numerous as a few years ago, while the number of books on the New Testament has increased largely. However, President Harper's *Amos and Hosea* fully sustains the reputation of American Old Testament scholarship, and are the best and fullest exposition of those most important prophets. The same author's *Priestly Element in the Old Testament* and *Prophetic Element in the Old Testament* are also valuable. Wealth of archæological information lends special value to Dr. Peter's scholarly *Early Hebrew Story*, an examination of the narrative portions of the Hexateuch. Ottley's *Religion of Israel* is a compact, semi-popular account of the development of Hebrew religion, as understood by a cautious and moderate critic. The *Jewish Encyclopædia*, of which three volumes have appeared during the year, has many articles on subjects connected with the Old Testament, written by competent scholars and in a scientific and catholic spirit.

The important discussion called out by Harnack's "What is Christianity" has been continued in Loisy's *Gospel and the Church*, a very searching critique of Harnack from the brave leader of the French liberal Catholics, and also in Sterrett's *Freedom of Authority*, a criticism of both Loisy and Harnack from the point of view of a Hegelian and Broad Churchman. The method of organiza-

tion in early Christianity receives the most searching examination in recent years in Lowrie's *The Church and Its Organization in Primitive and Catholic Times*.

Among biographies of religious leaders international recognition has been given to Rockwell's work on the bigamy of Philip of Hesse. A German treatise of formidable size, yet written by a young American scholar, it has been hailed in Germany as shedding new light on the character of Luther.

In Philosophy, the materialistic monism of Haeckel has had further vigorously combative announcement in his *Wonders of Life*, an answer to criticisms and replies on the widely read "Riddle of the Universe." On the other hand, in *Ideals of Science and Faith* six eminent scientists and four leading theologians seek to show that the antagonisms between science and religion have been greatly exaggerated. The trend of current feeling is more with Sir Oliver Lodge and these essays than with the aged Haeckel. Oscar Wilde's *De Profundis* is one of the saddest, most terrible, yet most fascinating books of recent times, a philosophy of suffering in the form of a confession. The ethical principles of antiquity, their modern modifications, and their relation to the moral teachings of Christianity are handled in untechnical language by President Hyde in *From Epicurus to Christ*.

Music and Art

- Grove's Dictionary of Music*. Vol. I. Edited by J. A. Fuller Maitland. Macmillan. \$5.00.
Theodore Thomas, A Musical Autobiography. 2 vols. McClurg. \$6.00.
Beethoven and His Forerunners. By D. G. Mason. Macmillan. \$1.50.
The Art of the Musician. By Henry G. Hanchett. Macmillan. \$1.50.
The Story of the Violin. By Paul Stoeving. *The Story of the Harp*. By W. H. Grattan Flood. Scribners. \$1.25 each.
The Study of the History of Music. By Edward Dickinson. Scribners. \$2.50.

- Bryan's Dictionary of Painters and Engravers*. Vol. V. Macmillan. \$6.00.
The Library of Art. Medieval Art, by W. R. Lethaby; Verrocchio, by Maud Cruttwell; Albrecht Dürer, by T. Sturge Moore; Giotto, by Basil de Selincourt; Constable, by M. Sturge Henderson; Pisanello, by G. F. Hill. Scribners. \$2.00 each.
Edward Burne-Jones. By G. B-J. Macmillan. \$6.00.
G. F. Watts. Reminiscences. By Mrs. Russell Barrington. Macmillan. \$5.00.
Old Masters and New. By Kenyon Cox. Fox, Duffield. \$1.50.
The Appreciation of Pictures. By Russell Sturgis. Baker & Taylor. \$1.50.

The past season's books on music, painting, sculpture, and on their eminent practitioners, surpass those of any preceding year. Only the barest mention of the best can be attempted in the space at our disposal.

Among those concerned with the "no-

SIR E. BURNE-JONES.

blest of the arts" the most important is the first of five volumes of a revised and enlarged reissue of Sir George Grove's monumental *Dictionary of Music and Musicians*. This is practically a new work (twenty-five years have passed since the original edition was published), ably and judiciously edited, and it promises to be an indispensable compendium for those who are genuinely interested in music or in music-makers. The *Musical Autobiography* of the late Theodore Thomas is a fascinating record of

a noble life. It is accompanied by 1,200 of the great conductor's programs, a collection of the highest value for its indication of the development of musical taste and appreciation in America.

Dr. Williamson's revision of *Bryan's Dictionary of Painters and Engravers*, now concluded with the fifth volume, gives to the world another great and invaluable work of historical narrative and critical comment, ranking in its field with *Grove* in the field of music. The new issues in that excellent set of monographs, "The Library of Art," are notable for a free exercise of individuality by the contributors that makes each of the volumes a sympathetic interpretation of the

work of the artist discussed. The memorials of *Edward Burne-Jones* by his widow, while making no pretense to a critical knowledge of art, give a remarkably clear and sympathetic account of the emotional life of Burne-Jones, Morris and others of their set, out of which their art sprang. Mrs. Barrington's personal reminiscences of *G. F. Watts* constitute the most important book about that painter yet published, giving an intimate portrait of the man and some account of the development of his art. For incisive analysis and illuminative appreciation Mr. Cox's little book of essays, *Old Masters and New*, is the most significant and the most valuable work in art criticism pure and simple issued in many a long day. Every lover of art should have it. Mr. Sturgis's *Appreciation of Sculpture* is a good, helpful and instructive book by an authority whose long and careful study of the arts has equipped him with a wealth of knowledge.

Poetry, Biography and Criticism

- Poems of Swinburne.* Harper. 12 vols. \$6.00.
Byron's Complete Poetical Works. Houghton. \$3.00.
The Sin of David. By Stephen Phillips. Macmillan. \$1.25.
Fenris, the Wolf. A Tragedy. By Percy Mackaye. Macmillan.
Cain. A Drama. By George Cabot Lodge. Houghton. \$1.00.
Love Triumphant. By Frederic Laurence Knowles. Estes.
Music and Other Poems. By Henry VanDyke. Scribner. \$1.00.
Emile Zola. By E. A. Vizetelly. Lane. \$3.50.
Honore de Balzac. By Mary F. Sandars. Dodd. \$3.00.
Theodore Watts-Dunton. By James Douglas. Lane. \$3.50.
An Irishman's Story. By Justin McCarthy. Macmillan. \$2.50.
Autobiography of Moncure Daniel Conway. Houghton. 2 vols. \$6.00.
Autobiography of Andrew D. White. Century. \$7.50.
Life and Letters of Mandell Creighton. Longmans. 2 vols. \$9.00.
Letters of John Ruskin to Charles Elliot Norton. Houghton. 2 vols. \$4.00.
Life, Letters, and Literary Remains of J. H. Southworth. Edited by his Wife. Macmillan. 2 vols. \$4.50.
Complete Works of Emerson. Centenary Edition. Houghton. 12 vols. \$1.75 each.
A History of Criticism. By George Saintsbury. Dodd. 3 vols. \$3.50 each.
The Library of Literary Criticism of English and American Authors. Edited by Chas. Wells Moulton. Buffalo: Moulton. 8 vols. \$5.00 each.
Shakespearean Tragedy. By A. C. Bradley. Macmillan. \$3.25.
Shelburne Essays. Second and Third Series. By P. E. More. Putnam. \$1.25 each.
Harvard Lectures on Greek Subjects. By S. H. Butcher. Macmillan.
Tragic Drama in Aeschylus, Sophocles, and Shakespeare. By Lewis Campbell. Longmans.
English Men of Letters. Sidney Smith, by G. W. E. Russell. Adam Smith, by F. W. Hirst. Thomas Moore, by Stephen Gwynn. William H. Prescott, by Harry Thurston Peck. William Cullen Bryant, by W. A. Bradley. Hobbes, by Leslie Stephen. Edward Fitzgerald, by A. C. Benson. Macmillan. 75c. each.

The year's crop of memorable verse has been unusually small—so much so as hardly to deserve a place by itself. If we omit the complete uniform edition of Swinburne in twelve volumes, with a dedicatory letter to Mr. Watts-Dunton at its head, and Paul E. More's well-edited volume of Byron's poems, there remains little or nothing of first rate importance or of any great promise. Even Mr. Phillips, from whom something at least poetical may be expected annually, has proved a good deal of a disappointment this last season. Not that his *Sin of David* is without its splendid romantic passages; but its dramatic shortcomings are singularly conspicuous, as also the peculiar flatnesses into which he falls when he attempts, as apparently he often does, to chasten his romantic proclivities by a sort of classical discipline or regimen. With this exception the brief impulse toward a classic reaction, which, tho slight, was still perceptible a year ago, seems to have ceased; and if anything, the pendulum appears to incline to the opposite extreme. Mr. Mackay's *Fenris, the Wolf*, and Mr. Lodge's *Cain* both belong to the category of barbaric; the former by its subject and treatment, and the latter by its general spirit. There is some good, if rather grandiloquent, verse in these productions, which, together with a ferment of spirit, and a bewilderment of moral ideas, justly entitles them to the designation. Amid lighter and less pretentious verse may be mentioned, with regret for the untimely loss of its author, Mr. Knowles's *Love Triumphant*. When it comes to the expression of thought, however, for our own day, there is something lacking. In spite of his popularity even Dr. VanDyke, who attempts to supply our want of a reflective poet, leaves much to be desired in depth and significance.

Of books about books and the makers of books, on the other hand, there is no lack. Indeed, the kind of literary criticism and biography, which is not itself literature, is so rapidly on the increase that it seems as though its subjects must soon be exhausted at the present rate of original production.

Mr. Vizetelly's biography of Zola possesses little critical value; prob-

ably the time has not yet come for a just estimate of Zola. But it has the merit of being written by Zola's English press agent and translator, a personal acquaintance of the author's besides; and tho wanting in concision and proportion, is likely for some time to be an authoritative source for the facts of the novelist's life. Miss Sandars, too, is the first to publish in English anything like a consecutive and reasonably complete biography of Balzac. She is unfortunate in writing at the height of a reaction in favor of her subject, particularly as she herself is very much under the dominance of the great attitudinarian, so that she occasionally fails to distinguish the man from the pose, as is not too inexcusable in the case of one who hoaxed himself quite as often as others. In default of any collection of Mr. Watts-Dunton's writings, Mr. Douglas's account of that critic and his work ought to be reckoned in with these other volumes under the head of useful literary information. Mr. Douglas writes in a vein of obsequious laudation, which would be disgraceful if it were not merely silly; but his book is valuable, nevertheless, as containing selections and extracts from much of Mr. Watts-Dunton's best criticism not generally accessible elsewhere.

In the nature of a mean between history and criticism, sharing to some extent in the nature of one and the manner of the other, and supplying material indifferently to both, should be mentioned here the autobiographies, memoirs, letters, and the like, which have recently been rising in shoals on every quarter. If the *Academy's* classification of the *genre* into autobiography and ought-not-to-biography is to be sustained, a great many of these productions may be lightly dismissed as belonging altogether to the latter class. Most of the remainder are more or less journalistic or anecdotal in their appeal, sketches of men, manners and incidents, like those of Moncure Conway and Justin McCarthy, to be taken up later, in part, perhaps, into our social histories. Of those the letters of J. H. Shorthouse, the author of "John Inglesant," form one

of the most significant collections to the student of the individual, probably by reason of his limitations fully as much as his achievement.

It is a striking illustration of the elasticity of the term, criticism, that it should seem as capable of including the Centenary Edition of Emerson, which is certainly criticism of the broadest sort, and, perhaps, of the best sort, too, in dealing directly in life without the intervention of books, as Professor Saintsbury's *History of Criticism*, which, in spite of its author's rather slap-dash fashion, is on the whole a valuable, even an indispensable compendium for students of that very special criticism which is concerned with books almost exclusively, while the *Library of Literary Criticism* illustrates the same subject for the general and less technical reader. Professor Bradley's *Shakespearean Tragedy*, an interesting discussion of the four great plays, "Hamlet," "Othello," "Lear" and "Macbeth," is the best piece of Shakespearean criticism published for some time. Professor Bradley's general manner and principles of criticism are Aristotelian. He criticises from the craftsman's point of view; and in the first part of his work, in which he writes of Shakespeare's dramatic conceptions and construction, he is largely indebted to Aristotle for his ideas. But his criticism, for all its formality and tendency to reason about a play as though it were fact, not fancy, is thoroly sound and serious. Between these two poles, as effecting a sort of compromise between them by turning a fresh stream of life upon literature, and a fresh current of ideas upon life, should be set the second and third series of Mr. More's *Shelburne Essays*, among which the Lafcadio Hearn and the Sainte-Beuve are, perhaps, the most remarkable for the depth and penetration of their analysis. Nor should mention fail of what seems something like a reviving interest in classical criticism in the publication of Professor Campbell's *Tragic Drama*, a sort of transcription from the writer's note-books, but not wanting in suggestion, and Professor Butcher's very readable *Harvard Lectures on Greek Subjects*.

Revision of the Copyright Laws

BY HERBERT PUTNAM, LITT.D.

Librarian of Congress.

THESE have recently been held in New York two remarkable conferences. Their intent was to consider the imperfections of our present copyright laws; and they were composed of representatives of various interests supposed to be affected by them. That the laws as they stand are imperfect is admitted. They are not a modern creation based upon a deliberate and scientific consideration of modern conditions; but in large part merely accretions upon the original act of 1790. This act, passed by the first Congress "for the encouragement of learning," took account of the statutory law of England and of particular enactments passed in most of the colonies. It specified as the subject matter of copyright only "maps, charts and books." It was later extended by the inclusion: In 1802, of designs, engravings, etchings and other prints; in 1831, of music; in 1856, of dramatic compositions; in 1865, of photographs; in 1870, of "paintings, drawings, chromos, statuary, and models or designs intended to be perfected as works of the fine arts." The act of 1870, in transferring the copyright business to the Library of Congress, provided for certain formalities not theretofore prescribed. But the statutes of 1873, tho nominally revisions, were, as regards copyright, in effect but a reiteration of existing law. The act of 1891 extended the privilege within certain limitations to foreign authors. Certain other acts affected the term, providing for renewals, and certain others have contained modifications and additional special provisions. The need of these is evidenced by no less than twelve amendatory acts since the revised statutes of 1873, and by no less than five bills pending last March, proposing further amendment.

The result of incessant amendment instead of radical revision has been to introduce into the laws textual contradictions and inconsistencies which have perplexed author, publisher, their legal counsel and the courts, and have greatly

embarrassed the administration of the Copyright Office itself. The replacement of the existing laws by one general copyright statute and the incorporation into this of provisions to meet modern conditions has been a recognized necessity. A commission to consider revision has been urged upon Congress, but Congress from its experience with other commissions has been reluctant to create a new one for this purpose. In its stead there was suggested an endeavor to secure an agreement by the various interests practically concerned in a revision of the law, and it was with this endeavor in view that the two conferences referred to were called together.

They were called by the Copyright Office, whose first decision had to be as to the organizations which should be selected to participate as having "practical concern" in the project. The Conference was to be limited to these, for its purpose was not an ideal perfection, but an *amelioration*. Any changes agreed upon to be necessary were to consider principle, especially principle as embodied in foreign legislation, but it had to recognize the limitation of expediency as embodied in the policy of our own existing law, and also the practicable as embodied in the recognized disposition of Congress and of our public.

In such a conference abroad the participation would be apt to be limited to authors and publishers, but with us it had properly to include all creators of artistic as well as literary property, and those concerned not merely with the publication of the original, but all reproductions in various subsidiary forms. There was an attempt also to secure an expression from the general public thru the National Educational Association and the American Library Association, and the counsel of the Bar in the American Bar Association. The resulting list included no less than twenty-seven organizations, and it was so notable in the scope of these, the variety of their interests and

the character of their representatives that it alone furnished the best prospect of success. It comprised, for example, in addition to the three organizations mentioned above:

The Authors:

The American (Authors') Copyright League (represented by Messrs. R. R. Bowker, vice-president, and Robert Underwood Johnson, secretary).

The National Institute of Arts and Letters (represented by Messrs. Edmund Clarence Stedman and Brander Matthews).

The Dramatists:

The American Dramatists' Club (represented by Messrs. Bronson Howard and Joseph I. C. Clarke).

The Composers:

The Manuscript Society (represented by Mr. F. L. Sealy and Miss Laura Sedgwick Collins).

The Artists:

The National Academy of Design (represented by Frank D. Millet).

The Society of American Artists (represented by John La Farge and John W. Alexander).

The Sculptors:

The National Sculpture Society (represented by Karl Bitter).

The Architects:

American Institute of Architects, and the Architectural League of America.

The Publishers:

American Publishers' Copyright League (represented by Messrs. Appleton, Putman, Scribner and their counsel).

The American Newspaper Publishers' Association.

The Periodical Publishers' Association of America.

The Association of American Directory Publishers.

The International Advertising Association.

The Music Publishers' Association of the United States.

The Photographers' Copyright League.

The National Association of Photo-Engravers.

The Print Publishers' Association.

The Lithographers:

The Reproductive Arts Copyright League.

The Printers:

The United Typothetæ of America.

The Typographers:

The International Typographical Union.

Even the *theater managers* were represented at their request for the purpose of submitting a particular suggestion.

A representative of the Treasury Department was present thruout to decide as to the practice of the department in the important matter of importations.

The American Bar Association appointed a committee, consisting now of three members of the Bar who have given special attention to copyright and who both participated and are prepared to lend criticism and counsel. Additional criticism from the legal standpoint has been secured in an informal way from several other members of the Bar specially versed in copyright law and experienced in copyright legislation. Beyond all of these there will be available the criticism and revising judgment, from the legal standpoint, of the Department of Justice itself, which has had proposed provisions under consideration and the proceedings of the Conference under observation.

The conferences were therefore remarkable, first, for the variety and character of the participants. (The total number of delegates, including those from the Government, the Librarian of Congress, the Register of Copyrights, etc., reached nearly sixty). No such congeries of interest, of opinion and of judgment have ever been secured to consider a copyright law for the United States. But they were additionally remarkable for the character of the proceedings themselves. During three days in June last and four days in November the delegates sat practically without interruption, submitting their suggestions and discussing proposed provisions. With the stenographic record of the first session in June and other accumulated data, including additional suggestions in writing from the same sources, various particular suggestions from other sources, its knowledge of existing legisla-

tion abroad, and the experience accumulated in its administration of the present laws, the Copyright Office drafted a statement for consideration at the second session of the Conference held in November. For convenience in discussion it took the form of a bill, which included no less than 15,000 words. During the four days of the second session, this was gone over section by section. A new draft is now being drawn which will in turn be submitted for criticism and suggestion and final discussion at a third session, to be held in Washington after the opening of Congress.

The limitations, as well as the opportunities of the Conference were indicated in the opening remarks of the chairman (the Librarian of Congress) at the first session:

"The origin, the occasion, and the purpose of this conference are indicated in the call. The origin is a general agreement that our present copyright laws are defective in definition and imperfect, and perhaps inconsistent in expression. The occasion is an intimation from the Senate Committee on Patents that at the coming session of Congress the committee proposes to submit a bill for a codification of these laws. Such a bill would naturally be drafted in the Copyright Office. If so, it would be the desire of the Copyright Office to have upon it the criticism of the various interests concerned with copyright protection. But the Office sees in it also an opportunity to submit to Congress in a systematic and orderly way various suggestions for the perfection of the laws where it is claimed they are now unjust or defective, and this conference is to give expression to these suggestions. Such of them as survive discussion will be noted for the attention of Congress in connection with such a codification. We invite them. We shall try to secure fair consideration for any of them that seem obviously just or to be supported by a considerable opinion. But we would not have our abilities in the matter nor the abilities of this conference overestimated. The conference, of course, is not a commission appointed by Congress to revise or even to codify the law. It is not in a formal way appointed by Congress at all. It has been invited by the Copyright Office, at the suggestion, to be sure, of the chairman of the Senate Committee on Patents, but without any express direction or mandate of law. It will, of course, be advisory to the Office, and through the Office it may reach Congress with recommendations, but, of course, its expressions can be no more than recommendations, and the recommendations to be effective ought, of course, to be kept within reasonable limits likely to be adopted. The District Attorney of New York has remarked that our statutory laws ought to be in two parts—the first of laws to be followed and the second of "moral yearnings." In our pro-

posals for copyright we had better, I think, leave the moral yearnings to a later generation, or at least a later session of Congress. The conference is composed of organizations concerned with copyright protection, but it is composed of typical organizations only—important ones, but typical ones only. It cannot claim, therefore, to be completely representative of the community. It has not been composed with reference to balancing interests possibly conflicting. A majority vote of its members would not determine a proposal to be just nor would a unanimous vote determine it to be expedient. In fact, any mere vote of the conference would have small significance. Now, these are serious limitations. We think they ought to be clearly before you at the outset, but we do not believe that they should prevent a work here of high service and of profit, and a work of which there is urgent need, and we cannot but believe that unanimity of opinion in a body such as this, so nearly representative and including interests so important, must have great weight with Congress.

The "decisions" of the Conference (*i. e.*, the proposals which appeared to be sustained by the predominant judgment of the representatives, including the Copyright Office itself and its legal advisers) will take the form of a bill to be presented to Congress. Pending the final draft of that bill, the publication even of the provisions which seem now to be settled would be premature. Certain of the subject matter which has been discussed at the Conference has, however, properly enough, been commented upon in journals representing certain of the interests participating, and may without impropriety be indicated here.

One question of general concern was that of the duration of the copyright. The present law, providing for a minimum term with a renewal in case the author or his wife or children be living at its expiration, is admittedly inconvenient in its operation, and imperfect in the benefit which it proposes. The author will probably desire to sell and assign his right. The condition that he or his wife or children must be living at the expiration of the original term raises an uncertainty as to whether he will have a renewal term to dispose of; and thus limits the price which he can secure in a sale of it. Opinion is all in favor of a single term as against one with provision for renewal.

Omitting the provision for renewal, the question still remains as to length of

term. There is still, of course, contention for a perpetual term, and those who urge it can point to several countries which recognize it. No proposal, however, for perpetual term came before the Conference. In this country it would require not merely an act of Congress but an amendment of the Constitution of the United States; for this provides only for the grant of copyright monopoly during *limited* periods. There is, however, a widespread feeling that a term which will leave the author without benefit in his old age of work produced and published in his earlier years, or even after his death deprives his minor children of this benefit, is not just and cannot be wholly fair, nor, indeed, within the spirit of our laws. It is certainly inconsistent with the policy of various foreign countries deemed most enlightened. No less than fifteen of these continue the protection thru the author's life, and for a period of fifty years after his death.

A characteristic of the United States statutes as against those of foreign countries has been their insistence upon certain formalities as a prerequisite to copyright. In so far as these consist in the registration itself and due notice, they are fundamental to the policy of our laws; but they have gone further than this and made the deposit itself of the two copies of the publication, which inure to the benefit of the Library of Congress, a condition without which the other proceedings will be ineffective; and they have further provided that unless the deposit be made on or before the date of publication, the other proceedings will be void. For failure to perform an act which is not an essential part of the registration itself, they have thus imposed a penalty which is the entire loss of the copyright; and this penalty of forfeiture becomes absolute if the date of publication has passed, for there is no means by which the omission may be made good. A modification of this harsh condition is therefore sought.

The remedies secured to the copyright proprietor in case of infringement seem to require to be enlarged, strengthened and made more clear; and the penalties upon the infringer to require more adjustment. The principle of penalties as against damages has required serious

consideration; particularly that involved in a division of the penalty between the state and the copyright proprietor, as is now, in certain cases, provided by law. The general principle of our common law is that in any actions alleging trespass upon such a property right, the damages recovered shall depend upon the injury suffered by the complainant, together with consideration of the profit which has accrued to the trespasser. It is, on the other hand, asserted that there are cases of infringement of a copyright where neither the injury to the proprietor nor the profit to the infringer can be definitely proved in dollars and cents. Whether in this case it be proper for the law to provide a fixed penalty which, as liquidated damages, should go to the copyright proprietor, or a penalty which as a criminal penalty should go solely to the state, is under discussion.

The proof of the infringement itself should, it is claimed, be simplified, and the existing provision which in some cases limits all recovery to a certain sum for every copy of the article "found" in the possession of the infringer is asserted to be insufficient, seeing that it is the copies sold by him and already distributed which have constituted the substantial injury.

Certain subject matter clearly within the intent of the law appears to need additional specification. It is in part the result of modern reproductive processes, which could not be foreseen by the original framers or in connection with the earlier statutes. The dramatization of novels, the novelization of dramas, the inclusion among "authors" of the projectors of collective and encyclopedia works have each required further expression. The fine arts in particular have felt grievances under the existing law. On the other hand, the administrators of the present law have been perplexed to determine as between the Copyright Office and the Patent Office at what point an artistic creation, for instance an artistic design, was an appropriate subject for copyright rather than for patent right. This perplexity arises particularly where the design is applied to certain material and the protection sought is in effect for the resulting product. The design may retain all its artistic qualities; but the

resulting product may be a utensil, and the protection sought be really for the design as thus applied, and not for it as a "work of the fine arts." It is the belief of the Commissioner of Patents that such cases should form a group by themselves, to be protected as "design patents." This would cause their registration in the Patent Office, but, he would recommend, under a modification of the conditions and fees exacted in the case of ordinary inventions. Underlying all consideration of subject matter is the suggestion of a subsidiary as against an original creation, the latter being of course the source, but the former introducing new species, each of which may be entitled to recognition and specific protection; and the right of the original creator, whether author or artist on the one hand, and of the reproducer who does not desire to *misappropriate* but has a right to know what he may lawfully appropriate, require to be fairly adjusted. The reproducers would claim that the notice of a reservation should be adequate, and on the other hand the artist and the playwright claim that mere exhibition or performance, as the case may be, should not of itself be held to presume a dedication to the public.

"Presumptions" indeed were touched in the discussion at several points; particularly in connection with a group of suggestions defining the right of author and publisher respectively in the absence of specific contracts. The purpose of the suggestions was to safeguard authors who thru ignorance or inadvertence had failed to define specifically the property privileges which they ceded, or to provide for reservations to themselves which they might reasonably have secured. It was, however, the clear opinion, and of legal counsel the emphatic one, that the copyright law should abstain from matters

which may be regulated and customarily are regulated by private contract.

The administration of the copyright office itself requires additional specification, which also has to be considered in the draft. The prodigious accumulation of copyright deposits beyond the needs or the interest of the Library of Congress as a library or the ability of the building as a storehouse requires some provision for elimination that will yet take due account of the requirements of the law of evidence in case of copyright litigation. There are now in the cellars of the Library building some 1,400,000 articles received from copyright but not drawn up into the Library proper because not necessary to its immediate purposes as a library. Much of this material is worthless. Some specific provision for eliminating this fraction is an urgent necessity.

Such are some of the questions that have come to this Conference. They are noted as indicating the practical nature of its deliberations. That absolute agreements should be reached upon all of them was not to be expected. The promise, however, for a copyright law which shall be a great improvement upon the existing law lies in part in the scope and character of the representation, to which I have already adverted, and also in the general spirit of co-operation and of fairness which prevailed at the sessions, and which led an observer* to remark at the close of the first one:

"Results of surprising unanimity were reached in a minimum of time and without waste of talk. . . . It was the unanimous feeling that unhopd for progress toward an excellent, if not ideal, copyright code had been made possible, and that the results would probably be quicker and better than if the plan of a (copyright) commission had been adopted."

* The Editor of the *Publishers' Weekly and Library Journal*, himself a participant as a representative of the Copyright League.

WASHINGTON, D. C.

Mrs. Rose Harriet Phelps Stokes.

The Long Day: A Story of Real Life

BY ROSE H. PHELPS STOKES

[An anonymous novel entitled "The Long Day," just published by the Century Company, purports to be a truthful account of a working girl's life in New York City. Our readers will remember that Mrs. Stokes was before her marriage last summer Miss Rose Harriet Pastor, and as she is now living on the East Side, has a wide acquaintance with the conditions described in the book.—EDITOR.]

"THE LONG DAY," the Story of a New York Working Girl, as written by "Herself," holds the reader's interest from start to finish. There can be no shadow of a doubt that "Herself" is a real flesh and blood woman who has known the despair of the stranger in quest of work, and the untold and untellable agonies of "The Long Day." Agonies only hinted at, the reader feels, in her graphic story. No one can doubt, after reading the book, that the writer lived it, as did with her every character that peoples its pages. "The Long Day" bears the stamp of

reality as few stories of today do, and Owen Kildare's "My Mamie Rose" is the one story that, from the standpoint of reality, may be classed with it, tho entirely different in substance. In the case of either of these authors one feels that Life has forced from out a human being a book—the first, and, perhaps, the last.

All the characters in "The Long Day" are drawn with vitality; they are living, breathing, working-men and working-women, even tho many of them come and go in one or two pages.

The "one-half of the world" who

"know not how the other half live," would rob this old saying of much of its truth by reading "The Long Day."

No man or woman interested in bettering the condition of the New York working girl, and no one wishing to know the New York working girl's condition should be without a copy of this book. It is a revelation of "conditions, not theories," and ought to arouse women more fortunately circumstanced to organized effort in behalf of those girls who are grinding out their lives in poverty and half-paid toil amid influences and associations too depressing for belief to the uninitiated.

Fortunate women who ask, "What shall we do?" are answered by the author, who tells us some of the things to be done at once. To quote "Herself":

"We have a great crying need for two things—things which it is entirely within the power of a broad-minded philanthropy to supply. The most urgent of these needs is a very material and unpoetic one. We need a well regulated system of boarding and lodging houses, where we can live with decency upon the small wages we receive. We do not want any so-called 'working girls' homes'—God forgive the euphemism!—which, while overcharging us for the miserable accommodations, at the same time put us in the attitude of charity dependents. What the working girl needs is a cheap hotel or a system of hotels—for she needs a great many of them—designed something after the Mills Hotels for workingmen.

"The most important necessity of the model working woman's hotel or lodging house would be not a luxurious table, but a parlor.

The number of young girls who go wrong in a great city like this for want of the various necessities of a parlor must make the angels in heaven weep. The houses where the poorly paid girl lives have no accommodations for the entertainment of her male friends. If the house is conducted with any respect for the conventions the girl lodger must meet her young man on the stoop or on the street corners. As the courtship progresses, they must have recourse either to the benches of the public parks, provided the weather be favorable, or else to the light and warmth of the back room of a saloon. The average cheap lodging house is usually conducted, however, with but scant regard for the conventions, and the girl is usually forced to adopt the more convenient and, as it would seem to her, really the more self-respecting habit of receiving her company in her room. And either one of these methods of courtship, it is evident, cannot but be in the end demoralizing and degrading to the thoughtless young people, however innocent they may be of any deliberate wrong doing."

Another important line of work pointed out by the author for the well-being of the working girl of the future, is the wide dissemination of a better literature than that at present within her reach. "Herself" outlines at some length the literary tastes of her work-mates at the box factory, and the example cited is typical of other factories and other workshops, and also of the department stores. Girls fed upon "Yellow-backs" are digesting mental trash that is bound to give them distorted and false views of everything.

There is work for women to do, and the writer points out very wisely what some of that work should be.

NEW YORK CITY.

Our Novelists

BY MRS. L. H. HARRIS

FORMERLY novelists bore a sort of family likeness to one another. They all had a freehold on the same pastoral scenery, and they held the moral-boiling end of imagination in common. And while they have lost these primitive birthmarks of style and motive to a great extent, there is still a traceable resemblance between them in the older countries. In England, for instance, the Houses of Parliament dominate their imagination, and they nearly always weave the story about the resplendent figures of "Lords" and "Ladies," not because such people are in the majority, or actually represent the real life-currents about them, but because the romantic traditions connected with them stimulate interest. And there is a neurotic likeness between French novelists. They all dramatize wickedness with the same kind of moral agency.

Now Mr. Taine accounts for both English and French writers according to inheritance and environment, and his explanation is generally accepted; but can any one make a bee line from the past to the present which will account for American novelists upon such grounds? We have more writers of fiction than any other country, but few of them have what may be termed the indigenous genius. And these are rarely the best. Mary E. Wilkins Freeman keeps close to the New England earth and spirit in her stories, but Hawthorne, who was born in the same region, was a "reversion to type." He belonged to a larger, older field of expression. He interpreted the heart of man, not the heart of New England. He surpassed environment and inheritance. Kentucky claims James Lane Allen with great pride, but Lloyd and Fox have come nearer presenting the common life of that part of the country. And there is Mary Austin in the West, who has written a novel this year which shows the inspiration of Old World poetry and religion more than it does the influences of the real West. She has made the country as ancient as Spain, and filled it with

troubadour music and love. The golden coast environment of California makes an up to date American woman write as if she had been born in the middle centuries. And the novelist of the South is a sad example of what inheritance and environment fail to do for some American authors. The old South is dead. His very cradle was burned with it; he lives in a new civilization, and he is descended from men who knew how to grapple in a life-and-death struggle with any situation that demanded attention. But he has no courage adequate to this splendid new life. He has neither the vision to see nor the genius to present what is actually going on about him. His literary style is better suited to the illusions of memory than it is to facts. He cannot realize in literary forms anything but the past. His novels are for the most part romantic diplomas certifying to the glories of the dead. Will N. Harben is the only author in the South who is offering the simple, honest, homely life of the common people in his stories. And he is receiving less attention than he deserves, because he leaves out the Civil War, the obsequious negro and the "magnificent Southern gentleman." He has stretched his canvas in an obscure neighborhood among the foothills of the Blue Ridge Mountains in North Georgia. But there is no telling when he will make a fool of himself by coming out where the other fellows are, in the cemetery business. The temptation must be very great, for they sell more of their books than he can sell of his. Cyrus Townsend Brady can make the welkin ring further with the doings of his preposterous, duodecimal heroines and fallacious Southern rakes than Harben can with stories of real men like "Abner Daniel" and "Pole Baker."

But the contention remains that every one is accounted for according to this formula of heredity and environment. If a man is a wag, it is because his remote ancestor was a court fool, or some nearer one was an Irish brick mason. But no one can tell why the wag's

Mary E. Wilkins Freeman, Author of "The Debtor."

brother has no wit. (People are so contrary about what they choose to inherit!) It is a sort of discourtesy to the science of biology to ask for an explanation of too many ancestral combinations, like trying to make a poet's figure of speech walk on all fours. And so, if we say that Thomas Dixon is the kind of novelist bred by the American "mob spirit," that Upton Sinclair is the teething literary grandson of abolition prejudices, what about Mr. William Dean Howells? Mr. Howells could no more interpret the

mob mind in American life than he could get drunk and "paint the town red." Neither could he be guilty of the bad form of entertaining a prejudice. What would be called prejudiced in an average person, is simply the evidence of extreme nervous sensibility in Mr. Howells.

The point is, if we begot Dixon, Sinclair and other staccato geniuses of this class, how did Mr. Howells come to be born to us? He is too mature. There are not enough American ear marks of fuss and fury in his literary style. It is

like the conventional tone of a well-bred, old gentleman who has nothing to forgive and nothing to regret. It is true that he sometimes permits an hysterical woman to pinch her husband, but did any one ever hear a character in his stories lifting his or her voice above the proper social pitch? Another thing, he can lay the scene of any novel he has ever written in any place where there is day and night, a dining room, a men's club, and a woodland road. Now, of course, the average novelist puts in day and night when he thinks of it. But very few of them know really what the hero ought to say or do at the club. The poor soul is self-conscious from the time he enters and faces the waiter until he stumbles out again. But a waiter has no terrors for Mr. Howells, his men act as if they had been born to club privileges. And very few writers among us know what really ought to happen on a woodland road. Dixon would take advantage of the scenery to present a bucolic love passage; and Sinclair would have a negro slave, bloody with his wounds, fleeing that way for his life. But, it will be remembered that Mr. Howells recently placed two old married people in an elderly top-buggy and allowed the reader to listen to their talk about the young ones as they drove along as naturally as if it were not the printed page they were riding over. And here again, we observe a difference. When he tattles he does it as a gentleman should. He offers scandal, not for sensational reasons, but to show the wisdom, delicacy, and humanity of covering up these incidental lapses of mortal nature on its way to immortal perfection. But this is not the use which Persis Mather or Lewis would make of such material. They use it for the salad dressing of their social or political dramas.

In short, we have not had enough history in this country to account for Howells or James, or Charles Kelsey Gaines, and a good many others; but we have had too much to justify the existence and popularity of Dixon, Sinclair, Sharts, Hallie Erminie Rives and a hundred others of the same kind. They lack the artistic sense of things, and they do not even want it. To say that they are produced by American environment

is giving them undue importance. Their own forefathers are not responsible for them. They are simply the pen-staff adventurers of the moment, obsessions which we have not had time to cure. They do not represent the life of the people, but merely the vices of the people.

The question is. If this is true, why have we so many of these little frogstool novelists? A plausible explanation, at least, is that the mainspring of the American mind is not acquisitiveness. (The students among us are not the ones who write the books!) But it is the youthful, unguarded inspiration to demonstrate, dramatize, proclaim. If any one doubts this, let him inquire within the circle of his own acquaintances and learn how many of them are incipient authors, whose manuscripts have been rejected possibly, but who feel invincibly the divine afflatus which tends to the translation of emotions into words; and let him consider how many more believe that they could write if they chose to "take the trouble." The writer of this article has never been in any family, club, or social circle where there were not more prospective authors than any other class of human beings.

And if we account for most of the men who write fiction, there is still a class of women novelists who have become very forward stepchildren of inheritance and environment. By far the greater number of authors in this country who deal with the "problems of the times" are women. They have a moral sense which tends downward in life and upward in literature. They are disposed to dramatize the decayed end of things in the loftiest style possible for them to command. "The House of Mirth," "The Wine Press," "The Work of Our Hands" and numerous other novels with equally serious titles have come from women authors this year, and they all deal with the sick places in life. Women write of evils elsewhere, but not as our women do—as a text from which to call down woe upon a perverse generation. And that is the chief feature of interest apparently, the woe-calling they do in the final chapters.

No one can be sure as to why the literary sense has developed this way in

them, but a shrewd guess will do no harm. The women are more actively advanced mentally in this country, and when women awaken intellectually they usually come to with the idea that they have been wronged for the last ten thousand years or so. The thing they begin to kick against first is their own environment, and then there is nothing but a

was intended by Nature to be their defense. And on the other hand they have a bad disposition to tell on one another in fiction.

There is Mrs. Charlotte Perkins Gilman, who uses a World Almanac, apparently, for the chief purpose of finding the statistics to prove how badly wrong we are in many particulars; and it is

Thomas Dixon, Jr., Author of "The Clansman."

dictionary between them and the mood to kick against everybody else's environment. The trouble is that women are news constructive outside of the domestic life. No one is so dependent for security as they are upon a conservative regard for traditions, things that have been reefed up by the years as barriers between them and the vast uncertainties of the future, yet they go to work with pen and manikin sword to destroy much that

said that Mrs. Gilman has "no head for figures"; but the remarkable fact is that this kind of enlightened, environment-kicking women is so possessed with the idea that things are going wrong that they first naturally go against nature to get the figures to prove it. And there is Marie Van Vorst, who owes her remarkable popularity to the fact that she makes a dramatic specialty of what will happen if women do not stay at home

oftener, and bear more children. She wrote a novel last year in which nearly every woman took to her bed with nervous prostration, not on account of family trials and duties, but from social and intellectual dissipations. Now, things are not really so bad. Few women in comparison to the many play bridge to get extra pocket money. The great majority of them do not figure in public, or in fiction, but they keep house decently. (Not to be sure, according to Mrs. Gilman's ideas of domestic economy, but according to the same old cake receipts they have always used; for it would take an army of policemen, and the whole municipal government to keep house according to Mrs. Gilman's plan. It would mean getting politics into the family frying pan, and having one's laundry done by order of the police court! And quite a sufficient number of women are bearing children to tax all the public school funds we have. In short, it is not inheritance or environment which accounts for very many of our women novelists; it is simply a nightmare notion they take up concerning things in spite of all we can do for the public safety. It's the same thing that makes women who don't write novels think there is "a man under the bed," or a burglar in the closet.

And, finally, according to Taine's formula, the negroes should be what they are not—the greatest of American novelists. Their ancestry is quite as savage as that of the Anglo-Saxons, who produced Shakespeare, Robert Burns and Charles Dickens. They have had heart-

rending experiences. They have the emotional temperament, the musical ear and beauty-loving minds. And one generation of the race has had more education than many of the Elizabethan poets ever received, enough at least to develop whatever powers of expression they possess.

And when we consider how hopeless the negro's social and political future is, and how assured it would be as an artist in the more catholic world of literature, it is strange that he has not grasped this opportunity to actually free himself in the noble relief of expression. For no man is really free who has not the spirit and art to reproduce himself ideally in some form. The whites can never do this for him. They have given him a pathetic, humorous, and grotesque place in their romances, but if the negro is ever to prove himself in any serious sense, if he is to have the dignity of other heroes in fiction,

he must draw his own likeness. Du Bois came very near it in his "Souls of the Black Folk," but his accent was too high. He asked too many odds of the reader's sympathy. A hero appeals to admiration, and he is no longer a hero when he asks sympathy, but he is a crying, ineffective martyr.

In any case, Booker Washington is wrong when he maintains that the negro's great opportunity is in the industrial world. If he can meet it, his hope and great salvation lie in the realm of art. When a man is a sculptor, painter or poet, people do not know how to inquire the color of his skin. The question is too small.

The Recent Elections

WE should all be thankful for the off-year elections. It is in the off-years that honest voters are free to do that house-cleaning which is neglected when the issues are of a national character and great offices are to be filled. Nothing then diverts them from a searching consideration of the political government of their own communities. They know that at elections in those years they can punish the Bosses of their own party without imperiling any national policy to the support of which that party is committed.

In only a few States were elections held on the 7th inst., and in only three were Governors chosen; but never have the results of off-year contests at the polls been more encouraging or of greater value to the American people. In almost every place where the polls were opened there was successful revolt against the Boss and machine dictation. In Philadelphia, Boss Durham and his ally, Senator Penrose, were overthrown and a corrupt ring that has controlled the local organization of the Republican party was beaten. Deeply impressed by the wickedness of this ring and by the evidence of its intimate connection with the Government of the State, the people of Pennsylvania have wrested the State Treasury from Republican control for the first time in twenty-five years, determined that the millions of the State's funds shall no longer be farmed out to politicians thru the agency of friendly banks. This victory in the State, with Mayor Weaver's victory in the city, marks the downfall and end of an unscrupulous political dynasty whose last competent leader was the late Senator Quay. Shaken by this proof of the people's righteous anger, the Governor, who sought to defeat Mayor Weaver's purpose by public denunciation after he had approved a "ripper" bill depriving him of a part of his power, now summons the Legislature in special session to undo his own work and to enact the reform legislation which he and his kind have heretofore refused to grant.

This redemption of Philadelphia, no longer "corrupt and contented," this tak-

ing of the State Treasury from unworthy hands, and this repentance of a Governor whom the Bosses and the rings have controlled; constitute the greatest achievement of the kind since the overthrow of the Tweed ring.

In Ohio, Boss Cox, overwhelmingly defeated in the city where he had ruled so long, retires from politics. This revolt against Boss rule, and against the customary alliance of the machine with public service corporations, was one of the chief causes of the defeat of Governor Herrick, who was commonly believed to be in a kind of political partnership with Cox, but who had also excited the opposition of the churches and the advocates of temperance by his attitude toward laws affecting the liquor trade. Machine rule in the State, thwarting the will of the people in nominating conventions, was resented by those who set out to get rid of Boss rule in Cincinnati. The election in Ohio was both a declaration of the voter's independence and a condemnation of municipal corruption.

Gorman has been a Boss in Maryland. His power is gone. The unjust Constitutional Amendment by which he sought to disfranchise the negroes has been rejected. Upon the acceptance of it he had staked all his political fortune. Some opposed it because it robbed negroes of their rights, others because it could be used for the disfranchisement of white citizens of foreign birth, others still for the reason that under its provisions many whites of American birth might easily, as they believed, be deprived of the voting power at a Boss's command. And there had risen in Gorman's party better men who were weary of his dictation. Now that he has been overcome in his own State and practically repudiated by his own party there, his malign influence in the Senate must lose its force. In the interest of decent politics, the counsel of neither Gorman, of Maryland, nor Penrose, of Pennsylvania, should be received with any respect at Washington. We hope that one of the beneficent results of the recent elections will be the retirement of both.

In no other instance was the popular protest against Boss dictation and arrogance shown more unmistakably than in the re-election of District Attorney Jerome. Of the election in New York we speak elsewhere. The same spirit was seen in New Jersey, in the support given to Mayor Fagan, of Jersey City, and to Mr. Everett Colby, who represents a demand for a restriction of the privileges granted to public service corporations. Undoubtedly, the attitude of voters everywhere was determined in part by recent revelations as to the misuse of trust funds, the methods by which great private fortunes have been procured, and the influence exerted by wealthy corporations in politics and upon legislation.

One of the lessons which these interesting elections should teach is this, that the people can get rid of Bosses and corrupt rings if they earnestly set about it and refuse to be diverted from their purpose by national political questions or appeals in behalf of partisan regularity. But eternal vigilance is the price of liberty. Bosses once put out can be kept out only by continued labor. Old ones are ever ready to grasp power again, and new ones are growing. Those who are submerged in off-year elections may come to the surface at other elections when local interests are neglected and local issues are overshadowed by questions of broader scope. Another lesson is that the ballots should be so made that they will not obstruct, but will facilitate, the purpose of the independent voter, to whose intelligence and honesty many cities owe so much. Loyal support of party nominations on the 7th would have defeated Jerome and elected the candidates of Philadelphia's ring. It is for the public good that independent voting should not be made both difficult and dangerous by the plan of the ballot, as it is by the ballots now used in New York.

The Election in New York City

AN unusual municipal campaign culminated on November 7th in the most extraordinary election ever witnessed in New York City, and it has been followed by charges of fraud, and the beginning of a contest over the count, second in grave importance only to the national

contest over Hayes and Tilden in 1876. Never was a party more confident of a clean sweep than was the Tammany Democracy in the first days of October. Republicans, the Citizens' Union and the Municipal Ownership League had vainly attempted fusion. One strong candidate after another had declined the honor of an anti-Tammany nomination. The Citizens' Union had at last withdrawn from the mayoralty contest altogether. A "walk-over" for McClellan was confidently predicted by his supporters and his opponents in unison.

In a day the situation changed. Mr. Ivins, returning from a long sojourn abroad, promptly accepted the straight Republican nomination and began a campaign surcharged with energy. The Municipal Ownership League hastened to put Mr. Hearst in the field, at the head of a full ticket pledged to a program of public ownership of public utilities. Instantly a new alignment of political forces began. The developments of a week sufficed to convince the McClellan support that instead of an election by default of opposition a desperate contest was on.

And this was only the half. With a blind stupidity almost incomprehensible, the Tammany Democracy, the Republicans and the Municipal Ownership League had one and all refused to renominate Mr. Jerome for the office of District Attorney, which he had filled with unequalled ability, integrity and fidelity. To a weak man such rejection would have been final. To Mr. Jerome it was the opportunity of a lifetime, and he seized it with characteristic verve. Almost no one believed that in New York City, handicapped by a form of ballot ingeniously devised to make independent voting difficult, an independent candidate, defying bosses and machines, could poll a vote worth the counting. Mr. Jerome did not shrink from the attempt. Backed by the petition of thousands of names, his single name and independent symbol went on the official ballot sheet.

Here, then, at last, in New York City, were two vital issues joined in one fierce contest: the issue of citizenship against boss domination; and the issue of public ownership and the public control of public property against corporate greed and

graft. From the outset it was plain that the first of these issues took strongest hold of the people; but from the first also the second compelled a wide and daily growing interest. The result of the voting showed that if the two had been combined under one standard, by placing Mr. Jerome's name on the Municipal Ownership ticket, they would have carried everything before them. We cannot but think it most fortunate that this did not happen. One of the failures of our political system is the confusion and confounding of issues. For once we are able to distinguish and to measure. We know the strength of the opposition to boss control. We know how many voters were willing to split the ticket, and that in Greater New York there are more than 15,000 of them in excess of the number required to elect a candidate flying the flag of defiance. In like manner we know that more than a majority of all voters in this city are convinced that a municipally organized community should assert its rightful ownership of public utilities and should maintain its control over them; for it is to be remembered that thousands of such voters, distrusting Mr. Hearst, cast their ballots for Mr. Ivins, whose declarations on this subject were straightforward, or for Mr. McClellan, who asserted that the Municipal Ownership League was but stealing the Tammany thunder. It would be idle now to say that the repudiation of bossism was forced thru by the municipal ownership pressure, or that municipal ownership interest was factitiously magnified by the revolt against Murphy and Odell. Each issue stood by itself, clean-cut and unmistakable.

Upon the issue of municipal ownership, however, every attempt has been made to misinterpret and belittle the plain verdict of the people. The corporation organs, enlisted for Tammany and graft, have offered every explanation but the true one of the tremendous vote, quite possibly a plurality if honestly counted, for Mr. Hearst. They have told us that it voiced discontent, that it registered a protest against wickedness in high places as revealed in the insurance scandals, that it was called forth by base and reckless promises to the dregs of society. The writers of these explana-

tions are not themselves deceived. As individuals many of them, by their own private confessions, voted for Mr. Hearst. They know that half or more of the Hearst vote came from the class that has always been described as "the bulwark of the Republic," namely, the small property owners, the shopkeepers and the better-paid clerks, and that a large part—much the largest part—of the "dregs of society" stood by Tammany and undoubtedly rendered a service that will be rewarded by terms in Sing Sing, before the last chapter of the story is written. It is precisely the "bourgeoise," detested by the Socialists, that in this instance are the rank and file of the municipal ownership movement. It is a movement that has come to stay and to grow, and we commend to all the Philistines of the corporation press the remarks of Mr. Carnegie to the reporters on his return from Europe the other day, when he gave his unequivocal endorsement of the municipal ownership idea as one that we must stand for if we believe in the people, and in the ultimate triumph of democracy.

But all these issues, vast as they are, sink for the moment to a relative insignificance in face of the other question that has been raised, of an honest count of the vote. There are the gravest reasons for suspecting that in many precincts Mr. Hearst was deliberately counted out; and the conduct of the Tammany officials since Mr. Hearst demanded a recount has not inspired confidence in their integrity. All honor must be accorded to Mr. Jerome, who was refused nomination on the Hearst ticket, and to Mr. Ivins, a defeated candidate, for the vigorous steps they have taken and are taking in co-operation with Mr. Hearst to sift the ugly charges to the bottom. If a great wrong has been done it must be righted, and if officials in high places have earned the prison cell, to prison they must go.

Professor Mitchell's Case.

AN opinion such as the Methodist press does not seem at liberty to express we may be allowed to give.

By the action of the Methodist Bishops Professor Mitchell is now re-

moved from his old position as Professor of the Old Testament in the Boston University's School of Theology. He could remain as long as the rule required approval by one or two Bishops of his nomination by the Trustees. But when the General Conference voted to require the entire Board of Bishops to act on cases of confirmation or charges of heresy, the tenure of professors was made more precarious, as Bishops are likely to be old and conservative. When Professor Mitchell was nominated for another five years' term charges of heresy were brought against him, and the Bishops failed to confirm. Then the Trustees investigated him, and asked the Bishops to reconsider the case, and took the following unanimous action:

"That our action of six months ago was equivalent to a refusal to confirm the election of Professor Mitchell, and that we have no reason to alter the conclusion then reached, which was based upon the conviction that 'some of the statements (contained in his book) concerning the historic character of the early chapters of the Book of Genesis seem to be unwarranted and objectionable, and as having a tendency to invalidate the authority of other portions of the Scriptures.' It is furthermore our opinion that we are not even at liberty to reopen the question of Professor Mitchell's confirmation under the law above cited."

Really, this is startling. It confirms our previous judgment that the Bishops would have been benefited by public advice in the Methodist press. He is condemned for questioning "the historic character of the early chapters of the Book of Genesis." But every scholar now knows that those chapters are not historical. There is no difference of view on that point anywhere. The question is settled, and those Bishops ought to know it. The General Conference required Bishops to demand "agreement with our doctrinal standards." What are they? They are so extensive as to be nothing at all. They include Wesley's Sermons and Hymns, Watson's "Institutes" and Clark's Commentaries, perhaps, and for aught we know now Pope's "Theology," and other Methodist theologians down to Miley and Bowne. The Methodist Church has got to submit, but its students will not, and the preachers will not. The Bishops seem to have dodged the issue by resting unanimously on previous action taken by a narrow majority. But

what is the explanation of this unanimity? The Bishops are not all troglodytes. Among them are intelligent and supposedly progressive men.

The explanation offered to us is this, that under the law of the Church they were not at liberty to reopen the case. Their unanimous conclusion to this effect is based on the following law of the Methodist Church as enacted by its General Conferences:

"In case of a re-election (this was a re-election after a five years' term), if a majority of the Bishops present and voting at any regular meeting of the board fails to concur, the Bishops shall state fully and in writing the grounds of non-concurrence both to the professor concerned and to the trustees of the theological school."

"The Bishops are hereby authorized and directed whenever specific charges of misteaching in any part of our theological schools are made in writing by responsible parties, members or ministers of our church, to appoint a committee of their own number to investigate such charges, whose report, if adopted by the Bishops, shall be transmitted to the trustees of the theological school involved for proper action in the premises."

Now the Bishops had done what they were thus directed to do. They had voted non-concurrence. They had sent "the grounds of non-concurrence" to the professor and the trustees; they had received and examined "charges of misteaching" made "by responsible parties"; they had examined them and made a report which was transmitted to the trustees of the theological school involved "*for proper action.*" But they claim, in the most nearly official defense that has come to us, that no "proper action" was taken or made known to them. We are told:

"There had been no explanation from Professor Mitchell, much less modification or withdrawal of the statements objected to by the Bishops, and which created 'a reasonable doubt.' There went from the trustees, so far as the Bishops knew, no request to Professor Mitchell even to consider whether the parts of his book referred to by the Bishops ought to be reconsidered, revised or withdrawn."

We should hope not! But the trustees asked the Bishops to reconsider, revise and withdraw; and the Bishops reply that they have no power to reopen the question. It is a case of moral inability. The Bishops say the trustees made their own examination, but they sent to the

Bishops no explanation or correction on Professor Mitchell's part that could in any way be called "proper action." Therefore the Bishops, all of them, escaped the responsibility of again voting on the matter by declaring that they were "not even at liberty to reopen the question."

We fail to see their lack of liberty. It was for them to judge whether the action of the trustees in reëlecting Professor Mitchell and transmitting their reasons therefor was "proper action." It seemed such to all the trustees. Further, if they had chosen to do so, we fail to see why the Bishops might not fairly have treated this as a new election by the trustees, to be considered *ab initio*, with no regard to the former re-election. Indeed, it seems to us that they were more anxious to evade further responsibility than to meet a real crisis in the Church.

But it does not seem to us true that the trustees took no "proper action." We have read carefully their reply to the communication of the Bishops. They say that it was referred to a special committee of the trustees, consisting of ex-Governor Bates, Silas Pierce, Esq., Drs. Perrin, Steele, Lindsay, Taylor, Pickles, and the President of the University, Dr. W. E. Huntington. They made careful examination and unanimously recommended that the trustees renew the request for Professor Mitchell's confirmation. The trustees further reported to the Bishops that he had declared his loyalty to the doctrines and discipline of the Church, that he accepted them "without equivocation, evasion or reservation as commonly understood by his ministerial brethren"; that the purpose of his teaching had been "to establish and confirm the unsettled faith of students in the inspiration and divine authority of the Holy Scriptures"; and that in his book, "The World Before Abraham," he had taught nothing more than was given to the Bishops when he was confirmed in 1900. The trustees admit that, like all other scholars, he has been compelled to give up the "rabbinical tradition, according to which the total Masorche text of the Pentateuch, as now extant, is from the one pen of the great lawgiver of Israel." They tell

of Professor Mitchell's success as a teacher and of the honor in which he is held by the students and the public; and they ask "only such liberty in teaching as can rightfully be accorded to a man holding the essential doctrines of our Church, such liberty as was exercised by John Wesley, and they conclude ominously:

"We devoutly trust that no adverse action in the request of the board will now give notice to the world that Methodism has lost the old time power, which has harmonized in her teachers and scholars an ardent pursuit of truth with fidelity to Methodist doctrines."

This is signed by President Huntington, ex-President Warren and Dr. Perrin.

But the Bishops have given that "notice to the world"—false notice, we believe. They have forbidden a conservative scholar—for every Old Testament scholar knows that Professor Mitchell is what would now be called a conservative—to question "the historic character of the early chapters of Genesis." This is amazing and puerile. Every school-book of history teaches us that no Deluge was thrown in where Genesis puts it, and science totally discredits it as history. No teacher of credit believes that the world was made in six days, or that six thousand years ago Adam and Eve were the first progenitors of the human race, or that Methuselah lived 969 years, or that languages had their origin at the Tower of Babel. It is a part of the business of such a professor as Dr. Mitchell to show his students how to reconcile their knowledge with their faith; and it should have been the business of the Bishops to brush aside technicalities and find a way to approve one of their most devout scholars. Instead, they have done a sad injury to the Church they ought to lead.

Literary Production and Reproduction.

It is wonderful. Thoughts are put into print at the rate of fifty words a minute by the simple tapping of the fingers on the keys. A keyboard is hitched to a foundry and the words go into type almost as rapidly. Into one end of a series of machines the trunks of trees are unceasingly fed, while from the other end there pours a stream of printed

books. The hungry presses clamor continuously for more copy. There are more books written, more books sold, more books read in almost every branch of literature than ever before. Every author of originality and power has the sheets snatched from his hands by the impatient publishers as fast as he can write them. Every person showing any symptoms of genius is coaxed and petted in a way that is liable to turn his head. The reaction time in literature is astonishingly accelerated. The interval between a thought and its printed expression is being reduced to a minimum.

Authors no longer form a gild. The sometime mysteries of their ancient and honorable craft are taught in every school. Everybody writes for publication, all who have anything of interest or importance to say and many who have neither, get into print somewhere and somehow. New editions of old books struggle for existence with the latest copyrights. No tariff on the boundary of the century protects the literary industry from the pauper labor of antiquity. The reading rooms are filled with diligent students poring over neglected volumes in search of ideas so old that they will be new to this generation. Commentators, editors, biographers and critics swarm around every great book, seeking for forgotten ideas. The dump-heaps around all the abandoned gold mines of literature are worked over every few years by some new cyanide process in the hope of extracting still more of the precious metal. Old theories, fancies, suggestions, themes, plots, characters, that appear to have the slightest value to us of the present are continually being brought forward again in new and attractive forms. Everywhere about us we see the avatars of all the ancient religions, philosophies and systems since the world began. It is the age of plagiarism.

Now plagiarism is the fundamental principle of the universe. In physics it goes by the name of the conservation of matter and energy. Nature is the great economist. She uses the same material over and over again for millions of years, molding it continually into the most useful forms for present purposes; never hesitating to send to the scrap

heap her most beautiful living machine when it gets the least bit antiquated; having no reverence for antiquity, no regard for reputation. The things she values most she wears out fastest. It is only in neglected corners of the earth that the geological relic-monger can find her old models.

People complain that the paper we use now is brash by reason of its short fiber and rotted by the alkali and sulfites that bleach it; that it will become yellow in a few years and fall to pieces in a century or two. Well, why should it last longer? Of what use is an old book except as a museum curiosity? All that is of value to future generations will be reprinted, or what is still better, be rewritten. If an idea remains for a hundred years buried in a book, inactive, unfruitful, forgotten, if no one has found any use for it in that time, it is not likely to be of use in the future. It is like the old things we preserve in the garret for twenty years in the vain hope that they may come handy some time.

The most valuable book is that which is so well adapted to the times in form and matter that it is quickly absorbed. The greatest man is he who gives the world such a shove that it rolls away from him even in his lifetime. Really useful ideas speedily become anonymous.

"Tho' old the thought and oft expressed,

'Tis his at last who says it best."

So writes Lowell. But nobody ever says it best, therefore nobody ever can call it his at last. An author cannot copyright an idea, he can only copyright a form of words which transiently embodies it. The idea, if it is good for anything, soon becomes common property and one does not have to buy his book to get it. We want no man's image and superscription on our current coin of thought. If it circulates rapidly it is soon worn off. Then let it go into the melting pot.

When the educated traveler visits a European cathedral or sees a famous statue, he has no feeling of surprise and but little of the anticipated delight. He was already familiar with it altho he had not realized it. So it is apt to be when we read for the first time some famous book, one that our literary conscience had for years twitted us on not having read—we have the same sense of disappoint-

ment. It was reputed to be original; it seems to us largely made up of quotations. Its epoch-making thoughts are to us commonplaces. We had breathed it in unconsciously and it had become part of us. We make pious pilgrimages to the classics only to find an empty tomb. The books of the great thinkers of the past are cenotaphs; their spirit has long ago escaped and is now influencing the minds and motives of living men who do not know its source. If it were not so, we are wrong in calling these men great and our homage is misplaced. "Back to Kant" is the cry we hear. How can we? Kant is in our very veins. How much would the world lose if every copy of Aristotle's *Metaphysics* and Newton's *Physics* were destroyed? These could more easily be dispensed with than many of lesser value, for they are most completely embodied in thousands of other volumes, some of them much more readable now. Truth has many channels by which to reach us.

"One accent of the Holy Ghost,
This heedless world has never lost."

The author who is worthy of immortality is he who is willing to be forgotten. The greatest compliment we can pay to a book is not to preserve it intact, like an indigestible lump, but to transmute it quickly into other forms, like nutritious food. The very transitoriness of literature at the present time is a sign that mental metabolism is active, and our civilization alive and healthy. After all, why should an author care to hand down his name to posterity? The author's chair is "the Siege Perilous," whereon no man should sit unless, like Sir Galahad, he is willing to lose himself to save himself.

It is the Egyptian ideal of an immortality, this of being kept indefinitely in the semi-public burial ground of the anthology and school reader, to be wrapped like a mummy in layers upon layers of prefaces and appendices and injected with annotations as preservatives. To be inflicted as a task upon those one aimed to please; to have essays written to explain the jokes and light allusions whose only value consists in their being caught by the reader on the fly by instinctive and unconscious apperception; to have a knowledge of

the intimate details of one's life made the boast of pedants and the criterion of culture; such a personal immortality is no more to be desired than that promised us by the seance-room, where one's spirit is at the call of any medium who wants to prescribe for a client's rheumatism. If the ideas to which one has given birth survive and multiply, it matters not if one's name be forgotten and his burial place is unmarked. Let us not be over-anxious lest proper credit be not given to the dead or to ourselves. We should scatter our best thoughts with a lavish hand wherever we go in the hope that some by chance may grow. We should not stop to label with our name the spot we have planted, as is done in botanical gardens. The highest literary ambition should be to

"Join that choir *invisible*
Of those immortal dead who live again
In minds made better by their presence."

Military Ethics

A CERTAIN distinguished professor in Berlin University, whom we might mention, is very proud that his son has been educated for the Army. That, he thinks, is a rise for him. The boy is attaining a social rank higher than his own, and yet that professor has been invited more than once to lecture before the Emperor, and his name is almost a household word.

And this social rank is what the Army claims for itself. Its profession it regards as something higher than any other. Why should it be so? Its members are not particularly educated. West Point or Annapolis gives a narrow and a curtailed education, as compared with any first-class university, or even a good college. And the business to which it introduces one is not particularly superior. It is, in peace, a dull life, with little chance for ambition, and promotion comes less by energy than by the access of years. And in war, which may not come in a life-time, the business is disagreeable when not wicked. An officer may have a gentleman's heart, as many have, but the tendency of absolute authority is to foster callousness and a tyrannous habit, as well as self-indulgence

and laziness. Peace is better than war, and the vocations of peace are gentler and more strenuous, more gracious and more useful than that of war.

So the customs, the traditions, the rules of the military profession are notably below those of other professions. The ethics of the military profession naturally lags behind that of others. It is natural it should be so. Its business is that which properly belongs to a former military age and is passing away. As the professional soldier makes a caste for himself, so he is the expounder of caste. That is the reason why the Army by its arrogance usually fails in ruling a subject people. It is the arrogance and contempt of the Army for the native that gives us trouble in the Philippines, and has brought on the German war against the Herreros.

We have lately had a glaring illustration of this ethical belatedness of military society in the Naval Academy at Annapolis. It was a case of a fight between two young men, one of whom was killed. It was a duel with bare fists, and officers and midshipmen all agreed that such a duel was a proper thing, and that it was only regrettable that one of the duellists had been "accidentally" killed.

The facts seem to be clear. The young man, Branch, had done his duty in reporting the results of his inspection of a fellow-student's room. For this he was deliberately insulted, and called a "sneak" and other opprobrious terms. Under the prevailing code of ethics, the ethics of the duello, the man insulted must challenge. He did so, fought and died. The officers winked at it. The classmen broke rules, and were allowed to, in order to see the fight. After it was all over nobody thought anybody was to blame. The officers held that it was necessary to allow such a method of settling difficulties, so as to develop "manliness." It was the custom of the Academy; many such fights had been "pulled off." Young Branch's death was merely "an accident."

But the boy's father thought differently. He thought it was not manly, but barbarous and wicked. So thought Secretary Bonaparte. Why so? Simply because they had not learned the military system of ethics. They had been brought

up under the civil, the Christian, code. They are not in the Medieval Age. They have moved forward. It is almost necessary that a service whose business is to fight should lag and linger behind the Christian world in its apprehension of right and wrong. Elsewhere, in highly civilized countries, Christianity has banished the decision of justice by ordeal and duel. The time will come yet when disputes between nations will not be settled by this same un-Christian, belated method of the duello of war, but in a Christian way. Then the army, too, will be reformed, reformed out of existence, and, in the good time coming, people will wonder that nations, and boys, were taught that when they were wronged a fight could settle which was right.

Such residual savagery is to be expected in the lingering institution of the army, and with boys. Children, say the pedagogologists, pass through the lower stages of animal life before they come to reach the real developed human nature. That may explain the outbreaks of savagery we so frequently meet in schools, ending at times in death. The coroner's jury have found that the college freshman was really tied to the rails and killed, as part of the "fun" of initiation into a silly society. That kind of barbarism, which consists in distressing and frightening a companion, should be sternly repressed. A high-minded boy should refuse to join a society which allows such "stunts." It can be stopped by the faculty, if they desire it. We know a college Greek letter society in which the professors who had been members of it told the boys that if anything of that sort occurred they would not attend the initiations or other meetings; and it is never practiced. If moral suasion will not accomplish it, then severer measures will succeed, such as Secretary Bonaparte proposes at Annapolis. Possibly our Catholic Secretary of the Navy has come to the kingdom for such a time as this, to teach some rudimentary lessons in Christian morals where they are most needed.

And the fights of pugilists are made the principal entertainment for the two fleets in New York Harbor, and the Admirals provide therefor and witness the sport. "If Christ were to come to New York"—but we will not finish the question.

The Jewish Massacres

Kishnef is outdone. The later reports rival the accounts of the massacre of Armenians by the Unspeakable Turk. Many thousands of Jews have been murdered by Christians in a dozen cities, and tens of thousands wounded and driven from their homes. The stories of the atrocities committed are too horrible to print. Men, women and children have suffered far worse than beastly barbarities. And these enormities are excused, palliated, on the plea that the Jews were revolutionaries, that they spat on the flag, that they tore the pictures of the Czar, that they shot at soldiers. Then punish the offenders, not the old men and women and babes. What shall we think of the Church that condones, if it does not provoke, such monstrous crimes? What shall we think of the bureaucracy, of the governors and police agents who stir up these horrors, that they may continue to hold the Czar in their clutch? For be it understood, it is not the revolutionists that do these things; it is their enemies. In Odessa the students defended the Jews and were overborne by the rabid mob stirred up by the rulers left over by the old régime. Witte could do nothing, for the reins are not yet in his hands, earnestly as he attempted to stop the massacre. But the day of just vengeance comes, a new day for Russia. Mr. Stead thinks that a carnival of massacre is before Russia, such as has not yet been seen. We have better hopes. We believe that Witte will rule St. Petersburg, and that St. Petersburg will be able to impose a free constitutional government on the whole country.

Football A college president, deploring the football craze, remarked that it took ten weeks out of the students' school year. Is football worth one-fourth of the boy's school life? Even if it is, cannot some way be agreed upon to make the game at once less fatal and more entertaining to the onlookers? Our British visitors who saw the game at West Point found it not very spectacular, very little open play, too much crowding and too much work for the surgeons. President Roosevelt speaks the better

mind of the people when he asks that the game be civilized. If the big universities of the first class (and here Johns Hopkins is utterly declassed, because of its inferiority in everything but scholarship) will not reform the game to something of the open English pattern, then why will not four or five New England or Western colleges join in a league of their own, after the livelier, more gamey, and less brutal fashion of football? We would like to see Dartmouth and Amherst and Williams and Bowdoin and Brown start such a movement, and we warrant that the great outside public would approve, and so will parents.

Municipal Ownership

They tell us too often that municipal ownership of street railways is expensive and affords inferior service. Consul Griffiths, at Liverpool, gives a different story of its success in that city. The tramways became the property of the municipal corporation in 1897. Since that time the number of passengers carried has increased from 38,409,084, in 1897, to 116,642,563, in 1904. The gross receipts have risen from \$1,413,035 to \$2,628,531. That is, there are now three times as many passengers carried, the mileage has been doubled, and the receipts increased nearly 90 per cent. Meanwhile the lines have been electrified, and the fares reduced nearly one-half; while the distance the passenger can be carried for a single fare has been increased threefold. The wages have also been increased so that employees were paid \$194,400 more last year than they would have received at the rate under private control, while proper provision has been added for their recreation and in time of sickness, and an old age pension is now being considered. Further than this, the sum of \$2,846,186 has been set aside as a sinking fund reserve for renewal, etc.; \$490,860 has been paid into the city treasury, and \$539,460 has been used to reduce the indebtedness. This is an extraordinary record, and it raises the question whether we could do as much in this country. Consul Griffiths thinks that the chief difficulty we would meet is in the lack of any considerable number of men of wealth and leisure, willing to serve

the public without pay, as guardians and trustees of public utilities, in an advisory or overseeing capacity. A country is rich that can call on such men, not necessarily of great wealth, who will do honestly and freely for the public what such men do here at great labor for our benevolent societies. Doubtless we have a fair number of such men, but we have not learned to ask their aid. Perhaps we would under municipal ownership.

Interchange of Professors

President Butler, of Columbia University, has been happy in securing from Mr. James Speyer, of this city, an endowment of \$50,000 to be called the Theodore Roosevelt Professorship of American History and Institutions, in Berlin University, the incumbent of which shall be an American teacher who will give a course of lectures for one year in the Berlin University, and in one other German University. In return a German professor will lecture one year in English in Columbia University on German History and Institutions. A new appointment to this professorship is to be made each year. This admirable plan for international intelligence and comity is due to the consent of the Emperor William; and we presume it was suggested by the exchange which Harvard and the University of Chicago have made with the University of Paris. We observe in the announcement the rule under which professors are appointed in Germany. They are state institutions, and so governed by the state. This annual professor "will be appointed by the Prussian Ministry of Education with the Emperor's sanction." There has lately been in this country some sharp criticism of the rule of our colleges and universities by the President and Trustees, the idea being that the President, as an administrative officer, and not an instructor, is after money more than the really educational interests of the institution, and his control of the trustees gives him almost autocratic power. Some writers have lately suggested that the faculty should choose and appoint all teachers, and it is an impression that such is the case in the German universities. But there the faculty, as here gen-

erally, nominate the teachers, and they have to be confirmed by a bureau of the Government and approved by the Emperor. Really that is no improvement on the usual American way.

The Credit Due

Of all the victories of last week's election none may prove of more permanent importance than that which in Maryland stopped the Southern tide against the Fifteenth Amendment. For the first time hot Southern men came out in favor of obeying the Amendment. For the first time a disfranchising amendment was defeated in a former slaveholding State, and that by an enormous majority. The papers have hitherto hardly given proper credit for this great and surprising victory in Maryland. Perhaps too much credit has been given to Governor Warfield and Senator Rayner, and not enough to Attorney-General William S. Bryan, a Democrat, who stiffened the Governor's backbone; to Mr. Bonaparte, whose work was most important; to Karl A. M. Scholtz, whose Independent Citizens' League of Germans aroused the foreign citizens against the grandfather clause; to Leigh Bonsal, who headed the Democratic Anti-Poe Amendment Association, who did herculean work; to John E. Semmes and Archibald H. Taylor, both Democrats, who directed the campaign committee of the Baltimore Reform League, an organization of Independents of both parties; to Albert S. J. Owens, Baltimore State's Attorney, another Democrat; to the Crescent Democratic Club, an anti-organization association; and to the Republican State Committee, under the chairmanship of John B. Hanna. These and other men did a great work which will be felt all over the South. They have killed, we believe, both the understanding and the grandfather clauses for good.

A Chinese Constitution

Very full of thought for the future is the communication sent to Peking by the Chinese Minister at St. Petersburg. He tells the Empress that Russia is to have a constitution; that this new form of government by the people will be followed by

a period of inner development and strength; that Russia will be a vastly more powerful and richer nation than she has ever been; and that she will therefore be a more dangerous neighbor. He does not believe that her aggressions will cease, but that they will be more difficult to resist. He therefore tells his Court that China must also be consolidated by establishing representative institutions. She must have a constitution and develop a national patriotism, such as can defend, by the spirit of a willing and responsible people, what Mr. Hay called the "political entity" of China. His advice appears to be seriously considered in Peking. It is in this same line that a commission of Chinese of high rank has been sent to the United States and to Europe to study and report on representative institutions, so that they may recommend a constitutional system for China. They are right. Only so can China cease to be helpless, and be able to maintain her integrity against the Powers that wish to break her up and divide the spoils. We can hardly conceive what a change it will make in the history of the world, in business and diplomacy, if in the next fifty years China shall develop into such a nation as is Japan, conscious of its power and its rights. Already the movement is well begun in education, and the American boycott is a part of it.

The International Parliament

The Chairman of the Commission appointed by the Interparliamentary Union to report on the plan for an International Congress or Parliament has heard from most of the members that they were ready to exchange opinions, and so he has called a meeting of the Commission this week at Paris. Sir Philip Stanhope, the Chairman of the Commission, inclines to The Hague as the regular meeting place of the International Deliberative Body. Baron d'Estournelles, who has recently been added to the Commission, and also La Fontaine, and Count Appongi, incline to favor its meeting at the capitals of the various nations represented, for a considerable time at least. Some differences of opinion exist on details, but five of the seven members have declared for all the essential points in the plan proposed by Hon. Richard Bartholdt. The other

two members have not yet expressed their opinion. The only important difference so far revealed is as to the structure of the Body (whether it shall have one or two Chambers). Bartholdt, La Fontaine, Appongi say two, because all national lawmaking bodies created during the nineteenth century took that form, in obedience to very strong forces, which are still operative. An international body, with two Houses, would make it easier for the executive and the legislative branches of governments to agree on national representatives in the International Body. The parliaments could send representatives to one House and the kings to the other. With America this question would not be so important as it is to Europe, where there is not so good an understanding between Executive and Legislature as with us, because in America both are elected. In Europe one is hereditary and the other elective.

Perhaps we may be excused for having spoken of Mr. W. H. Mallock as a "Catholic writer." That has been a general impression and based on what have been called the "Catholic tendencies" in his writings, due to his family environment. His mother was a daughter of Archdeacon Froude, and her two brothers were the dear friends and literary associates of Cardinal Newman. One of them was the historian, and the other, Richard Hurrell Froude, associated with Newman in the "Lyra Apostolica," sympathized fully with him in his renunciation of Protestantism, but he never joined the Catholic Church. The impression that Mr. Mallock is a Catholic is due in good part to his conclusion in "Is Life Worth Living?" that life is not worth living unless one holds the Catholic faith. Our attention has been called to this by several of our most competent Catholic authorities.

We are waiting for the Reports of the Government Bureaus. They are delayed this year, we understand, because of a new ruling that they must be held back until the Department Reports are published. We wonder why the Department Reports do not wait for the President's Message? Stale bread may be healthy, but it is not appetizing.

Insurance

The Insurance Investigation

AFTER a recess covering election week the sessions of the Armstrong Investigating Committee were resumed on Wednesday, November 8th. It was announced that the committee expected to finish its work by January 1st, and have its report ready for presentation to the Legislature within thirty days thereafter. John R. Hegeman, President of the Metropolitan Life Insurance Company, was the first witness examined. From his testimony it appeared that insurance for the wage-earner was higher in price than it was for those in more comfortable circumstances. The subject of industrial life insurance, which constitutes the bulk of the business done by the Metropolitan, has not previously been touched upon. This is a class of insurance in which a very large number of the working classes are vitally interested and many of those thus insured pay premiums weekly of from 5 to 60 cents and higher. The fact was brought out that half of such policies lapse within a year, the insured receiving nothing. The Metropolitan's industrial business in force at the end of last year reached the enormous total of \$1,127,-889,229. The average amount of an industrial policy is only \$140. To collect premiums on the business to which reference has just been made agents of the company must needs visit the homes of 1,000,000 policy holders. The Metropolitan Company began with a capital of \$500,000, which has since been increased to \$2,000,000. The surplus of the company now amounts to \$12,835,741, exclusive of the capital stock. A considerable portion of the company's business consists of risks assumed on the lives of children and babies. Medical examinations are not required by the Metropolitan where the face of the policy carried is less than \$300. Medical examinations are also waived in the cases of persons under nine years of age. Such risks are only subjected to "inspections" at twenty-five cents per capita. On Thursday the examination of the Mutual Life was once more taken up. It was incidentally developed, in connection with the Mutual's examination, that Joseph Howard, Jr., a writer of syndicate newspaper articles, has been receiving

\$5,000 a year for years for his services in writing reading notices along insurance lines. On Friday last the feature of the examination was the Metropolitan loans. In certain cases they were much below the market.

On Monday last it was brought out that John A. McCall, of the New York Life, had, immediately after his previous testimony, guaranteed to restore to his company the \$235,000 paid to "Judge" Hamilton, if the latter does not render a satisfactory account of his disposition of the money by December 15th.

The Mutual's Self-Investigation

IT was announced last week that Stuyvesant Fish, President of the Illinois Central Railroad, had definitely consented to serve on the Mutual Life Insurance Company's self investigating committee. Mr. Fish takes the place of Effingham B. Morris, President of the Girard Trust Company, of Philadelphia, who was a member of the committee as originally appointed, but who found it impossible to serve, as set forth in THE INDEPENDENT of November 2d. Mr. W. H. Truesdale, President of the Lackawanna Railroad, is expected to act as chairman of the committee. James B. Dill has been chosen as the committee's counsel. A resolution has been passed granting Haskins & Sells, the committee's expert accountants, authority to enter the Mutual's offices and examine its books and records. The powers granted these accountants are far-reaching, and the period of examination will cover the two years preceding December 31st, 1905.

The New York Life in Missouri

ON November 8th W. D. Vandiver, Insurance Superintendent of the State of Missouri, unexpectedly issued his long threatened order expelling the New York Life Insurance Company from Missouri. The answer of the company to this order was the procurement of an injunction restraining Superintendent Vandiver from enforcing his order excluding the company from doing business in Missouri and ordering that pending the hearing on November 20th the Superintendent's order be not enforced.

Financial

The Market for Securities

For some time past the rate for loans on call in New York has been rising. Last Saturday's bank statement showed that the surplus reserve had fallen below the 25 per cent. limit by \$2,428,000. This is the first deficit of the kind since September, 1902, and the largest since November, 1899. Naturally, the loan rate advanced, and on Monday it was 25 per cent. A depression of the market prices of securities has accompanied this scarcity of loanable funds, loans at low rates being the basis of speculation for an advance. The result of the election in New York has added a depressing influence, affecting the securities of New York street railway and gas companies, owing to the popular strength of the movement for the election of Mr. Hearst and other candidates of the Municipal Ownership League. With respect to such securities, and certain others recently subject to pool manipulation for the rise, the decline has been quite noticeable. Thus far the Secretary of the Treasury has refused to take any steps for relieving the stringency.

The scarcity of loanable funds at the present time in New York is caused mainly by withdrawals, customary at this season, to satisfy the demands of the West and South for money to move and market the crops. At the same time, powerful speculators have required large loans continuously to support their operations for an advance, as in the case of Reading stock, for example. When these operations for a rise were begun the general range of the market was already high enough to accord with prevailing conditions. We do not see why the Treasury should intervene to help these speculators carry their load. Nor should the banks permit these speculative operations to cause inconvenience and unusual expense to the mercantile community.

General industrial conditions thruout the country are at high water mark. While they do not warrant wild speculation for such advances as certain pool operators have sought to obtain, they should prevent any considerable decline. The crops are large. Trade reports point to a record-breaking tonnage of grain and of general merchandise seeking transportation, which is restricted only

by lack of cars. The strength of demand and of prices in the leading industries has not been surpassed in recent years. In October the monthly output of pig-iron for the first time exceeded 2,000,000 tons, and it is expected that the year's output will be 22,000,000 tons, or 4,000,000 more than that of 1903, and 5,500,000 more than that of last year. In the steel mills all past records of production have recently been broken, but the demand is not satisfied. A decline in the stock market will indicate the discomfiture of reckless speculators, but no reduction of the securities' actual value

Financial Items

PREVIOUS estimates of the corn crop are slightly increased by the Government's recent report, which makes the entire yield 2,707,993,540 bushels.

....The price of New York Cotton Exchange membership has risen from \$3,900 to \$23,000 since 1901, and no offers are now made below \$26,000.

....It is announced that the product of the Wheeler & Wilson Sewing Machine Company will be marketed hereafter by the Singer Sewing Machine Company.

....In October the output of pig-iron in this country surpassed all previous records, being 2,053,127 tons. The largest output for any month had been 1,963,717 tons, in May last.

....J. P. Morgan & Co., of New York, and the Dresdner Bank, one of the largest banking institutions in Germany, have entered into an agreement for co-operation in international financial transactions. The Dresdner Bank's capital and surplus amount to about \$50,000,000, and the institution has seventeen branches in Germany and Switzerland.

....Dividends announced:

Am. Cotton Oil Co. (Preferred), 3 per cent., payable December 1st.

Am. Cotton Oil Co. (Common), 1 per cent., payable December 1st.

Am. Express Co., \$3.00 per share, payable January 2nd.

International Silver Co. (1st Mort.), Coupon No. 14, payable December 1st.

International Salt Co., 4 per cent., payable 1 per cent. quarterly: December 1st, March 1st, June 1st and September 1st.

The Independent

VOL. LIX

NEW YORK, THURSDAY, NOVEMBER 23, 1905.

No. 2973

Survey of the World

For a Sea-Level Canal

Altho no official report of the action taken by the Isthmian Canal Commission's Board of Advisory Engineers on the 18th has been given to the public, it is known that the final vote was 8 to 5 in favor of a canal at the sea level. Those voting in the majority were the five foreign engineers and three of the Americans, Gen. George W. Davis, William Barclay Parsons, and William H. Burr. The five remaining Americans (General Abbott, and Messrs. Ripley, Noble, Randolph, and Storms) stood together for a canal with a summit level and locks. No authorized statement is published by the Board, because its report must first be submitted to the Commission, but it is understood that it was asserted by the majority that a sea-level canal could probably be completed in fifteen years, at a cost of \$230,000,000. The generally accepted estimates for a lock canal have been from eight to ten years and less than \$200,000,000. As approved by the majority, the sea-level plan provides for a canal 45 feet deep and 150 feet wide at the bottom, except in the Culebra Cut, where the bottom width would be 200 feet. The Commission will submit the Board's report to the President, with its comments and recommendations. The President will decide for himself, and lay the whole matter before Congress, which will be the court of last resort. Opposition in Congress to the sea-level plan will be due largely to the increase of cost, which, it is generally believed, will not fall below \$100,000,000, and to the longer time required. Chairman Shonts and Engineer Stevens, it is said, will argue for a canal with locks.

After a conference with the President, on the 20th, Representative Mann said he intended to introduce a bill abolishing the Commission and giving the President full powers.—M. Beaunau-Varilla, formerly Chief Engineer of the French Company, now holds that a lock canal, with summit level at 130 feet, should at first be made. This could be done in four years. He would have the builders keep at work on a sea-level project, with the purpose of making a cut 500 feet wide, worthy to be called the "Straits of Panama." Such a project could be completed, he says, in twenty years at a cost of \$300,000,000.

Progress of Reform in Philadelphia

A large majority in support of reform having been shown at the polls, prominent Republican ward leaders of the defeated "organization" in Philadelphia are now proclaiming their desire for reform. David Martin, who succeeded Boss Durham as State Insurance Commissioner, commends the Governor's suggestions for reform legislation, and says that the fees of his own office should be abolished. This would reduce his annual official income from about \$20,000 to \$3,000. Another prominent Philadelphian who has come to the support of the reform program is United States Senator Penrose, heretofore the associate and ally of Durham and McNichol. Gov. Pennypacker expects to find a large majority of the Legislature willing, at the special session, to repeal the Philadelphia "ripper" bills (which the same Legislature recently passed), to provide for personal registra-

tion, to guard the State's great surplus accumulation, and to do other things suggested by the Philadelphia uprising and the election of a Democratic State Treasurer. In Philadelphia, District Attorney Bell has become reconciled to Judge James Gay Gordon (Mayor Weaver's energetic private council), and has appointed Judge Gordon's professional associate, David Wallerstein, his first assistant, to have charge of the prosecution of the ring cases. When Mayor Weaver began to attack the ring, the District Attorney was acting as counsel for McNichol and for the contracting firm controlled by McNichol and Boss Durham. In replies to the Mayor's requests, he declined to initiate proceedings against those whom the Mayor was pursuing, and he refused to permit Judge Gordon to take part in the prosecution of persons arrested upon the Mayor's charges. It is announced now that he is to join hands with Judge Gordon in the work. In the first case to be tried (relating to frauds in the construction of the Smallpox Hospital), among the defendants will be Abraham L. English, formerly Director of Public Safety; Philip H. Johnson, an architect, Durham's brother-in-law; and James D. Finley, an inspector, Durham's cousin. Mr. Bell was criticised before the recent election for failing to prosecute about forty election officers arrested for violating the election laws in the interest of the organization. It is expected that he will now take up these cases.—Major Cassius E. Gillette, U. S. A., who assisted William Barclay Parsons and J. D. MacLennan in detecting the frauds in the filtration works, has been appointed by Mayor Weaver (with the Councils' approval) Chief of the Filtration Bureau, to succeed Engineer Hill, now under indictment. The salary, \$17,000, is the largest of those paid by the municipality. Major Gillette uncovered the frauds of Captain Oberlin M. Carter at Savannah. He was appointed with the approval of President Roosevelt, Secretary Root, and Secretary Taft.—The newly elected State Treasurer, Mr. Berry, has retained as his special counsel Homer L. Castle, recently the candidate of the Prohibitionists for Judge of the Supreme Court, whose sharp attacks upon the farming out of

the State's funds were a prominent feature of the campaign. Mr. Berry will take the office in May.

Railroad Rate Questions

Representatives of the five labor unions of railway employees (the Brotherhoods of Locomotive Engineers, Locomotive Firemen, and Railroad Trainmen, the Switchmen's Association and the Order of Railway Conductors) called upon the President last week and presented a written statement in opposition to the proposed legislation for the regulation of rates, on the ground that some reduction of rates was intended, and that such a reduction would cause a reduction of their wages. The President addressed them at considerable length. He would do anything in his power for the laboring man, he said, except to do anything wrong. There had been comparatively little complaint of the rates being as a whole too high, the most serious complaints relating to improper discrimination. He would not tolerate for a moment any injustice to a railroad any more than he would tolerate injustice by a railroad. But an increased regulatory and supervisory power over the railroads must be exercised by the Government, and he would like to have it exercised in the matter of overcapitalization as well as with respect to rates. The "wages fund" would be larger if there were no fictitious capital on which dividends had to be paid. The outcry against rate regulation was of much the same character as that which he had encountered while securing legislation concerning the coupling of cars and the liability of employers. He would resist any movement to hurt the roads. His aim was to secure just and equal treatment of the public by those who did not want to give it. "All I want is to give the Government an efficient supervisory power which shall be exercised as scrupulously to prevent injustice to the railroads as to prevent them from doing injustice to the public."—Mr. Mellen, president of the New York, New Haven & Hartford Railroad Company, called upon the President last week. He will support the latter's policy, and it is understood that President Cassatt, of the Pennsylvania road,

will also do this.—At its annual convention last week the Federation of Labor laid on the table, with only one dissenting vote, a resolution opposing the President's policy.—A hearing in the contempt cases against the Atchison and several other railroad companies was begun at Kansas City last week. These cases involve the rebates alleged to have been paid to a salt company and the Colorado Fuel and Iron Company, and are those on which Mr. Paul Morton was believed to be directly interested.—The Government has brought suit at Milwaukee against a private car company, the Pabst Brewing Company and several railroads, alleging the payment and reception of unlawful rebates thru the agency of the private car traffic contracts.

Chicago's Railways and Gas Supply

Mayor Dunne made another appeal to the Chicago Council last week, concerning the acquisition and operation of the street railways by the city. He asked for the passage of an ordinance providing for a vote at next Spring's election upon the question whether the city shall issue \$75,000,000 of Mueller law certificates for the purchase of unexpired railway franchises and the improvement of the service. By the use of this sum, he said, municipal ownership and operation could be brought about in one of three ways: By purchasing the property at a price to be fixed by arbitration, if the companies should agree to this; by taking the roads under condemnation proceedings; or by constructing municipal lines parallel to those of the companies. The ordinance was quietly referred to the Transportation Committee, which has received and buried several other propositions made by the Mayor, and which has agreed upon the terms for an extension of the companies' present franchises, except in the matter of compensation. These terms postpone municipal ownership for at least ten years, because they provide that the city shall not have the right to buy out the companies until ten years shall have elapsed, this right to be renewed at intervals of three years thereafter. Mayor Dunne denies a current report that he in-

tends to resign. He is going to stay with the cause of municipal ownership, he says, until it wins, and he is sure that it will win, "in spite of the mendacity and misrepresentation of some of the Chicago newspapers." It is said that he is opposed in his party by the friends of ex-Mayor Harrison. Clarence S. Darrow, the Mayor's special counsel with respect to the railway question, has resigned.—The Mayor has proposed an ordinance reducing the price of gas to 75 cents for the next five years, the city at the recent election having approved and accepted the new State law empowering it to do this. Probably this ordinance will be adopted. In 1900 the Council undertook to make such a reduction under the authority of old statutes, as to the bearing of which there was some question. Enforcement of the ordinance of 1900 has been prevented by injunction suits which are still pending. Since the date of that ordinance the companies have collected nearly \$14,000,000 in excess of a 75-cent rate, and in the ordinance now proposed it is provided that the adoption of it shall in no way affect the suits of consumers to recover that excess.

The President and Mr. Whitney

Curtis Guild, Jr., Governor-elect of Massachusetts, wrote to the President on the 10th, saying that the Republican ticket in that State would have been "overwhelmingly defeated" if the party platforms had not favored "immediate tariff revision," and expressing a wish that the President would suggest revision in his message. "Here in Massachusetts," he remarked, "the duty on hides is anathema." On the 15th a delegation of the leading shoe and leather manufacturers of the country, led by Gov. William L. Douglas, called upon the President and argued for the removal of the duty on hides, the Governor making the principal address. Mr. Roosevelt said that the subject should have his careful consideration, but he pointed out that tariff changes must take shape in Congress and would normally represent a compromise accepted by the people of many States. He then said that his experience with a committee from Massachusetts about a

year ago forbade him to discuss the whole situation freely with this delegation. In the recent campaign, he continued, Mr. Henry M. Whitney, a member of the committee, had misrepresented his utterances:

"He pretended to quote what I had said during the course of the long and informal interview with his committee a year before; no notes of the conversation having been taken at the time. Not only did he misquote the words I used, but by suppressing almost all that I had said and by giving what he purported to give entirely apart from its context, he absolutely, and as I am constrained to believe, deliberately, misrepresented what had occurred; and he knew well that it was impossible for the President of the United States to enter into a personal discussion about the matter with him."

Mr. Whitney is President of the Boston Chamber of Commerce. As Democratic nominee for Lieutenant-Governor he came within 2,000 votes of being elected on the 7th inst. After Mr. Roosevelt's address to the Douglas delegation he asserted that he had not intentionally misrepresented the President's views. His two colleagues on the committee (which represented the Chamber of Commerce), Mr. Webster and Mr. Hall, supported him in his statement as to what the President had said in favor of "the fullest possible freedom of trade with Canada." Mr. Whitney then wrote to the President (on the 17th), saying that the latter had done him great injustice. He appealed to the President's sense of fairness for a personal hearing, desiring to submit reports of his campaign utterances for examination. In reply, the President declined to receive Mr. Whitney. The latter had in his letter expressed regret that the cause of reciprocity was not to have the indorsement of the President's great name and the benefit of his aid. This remark, the President said, was additional evidence of the wisdom of his refusal to hear Mr. Whitney, because it was unwarranted by anything he had ever said. It was a deliberate misstatement. Mr. Whitney in his speeches, the President repeated, had misrepresented him:

"It matters little whether this was due to a deliberate purpose of deception or to a lack in both of your companions and yourself of a nice sense of propriety and of the power of exact thinking and of correct apprehension and

repetition of what was said. In either event, I feel that it would serve no useful purpose to see you again or further to correspond with you."

The Isle of Pines American residents of the Isle of Pines held a meeting on the 14th, asserting that the island belonged to the United States, and took steps for the organization of a Territorial Government. One report says that eighty Americans were present, another makes the number 260. Territorial officers were elected or appointed, a Governor excepted, and among these were T. B. Anderson (of St. Louis), Secretary of State, and Edward C. Ryan, Delegate to Congress. A letter signed by Anderson was addressed to President Roosevelt. It says that the Americans have waited three years for a recognition of their rights; that they have now taken steps to establish a Territorial Government, and that they rely upon the President "for a square deal." It is well understood that this movement on the island is sharply disapproved by the Administration at Washington, which holds that Cuba is entitled to the island. Her title to it is confirmed in the treaty now for two years pending in the Senate, where action has been prevented by Senator Penrose, of Pennsylvania. This treaty says that all claims of the United States are relinquished, in consideration of Cuba's grant to us of naval and coaling stations. One of these stations (at Guantanamo) is in our possession; another (at Bahia Honda) we can have at any time. There are said to be 430 American residents of the Isle of Pines, out of an entire population of 3,100. They own much of the land, and officers of a real estate company are prominent in the movement against Cuban rule. One of them complains that "Gen. Leonard Wood sold us out for two coaling stations." This movement is opposed in a written protest, signed by 1,400 Cuban residents and recently sent to Washington.—The number of guards at the President's Palace in Havana was recently increased. This is said to have been done because about sixty rifles and a large quantity of ammunition were discovered in an unoccupied house in the suburb district of

Cerro.—At last reports there had been less than ten cases of yellow fever at Havana. Dr. Guiteras says the infection was not due to the escape of mosquitoes from the detention hospital; 2,937 mosquitoes were recently killed there, and not one of the species that propagates the fever was found among them.

Inter-Church Federation

Five hundred officially appointed delegates of thirty denominations, with many other alternates and corresponding members, met in Carnegie Hall from Wednesday of last week to Tuesday of this week, to attempt a formal federation of their churches. After free discussion and many amendments proposed, the "Plan of Federation" offered by a committee of forty was adopted, as follows:

PLAN OF FEDERATION.

I. For the prosecution of work which can be better done in union than separately, a council is hereby established, to be known as the Federal Council of the Churches of Christ in America.

II. The following Christian bodies shall be entitled to representation in this Federal Council on their approval of the purpose and plan of the organization: The Baptist Churches, North; the Baptist Churches, South; the Free Baptist Churches, the Negro Baptist Churches, the Christian Connection, the Congregational Churches, the Disciples of Christ, the Evangelical Association, the Evangelical Synod, the Friends, the Evangelical Lutheran Church, General Synod; the Methodist Episcopal Church, the Methodist Episcopal Church, South; the Primitive Methodist Church, the Colored Methodist Episcopal Church of America, the Methodist Protestant Church, the African Methodist Episcopal Church, the African Methodist Episcopal Zion Church, the Mennonite Church, the Moravian Church, the Presbyterian Church in the U. S. A., the Cumberland Presbyterian Church, the Welsh Presbyterian Church, the Reformed Presbyterian Church, the United Presbyterian Church, the Protestant Episcopal Church, the Reformed Church in America, the Reformed Church in the U. S. A., the Reformed Episcopal Church, the Seventh Day Baptist Churches, the United Brethren in Christ, the United Evangelical Church.

III. The object of this Federal Council shall be:

- (1) To express the fellowship and catholic unity of the Christian Church.
- (2) To bring the Christian bodies of America into united service for Christ and the world.
- (3) To encourage devotional fellowship

and mutual counsel concerning the spiritual life and religious activities of the Churches.

(4) To secure a larger combined influence for the Churches of Christ in all matters affecting the moral and social condition of the people, so as to promote the application of the law of Christ in every relation of human life.

(5) To assist in the organization of local branches of the Federal Council to promote its aims in their communities.

IV. This Federal Council shall have no authority over the constituent bodies adhering to it; but its province shall be limited to the expression of its counsel and the recommending of a course of action in matters of common interest to the churches, local councils and individual Christians.

It has no authority to draw up a common creed, or form of government or of worship, or in any way to limit the full autonomy of the Christian bodies adhering to it.

V. Members of this Federal Council shall be appointed as follows:

Each of the Christian bodies adhering to this Federal Council shall be entitled to four members, and shall be further entitled to one member for every 50,000 of its communicants or major fraction thereof. The question of representation of local councils shall be referred to the several constituent bodies, and to the first meeting of the Federal Council.

Section VI provides for vote by denominations if demanded; Section VII, for admission of other denominations by a two-thirds vote by denominations; Section VIII, for a first meeting in December, 1908, and every four years thereafter; Section IX, for officers and their duties; Section X, for amendments by majority vote of members and denominations, while Section XI asks the National Federation of Churches and Christian Workers to call the first meeting of the Federal Council when its plan shall become operative by the adhesion of two-thirds of the churches mentioned. There were a few members who earnestly urged amendments to provide for the admission of Unitarians, but they were defeated overwhelmingly. The meetings were fully attended, and a great number of distinguished speakers spoke from the platform on various subjects bearing on the work of a united Church.

French Politics The melodramatic resignation of M. Berteaux as Minister of War, who suddenly left the ministerial bench in the midst of debate, slammed down his portfolio, and took his

seat upon the Left among the Socialists, has caused a general shifting of positions in the Rouvier Cabinet, but apparently has not weakened it, for after an eloquent speech from the Premier he received a vote of confidence by 372 to 126. M. Etienne, Minister of the Interior, put into M. Berteaux's place; M. Dubief, Minister of Commerce, was made Minister of War, and M. Trouillot, Deputy from Jura, was appointed Minister of Commerce. M. Berteaux is a Socialist, and as such has no right in the Cabinet, since the unified Socialist party of France has ordered that none of its members may take a position in the Government. He became still more uncomfortable when Premier Rouvier took the ground that government employes had no right to form unions, and finally when on this question the Socialists and Radicals voted against the Ministry, and it was only saved from defeat by support from the Right, he determined to leave his post. One reason why the Deputies of the Left were unwilling to precipitate a dissolution of the Government is because the bill for the separation of Church and State is now being put thru the Senate, and they wish nothing to interfere with that. No amendments are being permitted by the majority in the Senate lest it should imperil the bill. The bill for old-age pensions for working men also should be put thru the Chamber before January, when a third of the members will be elected. There seems to be a substantial majority for this measure altho it will involve a considerable increase in taxes. The regular budget for 1906 involves an increase of expenditures of more than \$19,000,000 over that of 1905, chiefly due to increase of salaries and navigation bounties.—Some workmen in the arsenal at Brest, in an anti-military meeting violently attacked the Maritime Prefect, Admiral Peplian. When the Admiral punished them for the insult the federated workmen in all five of the naval stations took up their cause as an infringement of free speech, and a general strike was ordered. M. Thomson, Minister of Marine, took a firm stand by declaring that he would not permit a strike that compromised the national defence, and that all who did not return to work would be excluded

from the arsenals. Upon his promise of a thoro investigation the strike was called off.

King Haakon VII of Norway

In accordance with the will of the people as expressed in the recent referendum, the Norwegian Storthing on November 18th unanimously elected Prince Charles of Denmark to be King of the Norwegians. As soon as the result was announced the chaplain of the Chamber invoked a blessing upon King, Government and country, and a royal salute of 42 guns was fired. On the following Monday a deputation of members from the Storthing, headed by President Berner, went to Copenhagen and was received by King Christian in the same room where in 1863 the crown of Greece was offered to Prince George. The old King addressed the delegation with the following words:

"Representatives of the men of Norway: It has pleased us to accède to the desire of the Norwegian people that we accept the ancient crown of Norway for our dear grandson, Prince Charles. We cherish full confidence that the Norwegian people, in common with him, have a happy future in store for them.

"The young King does not come as a stranger to Norway, for he claims relationship to former Norwegian Kings. Nor will the Kingdom of Norway be strange to him, for everywhere in the land common recollections of the history of the kingdom and the history of his race will meet him."

Then he bade Godspeed to King Haakon and Queen Maud:

"You, my dear grandson, have here served your Fatherland and King with loyalty. Therefore I am convinced that you will enter on your new and responsible task with good intent. Fill worthily your place and your father and mother, your whole race, the land of the Danish people, and I, your old King and grandfather, will all celebrate this solemn hour with warm feelings.

"Go with God, my dear grandchildren, from the land and race that bore you to the land and people which have called you, and take the blessing with you of your old King for you, your race, and your deeds now and forever. Herewith I commend you to God."

The new King and his consort will be escorted to Norway by a fleet of Norwegian, Danish, British and German warships, and will make his entry into Christiania November 25th. The formal

coronation will take place July 27th. The Crown Prince will take the name of Olaf. The first task of the Government will be to raise more money by taxation to meet the extraordinary expenditures of the interregnum, due to the long-continued sessions of the Storthing and the military measures, amounting to a sum estimated at \$2,250,000.

The Russian Peasants

It has been often said that so long as the peasants were not aroused, the rising of the industrial classes in the great cities could not effect a revolution. Consequently, the reports of numerous agrarian riots caused serious alarm, altho there is yet no proof that these sporadic outbreaks form part of a general movement or have any definite political aim. Delegates from the Peasants' Union of Kharkoff, who attended the Workmen's Council at St. Petersburg, declared that the peasants were ready to join with the laboring classes of the towns in a universal political strike. In Kharkoff the peasants have vowed to drink no vodka, to visit no cities, to work for no land owners, and to avoid all violence during the strike. But reports from the disturbed districts do not indicate any such moderation. Many large estates have been attacked, the houses looted and the buildings burned. The estates of Prince Oldenburg in Vorsnez and that of Prince Rostkoffsky in Novoskol have been wrecked, and in Chernikoff, Tamboff and Saratoff there has been much disorder. The peasants of Yasnaya Polyana refused to attack Count Tolstoy's estate. The peasants demand that all the land belonging to the State, the Czar and the monasteries be divided among them. It is reported from Penza that a false Czar has appeared in the region west of the Volga and has a following of 50,000 peasants. Such pretenders have several times in Russian history led very serious rebellions, so the rumor is quite credible. The Czar on November 17 issued a manifesto for the purpose of conciliating the peasantry by remitting a large part of the redemption dues on the land that was given them from the imperial domain

when they were freed from serfdom in 1861. These have been a heavy burden upon the peasants, and the term for final payments, originally fixed at forty-nine years, has been repeatedly extended, and at the present rate they would be completely paid up by 1930. The manifesto reduces the annual dues one-half from January 1st, 1905, and abolishes them after January 14th, 1907. By this act the Government loses some \$35,000,000 annual revenue and makes a total sacrifice of more than \$600,000,000.

The Russian Situation

There are many reasons for hoping that the internal disorders of Russia have passed their climax, and Count Witte has better prospects for establishing a stable government than for many weeks past. The Central Labor Committee of St. Petersburg called a general strike on November 16 for the purpose of demonstrating their power, but it seems to have had the opposite effect of exposing their weakness. The workmen of the city generally responded to the call, and struck to the number of some 60,000, but the strike did not spread thru the empire. The trains were stopped at the stations, the electric lights of the city cut off, the theaters were closed, and newspapers ceased to appear. The strikers were reported to be provided with revolvers, citizens were armed against them, and the vicious elements of the city were anticipating an opportunity for unlimited loot. A repetition on a larger scale of the riots of Odessa was threatened, and it was uncertain how far the army could be depended upon to maintain order. But the weather was too cold for street demonstrations, and the workmen had become tired of losing wages by being called out so frequently upon political strikes for vague reasons and with unsatisfactory results. In the Central Committee, or union of unions, the head of the federated industrial and professional societies, great dissatisfaction was manifested over the calling of the strike, and there was a hot discussion over its cause and continuance. The ostensible objects of the strike were to prevent the punishment

of the mutineers of Kronstadt and to protest against the action of the Government in establishing martial law in Poland. Both these objects they claim to have accomplished, but since Poland still remains under martial law and the mutineers are not yet tried, their triumph is not apparent. The Socialists tried to have the strike continued until the eight-hour day was secured at the present daily wage, but it was voted to call the strike off on Monday, November 20, and prepare for another in January. The Government abstained from any provocation and there was no serious bloodshed. Count Witte issued a personal appeal to the workmen, which was replied to in the following language:

"The Council of Workmen's Delegates expresses astonishment at the Emperor's favorite, who permits himself to call the workmen of St. Petersburg his brethren. The proletariat is not related to him in any way.

"Count Witte begs us to give the Government time, and promises to do all possible for the workmen. The Council knows that Count Witte has already found time to give Poland into the hands of the military executioners. The Council does not doubt that Count Witte will do all possible to strangle the revolutionary proletariat.

"Count Witte calls himself a man who is benevolent toward us and wishes our good. The Council declares that the working classes have no need of the benevolence of a court favorite, but demand a popular Government on the basis of universal, direct, and secret suffrage."

The Zemstvo Congress, which opened in Moscow November 20 with 300 delegates, is divided upon the question of whether to support the Government of Premier Witte or to continue in the opposition. Many of the most prominent of the Zemstvoists favor forming a law and order party to oppose further revolutionary measures, and to insure that the best use is made of the liberties already conceded.—Premier Witte has found that Government officials in several places connived at or assisted in the recent massacres of the Jews, and he has made many removals from office on this charge. Both Jews and Gentiles have contributed generously to the subscription lists opened in all our large cities for the relief of the Jews in Russia, and the fund collected in this country now amounts to \$562,307. In England \$370,000 has been subscribed.

In the Far East

A Japanese protectorate has been formally established over Korea by action of the Korean cabinet, under pressure from Marquis Ito, Hayashi, the Japanese minister, and General Hazagawa, commander of the Japanese troops in Korea. The discussion lasted two days and nights and took place in the presence of the Emperor. The Prime Minister of Korea refused to sign the treaty, for which the Emperor of Korea ordered his banishment, but he was pardoned upon the petition of Marquis Ito. By the terms of the treaty Korea agrees to employ Japanese officers to direct the Government offices and the custom houses. A Japanese Governor-General will be appointed. All diplomatic business with other nations will be carried on thru Japan. The Korean Legation at Washington, which was established in President Cleveland's second administration, will probably be at once withdrawn. There was some rioting in Seoul when the announcement was made, but it was soon quelled.—The Russian sailors and artillerymen at the fortress of Vladivostok mutinied because they were not sent home as soon as they had expected, altho their time had expired. Many of the public buildings were pillaged and burned. The Commandant was not able to control them, but by the aid of a regiment of Cossacks order was restored. The foreign residents, including American Consul Greener, took refuge on the ships in the harbor. Excited by the news from Vladivostok, 5,000 Russian prisoners at Nagasaki mutinied, and the Russian officers of the two transports which were sent to take them to Vladivostok were obliged to appeal to the Japanese authorities for protection. Four Japanese torpedo boats brought alongside of the transports put an end to the affair. Admiral Rojestvensky was on board one of the transports, but did not leave his cabin. Many of the Russian prisoners in Japan have requested to be allowed to emigrate to the United States instead of being taken back to Russia. The Russian soldiers at Harbin also mutinied on account of the poor food and clothing supplied them, while their officers lived in luxury. Two of the officers were killed. Troops and prisoners are being held back for fear they will join the revolutionists.

NORWAY'S NEW KING, QUEEN AND CROWN PRINCE.
Courtesy The Literary Digest.

Once More a King of Norway

BY BARON DE STAMPENBOURG

[Prince Charles of Denmark was elected King of Norway on November 12th and 13th by a vote of 257,710 to 68,852. The Republicans were much disappointed in their low vote. It is reported that the King will take the title of Carl V instead of Haakon VII.—EDITOR.]

JUST before the Norwegian Storting by a sweeping majority offered Prince Charles of Denmark the Kingship, Nansen spoke out the so-called Republican sentiment of the Norwegian people when he wrote in *Verdens Gang* as follows:

"If we could have a practical republic tomorrow, we would prefer it to waiting for a kingdom a whole year, provided the republic would mean a stable Government and its institution were permitted by the Grundloven (Constitution). Since this is not the case, we have no choice."

In other words, the henchmen of the sort of Republicanism that fired all Norway for a while after the secession from Sweden is quite content to take the view that there can be no republic, since it is

against the backbone of Norse law. The Norwegians were always amusing in politics, and following close upon the inimitable decorum observed by the Storting in its attitude towards King Oscar, the fiasco of Norse popular Republicanism, which Nansen voices, is more than amusing.

So after all is said and done—after the festive time of beer and schnapps—these bitter opponents of royalty, whose Viking forefathers had to have their necks broken by a ruler like Harald Haarfager before they could be made to pull together, they are to have a King, a Seventh Haakon, a Prince of Denmark—Denmark, the ancient usurper of Norway's independence!

King Edward of England has worked like a Trojan, as the uncle of the Prince, to make his election possible. His partner at the game of international chess was none other than the German Kaiser. The latter wanted a prince, not of the Hohenzollerns, but of German confederate sovereignty, to get the Norse throne. He even went so far as to call personally on the King of Denmark to prevent that ruler from giving his consent should a Danish prince be elected. But thru the British Foreign Office Edward assured the Storthing that the election of Charles would mean the practical guarantee of the best protection Norway could ever have in the event of war, to wit, the entire British naval power, and Edward won the game.

Charles is a bright young man of thirty-three years, of a good-natured turn, with no pronounced habits and ambitions, and, so far as is known, without taste for that, for a ruler, most fateful sport—the dream of conquest.

He is happily married to King Edward's bosom child, Princess Maud, and he has a two-year-old son, Alexander, who will be Crown Prince of Norway on his father's coronation.

Charles is very fond of outdoor life, is often seen in the saddle with a red coat on, hunting to hounds, and lives the life of an English noble with a penchant for horse racing. Above everything else in the world he delights in yachting, and as a practical naval man he takes a vital interest in everything pertaining to war machines afloat, from submarine to battleship. In practical seamanship he is without doubt the superior of any royal prince of his age, and is only exceeded in experience by his uncle, Prince Waldemar of Denmark, and Prince Henri of Prussia. His domestic tastes are of the most wholesome sort, thanks to his careful rearing by his parents, the Crown Prince and Crown Princess of Denmark. His father, who is a strict disciplinarian, was early of the opinion that the boy "in order to be a good commander must be taught to obey commands before he is entrusted with a command." Accordingly, Charles was sent, at the age of thirteen years, into the Danish Navy, not as a cadet, but as an apprentice, wearing common sailor clothes and doing common sailor work.

For nine months he held this lowest of all subordinate positions in the navy, and tho the strain was harder on him, being a prince, than on the other boys, who were mostly sons of naval officers, he stood it well, was promoted to midshipman on merit, then to cadet, and finally to naval officer. It was during his first nine months' struggles as an apprentice the writer had the honor of the Prince's acquaintance, because we served together on the same ships. Not that I or anybody else aboard ship considered it in the light of an "honor" at the time—for no rank counts in the navy except that of the navy's own making. He was a chum, a comrade, a messmate, nothing more. Those of us who were his seniors even went so far as to make him feel it in many ways where seniority is quite an advantage on board ship. Being the youngest boy in the mess, he had to do the "odd jobs" that fall to the lot of the junior messmate. He had to go to the galley and get the "mess grub" in a tub that would probably not be considered good enough for a foot bath at the palace where he had been reared. He had to eat from a tin plate with a tin spoon and an iron fork such as any scullery maid in the royal kitchen might set before a casual beggar, but would never condescend to use herself. He had to put up with seaman's fare that took the skin off his mouth, and his bed was the regular canvas hammock that he had to put up and take down like any other sailor.

From the luxurious surroundings of a kingly court, where he was waited on hand and foot, he was placed all of a sudden among a good, old fashioned ship's company, where he had not only to wait on himself but on others. Once a boy who had uncles and aunts like the present King of England and the Empress Dowager of Russia, he now found himself cut off from all his powerful relatives and torn from the bosom of the royal family, to do the work of a sailorman, to earn his oats without help or favor.

He weathered the ordeal excellently well. In the beginning he made so many "long" faces that he became the joke of the mess, but soon he learned to laugh with his comrades, and the real human side of the boy, which had been dwarfed into neglect by the artificialities of court

life, began to develop at a galloping pace with the rough, give-and-take horseplay in the navy.

When he came home after his first cruise in the "Baltic," with the midshipman's dagger in his bandolier, he was in the eyes of his comrades, at least, a full-fledged little "bisse," or sea-dog. He could chew, he could swear, he could talk ship. The former two accomplishments, which we had mischievously taught him were indispensable, procured for him a first-rate caning, administered by his father, the Crown Prince—the first parental salute on his home-coming. He had acquired the slang of the fore-castle, and he had acquired "sea legs," by which he shocked the court, to the extent of earning for himself a week's house arrest, during which he was made to unlearn the tricks that he took such a real pride in.

Now this very training in seamanship from the bottom of the ladder upward, rough and "improper" tho it was, served its purpose just the same in killing the courtier in the lad and making him as human as other healthy boys born without the disadvantages of princeliness. As a direct consequence Prince Charles is now a liberal-minded chap with whom the Norsemen are bound to get along. He is the incarnation of a "sea prince," as the Norsemen themselves are an incarnation of the sea. He can talk their tongue, he knows the annals of their history, he understands their traditions, their prejudices, their ambitions. He is not a Bismarck, to be sure, and it may even be doubted if he is above the average in intellect, but he is, nevertheless, the best available prince alive and the chances are he will accomplish more by the tact and fair-mindedness that are his, than a brainy and ambitious sovereign of

the Kaiser stripe could hope to do.

And Charles is to be Haakon VII. Will the coronation occur at the old Nidaros Cathedral at Drontheim, where the other Haakons and Haralds of Norse history were made kings, or will it be at Kristiania Slot in Christiania? At the latter place the King of Sweden has removed all the art treasures, whereas the silver, linen and furniture will remain, as that belongs to the Norwegian State. Charles will certainly not allow himself to be crowned in a half-furnished castle; so unless they take from the museums and give to the palace, Drontheim will be the place.

The face of King Edward will merit study on the occasion, as Princess Maud (of Great Britain and Ireland, don't forget!) is his only child to be crowned a sovereign, the only one he will live to see crowned. You will have to approach Edward on your face on that day! And the Kaiser will be present in the person of an envoy.

The Czar of Russia, being a cousin of Charles, may be there—if Count Witte will allow it. And uncles and aunts galore, from the King of Greece to the Empress Dowager and the Queen of England, will testify to the powerful family relations of the young Prince.

The great Harald Haarfager created a united Norway out of warring Viking elements, but since the union with Denmark, Norway has had no independent ruler for more than five centuries.

Charles is the first to lift the old Norse crown. Sovereign ancestors like the hero King Olaf Tryssve, the saint king Hellig Olaf, and the crusader King Sigurd are looking down upon him. Will he bridge the present and the past? Or will he steer his own course and look straight ahead rather than behind?

NEW YORK CITY.

The Proposal

A Story of the New York Ghetto

BY HERMAN BERNSTEIN

AUTHOR OF "CONTRITE HEARTS," "IN THE GATES OF ISRAEL."

BORIS DUSHKIN acted all morning like a man madly in love. Though he was thirty-five years old, with a university education, with a great deal of experience in life, which caused his hair to turn grayish and thin, he now felt like a schoolboy before his final examination. He was intensely agitated, nervous and absent-minded—yet he had never seen Miss Lillian Blumenthal. He was to be introduced to her today at Mrs. Fiddler's "private" restaurant, and match-making establishment.

He spent most of the forenoon in beautifying his appearance, but somehow things went wrong with him. He shaved himself with the utmost care, yet he cut his cheeks in several places, and when he tried on his gold-framed eye-glasses which he wore on special occasions only, they slipped off his short, thick nose and broke on the floor.

Dressed in his best suit—long black cutaway coat, white vest, light gray trousers and soft black hat—he elbowed his way thru crowded Grand street, swinging his black cane, a bottle of port wine under his arm, and as he walked he hummed a Russian song. Suddenly, while turning into Clinton street, toward East Broadway, he recalled that she, Miss Blumenthal, was a German Jewess, and almost mechanically he left off the Russian song and started to hum "The Two Grenadiers," regulating his steps with the tempo of the tune.

He rushed into Mrs. Fiddler's restaurant like a whirlwind; he hastily put his cane into the corner of the room; placed the bottle of wine on the table, and taking off his eye-glasses, wiped them cautiously for some time.

"You're all right, Mr. Dushkin—on time to the minute," said Mrs. Fiddler, a short, massive, red-faced woman, who appeared in the doorway of the dining-

room, and surveying him with admiration, she added:

"You look like a real prince today! Wahrhaftig!"

Dushkin kept wiping his eye-glasses, nervously. Presently he put them on and looked at his watch.

"Do you think Miss Blumenthal will come soon?" he asked, removing the paper with which the bottle of wine was wrapped.

"You may bet she will—we're Germans you know—and Germans are always punctual."

Mrs. Fiddler began to laugh so that her small eyes disappeared beneath the wrinkles of her fat face, which melted into an expression of self-satisfaction. She rolled up her sleeves, thus showing her red, round arms, and coming closer to Dushkin, said in a low voice, with a mysterious air:

"I was up to see the Blumenthals last night. I tell you it's a family of aristocrats. Their furniture, their carpet—a regular pleasure." She looked around, rolled up her eyes, and added, seizing Dushkin by the lapel of the coat: "I'm a friend of your's; that's why I want you to marry her. You know Florence, her younger sister, and you think she's nice, but where does she come in with Lillian? Florence is only a spring chicken and Lillian is a regular lady. She's older, of course, but you said you didn't believe in marrying a girl much younger than yourself. First of all Lillian is economical. She'll save every cent of yours; she's not a bit extravagant. I tell you she'll be an ideal wife; take my word for it." She paused awhile to draw her breath. "And I am a friend to her, otherwise would I try to arrange this match? Why, if you marry her I lose my best customer. Of course, you promised to make me a present of an icebox if all

turns out right, and I need one badly, but may the Eternal One punish me if I take this into consideration."

Mrs. Fiddler was interrupted by a knock at the door. Dushkin rose, adjusted his eye-glasses, and twisted his mustache. "Come in!" said Mrs. Fiddler, "Come in!"

A tall, slim, graceful young woman, with a wealth of light hair, entered slowly. Her blue eyes shone smilingly thru her spectacles as she and Mrs. Fiddler embraced each other and kissed thrice.

After Lillian Blumenthal and Boris Dushkin had been introduced by the keeper of the restaurant, they sat down by the table to eat; the match-maker busied herself serving dish after dish. Boris opened the bottle of wine with trembling hands and filled three glasses. Only when he noticed that Lillian's hands were also quivering as she lifted the glass to her lips, he began to feel that he was soon to bid farewell to his bachelorhood days and plunge into the sea of married bliss.

Boris and Lillian gazed at each other thru their eye-glasses for some time, then they nodded their heads and drank.

Their conversation flagged during the dinner, for Lillian had been reared amidst surroundings where people rarely discussed serious subjects seriously, so Dushkin found difficulty in interesting her and getting her views on matters. As a last resort he turned to the news of the day. He began to speak of the War, of Russia's repeated defeats, of her declining prestige and of the remarkably clever strategy of the Japanese. After

having listened to him for some time, Lillian felt that she must say something, tho she did not know what to say, so she interrupted him:

"Oh, yes, I have read about it."

A prolonged silence followed. Then Boris started to speak of literature.

"My father does not like the Russians, and he doesn't like their books—" suddenly Lillian burst out bravely. "But I was going to read one of—what's his name? — Tolstoy's novels — wait, let me think of the name of the book."

Mrs. Fiddler thrust her head thru the doorway, her face beaming with satisfaction and delight.

"Was it 'Anna Karenina,' perhaps?" asked Boris.

"No."

"War and Peace?"

"No."

"Resurrection?"

"No."

"Was it, perhaps, the 'Kreutzer Sonata?'"

"Yes, yes, that was the book," exclaimed Lillian triumphantly. "I started to read it, but father took it away from me. Is it a good book?"

"That depends on how one reads it. There are people with perverted minds, to whom the most innocent book will furnish food for unclean thought—whereas, on the other hand, right-thinking people will see nothing but the good in any work. . . . Some believe that in order to write of love, one must dip the pen into the rainbow or into the fine dust on the wings of the butterfly, or on a rose. But the Russian writers, especially Tolstoy, dips his pen into his own heart, and writes of life in terms of life."

"You don't say?" exclaimed Lillian

HERMAN BERNSTEIN.

with animation, adjusting her eyeglasses. "I must read his 'Kreutzer Sonata!' That's interesting! Of course you know my father never read anything by Tolstoy—you know he's been too much absorbed by his business to have time for reading books, but he doesn't like the Russians on general principles, present company excluded, of course—you aren't a bit like the rest of them. Mrs. Fiddler told me so, and now I can see for myself—but my father claims that all Russian Jews are schnorrers (beggars)——"

"Only a narrow-minded person could make such a sweeping statement as that," declared Boris, vehemently. "I could tell your father some things about the Russian Jews which would alter his opinion of them. Your father probably does not know them—just as he never read Tolstoy, and yet he has forbidden you to read him."

"Of course, I don't agree with my father on this point," Lillian interposed with a smile.

After the wine, Boris spoke more freely on various topics, and Lillian listened to him with close attention, almost bewildered. She had never before heard any of her acquaintances speak so logically, with so much zeal, with so much fire.

He described to her the sufferings of the Russian Jews in vivid colors, with deep emotion. Lillian's eyes flashed thru her glasses and she thought: "Is it possible that he is only two years in this country? He speaks English so well, better than father, who has been here more than thirty years. Altho Dushkin is a Russian, father will surely like him."

A street organ began to play a popular air, the clothes lines in the yard were creaking every now and then, and soon the bells of a fire-engine smote the air. The people of the tenements thrust their heads out of the windows to see whether the fire was near.

Mrs. Fiddler also leaned out of the window, but satisfying herself that the fire was in the next block, she returned to the kitchen. When Lillian came in to the kitchen a few minutes later, Mrs. Fiddler whispered to her:

"He's all right—isn't he? Now, be forward, above all don't be bashful, and

you'll have things your own way. Never mind his learned talk, they're all that way. Remember, be forward, and you can wind him around your finger—he's as soft as silk."

At four o'clock Boris and Lillian went out for a walk in Jackson Street Park. There, by the East River, they sat down on a bench and for hours he spoke to her of his experiences in Russia.

They returned to Mrs. Fiddler's house towards evening. After supper, Boris sang some sad and passionate Russian songs, with deep emotion, and at about nine o'clock he escorted her home.

On reaching the entrance of the house where the Blumenthals lived, Lillian pressed his hand firmly, and gazed fixedly into his eyes. Then she exclaimed:

"Mr. Dushkin, altho this is the first time we have met, I wish to tell you that in this house lives one whose heart will always respond to yours! Don't forget the number! Come tomorrow evening!"

Next evening Boris Dushkin sat in Blumenthal's parlor and spoke again of his experiences in Russia. Lillian sat close to him in a rocking chair, and listened eagerly, her eyes flashing. Near them sat Lillian's mother, a thin-bodied, gray-haired, blind little woman, and listened to Boris, shaking her head every now and then to show that she was following his words. Her face bespoke all-absorbing happiness. She rocked herself slowly, noiselessly, as tho fearing to disturb Boris.

Mrs. Blumenthal had lost her sight when Lillian was but three years old, and she never saw the faces of the eight children that came into the world after Lillian. She had neither seen her husband rise to wealth nor had she seen his downfall—for twenty-five years he had climbed the ladder of success as a neckwear manufacturer, and suddenly his affairs had taken a sharp downward course, and he fell into bankruptcy. Some Russian Jews who had worked for him became his competitors and forced him to the wall, so that now, in order to live, he manufactured neckwear at home, his six daughters doing the work and he himself acting as salesman. Ever since his downfall he hated Russian Jews, altho there had never been any particular love for them in his heart. Still, tho

Dushkin was a Russian, and tho he had not yet proposed to Lillian, there was great joy in the Blumenthal home. In his better days Blumenthal would have resented the idea of any Russian proposing to his daughter; but when a man has six dowerless daughters, the youngest of whom is already marriageable, he cannot afford to stand by his likes or dislikes, and he must fling his prejudices to the winds.

Lillian's sisters had been sent away from home for the evening, for fear lest Boris should take a fancy to one of the younger girls. The old man had to attend a very important meeting at the lodge of which he was President. So Boris had nothing that could hinder his wooing. He spoke with enthusiasm, and Lillian and her mother listened without interrupting him. Soon Lillian seated herself at the piano and began to play "The Waves of the Danube," which she had practiced all day long for the purpose of impressing Boris that her musical taste was not confined to the popular American songs. And Boris sang with feeling, flourishing his hands, rolling up his eyes, and clasping his bosom. And the blind woman rocked slowly, breathing heavily for joy.

After the strains of the song had died away, the old woman, almost overcome with emotion, begged to be excused for awhile, complaining of a headache. Lillian led her into her bedroom. There mother and daughter embraced, and with trembling voice the mother said:

"This is great luck for you, my child!"

Lillian rearranged her hair before the mirror, pinned the violets which Boris had given her on her bosom, and came out to Boris, smiling. For a minute they were silent—then she sat down by the piano, and said in an uneven voice, opening her sad, large eyes:

"You have told me of your experiences of life, of your career. I have told you nothing—I suppose Mrs. Fiddler has told you all about me. I have had but little experience—very little indeed. I was courted by a number of young men, by rich and good-looking young men, but—well, I didn't care for them. I have always pictured to myself an ideal—I always dreamed of a man about thirty-five, a man on whom I could rely, whom

I could respect as a father—one with whom I would feel safe—knowing that he could protect me. He needn't be tall or broad-shouldered. He must be with black eyes, with black mustaches—somehow I pictured him to be with eyeglasses. He must be intelligent, a doctor or a lawyer, or a civil engineer—one who can sing, an enthusiastic man, full of life——"

"If you would only add the bald head in your list, I think that I could qualify as your ideal," said Boris.

Lillian rose, and placing her hands on his shoulders, exclaimed softly:

"You are my ideal!"

She trembled as she said these words, grasped his hand and gazed into his eyes. Suddenly she bent down and kissed him upon his cheek, and such an impetuous kiss it was that their eyeglasses struck and those of Boris fell to the floor, breaking into small pieces.

"How will I find my home now?" asked Boris, jestingly, going down on his knees to pick up the bits of broken glass.

"I will lead you. Don't be afraid—I will lead you home. Never mind, Mr. Dushkin, I'll pick up the broken glass," and as she bent down on the floor, their lips met once more in a prolonged kiss.

They rose and sat in silence for some time, holding each other's hands. Suddenly she said resolutely: "Well, Boris, I have thought the matter over, I have given it the most careful consideration—I have decided to accept you——"

And she kissed him once more. Boris was dazed—he could not say a word. He stayed another five minutes and took his leave absent-mindedly, promising to call again on the next evening.

He left the house as intoxicated. He had been preparing himself to propose, to speak to her seriously, to unfold to her his past, and to ask her to tell him hers—something which he considered as essential to happiness in married life—to tell her of his circumstances in detail, that he was not yet able financially to marry for perhaps two or three years to come, and suddenly, before he had said a word, he found himself accepted! He reached home with a painful headache, and winding up his phonograph, as was his wont every evening, before

going to bed, he made it play to him one of his favorite Russian songs.

When he called on the Blumenthals for the third time he brought no flowers for Lillian; he was dressed in his everyday clothes of light checkered gray, a soft shirt and a carelessly tied four-in-hand. He wished to impress Lillian that he was not as rich as Mrs. Fiddler, the keeper of the private restaurant, in all probability must have represented him to be. He resolved to speak to her seriously, frankly. Still he armed himself with three pair of eyeglasses, for the thought of the kisses for the first time in his life given to him by a strange woman were still burning his cheeks with a peculiar fire that spread within him and made his heart beat fast with joy.

He rang the bell firmly. Lillian came to the door in a white dress, a mass of lace and tulle. Seizing him by the hand, she pressed it tenderly and affectionately.

"How are you, Boris?" she asked. "But why are you not dressed in evening clothes?" she added, suddenly lowering her voice with disappointment.

"Miss Blumenthal, I wish to speak to you," he said in a firm voice. "I have many things to tell you, many things to ask you about the past. . . . I wish to speak to you about the present—to discuss the prospects for the future. . . . We must not be hasty."

"Later, later, some other time about this, Boris," she interrupted him.

"Oh, no, we must consider matters carefully now," pleaded Dushkin. But Lillian took his arm, and dragging him toward the staircase, began to laugh.

"Of course we must consider matters carefully, of course. Ha, ha ha!" and she suddenly bent down to him, clasped his head with both hands and kissed him on the forehead.

"Come, come, my serious philosopher, ha, ha, ha!" Lillian led him up the stairs. When the door of the parlor opened he saw that the room was brightly illuminated and four men dressed in black Prince Albert suits came forward to meet him.

"My father, Mr. Dushkin," Lillian introduced them. "My brother, Herman;

my brother, Ludwig; my brother, Phil—this is—Boris. . . ."

They all assured him in one voice that they were happy to meet him, and the little man surrounded by the four tall, strong-looking men, stood with lowered head, his eyes wandering. Now and then he twisted his long mustache, adjusted his eyeglasses and wiped the perspiration from his face with a handkerchief.

"Ludwig, tell the family to get ready," said the father, a stout man with a prominent paunch, with long red side-whiskers sprinkled with gray.

"Be seated, Mr. Dushkin," he turned to Boris. "Don't be bashful, don't be bashful;" the old man stroked his side-whiskers, and then motioned to Lillian to leave the room. As soon as the door closed behind her, the four black-coated men seated themselves in arm-chairs, and Boris, feeling himself out of place with his everyday clothes in this brightly illuminated parlor, sat down on the edge of a small, frail, gilt parlor chair.

"Now, Mr. Dushkin, what is your business?" asked the father.

"I am a civil engineer," replied Boris, like an embarrassed schoolboy.

"Oh, yes, my Lillian told me about it. Well, how is business?"

Boris felt somewhat offended by this questioning, as well as by the old man's tone, but he controlled himself and said:

"Fairly well, considering that I am a newcomer in a foreign land."

"Yes, yes, my boy, *mezumen*, *mezumen* (cash) is the great thing in the world. You've got a good business, but you need push and pull to work yourself up in your line."

He winked his eye, patted himself on the vest, and said with a self-satisfied laugh: "Don't worry, I have many influential friends—millionaires. You know we German Jews are a great power in this country. You'll be all right—"

Boris bit his lips in his effort to contain his gathering rage. He felt humiliated, and when he recalled what Lillian had told him of her father's antipathy for Russian Jews, and also for the Russian classics, which he had never read, cold perspiration came out on his fore-

head; he quivered, yet managed to maintain silence.

Soon the door opened and Lillian appeared with her mother on her arm. The blind woman walked slowly, outstretching her hand to greet Boris.

"Mr. Dushkin," she mumbled.

Boris jumped up and seized her hands.

She added something indistinctly, but her face beamed with hope and joy, as he led her to the gilt parlor chair, which he had occupied. Lillian placed two bottles of wine on the table, then she brought in cakes, nuts and raisins.

Old Blumenthal poured out wine for everybody, and, lifting his own glass, said:

"I drink the health of Mr. Dushkin, my future son-in-law."

"Good luck to you!" "Good luck to you!" Lillian's brothers raised their glasses and all, save Boris, drank. He held his glass and his eyes were fixed imploringly upon Lillian.

"My daughter has accepted you. Now, I make it my policy not to interfere in such matters; I wish you good luck!" said Blumenthal, clapping Dushkin on the shoulder.

Lillian hastened over to Dushkin and whispered:

"Boris, say something. Make a little speech."

He mastered himself with an effort, and ejaculated:

"I drink Lillian's health!"

"Good luck to you!" responded the men, and Lillian bowed.

"Now you may call in the girls, Lillian," said the old man.

Lillian opened the door and five girls, in bright dresses, entered:

"Lucy, Harriet, Mathilda, Margaret, Dorothy—my sisters, and this is Mr. Dushkin, Boris."

"Pleased to meet you!" All bowed and smiled.

"Lillian, now let's have some music," declared the father, beaming with joy. "Play for us that piece, what is it—the—the—'Waves of the ——.'"

Lillian sat down by the piano and began to play; her head moved from right to left, back and forth, and her shoulders twitched. The sounds came slowly and expressionlessly; the old man patted himself on the vest with one hand, and held

a cigar with the other. Lillian turned her head several times to Boris, and nodded to him to sing. Boris shook his head in silence.

Soon Lillian's brothers came over to him and began to speak to him about Russia and the war, and Lillian kept playing languidly.

Suddenly the old man rose, thrust the thumb of his left hand in the arm hole of his vest, and advanced to Boris.

"Say, you get an engagement ring, you know," he said, puffing his cigar, "a good blue-white stone of about two carats."

"What?" questioned Boris, staring at him, adjusting his eye-glasses. "What is it?"

"You know, a ring that Lillian shouldn't be ashamed to show to her friends."

"Sir, I know what I have to do," cried Dushkin, turning pale.

Lillian stopped playing as soon as she noticed her father speaking to Boris. She joined the group.

"What I meant to say was that since you and Lillian are engaged, Lillian needs an engagement ring," explained Blumenthal.

"Papa thought that as a foreigner it is possible that you do not know the customs of this country," put in Lillian. Then turning to her father, she added, "Boris is all right."

"Sir, I know what I have to do!" repeated Boris, raising his voice, and buttoning his coat, nervously. "I have never yet associated with such people."

"But papa did not mean to insult you," pleaded Lillian.

"I have never associated with such ill-bred people in my life," cried Boris, clutching his fists for rage.

The old man rushed over to him, and grabbing him by the shoulders, began to shake him.

"What?" he thundered. "We are ill-bred people? We? There's the *khutzpe* of the Russian Jew! The impudence! *Schnorrers!*"

Boris freed himself from the old man's grip, straightened himself, and adjusting his eye-glasses, cried tremulously:

"With you *mezumen* is the great thing that counts, while we have ideals and principles higher than cash!"

"*Schnorrers! Schnorrers!*"

Boris rushed thru the open door and the Blumenthal family after him. As he ran thru the hallway he heard Lillian and the blind mother sobbing, and Blumenthal shouted:

"You *schnorrer!* Wait! We'll sue you for breach of promise! *Schnorrer!*"

Boris came out on the street without his hat. He put on his eye-glasses, which were dangling on the chain. A chaos of

sounds rang in his ears: "*Schnorrer! Mezumen!* Breach of promise!" And amidst this confusion of sounds he recalled Lillian's words uttered to him two evenings before, at their first meeting: "Remember that in this house there is one whose heart will forever respond to yours!"

And Boris looked around on all sides and sped away as if pursued by some terrible phantom.

NEW YORK CITY.

John on Patmos

BY ESTHER HOOKER CATLIN

I AM alone upon the Patmos isle.
No sound of voice, nor touch of human hand
Is here for me,
No footprints on the headland where I stand,—
No sail at sea,—
Only the vast, immeasurable arch of blue
And the eternal waves reflecting heaven's hue.

I am bowed down and broken with my years.
I, who was once the swifter in the race
On the great day
When I outran that other to the place
Where Jesus lay.
On through the city gate, and o'er the vale we
sped,
Not knowing that we sought the living 'mid
the dead.

I am unfriended on this barren shore.
But once with Him on Judah's hills I walked
Beloved the best;
And oft His face shone on me as we talked
To make me blest.
E'en now those wondrous words He spake come
back to me,
"Fear not, nor be cast down; I will return to
thee."

And only I am left of all the Twelve.
I, who was last to leave Him on the tree,
Alone recall
His words, His voice,—and how He looked
on me.
That look spoke all:—
My soul, tho dull to comprehend it, lost all
fears;
And now I know its meaning, after many years.

I am cast forth, and into exile driven.
But in my solitude there comes to me
A holy dream,—
The vision of a kingdom that shall be,—
Worldwide, supreme;
And He, the Lamb that sitteth on its great,
white throne
That vision gives to all who wait with Him
alone.

PHILADELPHIA, PA.

Negro Self-Help

BY BOOKER T. WASHINGTON, LL.D.

FROM time to time in the past a great deal of matter has been furnished to the public, with the praiseworthy purpose of portraying the individual struggles and sacrifices of colored youths to secure an education. These efforts of struggling young men and women, with no inspiration in family tradition and fortune, and with little or no money with which to secure the knowledge they crave, is one of the most encouraging as well as pathetic features I have come across in my educational work during the past twenty years. As a hopeful indication of race character, and I may safely so describe it, it must be of peculiar interest to the average American interested in the Negro people.

On the other hand, much matter has also been furnished the public concerning the aid given the Negro race by philanthropic white people; attention is also frequently directed to the volume of money expended for the education of the Negro by State and municipal governments, the proceeds of land grant funds and of common taxation.

I do not think that the public has been sufficiently informed of what the Negro himself has been doing during the past forty years, and is doing now, toward his own education thru the religious organizations controlled by him.

Before dwelling upon this principal point, however, I wish to direct attention here to several minor ways of more or less importance in which the Negro is constantly displaying the quality of self-help—the most important and significant force in the uplift of any person or race, the absence of which must always be regarded as a fatal defect of character.

First, then, it is well to say that there are very few orphan asylums anywhere for Negro children. Possibly in nine or ten cases Negro families care for the orphans of their race in the neighborhoods where they reside. A child is not left many hours without parents before it strays into some family, or, more often,

is sought out by some friend, and, without legal formality, soon becomes a real part of the family. Because of this custom one finds very little suffering among Negro children. In the Southern States the masses know little about hospitals. The sick and unfortunate are cared for by secret and fraternal societies, by the churches or by individuals. A second form of self-help, which is increasing year by year, is the voluntary taxation of Negro communities for the purpose of extending the public school term, often from one to three months; that is, these months are added to the regular public school term.

I could name other forms of self-help that are equally significant and praiseworthy.

But to return to the main point. Of the more than eight millions of colored people in the United States, it is estimated that two-thirds of the adults are members of some church. The great body of them are either members of the Baptist Church, or of some branch of the Methodist Church. The Methodists are divided into four groups or branches, namely: the African Methodist Episcopal, the A. M. E. Zion, the Colored Methodist, and those belonging to the main body of the Northern Methodist Church. Besides, in all the Southern States, and in some States outside of the South, there are Presbyterian, Congregational and Episcopal churches, and a few other denominations—including Catholics—not under the Methodist or Baptist groups, all contributing something toward the expenses of the schools and colleges.

The plan for securing money from the colored people thru their churches varies according to the location and conditions surrounding the people, as well as the customs and laws of the church. For example, in the case of the Baptists, there is at least one institution, usually called college or university, in each Southern State, supported in part or in whole by the pennies and dollars of the

masses. In Alabama, for illustration, there is what is known as the Alabama Baptist Colored University, at Selma. Last year the colored people in Alabama contributed to the work of this institution \$9,441.93, exclusive of student board and tuition. The property is owned by colored people; their money created it, with the exception of a few gifts from outside sources. There is at least one such school in each of the Southern States. The detailed circumstances surrounding them may vary, but the general plan is the same.

In the case of the African Methodist Episcopal Church, there are institutions that owe their existence almost wholly to the small gifts of the churches and individuals of the denomination. Last year \$51,601.86 was raised by this denomination for the purposes of education. The oldest and largest of these institutions is the Wilberforce University, at Wilberforce, O. Altho this institution is now somewhat generously assisted by the State of Ohio, it was for years supported almost wholly by the colored people.

Let me use another illustration as showing what the African Methodist Episcopal Church is doing in the South. There is a school in Atlanta, Ga., called Morris-Brown College, that was organized only a few years ago. It now owns a very valuable property and has a large student body. The college was built and is supported, to a large extent, by money raised by the church membership. For 1904 the institution received from all sources for running expenses, \$15,985.58, of which the churches in that connection in the State of Georgia contributed \$6,200, the third Sunday in September being set apart for the taking of offerings for the educational work; and \$850.50 was raised thru the industrial department. The remainder was contributed thru other channels of the church, and mostly all of it by Negro people.

The African Methodist Episcopal

Zion Church has ten institutions of learning, of which Livingston College, at Salisbury, N. C., is the most important. The Corresponding Secretary of Education of the Zion Church reports that the money collected last year amounted to \$20,706.54, which went to all the schools of the church to supplement their other revenues for running purposes.

Thru the Freedmen's Aid and Southern Education Society of the Methodist Episcopal Church, the colored membership contributed for education for the current year, \$19,251.73. For the ten years, 1896-1905, inclusive, \$79,228.13 was contributed.

The Negro Baptists support quite a number of educational institutions, and to carry on the work the churches raised during the past year \$85,888.18.

To sum up, we find that the A. M. E. Church contributed \$51,601.86 for educational purposes last year; the A. M. E. Zion Church, \$20,706.54; the Colored Methodist Episcopal Church, \$45,000; the Methodist Episcopal, \$15,926.40; the Baptists, \$85,888.18; making the total, \$218,622.98, for only two branches of the Christian Church. If the contributions of the Negro Congregationalists, Presbyterians and Episcopalians, etc., be approximated, we should have probably an annual contribution for educational purposes by the Negro Christians of \$250,000.

Within the past ten years, it is safe to say, according to these figures, that the Negro in America has contributed at least \$2,000,000 thru his churches toward his own education. This, I think, all fair-minded people will agree, is a pretty good record for a race of people which was in slavery forty years ago. And these figures, of course, do not include the amounts which colored people are contributing constantly to local and independent institutions. The Tuskegee Institute, for example, receives contributions from colored people annually, and the same is true of other institutions which have no direct church connection.

TUSKEGEE, ALABAMA.

MUSIC

ART AND DRAMA

The Philharmonic and a Strauss Specialist

To open its sixty-fourth season, thru-out which it will continue the policy so successfully followed for the last two years, of playing under the leadership of several eminent conductors from various parts of the world, the venerable and sturdy New York Philharmonic Society engaged the services of Mr. Willem Mengelberg, conductor of the "Concertgebouw" Orchestra of Amsterdam, who presided over its brace of concerts on November 10th and 11th. Mr. Mengelberg is the youngest of all the foreign conductors who have thus far appeared with the Philharmonic (he is only thirty-four), but he is also one of the most masterful of them all. He is a specialist in the music of Richard Strauss, and to him in recognition of good services both at home in Holland and elsewhere, the composer dedicated the score of "A Hero's Life." That colossal tone-poem formed the chief part of Mr. Mengelberg's program. The Philharmonic Orchestra's performance of it under his baton was the most beautiful and the most magnificent that was ever heard in New York.

William Mengelberg, of Amsterdam, who Conducted the First Concert of the New York Philharmonic Society.

It had been played here several times before—by Mr. Paur, by Mr. Gericke, and by the composer himself; but Mr. Mengelberg's interpretation of it surpassed all the others in its appeal of sensuous charm no less than in its impressiveness of lofty grandeur. His reading resembled most closely the composer's own—and it is only fair to recall that Dr. Strauss labored under the disadvantage of having to conduct a much poorer orchestra, whose members were, many of them, incompetent to play his music.

Altho the score of "Ein Heldenleben" is about the most intricate and complicated web of musical symbols ever penned, and the piece lasts forty minutes

in performance, Mr. Mengelberg has mastered it so thoroughly that he conducts it from memory. He does not permit even the conductor's desk to stand between him and the orchestra. And his mastery of its every detail, his grasp of the composer's every intention enables him to publish its proclamation of beauty and truth with unfailing sureness and with absolute authority. It was a wonderful exhibition of the conductor's power that he gave—perhaps the most wonderful ever witnessed here. Yet his methods are simple, straightforward.

ward, direct. He is resourceful and commanding, but quiet and dignified withal, imbued with that true modesty which effaces all thought of self in the task to be done. The vast Philharmonic audiences demonstrated in no uncertain way that they would rejoice to have Mr. Mengelberg come again.

Boston Symphony Orchestra

The Boston Symphony Orchestra began its twentieth season in New York auspiciously on November 9th, with a fine concert in Carnegie Hall, the program of which was the best that Mr. Gericke has put to his credit—in New York at least—in a long while.

The Dvorák concerto in B minor, for violoncello served to introduce as the soloist Mr. Heinrich Warnke, the new principal 'cellist of the orchestra, who comes to it from the same position in the Kaim Orchestra of Munich. It is an extremely difficult concerto, in writing parts of which the composer had the help of that rarely gifted player of "the grand-ducal instrument," Mr. Alwin Schroeder. Mr. Warnke played it skillfully and intelligently and, when the composer permitted, made his instrument sing sweetly its luscious melodies. His tone is pure, round, full; his style virile, and his taste excellent. If he is not yet the consummate artist that Mr. Schroeder is, he is nevertheless a not unworthy successor to him, and Mr. Gericke may well be proud of his acquisition.

The playing of the orchestra thruout the concert was a marvel of euphonious beauty and precision. Its superlative achievement in this respect was in the dainty tinkling "Pizzicato ostinato" of the third movement in Tschaikowsky's Fourth Symphony. In the direction of pure tone and unity and polish no playing could be more absolutely flawless.

Yet while the estimable Mr. Gericke, whom Mr. Henderson aptly characterizes as "our Bostonian Arbiter Elegantiarum," conducts the old classics with loving tenderness his interpretation of the ultra-modern in music is not notable for breadth of sympathy or largeness of comprehension. The feet of the young men travel a path that has little lure for him.

New York Symphony Orchestra

Mr. Walter Damrosch's New York Symphony Orchestra has been re-organized since last year and greatly improved by the infusion of new blood. Its first concert of the season, given at Carnegie Hall, on November 12th and 14th,

demonstrated that it is now an excellent band, its work being characterized by a sureness of attack, fullness of tone and beauty of finish to which it had never before been able to attain.

The novelty on the program was a delightful little prelude to Mallarmé's poem, "L'Après-midi d'un Faune," by Claude Debussy, a young French composer, who is hailed with acclaim in Paris just now as the coming

man in French music. The piece is a dainty musical cameo exquisitely wrought. It succeeds in evoking the mood of the poet's dreaming faun and leaves the impression of graceful and interesting individuality. But it is rather slight to serve as a basis for a complete appraisal of the composer's powers.

English Girl Violinists

Two English girls are seeking fame and American dollars this winter by playing on the violin. The first of them, Miss Marie Hall, made her American début on November 8th, with the assistance of the Damrosch Orchestra, and left a very

MISS MARIE HALL.

pleasing impression indeed. A frail-appearing young woman of twenty-one, she yet handles her instrument in a surprisingly virile fashion. The most remarkable thing about her playing is her almost flawless technic. That a slender woman, and especially so young a woman, should have conquered so many of the heart-breaking tricks of the fiddler's stock in trade is a thing to wonder at. And she does it all with confidence and repose, with a naïveté that is charming. Her tone is full, penetrating and usually pure. She has great digital dexterity, and in her scales, arpeggios, harmonics and double stoppings is both secure and brilliant. Her bowing is free and skillful. The music she played was designed more for the display of technical proficiency than for the emotional sway of its hearers, and it must be said that Miss Hall did not quite attain to a complete utterance of even its rather slender emotional content. But there is promise that she will do that—with years and greater musical experience.

Miss Otie Chew made her appearance as the soloist of the first Philharmonic concert, when she attempted the Brahms violin concerto—a most injudicious choice for a young lady; only a wizard, a giant and a master musician, all in one, can play that concerto aright. She displayed, besides this inordinate ambition, considerable musical intelligence and a pretty grace, but Brahms's difficult work was hopelessly beyond her.

Mme. Emma Calvé

To the regret of a host of admirers, Mme. Emma Calvé will not appear in opera this year. Instead, she is touring the country as a concert singer. She made her entrance in that capacity at a concert in Carnegie Hall on November 4th, when she had the assistance of the Damrosch Orchestra, and she delighted a hallful of her adorers, for she had never sung more beautifully in New York than she did on that occasion. Madame Calvé's voice is still fresh. Needless to say, she handles it with great artistic intelligence. She is the foremost French singer of this age, and those who have an opportunity to hear her will enjoy a treat indeed.

Coming Musical Events

During the next month in this busy metropolis the nights will be filled with music, and the daylight hours too will have their full quota. For the guidance of those music-lovers among THE INDEPENDENT'S readers who intend to visit New York at this time, is offered the following condensed calendar of the best things scheduled for the coming month:

Every Monday, Wednesday, Friday and Saturday evening and Saturday afternoon, opera at the Metropolitan Opera House:

- Nov. 26—Afternoon—Carnegie Hall: New York Symphony Orchestra concert, Walter Damrosch conductor.
 “ 28—Afternoon—Mendelssohn Hall: Raoul Pugno piano recital.
 “ 28—Evening—Carnegie Hall: New York Symphony Orchestra.
 “ 29—Evening—Mendelssohn Hall: Edwin Grasse violin recital.
 “ 30—Evening—Carnegie Hall: Kubelik violin concert.
 Dec. 1—Afternoon—Carnegie Hall: Philharmonic Orchestra concert, Victor Herbert conductor.
 “ 2—Evening—Carnegie Hall: Philharmonic concert.
 “ 5—Evening—Carnegie Chamber Music Hall: Flonzaley Quartet concert.
 “ 5—Afternoon—Mendelssohn Hall: Raoul Pugno piano recital.
 “ 7—Evening—Carnegie Hall: Boston Symphony Orchestra concert, Vincent d'Indy conductor.
 “ 8—Evening—Mendelssohn Hall: Margulies Trio concert.
 “ 9—Afternoon—Carnegie Hall: Boston Symphony Orchestra concert.
 “ 9—Evening—Carnegie Hall: New York Oratorio Society, Beethoven's "Mass in B."
 “ 10—Afternoon—Carnegie Hall: New York Symphony Orchestra concert.
 “ 11—Evening—Carnegie Hall: Concert by the Philadelphia Orchestra, Fritz Scheel conductor.
 “ 12—Evening—Carnegie Hall: New York Symphony Orchestra.
 “ 12—Evening—Mendelssohn Hall: Kneisel Quartet concert.
 “ 14—Evening—Carnegie Hall: Musical Art Society concert.
 “ 15—Afternoon—Carnegie Hall: New York Philharmonic Orchestra.
 “ 16—Evening—Carnegie Hall: New York Philharmonic Orchestra.
 “ 17—Afternoon—Carnegie Hall: New York Symphony Orchestra.
 “ 19—Evening—Carnegie Hall: New York Symphony Orchestra.
 “ 19—Evening—Mendelssohn Hall: Concert by the Longy Club of Boston (wind instruments).
 “ 19—Evening—Carnegie Chamber Music Hall: Flonzaley Quartet concert.

DR. FRANK DAMROSCH.

Director of the New Institute of Musical Art of New York.

A New School

One of the most important new institutions making for musical culture in this country, is the Institute of Musical Art of New York, which, under the direction of Dr. Frank Damrosch, opened its doors last month. Based on a foundation of \$500,000, established by Mr. James Loeb in memory of his mother, the new school has been planned for devotion to the highest and most unselfish artistic purposes. Dr. Damrosch has gathered about him a faculty that cannot be surpassed anywhere in the world, including such skilled teachers as Mme. Etelka Gerster, Mr. Georg Henschel, Mr. Sigismund Stojowski, Mr. Percy Goetschius, the members of the Kneisel Quartet, and others equally famous. With such a staff the cause of good music in America cannot fail to be furthered. In the Institute's courses of instruction the conservatory idea is coupled with private lessons, and therefore individual development. Dr. Damrosch says:

"This school was planned on a broad educational basis. The musician must also be developed mentally, morally and physically. This school is not a place where music lessons are sold. Students place themselves absolutely in our hands, and the work is prescribed for them according to their needs. We want to train musicians who are proud of the nobility of their art. Our aim is to lay a broad foundation first, and then develop each student individually. None will be compelled to undergo a stereotyped treatment."

A unique feature of the work is an admirable course of instruction in "How to Listen to Music," designed for persons who wish to increase their capacity for musical enjoyment without making a practical study of the art.

The institute is housed in the fine old Lenox mansion at Fifth avenue and Twelfth street, which is well adapted to its use. It began its work with an enrollment of more than 350 enthusiastic students. Dr. Frank Damrosch has done more probably than any other living man for the cultivation of a popular knowledge and appreciation of music in this community. His work as an instructor and an executive of proved ability is well known. This, his new venture, one which has lain next his heart for many years, deserves the greatest possible success, and undoubtedly will achieve it.

Art Interests of the Summer

The Summer season, tho uneventful in New York City, was not altogether without affairs of importance in the development of art appreciation thruout the country. The Art Department of the Lewis and Clark Exposition, at Portland, was unique in being under the management of one man, F. Vincent Dumond, and he justified his selection by providing for the visitors to that exposition an unusually representative collection of American paintings. The opening of the fine Albright Gallery in Buffalo, and of the new wings of the Detroit and Brooklyn Museums took place in the early Summer; also the exhibitions in the Cincinnati and Worces-

ter Museums. The Albright Gallery is at present exhibiting the interesting canvases from Scotland, representing the strong Glasgow school.

During this month our only international exhibition, that of the Carnegie Institute in Pittsburg, opened on the 2d for the tenth time, with prizes awarded as follows: \$1,500 and medal of the first class to Lucien Simon, for "Evening in a Studio"; \$1,000 and second class medal to Edward Redfield for "The Crest"; \$500 and third class medal to Childe Hassam for "June," and honorable mention to Glackens, for "At Mouquin's"; to J. Sloan, for "The Coffee Line," and to C. H. Woodbury, for "Winter."

Of the very deepest importance to New York is, however, the recent assumption of his duties by the new Director of the Metropolitan Museum, Sir Caspar Purdon-Clarke, in whose efforts to make that museum the helpful agent in American art education it should be public interest must be keen and sympathetic. Already there are indications of a

thoughtful broadening of the policy of the Museum, as in the permission now granted to teachers to take classes to the Museum on pay days. An attractive quarterly bulletin appeared on November 1st, giving much interesting information about the Museum and its aims and needs. That it shall be widely read is the hope of all the Museum's friends. Among the new exhibits, are the Sargent portrait of Chase, presented by Mr. Chase's pupils; a cast of a Rodin statue, a painting by the late Edwin Lord Weeks, and the original cast from Canova's "Cupid and Psyche."

The National Sculpture Society

Excepting at the Architectural League exhibition the work of our sculptors has very little chance to come before the public, in anything like a representative showing, partly because of the non-existence of an adequate building and partly because of the indifference of the sculptors themselves. At least one in-

fers an indifference from such a poor response to the invitation to compete for two prizes for portraits in the round and in relief shown in the exhibition at the Fine Arts Building. No reliefs submitted could be accepted by the jury as good enough to receive a prize, and among the portraits in the round those receiving the prize and mentions were almost the only creditable performances.

Charles Grafly received \$500 for a portrait of a man, very forcefully executed in a crisp technique suitable for bronze. The mentions were for Evelyn Longman for a sensitive and interesting head of a woman, and for Attilio Piccirilli, whose marble bust of a woman, tho lacking interest in subordinate details of surface modelling, was next to Grafly's works

in sculptural quality. Janet Scudder's little silver panels and medallions and Macmonnie's charming medallion of a young girl on horseback were not in the competition, and few of the other works shown would influence the public to have itself portrayed in sculpture.

New York Water-Color Club

Our younger club of water-colorists, now in its sixteenth year, is showing four hundred odd works until December 3d. The majority of these are small and of average merit, but there are a few that will be memorable surely as among the best the new season is likely to present to us. Such delicate certainty of handling and perfected sense of color re-

lations as H. B. Snell shows in his large rendering of an air and water and sky in which a beautiful great boat seems to repose—"On the Lagoon"—is rarely seen from a brush not handled by a Japanese. This picture very deservedly received the Beal prize. Mr. Snell's work is receiving everywhere the recognition it deserves, his "Polperro," shown at the last Society exhibition, having been awarded first honors at the Worcester exhibition. More and more often he is showing himself capable of literally absorbing all the beauty of an impression and expressing it in a way not beyond the public grasp. A collection of his pictures shown by themselves would be a great pleasure.

H. B. Breckenridge is of altogether a different temperament, but no less possessed by his art. His life in the Pennsylvania hills results in a number of works every year, and gradually his robust manner is mellowing while losing nothing of its strength. He shows fifteen pictures, all remarkable in splendor of color, and in general instances showing growth on the imaginative side. "The Forest Temple" is a glorious thing, deep and quiet yet intensely emotional. "The Winding Stream" and "Summer" are large in effect as in size also, while the smaller pictures all show the decorative possibilities our landscape provides for the painters able to see it.

An altogether lovely thing from abroad is Charles Warren Eaton's "Morning in Holland," an interesting departure from his recent American landscapes. It is tender and happy in mood and deliciously good water-color painting.

Elizabeth Shipper Green shows a series of eight pictures of "The Mistress of the House," evidently made for reproduction. It cannot be said that Miss Green advances much in her art. She seems to have been fully grown when she "arrived;" and to have infinite capacity for producing decorative arrangements of considerable charm but with no discernible possibilities for anything more in future.

Other things in the decorative manner are a number of fascinating prints from wood blocks by E. Mars, some etched plates colored apparently by hand by M.

H. Squire, and some tonal effects by A. P. Button. Marianna Sloan's "Wind on Tom's River" is very good indeed and very uncomfortable. Colin Campbell Cooper shows the result of wanderings abroad, none of which are as interesting to us, now that we expect of him studies of our own cities, as the "Pittsburg." But he has done much better work than this. Genjiro Yeto shows how Western art schools can coarsen the talent of a Japanese in several pictures made in Japan after years spent here.

The Scribner Book Exhibition

The Scribner exhibition of fine books this year has taken a new departure. For a number of previous years the Scribner house has maintained an annual exhibition of books notable for their superb, artistic and costly bindings. This year the Scribners are showing one hundred famous first editions. It is safe to say that nowhere else could such a magnificent showing of famous first editions be seen massed together. Even the splendid Morgan and Hoe collections are outclassed.

The total value of the collection, according to the catalogue, is approximately \$50,000. It contains rarities of four centuries and includes books from the very beginning of the art of printing.

The first number in the catalogue is a St. Thomas Aquinas, folio in size, and beautifully printed in Gothic letter, and is dated 1463. The binding is by the famous Roger Payne. The most expensive volume shown was a Pliny, the first leaf of which was ornamented by a superbly painted border by the master, Giralmo di Cremona. The binding by Bedford is modern, but the book itself bears the date 1469, and is, without doubt, the finest known copy of the most magnificent production of the Venetian press. The price of this particular volume is \$7,500. Other notable numbers were a Thomas a' Kempis in first edition (circa 1470); Euclid, printed in 1482; The Holy Bible, dated 1551; Fox's "Book of Martyrs," dated 1559, from which we reproduce one illustration. There is also a copy of Harvey, dated 1653, which is rendered unique

by the insertion of Harvey's autograph, dated January 1638, an autograph so extremely rare that it is doubtful if any other signature of the discoverer of the circulation of the blood has ever been offered for sale.

The Drama

Of the new plays thus far produced this season the most notable are, in our opinion, the three following: the Marlowe-Sothorn Shakespeare plays; Bernard Shaw's "Man and Superman," and J. M. Barrie's "Peter Pan."

When Miss Marlowe and Mr. Sothorn revived "Hamlet," "Romeo and Juliet" and "Much Ado About Nothing" last year, we expressed it as our opinion that these three plays were the best given in America during the season. This year the Sothorn-Marlowe repertoire consists of the "Taming of the Shrew," "The Merchant of Venice," "Twelfth Night" and "Romeo and Juliet." In "The Merchant of Venice" Mr. Sothorn does not so perfectly impersonate Shylock as he did Hamlet, for Mr. Sothorn is the best Hamlet now living. His Shylock is notably fine, however,

and follows out the best traditions of the rôle, altho he makes himself up as a rather dirty old Jew of the middle class, hardly Shakespeare's intention. Miss Marlowe's Portia is all that could be desired, and more. Her delineation of the part, especially in the court scene, is incomparable, and her charming voice and lovely face were a delight to hear and to see. In the "Taming of the Shrew" both stars far outclassed any other actors in these parts the present reviewer has witnessed. Miss Ada Rehan, whose "Katherine" is considered her best part, was in every particular outclassed by Miss Marlowe, while Mr. Sothorn, as Petruchio, was even better than Miss Marlowe. In this comedy the actors have been accused of descending to "horse play," but while their boisterousness was more rollicking than is usual, they did not seem to be overdoing their parts. In "Twelfth Night" Miss Marlowe, as Viola, reached the climax of her art; her girlish grace and tenderness were beyond compare, and she seemed never so exquisitely charming. Mr. Sothorn, as Malvolio, maintained a high degree of excellence thruout, but in the prison scene he was a trifle melodra-

Illustration From the Extremely Rare First Edition of Fox's "Book of Martyrs" in the Scribner Exhibition.

matic. On the whole, we should say that Miss Marlowe is the best in "Twelfth Night," Mr. Sothern in the "Taming of the Shrew," while they divide honors in "The Merchant of Venice." It is impossible to speak of this company with proper restraint. Several of the minor characters act well enough to be stars in other companies, and there is not a weak spot in the cast. The scenery and stage management are perfection, and there is an artistic understanding, a refinement and nobility about the whole production that will appeal to every man and woman of cultivation.

The Ben Greet Players are also offering this year, "Henry the Fifth," "Much Ado About Nothing," "The Merchant of Venice," "Macbeth" and "Julius Cæsar." They give the plays just as they were produced in Shakespeare's time, with the exception that women take the female parts instead of boys. All those who are interested in the historical drama and classical literature should see these revivals. But now that Miss Mathison has retired from the company there are only a few competent actors left. The comedies are much better given than the tragedies.

The season is rich in Shakespeare. Besides the superlative performances of the Marlowe-Sothern company and the historical revivals of Ben Greet, Mr. Robert B. Mantell is giving thoroly creditable and dignified performances of "Hamlet," "Othello," and "Macbeth" in the good old-fashioned way. None of the actors are great geniuses, but they all know their business, the great traditions of their parts, and to any one not cloyed with Shakespeare—and few people nowadays are—the plays are enjoyable. Last year Mr. Mantell, in spite of shabby scenery, made a success, even in New York, and this year the stage setting is all that could be desired.

A very heart-winning play is "Peter Pan," in which Miss Maude Adams takes the title rôle. It is primarily a play for children and those who love children. Indeed, in a strict sense it is not a child's play—it appeals too much to the childhood memories of grown-ups. "Peter Pan" is founded on J. M. Barrie's story of the "Little White Bird." It depicts the adventures of a boy who would not

E. H. Sothern in "Taming of the Shrew."

grow up and who lived with the fairies. He takes three happy children one night from their father and mother and shows them all the delightful and fearsome things in Fairyland. The plot of the play is nothing, the scenery and Miss Adams are everything. Some people will say that Miss Adams has "come down" to act in a spectacle of this sort, while others will enthusiastically argue that her elfin beauty and winsome ways were never before seen to such advantage or given such a bewitching theatrical setting. We think both are right. "Peter Pan" is an unclassifiable play, but every one should see it.

From a literary point of view the most interesting play of the month is Maurice Maeterlinck's "Monna Vanna." He has publicly repudiated the theory upon which his early "plays for puppets" were

Maude Adams in "Peter Pan" at the Empire.

written. "Monna Vanna" contains no symbolism, no mysticism; it is a practicable drama, set in the romantic period of Italian history, and written for his actress wife. The play would be well suited to a jealous star, for there is only one female part. It is, however, extremely difficult to act because of the swift vicissitudes of feeling and because of the necessity of keeping the whole tone of the piece in the poetic key in order to prevent the grossness of its plot from being offensive. The present cast is entirely inadequate. The male players are stiff and conventional, and Madame Kalich, a Yiddish actress of considerable emotional power, is noisy and stagey at times, altho at others she shows great delicacy and altogether avoids the prurient possibilities of her part. As given at the Manhattan Theater there is a curious reversal of the ordinary conditions in that the supernumeraries are more alive than the actors. The well drilled crowd of Pisan populace acts like a Greek chorus in pantomime, intensifying the emotional effect as a good orchestra strengthens the voice of the soloist.

It is unfortunate that the version of John Severance is used, for it is much less poetic than that of Alexis Irénée du Pont Coleman, and has many unaccountable deviations from the French original.

"The Squaw Man," now at Wallack's, is not the ordinary fortune-hunter anxious to marry one of Uncle Sam's wards because he is rich enough to give them all a farm, but an Englishman who shoulders disgrace in order to save his brother, the Earl, and takes refuge on a Wyoming ranch. William Faversham acts the part of the young ranchman and loving father with naturalness and a touch of fine, manly feeling. His pretty Indian wife is a pathetic figure, little more than a child herself, and the play ends, like a piece of music, with its keynote, "Poor little mother," spoken in Mr. Faversham's deepest and richest tone. Her sacrifice is inevitable from the beginning, for the strange *mésalliance* could end in no other way, and leave the hero free to be happy at home in his own country. Technically the play would have to be classed as a melodrama, but in genuineness, feeling

and propriety it is so far above the sort of play to which that term is applied that one dislikes to use it. There is very little of the exaggeration to which the Wild West drama is liable. The cast is even and all are kept in their places. George Fawcett as Big Bill, foreman of cow punchers, is admirable, but he should know that no flesh-and-blood cowboy would ever forget himself so far as to use "language" in the presence of a lady.

Mrs. Leslie Carter has been reviving her old successes of "Du Barry" and "Zaza," now, as always to crowded houses. They say an actress never learns how to act till she is too old for her parts, and certainly Mrs. Carter is at a disadvantage that even her genius cannot entirely overcome in taking these rôles of the royal and the music hall courtesans. Her latest play, "Adrea," is better than either of these. Mr. Belasco's stage craft has fullest scope in "Du Barry" in the scenes at the Court of Louis XV, and during the Revolu-

tion, which are unexcelled in historical accuracy, movement, and illusion.

Each year Klaw & Erlanger import last year's "Drury Lane Spectacle," and each year it becomes more of a spectacle and less of anything else. It is hard to see how "The White Cat" can be surpassed in splendor of stage pictures or in beauty of costuming, but the music is commonplace, and the wording is below that. Last year's "Humpty Dumpty" was much more interesting on account of its novel effects and surprises.

Klaw & Erlanger's production of "Veronique" at the Broadway Theatre, which introduces the George Edwardes Company, from the Apollo Theatre, London, is a pleasing comic opera. The music is tuneful and the chorus is well trained, as well as well dressed. Several members of the company have good voices and there is a decided comedy element infused into the play which makes a stronger appeal to an American audience than is usually the case with a direct importation.

Stage Setting from "The Squaw Man" at Wallack's Theatre.

French Anxieties

BY URBAIN GOHIER

[In this day of exposés of corruption in our political and commercial life we confess to taking some satisfaction, ignoble as this sentiment may be in this case, when we read in this article by M. Gohier, "the French Lawson," that our sister Republic is not free from the evils that humiliate us. M. Gohier is the author of "The Army Against the Nation," a book which made a sensation at the time of the Dreyfus trial.—EDITOR.]

DECIDEDLY the shepherds of the nations are becoming nomads. The President of the French Republic has just returned the visits of the Kings of Spain and Portugal; the young sovereign of the former country is at this moment planning a second excursion to Paris, which is intended to be less official and more amusing than the first; the King of Portugal, the husband of a Princess of the House of France, is almost as familiar a figure in the capital as the King of the Belgians; the King of England is glad to return here and recall, with tender emotion, the memories and pleasures of his long career as heir to the throne; the King of Italy, the Czar, the King of Sweden, have all spent some delightful days among us.

The harmless bomb which a burlesque anarchist, now and then, hurls at the retinue of the sovereigns has merely the effect of giving a little pleasant savor to the festival program, between the gala evening at the Opéra and the hunting party at Rambouillet. A trip to Paris is a perpetual temptation to crowned heads: Mr. Roosevelt is the only one who has resisted it so far, except the Emperor of Germany and the Sultan, who have private reasons for staying away.

This force of attraction, exercised by hospitable France, amiable and alluring France, is a fortunate compensation for the tactlessness of her foreign policy. As soon as there is a question of dealing seriously with serious matters French diplomacy never misses an opportunity of bringing discredit upon itself and of compromising the interests of the country. When the United States and Spain were at war French statesmen and French journalists hoped and openly predicted that the Spaniards would be victorious. During the struggle between Russia and Japan the same authorities gave voice every day to their wishes and prophecies in favor of the Russians; the

French Government violated its duties as a neutral power, in order to provide bases of operation for the Russian fleet in Madagascar and Indo-China. A few days ago our late Minister of Foreign Affairs gave up a state secret to be quarreled about among the newspapers, and destroyed in advance every chance of an effective understanding with certain powers which can no longer place any reliance on the discretion of the French Government.

Now, really, the military force of France should be sufficient to allow her to dispense with diplomatic adroitness: for we have expended, since 1870, at least 40 milliards (40,000 million of francs) for the purpose of making a navy and remaking an army. The Ministers in office are constantly declaring that we have the first army in the world and the second navy in the world.

No doubt of it: our troops have won a certain number of victories over the Annamites, the Hovas and the negroes of the Kongo and Soudan, but especially over the French workmen on strike and over the monks we had to expel from their convents. No later than last month our regiments on the maneuvering ground of Vincennes carried by assault, and in quite a brilliant fashion, a redoubt, for the diversion of the Prince of Bulgaria.

Unluckily, as soon as the Ministers are obliged to surrender their portfolios, they change the tune; they prove, and with quite an abundance of proofs, that our army and navy are by no means in a position to meet a severe ordeal. M. Locroy and M. Pelletan, both of whom have been Ministers of the Navy, have, again and again, promulgated demonstrations of this character with regard to the fleet. M. de Lanessan has just established the fact that we possess no strong fortresses, no first-rate troops, no means of mobilization, and no artillery so placed as to defend our Eastern frontier. The

URBAIN GOHIER.

author of the present article has on several occasions been prosecuted before a jury for making the same revelations, and he has been always acquitted, in consequence of the evidence he was able to bring forward. The expedition to Madagascar has shown the incurable disorganization of our administrative departments.

At the time of the Fashoda affair and at the time of the Morocco affair, these very Ministers, who were in the habit of boasting of the excellence of our navy and of the strength of our army, had to confess that "we were not ready," that the *personnel* was in disorder, the *matériel* in a deplorable condition, and that the arsenals were empty. At Fashoda, the first threat from England compelled us to abandon our positions on the Upper Nile; in the Morocco affair, the first warning from Berlin compelled us to get rid of our Minister of Foreign Affairs.

We have, then, the greatest desire to live in peace, if not in amity, with the rest of the world, and we labor under the greatest necessity of doing so also. And we are threatened, too, with a peril of the most alarming character. Our ally, Russia, to whom we have lent between 10 and 12 thousand million francs in re-

turn for the security she promised us, no longer exists as a military power. She cannot recover her strength for another generation. And there we are—caught between England and Germany, between the hammer and the anvil.

The economical rivalry of these two nations is driving them into a formidable conflict. They have been long challenging each other; they know that the battle is inevitable; they are searching for such help as may further their ambition in every corner of the world; and each of them would like to make sure of the French alliance. England would wish to have our army against the Germans, and Germany would wish to have our navy against the English. The Government of London and the Government of Berlin, each in turn, warn us, the former in friendly terms, the latter in brutal terms, but both with equal decisiveness, that we cannot be allowed to stand neutral and look on at the combat as mere spectators. We must make our choice.

We should be well pleased not to have to make any choice. We are sure, whatever may be the result, to have made a fatal choice. If we declare for England, we shall be invaded, pillaged and massacred by the German Army, while the English are quite safe, sheltered in their island. If we declare for Germany, we lose in a week our immense colonial empire, and our great ports will be destroyed by the English fleet, which cannot inflict the slightest damage on the German coast, either on the North Sea or on the Baltic. That is to say that, no matter what happens, France will be the victim of a war which she would heartily desire to have nothing to do with.

During the War of the Transvaal, we witnessed the arrival within our walls of Dr. Leyds, diplomatic agent and financier of President Krüger, with 75,000,000 of francs. A few months later, he took his departure, with empty hands, but accompanied by assurances of the warmest sympathy. I remember having described in THE INDEPENDENT the violence of the Anglophobia sentiment at Paris, in an article written at the time. It was dangerously imprudent to speak English on the boulevards or in a café. England has successfully turned the les-

son to her profit. The sons of St. George are winning fresh victories every day. The English, execrated about five years ago, are at present our dearest friends; our leading "yellow" journal is edited in connection with the *Times*; English companies are considerably interested in our press; M. Loubet and King Edward exchange affectionate visits; the municipalities of London and Paris imitate them; the President of our Municipal Council, who is an ex-Revolutionist-Collectivist-Internationalist, is just on the point of going to shed a tear and say a prayer at the tombs of Queen Victoria and the Prince Consort.

The task of Germany is not so easy, on account of Alsace-Lorraine. The German agents have to take greater precautions. They do not venture to make an offer of German friendship directly; all they attempt is to light anew or to keep lighted the torch of Anglophobia in those regions which have not yet been brought to subjection by the warriors of St. George. The leader of the German party is the Socialist Deputy Jaurès, whose journal is lavishly aided by the wealth of twelve silent partners, who are half-German Jews: MM. Reinach, Blum, Herr, Sachs, Rouf, Casewitz, Dreyfus, L. L. Dreyfus, Rodriguez, Picard, Levy-Bruhl and Levy-Brahm. Prince Radolin, the German Ambassador, openly visits Citizen Jaurès in the official carriage of the German Embassy, for the purpose of conveying to the French Socialists the instructions of the German Imperial Chancellery. It is a curious spectacle, a spectacle that could not have been witnessed in the time of the Holy Alliance of Kotzebue and of Karl-Frederick Sand.

The perils of this situation do not greatly disturb the French people, who like to live in blissful ignorance of everything that does not interfere with their pleasures. And the professional politicians have their minds busied with a much graver question than national destinies—the question of the elections. The salvation or ruin of France appears to be of very secondary importance when compared to what we call the conquest of the "*assiette au beurre*," that is to say, power, its profits and emoluments.

When the year 1906 begins, we shall have to elect a President of the Republic,

a third of the Senate, and the entire Chamber of Deputies. These are the only events worthy of consideration on this planet. Who is going to be a candidate, who is going to be elected for this and that vacant place—that is really the only problem deserving attention.

The salary of a Senator or of a Deputy is not enormous; they receive five dollars a day, and, for this reason, are known popularly as "the twenty-five francs." But this modest remuneration possesses a property the nature of which has not yet been explained by science. It multiplies as abundantly in the hands of the honorable legislator as did the loaves and fishes distributed by Jesus Christ to his hearers. The good people notice with admiration that most of those whom they have elected, and who are paid 9,000 francs a year, live at the rate of 50,000 francs a year, and are able to retire millionaires when the Legislature comes to an end. This phenomenon forces into a political career a large number of citizens who are anxious to devote themselves to the service of their country and the welfare of the people.

The office of President of the Republic pays better. He gets 1,200,000 francs a year, during seven years, and many other important advantages besides. If M. Loubet offers himself for re-election, he will be re-elected; but he has not yet made known his final intentions; he has changed his mind several times. The most widely known candidates are: M. Fallières, President of the Senate; M. Doumer, President of the Chamber, and M. Berteaux, stock broker and Minister of War. Big financial interests play a part in all these combinations.

M. Berteaux, who controls at once the army and the movements of the stock exchange, and who has obtained his ministerial portfolio in return for the pecuniary services he has rendered his colleagues in the Chamber, is naturally repeating his generosity in a two-fold degree, and most of the legislators who have got into debt are already rid of their creditors. At first there was some fun made at the expense of the stock broker who put on his top boots, when he was expected to review our glorious troops and their glorious generals, between two of our "Wall Street" sessions. But it

was quickly discovered that M. Berteaux was not at all so bad; indeed, that he had some very good points about him. As to M. Rouvier, who is also a banker, Minister of Foreign Affairs and President of the Council—after some painful ordeals in connection with the Panama crisis—he does not aspire to the first place. He will be satisfied with the presidency of the *Crédit Lyonnais*, one of our most important financial associations.

The times no longer exist in France when French political life was a grand combat of ideas, when statesmen were idealists, and the political press a noble rostrum for thinkers. Money decides everything; moneyed men can do anything; all official positions, from the humblest to the highest, are bought with money, for the purpose of making money out of them. It is surprising that your great "captains of finance" have not taken it into their heads to come over here and turn themselves into kings in our Republic.

The characteristic feature of the approaching general elections—that is to say, of the entire renewal of the Chamber—will be the triumph of Socialism. For 580 seats there will be 2,500 candidates, and at least 2,000 of these will proclaim themselves Socialists. Socialism is now the fashionable badge. The millionaires, the aristocrats, the clericals are Socialists, as well as the professors, the *littérateurs*, the magistrates and the adventurers: revolutionary socialists, Christian socialists, radical socialists, independent socialists, anarchist socialists, bourgeois socialists—all kinds of socialists. M. Berteaux, financier, Minister of War and candidate for the throne, is a radical socialist.

The thing that especially prevents the people of different countries from understanding one another is not the employment of different terms to designate the same thing; it is the employment of the same term to designate things that are very different.

Thus, when I was in the United States, I made the acquaintance of men who are planning a new organization of property and whom you term *socialists*, and especially of workmen who desire to advance the welfare of their own class by dimin-

ishing the profits of the capitalist class. I saw that the labor unions compel their members to purchase no goods except those bearing the "label"; that is to say, goods the manufacture of which enabled the workmen to earn fair wages. The American socialist has no desire to profit by the misery of his brethren.

In France the socialist leaders have realized big fortunes by annexing to the journal of their party a great bazaar in which were sold:

"A magnificent complete suit, made of cheviot that cannot wear out, for \$3.20.

"A superb hat of pliable felt, Van Dyck form, for \$40.

"White shirts, collar and cuffs, linen, \$45.

"A dozen pocket handkerchiefs, different shades, \$59.

"Complete child's suit, \$59."

And a thousand other objects at similar prices.

Such announcements have appeared for several years on the fourth page of the *Moniteur Socialiste*, immediately after the page upon which may be read fiery declamations about the exploitation of workingmen by the capitalists. The bazaar occupies the ground floor of the building, the first floor of which was occupied by the journal.

In vain did the workingmen's associations make angry protestations; hatters, shirtmakers, tailors, dressmakers, shoemakers, all expostulated without result. In vain did the Labor Inspectors report on the physiological and moral consequences of this *sweating system* among the working people. The employees of this great Socialist enterprise continued to work for ten, twelve and even thirteen hours a day, the women earning twenty, and, in some cases, fifteen cents a day. The Socialist leaders amassed respectable fortunes, purchased the castles and domains of the old aristocracy, waxed fatter and fatter, visibly, before your very eyes. And the Socialist workmen bought the wares that could only be manufactured at a wage-rate which spelled starvation, making a profit for themselves out of the exploitation of their brethren.

So you see that the same word, Socialism, means two very different things in France and the United States. Let American capitalists not be alarmed, then, when they hear of the election of

four or five hundred Socialist Deputies to the French Parliament. It will be the easiest thing in the world to come to an understanding with these revolutionists when some reactionary measure is being concocted. The entire political world is at the present hour Socialistic in France, because the rapid and prodigious good luck of the first inventors of the formula is a stimulus to every sort of cupidity. We have known them all—lawyers without clients, doctors without patients, professors excluded from the University, workmen engaged in occupations upon which the police keep a close eye; and, in less than ten years, we have encountered them again, gorged with all the good things of the earth. What the adventurers of other lands search for in the Klondike, our young politicians find, with much less trouble, in the pockets of their unconcerned French dupes, by means of the magic formula of *Socialism*.

In their electoral programs, these apostles keep on invoking, naturally, the names of Karl Marx, Engel, Lasalle, Henry George, and Jules Guesde. But, in reality, they manage to live on very good terms with the big capitalists, and they like nothing so well as paying their respects to the tyrants. M. Millerand, a Socialist Minister, has received from the Czar and the King of Italy the emblems of the Order of St. Ann and of the Order of St. Maurice and St. Lazarus, and he has been created a Baron by the Emperor of Austria. M. Jaurès has had a very profitable connection with the European publication department of the Equitable. He persuaded M. Waldeck Rousseau to appoint Mr. J. H. Hyde an Officer of the Legion of Honor, and obtained the Orders of the Sultan for his brother, Commandant Jaurès; he has dined with the King of Italy and feasted with the Papal Nuncio; he keeps in constant communication with the German Imperial Chancellery; he has made known the program of his party in this incisive phrase: "We are not ascetics; our way of living should be liberal."

In the month of October, M. Augagneur, Socialist-Collectivist Deputy for Lyons, was made Governor of Madagascar, with a salary of \$30,000; and M.

Miram, Socialist Deputy for Rheims, has just accepted an office in the Administration at \$5,000 per annum. Now it happens that this M. Miram owed his election to his support of a measure which gave great uneasiness to American insurance companies doing business in Paris. His retirement from the Legislature has caused the utmost satisfaction to the Equitable, the Mutual and the New York Life. Of course, a mere coincidence.

The most recent "Socialist" election took place during the last month in the Department of La Lozère; the "Socialist-Radical" Deputy elected is a speculator on an immense scale in the corn crops of Southern Russia, one of the people in Europe who gain most of their millions by increasing the price of bread. "We are Socialists sincerely," say these gentry, "because socialism means for us twenty years of profit."

As all things are linked together in the social life, the same causes that have perverted our political conscience and our old political ideals have finally succeeded in corrupting our most precious possession—the artistic sense. While some among us were proud of our ancient military glory and others detested it, we were all proud of our intellectual glory, of our writers and our artists. Mercantilism is about to destroy this patrimony.

It is very singular that, within the last thirty years, every business connected with works of art, every market of literary production, and almost the entire theatrical industries have been controlled by persons belonging to the Jewish race. At the same time, the nature of the works changed. Psychology made way for pathology; elegant libertinism made way for the coarsest pornography. The idea of cultivating art for art's sake, of writing for the purpose of revealing one's intimate soul, of translating one's dream into painting or music, is now regarded as absurd. Except money and women, nothing is considered worth an effort, a passion, a devotion.

It is all a nightmare for those Frenchmen who have kept the French soul.

What will sweep it away? Perhaps a violent shock, a cruel and salutary visitation. We are waiting.

PARIS, FRANCE.

Proposed International Phonetic Conference

BY ROBERT STEIN

OF THE BUREAU OF STATISTICS, WASHINGTON, D. C.

IN reply to an inquiry, the editors and publishers of the leading American dictionaries have declared with practical unanimity that, if phonetists would agree on a uniform scientific alphabet, that alphabet would of necessity be used as a key to pronunciation in future editions of dictionaries.

The importance of this statement cannot be overestimated. A uniform pronouncing key in dictionaries is the key to the spelling reform. Agree on a uniform alphabet and fold your arms; the spelling reform will come of itself.

The reason is manifest. At present the pronouncing keys of dictionaries are not learned by heart, because there are too many of them. A standard key, used by all dictionaries, would in a few years be learned by heart by the entire educated public, thru the mere fact of constant repetition. All other works that have to use pronouncing keys would of necessity adopt that of the dictionaries. The rising generation, learning it in their primers, and keeping up its practice thru the use of dictionaries and language manuals, would get into the habit of using that alphabet whenever they had occasion to indicate pronunciation.

This would presently lead to a step of decisive importance. Experiments have often been made to begin the teaching of children with a phonetic alphabet. The result cannot be better described than in the words of Ben Pitman (in "The Life and Labors of Sir Isaac Pitman"):

"Experimental classes for instruction in phonetic readings were formed and taught in many cities and towns of England and Scotland. Numerous classes of ignorant children

in reformatories and charity schools, as well as private classes, were taught to read with precision and tolerable fluency *in from two to three months*, by one hour's daily instruction. An added interest was created in favor of the new system when it was found that the transition from the phonetic to the roman letters was a comparatively easy task. The general resemblance between the old and new styles was so great that the pupils' ability to read the new method enabled them to readily decipher the greater number of words in common print. It was thus demonstrated that *the easiest and speediest way of learning to read roman letters was to begin with the phonetic system.*"

If such experiments were made and are now made with alphabets devised by individuals, and, therefore, possessing only limited authority and utility, they will be made more frequently with an alphabet possessing the highest authority and presenting the great utility of being the recognized key for indicating the pronunciation both of English and of other languages.

When it becomes known that in this way the labor of learning to read can be reduced to almost nothing, it will not be long before all the schools begin with the phonetic alphabet. Thus the entire rising generation will become as familiar with the phonetic spelling as with the traditional, not merely without additional labor, but with a great saving of labor. The gradual disappearance of the traditional spelling from everyday use will then be only a question of time.

Desiring to obtain the verdict of the learned public on this subject, the Boston University, during the past year, sent out a circular inviting opinions on the proposal to hold an international conference of experts in phonetics, for the pur-

pose of adopting a uniform alphabet to be used as a key to pronunciation in dictionaries, care being taken to make it as convenient as possible for ordinary writing and printing. Out of some eight hundred replies, comprising practically all those qualified to speak, only three per cent. were adverse, the great majority declaring that a conference is the only satisfactory means to arrive at an agreement. And without an agreement, reform is, of course, inconceivable. Reform, in fact, means agreement.

It is simply a question of money. The phonetic experts possessing the requisite authority are well known, and are ready to do the work, if somebody will bear the cost—about \$10,000. The conference must, of course, be carefully prepared thru correspondence, extending over at least one year, preferably several years.

In the United States there are 19,000,000 school children, in other English-speaking countries about 10,000,000, making a total of 29,000,000. Phonetic spelling would save on an average two years of every child's school time, making a total saving of 58,000,000 years. To a less extent this would be true of the 270,000,000 children of school age throughout the rest of the world. Hence, if "time is money," it may be imagined how fruitful would be the investment of \$10,000 for an international phonetic conference. The donations for public purposes in the United States have recently averaged \$100,000,000 a year. It ought not to be difficult, then, for the friends of the present movement to obtain the small sum needed for a work of such manifest necessity and far-reaching consequences.

WASHINGTON, D. C.

Caw or Coo

BY BOLTON HALL

AUTHOR OF "THINGS AS THEY ARE," ETC.

WHEN Adam named the birds, the crow and the dove both had dirty-white feathers, and they asked Adam to change them, for white is beautiful when it is clean, but when it is dirty it's awful.

The crow said in his harsh voice, "Caw, I want my feathers changed; caw, caw," and the dove said, "Coo, coo, won't you please change my feathers, too? Coo, coo."

Adam could not change their feathers, but he asked the sunlight to change the feathers, because, you know, all colors come from light. So the two birds went to the Light, and the crow said, "Adam sent me to you—caw—he says you are to change my feathers; caw, caw; so be quick about it, caw, caw." But the dove said, "Coo—coo, Adam said you

would be good enough to change my feathers, coo; can you please do it now? Coo, coo." Now, the Light did not like to be spoken to in a harsh voice, but he liked the gentle way in which the dove spoke, so the Light said, "Yes, I will change your feathers," and he changed the dove's to a beautiful pearly gray that turned into the colors of flowers when the dove moved, and he put his own red ring round the dove's neck. And he changed the crow's feathers, too, but he made them plain black. All the same, they shine as the dark sky shines at night.

Adam's children loved the soft voiced dove and took it to live about their houses; but the crow, with his harsh "Caw, caw," and rough ways, Adam's children never liked, so he wanders like a stranger in their land.

NEW YORK CITY.

Literature

London Films

*London Films** will come closer home to the American reader than "Tuscan Cities" or "Venetian Life," and the book is in no whit inferior to those masterly studies in Italian life. As a guest a year ago in many English homes, Mr. Howells of course remembers that he has been in the house of his friends, and may not bring away the silver speech and the gold of intimate table association. He has, however, everywhere else used his eyes with their incomparable alertness of vision, seeing better than any one else what many have seen, and seeing more than any one of the things that remain in shadow or in a light too effulgent.

With a strong tendency to detach halos from saints, to see whether they are true emanations or merely tacked on—stage additions of sounding brass—his task admits of more playfulness than did that of Emerson in "English Traits," where the spurious metal is gently put aside and only the true emanations considered. Mr. Howells enjoys handling the tacks, and yet has his hesitations, which seriously betray themselves in a fear now and then that he may say something he does not mean, or something he does mean, which may offend, or that, finding the something likely to be unacceptable, he may fail to say it, believing it to be true and needful to be said. This humorous tremor—partly a literary tremor—is everywhere noticeable, but is most cleverly present, perhaps, in the "film" on "the American invasion" of England—a chapter aggravatingly delightful, balancing, as it does, the pros and cons of a supposed growth in the English liking for Americans, and arriving at the sage conclusion that there may possibly be diversion of vitality in their love, but no extraordinary increase—a conclusion at once courteous, non-committal, just, most unsatisfactory, and not to be endured. Summing up the whole matter, he commits himself so far as to say, with characteristic drollery:

"If the logic of their emotions in this direction were a resolution to like all the Americans with a universal affection, I should admire their spirit, but I should feel a difficulty in its operation for a reason I hesitate to confess: I do not like *all* the Americans myself."

But it would be a mistake to suppose that Mr. Howells could think a thorn, and not wrap it in roses and say it. He is too much an American for that. The roses will be voluminous, and the thorn hardly perceptible, but it will be there. Speaking, for example, of the pavement of Piccadilly, it

"sprouted in a race of giants who were as trees walking. They were mostly young giants, who had great beauty of complexion, of course, and as great beauty of feature. They were doubtless the result of natural selection, to which money for buying perfect conditions had contributed as much as time necessary for growing a type. Mostly their faces were gentle and kind, and only now and then hard and cruel; but one need not be especially averse to the English classification of our species to feel that they had cost more than they were worth."

In the "film" on "Means of Sojourn in London" and that on "Traits of the London of Springtime," we have the marvelous eye-service combined with play of fancy and humor which have given his realistic novels a place of their own on the shelves of best English fiction. The same remark applies to his account—a brief account; it fills only five pages—of an hour spent in the gallery of the House of Commons. But here he manages three filmy radiations into social and political fields dear to all his later books. It is only in the hazy borders of the picture that we see Mr. Burns, the labor leader, in whose legislative manner there is

"that repose which marks the caste of 'Vere de Vere' and is supposed to distinguish them from that of Smith and Brown."

"In the same filmy border sits the mighty British Parliament in grave deliberation on a matter of establishing penny steamboats on the Thames, and we learn that 'the English can let the County Council put municipal boats on the Thames with the full assurance that the County Council will never be in case to retire on a cumulative income from them.'"

Taking advantage, finally, of the presence of female visitors behind the grille of the House gallery—"beauteous

* LONDON FILMS. By William Dean Howells. New York: Harper & Brothers. \$2.25.

wraiths, or frescoes in the flat"—we find that women can have the franchise when they want it; if they occupy thrones and yet are not in legislative halls, "it must be because they like being queens and do not really care for being legislators." Thus, in graceful transition from lighter themes, female suffrage, municipal ownership, and the burning question of labor are tossed in floating leaves from the visitors' gallery, while the British Parliament, with ministerial feet on ministerial benches, softly drops the affairs of the United Kingdom—of "England, Scotland, Ireland, Canada, India, South Africa, Australia and New Zealand"—to

consider whether West Ham, a London suburb, is getting a pull through a line of steamboats on the Thames.

Some Southern Stories

When an author has created a really notable character in fiction, and when his success lies chiefly in the attraction this character has for his readers, it is a perilous business to write a story and substitute another which challenges comparison. But this is what Will N. Harben has done in his new novel, *Pole Baker*,

¹ POLE BAKER. By Will N. Harben. New York: Harper Bros. \$1.50.

A BLOCK IN THE STRAND.

From "London Films," by W. D. Howells.
Copyright, 1905, by Harper & Brothers.

and the result justifies the risk. The reader naturally holds back against the homely charm which Pole Baker exercises from the beginning, feeling that his affections are already engaged to "Uncle Abner David." But it is impossible to withstand the day and night moods in Pole Baker. Where he is good, he is like a whole, round, happy day in the fields with heaven on his horizon; when he is bad, he is so simply, honestly bad that it is our own darkness demonstrated. The evil in him is so real, so kin, that we cannot deny that he is the blood-brother of living men. And virtue in him is so grave, strong, chivalric, and it works up thru such tribulations that the dramatic power of his personality far exceeds that of any other character Mr. Harben has ever drawn. The translations given of the sadness and splendor of married love, the whimsical veracity of the whole conception, shows this to be the author's best work in fiction so far.

*Uncle Bob*² is the idealized old "darker" of the South, who never ceases to be a retainer of the family which once owned him. He is the custodian of its traditions, the sage to whom the youngsters go for stories; and this book of short stories is a faithful reproduction of him in this rôle. It also intimates those traits of character and points of view which gave him a place in Southern affections and will keep his memory green in fiction.

The publishers say that Mary Farley Sanborn's story, *Lynette and the Congressman*,³ has a "Southern flavor," whatever that may mean, and "a touch of political life." But it is not what Mr. Lewis would represent as political life. There is no "graft" in it, or any other snubnose feature common to American politics. Everything is as it should be in this novel. Lynette, though an inexperienced department clerk, chooses the right Congressman; and the Congressman chooses the right Lynette; and things come to pass in a slow, mildly interesting, elaborate sort of way which interferes in nowise with the gentle reader's nap between chapters.

The problem novel has never made

much headway in the South, partly because the people there do not realize the problem features of a situation as quickly as they do elsewhere, and partly because they do not have so many problems. Thus, when a respectable woman marries in the South, she generally stays married for better or worse. But the author of *The Ancient Landmark*⁴ has attempted to show in a very interesting way how a woman may be justified in getting a divorce and marrying again even if she lives in Kentucky. The landmark referred to in the title is the conviction entertained by the best people there that divorce is the indecent refuge of the indecent. And it passes because the heroine is a good woman and entitled by the sympathy of every reader to a divorce and to any other relief the law affords. This, however, is a romantic rather than an ethical way of disposing of this problem.

The Use of the Bible

Prof. William Newton Clarke, of Colgate University, holds to an unusual degree the confidence of religious leaders of all schools and all churches. He has an enviable reputation, both in Great Britain and America, for thoroughness of information, for carefulness and clearness of thought, and for intelligent and sympathetic appreciation of the practical bearings of theological statement. His "Outline of Christian Theology" has had more influence upon preachers, including very eminent and highly useful preachers, than any other treatise in systematic theology for many a day. One feels the Christian in Dr. Clarke on every page, and his sincere Christian devoutness, together with his habit of considering questions in which people are really interested, has given him the ear of all save a few impervious conservatives.

He has produced now a book* which will be of use in influencing Christian thought in this "Era of Reconstruction" in theology. Starting from the premise of an honest use of Scripture, he admits the conclusions of

³ LYNETTE AND THE CONGRESSMAN. By Mary Farley Sanborn. Boston: Little, Brown & Co. \$1.50.

historical criticism to such an extent as completely to revolutionize the method of the use of Scripture in doctrinal theology. He does not argue for a new view of the Bible, tho he frequently states the newer view with a clearness which is in itself an argument; he considers rather the case for the historical or evolutionary conception of the Bible to be now beyond need of argument, and he proceeds to show what this means in the formulation of Christian doctrine and in ordinary Christian thinking. He has exhibited the every-day consequences of the recent light which has broken out on the word of God with a clearness and thoroness that has not hitherto been equaled. It is all set forth in such simplicity that one wonders why it was not done before, and with a continuous application to the very problems in which religious men are burdened which is as delightful as its absence in the writings of some is tantalizing. When Dr. Clarke has finished with his argument there is very much in the systematic theologies hitherto regnant that is absolutely obsolete, and much in the methods of handling the Bible by the ordinary minister that is no longer tolerable. The proof-text method is gone, and the dogma of an infallible doctrinal repository, equal in all its parts; the covenant theology is also put in limbo, and the theory of the imputation of another's righteousness, also the expectation of Christ's bodily return, and the idea of a general judgment, and all that has grown out of the application of altar terms and conceptions in the doctrine of salvation. In fact, to use his own expression, Dr. Clarke has seen a "revolutionary light," and he has seen it so clearly, and told of it so honorably and straightforwardly, and with such full appreciation of, and sympathy with, the case as it actually stands today with ministers and religious people, that his book may be expected to mark an epoch in the method of extracting truth from the Scriptures. Beyond question the author has declared the method of the future, and it is the only method which today is practical with those who are well informed.

Dr. Clarke has written a book which every minister should buy or beg or borrow, and we may well rejoice that this final pronouncement of the breakdown of

the old ways of treating the Bible is made, not by an agitator or an extremist or an iconoclast, but by a warm-hearted Christian man, in full sympathy with all Christian effort, who has set forth in simple and honest words how and in what manner the Holy Scriptures today are profitable for doctrine and for instruction in righteousness.

Professor Palmer's Herbert

There is something peculiarly fitting in this superb edition of our sweetest religious poet.* "When I lay in my cradle," says the editor in his Preface, "a devotee of Herbert gave me the old poet's name, so securing him for my godfather." And the result of fifty years' devotion, "with suitable fluctuations of interest," is now given to the world. Let us say with emphasis that in the matter of make-up these three volumes are a model of what such a publication should be. The form of the page and the clear, simple type are peculiarly restful and attractive to the eye. The illustrations, including facsimiles of Herbert's manuscripts, and scenes concerned with his life, are a genuine addition to the reader's enjoyment. Especially the value of the books is increased by the pencil drawing on vellum by R. White, which is here for the first time reproduced, and which is probably the original of the engraved portrait so well known.

Of the more specific work of the editor one may say that it is at once scholarly and literary, minute in its exegesis yet mindful always that a poet and not a *corpus vile* is under discussion. But it is only proper to add that one who comes newly to Herbert should use the edition with caution; he might be misled in more than one point. The sources of the modern text are two: the volume printed by Nicholas Ferrar, in 1633, from a manuscript sent to him by Herbert just before his death and still preserved; and an earlier manuscript discovered in 1874 by Dr. Grosart, in the Williams Library of London. This Williams manuscript not only varies in a number of details

* THE ENGLISH WORKS OF GEORGE HERBERT. Newly arranged and annotated and considered in relation to his life by George Herbert Palmer. 3 vols. Boston: Houghton, Mifflin & Co. \$6.00.

from the 1633 volume, but contains a considerably smaller number of poems. Now, Professor Palmer was the first scholar to observe that we have here a valuable means of determining Herbert's chronology, in so far at least as the poems not included in the Williams manuscript belong by a strong presumption to Herbert's later years. With the help of this presumption and other indications, Professor Palmer has rearranged the poems according to a general chronological sequence. The service thus rendered to a just appreciation of the poet is incomparably great.

But Professor Palmer has taken a further step, and here doubts begin to assert themselves. He has divided the poems into eleven groups according to their theme, thus: I, The Church-Porch; II, The Resolve; III, The Church; IV, Meditation; V, The Inner Life; VI, The Crisis; VII, The Happy Priest; VIII, Bemerton Study; IX, Restlessness; X, Suffering; XI, Death—to which is added a supplementary group of the Additional and Doubtful Poems. Unquestionably this order of arrangement throws a new light on Herbert's development; we follow him thru his Cambridge years with their reverence for the Church and their wealth of reflection, thru the three years after his mother's death, when his life seemed broken and his purpose annulled, thru the last three years of priestly consecration at Bemerton. All this is a service to the student, but it just as surely is in danger of misleading the casual reader. It was Professor Palmer's aim to bring out the sharp contrasts in Herbert's career, to emphasize the times of uncertainty and to belittle the period of consecration. Moreover, the last five groups (7-11) are so ordered as to give the impression that Herbert's content in the priesthood was insecure and overwhelmed by increasing restlessness and sorrow. Such an arrangement is highly arbitrary and, in our opinion, does violence to the truth. Herbert was to some extent a man of moods, he was not without seasons of dejection and self-debasement; but changing moods do not necessarily mean contradictions of character, and it would be fairer to the poems if the note of exultation followed, instead of preceding, those of depression.

Restlessness, Suffering, Death—is Professor Palmer's close; it would appear as if the poet's life went out in failure and gloom. Now, quite the contrary may be seen by glancing at Walton's or Oley's biographies, and in fact some of the sweetest and hopefulest of the poems fall under the heading, Suffering—for example, those stanzas that begin with the line that is in every one's memory:

"How fresh, O Lord, how sweet and clean
Are thy returns! Ev'n as the flowers of spring,
To which, besides their own demean,
The late-past frosts tributes of pleasure bring.
Grief melts away
Like snow in May,

As if there were no such cold thing."

The arrangement is made in support of a new interpretation of Herbert's character presented in a series of Introductory Essays. To the poet's contemporaries he was holy and almost sainted, and so he has appeared to generation after generation of readers. Professor Palmer's thesis is, briefly put, that Herbert was more worldly than saint and that "holy" is the last epithet that should be applied to him. It is in support of this paradox he has separated the poems according to his own taste. The thesis, we must aver, is not upheld by internal or external evidence; Isaak Walton's opinion of the man is likely to endure unshaken. For this reason we must hold Professor Palmer's edition as highly suggestive to one well grounded in the poetry of the age, but not without an element of danger for the unprepared reader.

The Indian Dispossessed. By Seth K. Humphrey. Boston: Little, Brown & Co. \$1.50.

By taking only those instances wherein the Government or its representatives have been conspicuously unfair in dealing with the Indian, Mr. Humphrey succeeds in making out a pretty strong case against the white man. He has used his material well and has made the most of it. And surely the Government, in its Indian policy, has often violated its pledged word, or its unpledged obligation. Its treatment of the Poncas and the Nez Percés has been particularly reprehensible, and in many other instances it has failed in its duty.

But the other side of the question is hardly so much as hinted at in Mr. Humphrey's book. There is little or nothing regarding the frightful depredations common to Indian uprisings; the cruelty, cunning, mendacity and treachery common, tho not invariably found, in the Indian character; the indiscriminating vengeance which he wreaks upon a community for the act of an individual. The notion, so industriously fostered of late by Eastern sentimentalists, of the Indian as a sylvan Aurelius, clement, forbearing, magnanimous, truthful and guileless, is of course, pure moonshine. Long before there was any white man's government to break treaties, or in fact a white man on the continent, the Indian took the warpath as caprice prompted him, waged wars of extermination, ambushed his enemies, massacred the helpless and tortured and burnt his captive warriors. When the whites came, there arose at once the question of which of the two races should give way, for with ideals and practices so different, it was impossible that they should dwell side by side. The conflict has been attended with every species of ruse, with great cruelty and with every exercise of force; but both the conflict and the result were inevitable, and the Indian has had to give over the land to those who could make intelligent use of it. Mr. Humphrey not only fails to allow for Indian delinquencies, but he also fails to mention the great work the Government has undertaken in attempting to educate the Indian up to a self-supporting citizenship. Some 40 million dollars has been spent exclusively for education and training since 1877, with, on the whole, commendable results. He also fails to state the great progress that has been made, under Government fostering, by those Indians who have given up tribal life and have gone to work resolutely as producers of wealth and American citizens.

McAllister and His Double. By Arthur Train. New York: Charles Scribners' Sons. \$1.50.

Among the host of novels that have appeared on the general lines of Conan Doyle's creations, Arthur Train's new book, *McAllister and His Double*, de-

serves a high place. Some of these stories have appeared from time to time in magazine form. They deal with the unfortunate positions in which an aristocratic clubman is placed, on account of his strong resemblance to his valet, whose nature is susceptible to the temptation of acquiring wealth without work. The experiences of McAllister range from passing the night in prison, suspected of being his own valet, to the humiliating position of introducing a suspicious detective into a select house-party, as an intimate friend. The McAllister stories are entertaining from start to finish, but the other stories in the book, with the possible exception of "Extradition," show a decided falling off.

Pebbles

.... "My instructor in English A told me not to say 'hair cut.'"

"How's that?"

"He said it was a barberism."—*Harvard Lampoon.*

REJECTED.

.... Unto the charnel Hall of Fame

The dead alone should go;

Then write not there the living name
Of Edgar Allan Poe.

—*John B. Tabb.*

.... *Mistress*—Katie, do you know anything of my husband's whereabouts?

Katie—Shure, mum, I lift them hangin' in the closet.—*Cornell Widow.*

.... **NAGGING IN RHYME**—The love affair of Robert and Elizabeth Barrett Browning is supposed to have been as delicate as the petal of a rose. They were both of them Lovely Characters, and the average married woman feels tears spring to her eyes every time she thinks of them. But it seems that it is as easy to nag in verse as in prose. At least here is something Elizabeth Barrett Browning wrote, and if Robert did not take it to himself it was because he was so wrapped up in writing his own poetry that he paid no attention to what his wife wrote: "It isn't the things you do, dear, but the things you leave undone, that give me the heavy heartache at the setting of the sun." And she goes on to say it is the word he leaves unspoken, the kiss he does not give, the kind act he leaves unthought of, that add pangs to her sorrow. The verses have been set to music and if the family man will listen while his daughter sings at the piano, he will recognize the familiar wail of the married woman. The married bliss of Robert and Elizabeth Barrett Browning has always been doubted by the experienced. When a married woman uses her maiden name instead of her husband's initials, something is wrong.—*Atchison Globe.*

Editorials

The Insurance Investigation

OF all the revelations of shocking mismanagement in our great life insurance companies, the most important and disquieting are to be found in the testimony of officers and records as to the expenditure of great sums for the corruption of legislators, and in the evidence that prominent and powerful politicians were beneficiaries of this misuse of trust funds.

Beginning with the admission that the payments to one "legislative agent" by only one company in five years had been nearly \$1,000,000 (payments for which no vouchers as to the use of the money were required), the record of such practices has been growing from day to day. We have heard the story of the house maintained by the companies at Albany as a resort for legislators who were willing to accept the hospitality which it offered—that so-called House of Mirth, which must now be known as the House of Graft; of the large retainers, annual and occasional, paid to all sorts of persons; of the instructions sent to the local agents concerning their traffic in legislation. It appears that their labors were not confined to the "killing" of bills relating to insurance. The letters of Comptroller Jordan (now conveniently in exile) to the manager of the House of Graft directed him to "kill" legislative propositions of many kinds. Bills regulating the employment of children, improving the tenement house laws, providing for the safety of guests in hotels, and relating to the taxation of real estate and banks—these were some of the measures for the defeat of which he was instructed to use the policy-holders' money. Even a bill ceding certain water rights to a town on the shore of Long Island was marked by his employer for destruction. All this shows how wide the scope of this corruption had become. And the committee has only just begun to uncover the regular payments made to persons exerting official influence.

The president of one company has promised that \$235,000 paid by his order to a legislative agent who is now conveniently in Europe shall be restored to the company out of his own pocket if the agent does not make a satisfactory ac-

counting within a few weeks. But this is only a small part of the sum for which this agent gave no vouchers.

Has it occurred to these responsible officers, these recipients of enormous salaries, these syndicate speculators, that they have exposed themselves, by their dealings with these lobbyists, to charges which any respectable financier would resent with great indignation?

If it be assumed for the moment that the use of a life insurance company's money to control legislation is justifiable, we are confident that the bills which would warrant the expenditure of one-tenth of the money given to these agents in the last five years cannot be produced. When the responsible officer of a company pays \$500,000 to a legislative agent, requiring no voucher as to the use to which the money is put, how is he to meet the charge of some enemy that a large part of the money went into his own pocket?

This risk appears to have been overlooked by the officers who made these large appropriations in the dark. For their own protection it might have been better to hold the legislative agents to a strict account.

We do not believe, as we have said, that the bills (hostile to the interests of the companies and the policy-holders), for the suppression of which these great sums were handed over to the go-betweens, ever existed as genuine legislative propositions in number and importance sufficient to account for one-tenth of the money. What were the bills? They have not been cited in explanation of the expenditure.

It is true, however, that "strike" bills are sometimes drafted by legislative agents themselves, and that the introduction of them is procured by the same agents, in order that they may have an excuse for demands upon the company's treasury. But rarely do such measures commend themselves to any considerable number of legislators. It is difficult to resist the conclusion that the chief business of these agents has been to prevent the passage of good bills that were proposed in the interest of policy-holders, and that would have subjected the offi-

cers to really effective regulation and control. Those who are familiar with the results of Mr. Hughes's work can see what kind of legislation the companies' officers must have dreaded. Bills providing for such legislation might not deserve to be called "strikes." The suppression or defeat of them, however, by corrupt influence is something for which legislators may justly be denounced. But the briber should suffer with the bribed in public estimation.

After those parts of the testimony of Messrs. Hyde, Harriman and Odell, which are in conflict, have been eliminated, there remains enough to substantiate the main points of Mr. Hyde's story. Ex-Gov. Odell admits that the bill to repeal the charter of the Mercantile Trust Co. was introduced (by the chairman of the Insurance Committee) with his knowledge, while he was Governor, and that he saw no objection to it then, altho he afterward advised that it be withdrawn.

Mr. Hyde says this bill was mentioned to him, when he was advised to settle Gov. Odell's claim, as an indication of the powerful influence that might be exerted to the injury of the Trust Company. On the other hand, it is denied that the bill was so mentioned.

At all events, there was such a bill, and a settlement was made with the Governor for \$75,000, and the money was paid on the very day when the Governor publicly withdrew his opposition to the re-election of Senator Depew, who was then an Equitable trustee, enjoying an annual retainer of \$20,000 for services which have not been clearly defined. We have no space here for an analysis of the testimony with respect to this Shipyard Trust claim, but we must say that the evidence ought to make it impossible for Mr. Odell to retain his position as organization leader of the Republican party in the State of New York. It discloses another phase of the relation between the companies' managers and politics as well as legislation. And it is a relation of which all the persons directly interested should be ashamed. We do not see that anything will be gained, however, if Senator Platt is permitted to succeed Mr. Odell.

At the close of the investigation the

Armstrong Committee, with the aid of Mr. Hughes, will propose for the evils now so clearly revealed such remedies as new legislation can provide. To the committee's recommendations and to the action of the Legislature upon them the public must look for that regulation and official control to which the companies should be subjected. But there are some remedies that can be applied now. If District Attorney Jerome sees that laws have been violated by officers of the companies, it seems to us that he ought not to defer action until after the committee has finished its work. We are not thinking now of indictments, however, for it may be that there is no legal warrant for them, but of the action that should be taken by trustees (or directors) and policy-holders.

There are three presidents who should be required to resign. We refer to Mr. McCurdy, Mr. McCall and Mr. Hegeman. With them should go those relatives and other persons in office who have assisted them in making the mismanagement of our great life insurance companies a scandal thruout the civilized world.

Insurance Superintendent Hendricks should have been removed long ago. But that is a matter for the consideration of Gov. Higgins. When we look at the names of the trustees of the three companies whose presidents still retain their places, and see that among them are eminent lawyers, bankers and merchants, as well as a Justice of the United States Supreme Court, we cannot understand why they have not insisted upon those resignations or removals which are demanded in the public interest and for the good repute of American financial and fiduciary administration at home and abroad.

The Federal Council of Churches

It was a great meeting. It was great in its representation: thirty-two denominations, with over eighteen million communicants, and three times as many more adherents; great in the purpose it had in view, to federate the Christian bodies in this country, as far as possible, into a single force for all good things; great in the extraordinary number of able and eloquent addresses in its ses-

sions covering a week of meetings; great in the harmony of its members, representing so many views of faith and worship; great in the influence which the now federated force of its constituent churches will have for the well being of our country.

Let it be understood, to begin with, that this is a federation for influence and combined power; it is not a federation against any Christians who have not taken part in it. Particularly, it is not a federation to attack, or in any way discredit the Christian work done by the Catholic Church in this country. The denominations taking part in it are all so-called Protestant; but the word *Protestant* does not appear in its "Plan of Federation," and had no place in its long Program. No word was spoken on its platform attacking the Catholic Church, while words of commendation were spoken of spiritual fellowship and kindly good-will.

Nor let it be supposed that this is a federation against so-called non-Evangelical Churches. Neither was there any attack upon the Christian service of these bodies, and we observe that the word *Evangelical* does not happen to appear in its Plan of Federation. This does not mean that the Churches so far adopting it are not all what are often called Evangelical; but it does mean that the purpose of the union is not hostile, but rather tolerant, and even friendly, to all not yet in this federation. Its purpose is first inclusive of those who were asked to come together to see if they could unite; it was not exclusive. Many other denominations will doubtless yet be brought into this union.

As a challenge or a pronunciamento, the action of Professor Dealey, of Brown University, and two or three men with him, who offered a series of successive amendments to protect Unitarians from exclusion, was a success—it attracted attention—but it was poor strategy. It forced the Conference to add the word *divine* before "Lord and Saviour," and it is almost a wonder that it did not drive it to require subscription to the whole Nicene Creed. As it was, more than one speaker found these resolutions the occasion to put the Conference, so far as speeches could do it, on the strictest

Trinitarian basis. And yet the Plan of Federation had been drawn up with no polemic idea. Its language was that of inclusion, not exclusion. The expressions that would shut out believers had been rather avoided, and it was no great wisdom which attempted to raise the issue and invite overwhelming defeat.

Now what has this extraordinary coming together of these denominations accomplished? First, this meeting together is itself a great accomplishment. Nothing like it has ever occurred in the history of our divided Church. For these five hundred men were not merely so many well-meaning Christian gentlemen; they were all officially chosen and delegated by the chief authority of their several denominations to form this federation, with the distinct and expressed purpose of announcing the unity of the Church of Christ, of which their denominations are but a part. They have shown that we are not a divided Church, but that its members are one in their Lord.

But let it be fully understood that this plan of federation has not yet been fully completed. All has been done, and well done, that could yet be done. The Plan has been drawn up and heartily, indeed unanimously, approved. It must now go down to the several Christian bodies that sent their delegates, for approval and adoption. If approved by two-thirds of these denominations—and we do not anticipate that a single one will reject it—the first session of "The Federal Council of the Churches of Christ in America" will be held in December of 1908, the earliest date when it will be possible to meet after all the denominations will have had opportunities to give their adhesion to such a federation. The meeting this past week was preparatory; thus the federation will be complete and in full operation, and the work it has to do will be fairly entered upon. Fortunate will those be who shall live under the new era of Church union, if, as we fully believe, the promise of united service shall be fulfilled in preventing hurtful rivalries and in strengthening each other's hands in the support of public righteousness and individual devotion to whatever honors God in benefiting man.

The Plan of Federation, if not wholly

the best conceivable, was the best that could be agreed upon. It gives the title "Federal Council of the Churches of Christ in America" an admirable one. It names thirty-two denominations as charter members, including all the largest Protestant ones except the Southern Presbyterians, and some Lutheran bodies, which hesitated to accept the invitation. Its announced purpose is to express catholic unity, develop harmonious service, encourage spiritual life, secure combined influence for moral and social betterment, and to organize local unions. It is to claim no authority beyond counsel, to make no creed or rules of government or worship, but only to help in common benefits. The Federal Council is to meet quadrennially, and its delegates are to be four from each denomination, with one additional for every 50,000 communicants. Whether the local councils shall also be represented by delegates is to be settled by the Federal Council when it shall meet in 1908. Any question that may come up is to be decided by a general vote, unless one-third ask for a vote by denominations; and in a similar way other Christian bodies will be admitted and amendments adopted.

The only serious question before the committee of forty and the Conference was as to the representation of local councils, or federations. We believe that while the denominations should be directly represented, and while it is not wise, as in England, to have local councils alone represented, the main reliance should be on the support of the local federations, which will do the work, and best understand its importance; which will provide its funds and will expect representation. We do not doubt it will come to that in the end.

In securing the success of this great meeting and great work, especial recognition is due to the National Federation of Churches and Christian Workers, which called the Conference, and especially to its able Chairman, W. H. Roberts, D.D., who was also Permanent Chairman of the Conference; and to the Secretary, E. B. Sanford, D.D., and we may add, to Bishop Hendrix, of the Southern Methodist Church, Chairman of the Committee which drew up the Plan of Federation.

American Candidates for the Nobel Prizes

Who are our great men? That is a question we asked in our issue of March 9 last. It was not a rhetorical question. We wanted to know. It was naturally suggested by an article published in that issue giving the names, nationality and achievements of the twenty-five men to whom the Nobel Foundation had awarded its prizes in the four years during which that body has been acting. Five prizes of about \$40,000 each are awarded every year respectively to the person who has made the most important discovery in physics, in chemistry, and in physiology or medicine, and who has produced the most distinguished literary work of an idealistic tendency, and who has done the most for the promotion of peace. Among these, chosen without regard to nationality as the greatest benefactors of the human race, no American has yet found a place, and the question at once arose, have we any American worthy to rank with Röntgen, Lorentz, Zeeman, Becquerel, the Curies, and Raveleigh in physics; with Van't Hoff, Fischer, Arrhenius and Ramsay in chemistry; with Behring, Ross, Finsen and Pavlov in medicine; with Sully-Prudhomme, Mommsen, Björnson, Mistral and Eche-garay in literature, and with Dunant, Passy, Ducommun, Gobat and Cremer in international pacification.

We were not able to answer this question to our own satisfaction, and therefore we referred it to the most intelligent body of individuals we knew of, namely, our readers. They gave it up, too. Several other papers took up the query and spread among their readers with an equally unsatisfactory result. We are a patriotic people and willing to proclaim in the strongest possible terms on Fourth of Julys, and even on other days, that this is the greatest nation on the face of the earth and leads the world in science and literature and peacemaking, but when asked for specification we are more diffident. With one exception, discussed below, the votes were too few and scattering to be worth reporting.

Most of those whom we approached personally upon the subject promptly expressed a willingness to vote for a candidate in one or more of the five classes.

and with equal readiness they usually objected to the names we had suggested, but when pressed for better names they almost all asked for a postponement of the query to give time for further consideration. We have had since no reason to think that said consideration has been effective.

As was to be expected, more persons felt themselves competent to express an opinion upon the candidates in literature than upon the scientific subjects. We suggested, not as expressing our own opinion but merely to stimulate thought, the names of Allen, Burroughs, Cable, Carman, Clemens, Mrs. Freeman, Hale, Howells, James, Loudon, Stedman, Mrs. Ward, Mrs. Wharton. To this list several of our readers have added the names of Borden P. Bowne and William Vaughn Moody. If it had been a question merely of literary eminence the vote would have gone for either Howells or James, but most of those who suggested them expressed a doubt whether the work of such representative realists could properly be called idealistic in tendency.

In regard to the peace prize, President Roosevelt has, since the question was raised, become most conspicuous for his activity in bringing about the conclusion of the Russo-Japanese War. Next to President Roosevelt, Congressman Bartholdt has been most often spoken of for the Nobel Prize, and the American delegation at the Interparliamentary Conference held in Brussels last August petitioned the Norwegian Government to grant it to him.

Very unexpectedly to us, our readers took more interest in the candidate for the medical prize than any other. This was due to the fact that a boom was started for Dr. A. T. Still, as having made, in Osteopathy, the most important discovery in physiology or medicine. The Osteopathic journals took it up and prepared petition blanks and postal ballots, which were circulated with such enthusiasm and success that we received altogether 22,061 votes for Dr. Still. Many of these were accompanied by letters indicating great reverence and affection for "the old doctor" and gratitude for benefit derived from his treatment. The geographical distribution of the votes is interesting as showing the

way such popular movements spread. Starting only about fifteen years ago in Kirksville, Mo., without initial prestige and against strong opposition, it spread rapidly thru the neighboring States of the Mississippi Valley and then to all parts of the country. Every State and Territory and Alaska, Canada and Mexico are represented in the votes we have received, but most of them come from the following States, and probably the number of votes indicates in a rough way the relative strength of Osteopathy in these States: Missouri, 15,207; Illinois, 880; Ohio, 532; New York, 467; Texas, 419; Iowa, 307; Tennessee, 269; Michigan, 240; Colorado, 225; Pennsylvania, 205; Arkansas, 201; California, 200.

The pros and cons of Osteopathy have been adequately presented in our two last issues, so we cannot devote any more space to the discussion. Here we are only concerned with its bearing upon the question of selecting our greatest men. In our former editorial we stated our opinion that a popular vote could not decide the matter. Possibly our skepticism of the value of such a referendum deterred our readers from taking part in it. At any rate, our skepticism has not been removed by the result. While it is, as we then said, an excellent topic for thought and conversation, the final decision as to the value of a scientific discovery, in medicine as well as in chemistry and physics, must be left to posterity. And if we are not willing to restrain our curiosity, or to allow a public benefactor to go to his grave without due recognition from his contemporaries, we must take our opinions chiefly from those who by training and position are better qualified than the average man to form a sound judgment upon such technical matters.

Fortunately for the world the foresight of Alfred Nobel, maker of dynamite, has provided just this needed apparatus for the appraisal of purported discoveries. About \$13,000 are spent in the examination of the claims of candidates and other administrative expenses for each of the \$40,000 prizes. It is particularly stipulated in the statutes (sec. 7) that the medical prize shall only be awarded after a special investigation by

the Medical Nobel Institute. We hear on every hand of marvelous cures wrought by new therapeutic methods, some of which strike us as plausible, some doubtful and some absurd; all of them, however, vouched for by numerous followers, whose good faith and intelligence cannot be denied. The average layman has not the training, the average practitioner has not the time, to decide between these conflicting claims. To have them adjudicated by so competent a body as the Nobel Institute is a public service of great value to the world.

Proposed curative methods yet denied recognition by orthodox science, have in this an unexampled opportunity to prove their claims. We recommend our osteopathic friends not to be content with their present victory of popular votes, but to take the necessary steps to bring their cause before the Nobel Commission, to be passed upon by the Caroline Medical Institute of Stockholm, as described in our article of March 9. That this tribunal is ready to recognize new and revolutionary medical methods is shown by their putting the stamp of approval upon Finsen's light cure within seven years after its discovery.

The announcement of the awarding of the Nobel prizes is made upon the founder's birthday, December 10th, and it is awaited with considerable interest to see if America has yet found admission into this living Hall of Fame.

Who Pays for It?

NOT often does the public have an opportunity to read at first hand a sociological document so portentous as the authentic account of "The Smart Set in Winter," which appeared in these pages a week ago. The facts which it revealed cannot be talked about in any kid-gloved fashion; and they will not be. Thru-out the American nation they are calling forth an amount of plain speaking that will make some good-for-nothing members of human society sit up and take notice.

We have called the document portentous. It is. It presages a social struggle bigger than any that has yet been waged in human history. Similar struggles have

occurred, but they have been similar only. None has been fought on quite the same lines that this one will follow, and none where such large issues of human happiness or misery were at stake.

In all class struggles hitherto there has been a political complication. Some question of national independence, or of the organization of the state, or of the form and accountability of government, has been forced into the foreground until it has in a measure overshadowed the fundamental economic and moral issues. In America those questions have for the first time in the social evolution of mankind been disposed of. National independence we have enjoyed for more than a hundred years. We have established constitutional republican government on the broad basis of universal suffrage. There is nothing now to prevent our dealing directly, and with entire singleness of purpose, with the question whether we intend to make over our unequalled natural resources, and all the machinery of our superb political organization, to a little group of multi-millionaires, to be owned and exploited by them for the luxurious maintenance of an exclusive social set, measured statistically by the number of boxes in the parterre circle of the Metropolitan Opera House, and self-portrayed morally as a quarrelsome gang of bridge whist gamblers.

By their own admissions—nay by their arrogant boasting—the members of this little set lead worthless, lying, stupid lives. They cut the first act at the Opera because they must pretend that they have dined fashionably, although dinner functions are becoming less frequent. They extend invitations to five o'clock tea to acquaintances that they wish to turn down, and then take good care to be out from five to six. They hold up their guests in good robber-baron style for gambling stakes and unpaid gambling debts. A hostess writes herself down humiliated and a failure if she does not clear enough from the Sunday afternoon bridge to pay the expenses of her week-end house party. No gentleman can be invited to her entertainments unless he is prepared to spend from \$1,000 to \$5,000 a year on his clothes alone and for other things—at any rate for servants' fees and gambling debts—in proportion. No lady

can be "in it" if her clothes cost less than \$3,000 to \$10,000 a year.

This is an engaging picture! It reveals the differentiation that American society has undergone since the days of Jefferson and Adams. There was no four hundred in those days, nor any millionaire gentleman maintaining for his wife thru a single season a villa in the Riviera, a town house in London, a country house on the Thames, another at Mamaroneck, and a second town house on Madison Avenue, for whose furnishings half a dozen European palaces had been despoiled of tapestries and other works of art. But, neither were there in those days any double-decker tenement houses, nor any such army of sweat-shop women as we now have working in poison-laden dens from four o'clock in the morning to eleven o'clock at night to create wealth for a millionaire gentleman with a fancy for tapestries and intercontinental house-keeping. We were a plain, undifferentiated folk, in those days.

Far be it from us to take our four hundred to task for worthlessness and stupidity! Heaven knows they are not to blame for that! The wind bloweth where it listeth, and the great and mighty Ruler of the universe has distributed the modicum of grey matter that he has seen fit to create on this planet into such skulls as have pleased him. Let us not impugn his wisdom in denying any great amount of it to the American smart set! He presumably knows what he is about. Furthermore, as pronounced believers in individual liberty we cannot deny the right of these ladies and gentlemen to be as inane as they like, provided they don't try to make honest people pay the bills.

But, it so happens that this universe is constituted on simple mathematical principles, one of which is that something and nothing are not equivalent. A human being cannot be at one and the same time a wanton spendthrift and an economically worthless, that is to say, an unproductive, person, unless somebody else does pay the bills. And this is precisely the condition of affairs which the sociological document that we published last week discloses. And it is not because the American people will deny to any class the right to conduct its own private

affairs as it sees fit that an unprecedented social struggle is bound to come. It will come because the American people when it is once possessed of the facts and mentally grasps the situation, will not go on patiently paying the bills of a smart set that chooses to be both morally wanton and economically worthless.

Incidentally, it may be proper to remark that here in America, where for the first time the social struggle will be fought out apart from political complications, it will be unnecessary to employ such means as were once resorted to by the Commune of Paris. We are a practical folk, and have a way of achieving our ends without overmuch dramatic fuss. We shall dispose of our smart set by the simple process of stopping its allowance. That is to say, we shall take away from its multi-millionaire husbands and papas the ownership of those vast wealth-producing public utilities that rightfully are the property of the public. And we shall not even make martyrs of them by confiscating what they now possess. Their wives and daughters will distribute that for them fast enough. We shall only refuse to give them fresh letters of marque when next they try to hold up legislatures and city governments for new charters of exploitation.

A Discourteous City

A MOST extraordinary statement, affecting international courtesy, we read two months ago in the *Paris Européen*. We had already heard of it as a matter of knowledge in a narrow circle, but we could not believe it credible. The British squadron, under the command of the Prince of Battenberg, was then anchored at Halifax, and expected to visit American waters. Accordingly President Roosevelt, said *L'Européen*, wrote to Mayor McClellan asking him to organize officially the suitable reception and honors for the fleet. But Mayor McClellan replied—we translate—that "it would be quite impossible for him to do this, seeing that public opinion was absolutely opposed; and that it was the intention of the Mayor, if the fleet should come to New York, to absent himself until after its departure." It was further said that according to the infor-

mation of the police it would be impossible to maintain order if the British sailors were allowed to disembark; and that the Irish and German societies were resolved to testify in every way their hostility to the fleet and to the British sailors. It was added that President Roosevelt was much annoyed, but that, from fear of endangering the Republican Party, he did not venture to do violence to the anti-British feelings, which were very bitter.

It was hard to believe that these statements were true. We called the attention of Mayor McClellan to them, and asked if they could be trusted. We received from his Secretary the personal oral assurance that they were not true, and accordingly we said nothing, but waited to see what courtesies the city would show to our distinguished visitors. It has shown no courtesy whatever. The Mayor privately and informally received Prince Louis of Battenberg at a dinner on Sunday afternoon at his own house. That was all. The only civility shown to our international visitors was by the United States Navy, with the personal entertainments devised by Mr. R. M. Thompson, who is President of a Naval Academy Alumni Association, and who did admirable work to supply the lack of hospitality on the part of the city.

It may be that the President made no such request of Mayor McClellan, and it may be that no such refusal was made; but the event proves that the charge was substantially true. The city did not entertain the British fleet. It did not appropriate one cent for it. That is not the way the city of Southampton by its Mayor meets and welcomes our Ambassador when he touches British soil. It is not the way that London has honored representatives of our Army and Navy.

The fleet came to New York. Not welcomed by the city, it was warmly welcomed by the people. We are not all as lawless as was represented. Our Irish citizens are mostly law-abiding and hospitable to visitors, and so are our German citizens. It is Tammany, only Tammany, and the worst of Tammany, that held the Mayor's hands. We are ashamed for the City thus disgraced.

We pity the Mayor who had to submit to the gross and stupid ill will of the organization which rules New York from Tammany Hall.

✱

The Tuberculosis Problem

Altho no cure for tuberculosis in human beings has been made public, yet many of the perplexities of the problem are being cleared up and conflicting evidence harmonized. When Professor Koch discovered tuberculin it was thought that a cure for "the great white plague" had at last been obtained, but further experimentation showed that while it reacted against tuberculosis in cattle, it was of no avail against that in human beings. Later Professor Koch found that there are two distinct kinds of tuberculosis bacilli, the bovine and the human, and he thereupon concluded that the precautions taken against the use for food of the milk and flesh of tuberculous cattle were unnecessary. This was received with incredulity by physicians in general, for cases where the disease had been apparently caught from cattle had been often observed. Now it is known that human beings may become infected by both the human and the bovine bacilli, but the former are much more common and more dangerous. Out of 67 cases of tuberculosis in human beings studied by the medical societies of Berlin, 56 were found to be infected with the human bacilli, nine with the bovine, and two with both. The bovine bacilli in human beings do not generally attack the vital organs, but are found in the glands of the neck or adjacent to the intestines. But since they are very dangerous to infants and children, all meat and milk should be subjected to rigid inspection, and no such food of doubtful origin eaten uncooked. In regard to the reverse process, the infection of cattle by human bacilli, Koch's rule seems to hold without exception. It has been found impossible to cause a progressive tuberculosis in cattle either by feeding them or inoculating them with pure cultures of the human bacilli. There is also a third form of the tuberculosis bacilli found in chickens, pigeons and geese. None of these three forms has been observed to change into another, even tho cultivated in the blood

of a different animal for years. The chief danger from infection by tuberculosis is therefore not from the lower animals but from other human beings. Professor Behring is being sharply criticised in both Germany and France for announcing to the International Congress last summer that he had discovered a cure for human tuberculosis, and yet refusing to give it to practitioners or to make known its method of preparation. In reply, he repeats his former statement that it will require at least a year of further experimentation before it will be in a form to be given to the public. He says in regard to his new cure for consumption, which he calls "T X":

"The principal reason for my statement lies in the fact that the new remedy is not transportable without danger of losing in part its specific power. I extract T X from the animal organism in a form which can be best compared to an explosive substance. On being drawn from its source, the living organism, it is subject to alterations similar to the coagulation of blood escaped from a vessel. That is why at present the control of the therapeutic efficacy of my remedy is only possible in the place of production and when handled by certain impartial experimenters who have learned under my direction the long and difficult process of preparing T X and how to use it." Professor Behring states that he has another remedy, "T C," against bovine tuberculosis, which is the mother substance of "T X," but much more stable. He has promised to impart the secret of the preparation and use of "T X" to Professor Metchnikoff of the Pasteur Institute, who will experiment with it in Paris.

A Treaty That Should Be Ratified

The attempted establishment of a Territorial Government on the Isle of Pines by two or three hundred American residents ought to induce the Senate to ratify the pending treaty of cession immediately after the assembling of Congress. It was well understood when the Treaty of Paris was signed that the island, which had been politically a part of Cuba, was not to be taken or claimed by the United States. The treaty now pending, to the support of which the Administration is committed, says that we relinquish all claims in consideration of Cuba's grant of naval and coaling stations. We already possess one

naval station at Guantanamo, and we can have another whenever we are ready to take it. For two years action upon the treaty has been prevented by the opposition of Senator Penrose. Since the failure of the Enterprise Bank and the suicide of its cashier, the persistent demand of the Senator's late colleague, Mr. Quay, for the elevation of New Mexico to the rank of a State has been explained. But it has not yet been shown that Senator Penrose has an Andrews on the Isle of Pines.

Professor Briggs might have held all his peculiar views as to the Bible, and yet been allowed to remain undisturbed as a Presbyterian minister, if he had only cooed gently. The attack upon him was aroused by his positive and antagonistic attitude. They declared that he had no respect for the opinions of others. He treated his opponents, they said, as Eichhorn treated those conservative men who differed from him; he "snorted" at them. *Zion's Herald* gives a full defense by the Trustees of the Boston School of Theology of their action in supporting Professor Mitchell, and then explains that Professor Mitchell's "personal element" came in to secure the action of the Bishops in refusing to confirm his reelection. What that means is, that he is reported to have "snorted"; that he was not respectful enough to those who differed from him; that he was not careful to avoid provoking those who held the conservative views; that he did not coo as he ought to have done. We do not wish to underestimate the virtue of cooing, or to excuse the vice of "snorting"; but it is a surprise to those that have known Professor Mitchell that he has been guilty of that fault. Certainly it is not to be seen in his published writings. There he has been discreet, while distinct. Doubtless it is oral utterances that are reported to his injury, perhaps fairly, perhaps unfairly. But this is to be said, that between the two ways of presenting one's honest views, that of distinct, positive, emphatic utterance has the merit of the greater courage, and one who "snorts" may receive attention, while one who coos may not be heard

outside of his nest. As to the Methodist Church we venture to say this, that the time has come when room must be made in its theology and its pulpits for a reasonable, moderate and devout higher criticism. If it does not, its people will leave it behind.

Jewish Massacres Past all pity is the condition of Russia. Who are to blame for the horrible massacres of Jews? Who for the fierce fury of mobs let loose? There is only one answer. Those who sowed the wind must reap the whirlwind. At the bottom of it, it is those who have taught the people that are blamable for the lesson learned. And chiefly it is the Church of Russia, which has failed to understand the gentle religion of its presumed Master. Jews would not have been murdered if Christian priests had not taught hatred and bloodshed. If the Church pretends to be the great teacher of the people, the standard-bearer of the truth, it must be known by its fruits. Instead of that, the Russian Church, as too often elsewhere, has been the guilty partner of wealth and power, and has excused where it has not seduced to crime and cruelty. What a shame it is that for the defense of liberty and justice we must leave the Church and go to leaders who hate the Church as the tool of tyranny. A curse is on a Church that kills Jews; and many thousands of Jews, men, women and children, have been slaughtered by Christians—such Christians!—in these last few weeks. We rejoice that with such liberality our American Jews are giving to the supply of the wants of those that have survived; but have not Christians a nearer duty to give succor to the children of those whom other Christian hands have slain?

Korea At last Japan has revenged her loss of ten years ago, when three European powers refused to allow her to keep the fruits of her victory over China; but she has revenged herself on poor Korea. And who cares? Doubtless Marquis Ito and Count Hayaishi, who conducted the negotiations with the comic Emperor of Korea, showed no courtesy. How could they? The conclusion was already assured—Korea had

been held for a year or more by Japan and would never be given up. The Emperor and his ministers might fume and refuse, but it did no good—they were fated to yield in the end, and he was bound to become the patient and obedient vassal of Japan, just as the Khedive of Egypt retains the form of rule, but obeys the orders of Lord Cromer. It will be vastly better for Korea, which is a fine country, as it is better for Egypt to be ruled by England. There will be good order, roads and railroads will be built, and a mighty development will follow speedily. Meanwhile Korea, which Japan was bound to hold, will be her defense against any further ambition of Russia, for the northern coast of Korea almost reaches to Vladivostok, while on the western border it skirts Manchuria. Korea is from this time simply a colony of Japan. The Emperor is a mere phantom. He cannot rule his own country; he cannot even have one word to say to a foreign power. Things are plain now, with no pretense or evasion, and it is well to have it so.

We have nothing to say as to the question of veracity raised by President Roosevelt in his correspondence with Mr. Henry M. Whitney, President of the Boston Chamber of Commerce, and the Democratic candidate for Lieutenant-Governor; but we wish that the President's emphatic habit of expressing his views had not led him to charge such a gentleman as Mr. Whitney with making a "deliberate misstatement," and to suggest that he was guilty of a "deliberate purpose of deception." It is evident that the President wrote in more heat than fuller consideration would have suggested.

We congratulate the city of Worcester, Mass., on the magnificent gift of several million dollars to its Art Museum by the bequest of Stephen Salisbury. Such gifts make a city famous, and are a chief benefit to its people. Few museums in the country will be so well endowed. Mr. Salisbury has long been distinguished for his love of American history and for the honor he has done to the city in which he lived.

Insurance

THE PRUDENTIAL ROCK OF GIBRALTAR.

The Prudential and the Rock of Gibraltar

THE Prudential Insurance Company of America recently undertook to procure a fragment of the Rock of Gibraltar, that should symbolize in its mass something of the strength of this well-known Newark institution, that because of skilful advertising has become identified with the celebrated English fortress on the Mediterranean.

The illustration gives no suggestion of the great beauty of the grayish-white limestone rock which is at once dense and compact, but which takes a high polish and has been worked into ornamental objects dear to the hearts of tourists. The emblematic and sentimental value of the slice of British territory secured by the Prudential cannot help being very great and will no doubt attract much attention at its home office.

The Mutual's Self-Investigation

THE investigating committee of the Mutual Life Insurance Co., of which Stuyvesant Fish, President of the Illinois Central Railroad; John W. Auchincloss, one of the directors of the same railroad, and W. H. Truesdale, President of the Lackawanna Railroad, are members, have made a preliminary report in which reforms of the most sweeping character are recommended. The management of the company comes in also for severe criticism. In consequence of the committee's activity, a proposition has already been made by President Richard A. McCurdy looking toward the reduction of his salary one-half. The "House of Mirth" at Albany is to be closed, and there will be no more campaign contributions. Andrew C. Fields has been ordered to return to this country and place himself under the jurisdiction of the company and the laws of the State of New York. The committee is of the opinion, and boldly says so, that all matters pertaining to legislation, either National or State, affecting the company should, in future, be handled solely and exclusively by the Law Department and in its name, with full responsibility resting on the head of that department for each and every transaction, and not in the name or thru the medium, colorable or otherwise, of any other department or branch of the company's service. The Supply Department will, according to the committee's recommendation, at once cease to transact any business foreign to the purposes for which that department was created, as prescribed in the by-laws. The concluding paragraph of the committee's report stamps it with all seriousness and endows the report with intelligent vitality when it sets forth principles that ought particularly to obtain in the conduct of a life insurance business, viz:

Your committee further recommends that, pending this examination, the President and the officers under him put into immediate effect such measures of sound economy and curtailment of outgo as will in the future result, through an increase of dividends or otherwise, in a decrease of the cost of insurance to policyholders.

Financial

Steam and Trolley

WE have occasionally spoken of the interesting movement in the Northeastern States for the acquisition of trolley railway systems by the great steam railroad companies. The New York, New Haven & Hartford Co. has obtained possession, thru the agency of a subsidiary corporation, of the trolley systems of New Haven, Hartford, Springfield and several other cities of Southern New England. In this State, the New York Central now controls the Schenectady, the Utica and Mohawk Valley, and the Syracuse trolley lines. Last week the Delaware & Hudson Railroad Co., or interests representing that company, purchased the United Traction Co., which owns the electric railway systems of Albany, Troy, Rensselaer and Cohoes, paying \$150 per share, or \$7,500,000 if all the stockholders sell. This is the first venture of the Delaware & Hudson in the street railway field.

Spanish-American Bonds

A REMARKABLE advance in the market value of bonds representing the foreign debts of South American and Central American countries is shown in the recent annual report of the Council of the Corporation of Foreign Bondholders, a British organization, of which Lord Avebury is President. In some instances the value has doubled in the last twelve months. In the following table the Council shows comparative prices at the end of September:

Countries.	1901.	1903.	1904.	1905.
Colombia	14	24½	24	44
Costa Rica, A bonds..	16½	22	26	56
Costa Rica, B bonds..	15	19	19¼	46
Guatemala	13	21	24	39½
Honduras	5	5¼	6	13
Nicaragua	57½	60½	59	79
Paraguay	23	29	35	50
Uruguay	49½	58¾	59½	72
Venezuela	26	32¾	42	51

To this list might be added the bonds of Santo Domingo, the value of which has more than doubled. It is understood, the Council says, that the increase in values is largely due to the idea that the utterances of President Roosevelt

with regard to the Monroe Doctrine were intended to indicate that the United States Government would not allow the Spanish-American republics to take advantage of the protection afforded them by the United States in order to evade the payment of their liabilities to their foreign creditors. It is stated that since last year's report the Colombian and Venezuelan debts have been settled on terms "which, all things considered, may be considered fair, especially in the case of the former." The debts of Costa Rica, Guatemala, Honduras, and Argentina, however, are still in default, although negotiations for a settlement of two of these are in progress. The principal loans in default are approximately as follows: Argentina, £15,252,453; Costa Rica, £2,000,000; Guatemala, £1,482,800; Honduras, £5,398,570. In the Council's list of such loans are £2,418,800 in Confederate bonds and £4,632,306 in bonds of Mississippi, Louisiana and West Virginia, as to which the arrears of interest largely exceed the principal.

Financial Items

THE Railway Steel Spring Company (capital \$13,500,000 common and \$13,500,000 preferred) has bought for \$4,500,000 the plant of the Latrobe Steel Company, at Latrobe, Pa.

....A dividend of \$15 per share, or 60 per cent., was declared on the 20th by the Calumet and Hecla Mining Company. This makes \$50, or 200 per cent., for the year 1905, against \$40 in 1904.

....The Seaboard National Bank will increase its capital stock from \$500,000 to \$1,000,000 by declaring a stock dividend of 100 per cent. A cash dividend of 100 per cent. will be declared out of the surplus, and the proceeds of this dividend will be used to pay for the new stock. The bank has a surplus of \$1,250,000, and the undivided profits are \$278,721. S. G. Bayne is President, S. G. Nelson Vice-President, and C. C. Thompson, Cashier.

....Dividend announced:

N. Y. Central & H. R. R. Rd., 1¼ per cent., payable January 15.

The Independent

VOL. LIX. NEW YORK, THURSDAY, NOVEMBER 30, 1905. No. 2974

Survey of the World

The Isthmian Canal

It is expected at Washington that the Isthmian Canal Commission will by unanimous vote approve the report of the minority of the Board of Advisory Engineers, which is to be in favor of a canal with locks, and that the President will agree with the Commission. The two reports will not be ready until some weeks hence, and in January the foreign engineers are to meet in Brussels, where their signatures will be affixed. It is recalled that Gen. Davis, Mr. Parsons, and Mr. Burr, the three Americans who voted for a sea-level canal, took similar action in February last, when, as a committee of the Commission (of which they were then members), they made a report upon the subject. The present Commission (and, probably, the President) will, in arriving at a decision, give considerable weight to the evidence that the construction of a sea-level canal would consume many years and require very heavy expenditure. It is said to have been admitted by the majority of the Board that the sea-level plan would call for an additional excavation of so large a quantity of rock at the bottom that the cost of this work alone would be \$90,000,000, and that the time required for it would be sixteen years after the removal of the earth above it. Among the plans now proposed is one prepared by Major Gillette, formerly one of the Commission's engineers, and now assisting the Mayor of Philadelphia in completing that city's filtration works and in pursuing the ring that held the filtration contracts. Major Gillette would build a great dam at Gatun, thus making a lake thirty miles long at the summit level, and at each end of this lake would have three locks. Such

a canal, he says, could be built in five years at a cost of only \$105,000,000— It is understood that the work and the expenditures of the Commission will be the subjects of an investigation in Congress. The Commission now asks for \$16,000,000 to meet its obligations up to June 30 next. Of this sum, \$9,000,000 will be needed for payments on contracts recently made, and \$7,000,000 will be required for current expenses. Nearly all of the \$10,000,000 appropriated some time ago has been used. In answer to published criticism concerning the contracts, Secretary Taft says that the President is authorized by the Spooner Act to make contracts up to a total of \$135,000,000. It is reported that the President is satisfied with the present Commission, and will oppose any movement for the abolition of it.

Second Conviction of Senator Burton

At the end of his second trial, in St. Louis, last Saturday night, United States Senator Joseph R. Burton, of Kansas, was again found guilty of receiving compensation for practicing as an attorney before the Post Office Department in behalf of a speculative company that was in danger of being forbidden to use the mails for the promotion of its business. He was employed for several months, at \$500 per month, beginning on November 18th, 1902. After his first conviction, in 1904, he was sentenced to be confined in jail for six months and to pay a fine of \$5,000. This first conviction was annulled on the ground that the money had been paid to him outside of the jurisdiction of the trial court. The second indictment was found just in time

to avoid the statute of limitations. He is now found guilty on all of six counts. The maximum penalty is two years in jail and \$10,000 fine on each count. He will appeal again, and may be able to prevent a final decision until after the end of his term, in March, 1907; but he will not attempt to occupy his seat in the Senate.

Washington Topics

It is the intention of Secretary Root to attend the Congress of American Republics at Rio Janeiro, next Summer. As it is not customary for the head of the State Department to undertake such missions, an impression prevails that in this instance the Secretary's purpose is one of much importance and that he will strive to promote a better understanding of the Monroe Doctrine.—At the President's request, Secretary Shaw, who intended to leave the Cabinet on February 1st, has consented to remain until the end of the coming session of Congress. Other members who were intending to withdraw have been urged to stay. Secretary Hitchcock will finish his campaign against the land thieves, and Attorney-General Moody's departure has been postponed.—On the 27th the President removed from office Assistant United States Treasurer William S. Leib, of Philadelphia, for "persistent violation of the civil service law while in office." Charges were made against him by the Civil Service Commission some months ago. At the request of Senator Penrose, the President gave him a hearing, at which Commissioner Cooley acted as prosecutor, and Representative Patterson as defendant's counsel. In a letter announcing his decision to Mr. Leib, the President says: "It appears to me very clear that there has been a constant effort on your part to evade the provisions of the civil service law, to hamper its workings as far as possible, and to obstruct in every way the action of the Commission."—The President has appointed Herbert J. Hagerman to be Governor of New Mexico. Mr. Hagerman succeeds Governor Otero, who has held the office for eight years. The latter is said to be an intimate friend of Delegate W. H. Andrews, formerly of Pennsylvania, whose

connection with the wrecked Enterprise Bank was the subject of much discussion during the recent campaign in that State. Delegate Andrews asked for the reappointment of Governor Otero.—The General Board of the Navy will recommend in its program of work for the coming year the construction of three first-class battleships of at least 18,000 tons, three scout cruisers, five gunboats, and several torpedo boats and destroyers.—Senator Tillman says that not more than four Democrats in the Senate will vote against the President's railroad rate policy. If this be so, the added votes of less than a score of Republicans will be enough to make a majority for it.

Reform Movement in Pennsylvania

City Solicitor Kinsey now says to the public that he is in complete sympathy with Mayor Weaver. As evidence of this he has appointed William M. Meredith to be his assistant. Mr. Meredith has been associated with Judge Gordon (the Mayor's counsel) in pursuing members of the ring, and in his new office he will have charge of the civil suits by which the city will seek to recover some of the money fraudulently taken. Another associate of Judge Gordon (David Wallerstein) was appointed two weeks ago by District Attorney Bell to be his assistant, and to have charge of the criminal suits. Mr. Kinsey says he is about to reorganize his entire office force in order that it may be in sympathy with the Mayor.—William H. Berry was elected State Treasurer by a plurality of 88,244. The Sinking Fund Commissioners (one of whom is the present Treasurer) have given notice to the banks now holding the Sinking Fund surplus of \$4,000,000 that they should be prepared for a withdrawal of the deposits. During the recent campaign it was asserted that these deposits had been made in violation of the law, which requires the money to be paid for State bonds or to be invested in United States securities.—It is expected that Gov. Pennypacker, at the earnest request of a great number of citizens, will add the questions of ballot reform and uniform primaries to those which, under his original call, the special session of the Legislature is to

consider.—The reform press objects to the proposed erection of a statue of the late Senator Quay on the Capitol grounds at Harrisburg. Gov. Pennypacker approved the bill for such a statue last Spring, but vetoed bills for statues of Gen. Hancock and Gen. Hartranft. The views of those who object appear to be in accord with those of Mr. Henry C. Lea, the well-known author, who says, in a published statement:

"It is impossible to imagine that the community will patiently accept the shame of thus honoring in perpetuity the memory of a man who prostituted his remarkable abilities to the systematic debauching of public morality; of a man whose achievement was the building up of a machine which rendered graft a profession and enabled the gang to rule and plunder at will; of a man whose sole claim to remembrance is that he covered his native State with ignominy and rendered it a byword in the nation as the typical exemplar of political corruption."

Mayor Dunne and Chicago's Railways

In a public address, a few days ago, Mayor Dunne said he had no hope that his plans for municipal ownership would be carried out with the consent of the present City Council of Chicago. In a letter addressed to the editor of an Eastern magazine he says that he has not "abandoned the idea of municipalizing the street railways," but is still confident that the will of the people will be carried into effect sooner or later. He has been hampered, he continues, by a hostile Council and a hostile press. Explaining his messages to the Council, he describes at length the advantages of his plan for using a new corporation which should act as a constructing company for the city. He then says:

"After waiting for three months for some action, I sent several messages to the Council, calling their attention to the vote of the people as expressed at the polls, and respectfully urged them to take action according to the people's desire. They have absolutely refused to pay any attention to the same, and the transportation committee, which has the matter in charge, upon its own initiative has invited the present traction companies to present forms of ordinances for the renewal of their franchises for twenty years. They are hurrying thru these ordinances with the utmost expedition at the present time. Every move I have made in the Council in favor of municipal ownership has been defeated by majorities of from 47 to 42 to 18 to 22. I am

practically powerless, so far as the Council is concerned. The Council, however, has agreed to pass no ordinance that shall not provide for a referendum before the people. I am very confident that when the extension ordinances are submitted to the people they will vote them down, next spring."

Nearly all the city newspapers, he adds, are working against municipal ownership, and "all the banking interests and capitalists seem to be in league" to prevent it. But he believes the people will insist upon carrying out their wishes already thrice expressed at the polls, and he intends "to fight this thing out to the end."

The Election in New York

It is now expected that there will be a recount of a large number of the ballots cast at the recent municipal election in New York. On Monday last Supreme Court Justice Amend, in response to the application of Mr. Hearst and other candidates on the ticket of the Municipal Ownership League, ordered that the boxes in five districts be opened. The application had been opposed by counsel representing Tammany Hall and Mayor McClellan, the leader of these attorneys being Ex-Judge Alton B. Parker, candidate for the Presidency in 1904. Mr. Hearst's lawyers say that in more than half of the districts the errors already found are sufficient to bring the boxes under Justice Amend's ruling, and that the ballots in more than a thousand districts may yet be recounted. Owing to the continued efforts of reform organizations and of the prosecuting authorities, many men will be punished for illegal voting and other fraudulent acts. About sixty persons have already been indicted (among these being eleven election inspectors), and three have been sent to the penitentiary. In two or three instances heavy bail has been forfeited by indicted repeaters, for the escape of whom some one was willing to pay.

Cuba and the Isle of Pines

The approaching Presidential election (December 1) excites little interest in Cuba, because the result is so clearly foreseen, the Liberals having no national or Congressional tickets in the field. It is asserted that several groups

of persons conspiring against the Government have been discovered. Following the capture of arms and ammunition in a house at Cerro, the arrest of Dr. Julian Betancourt, a Liberal Congressman, was ordered. Two or three days later, thirteen men were arrested in Pinar del Rio, and 59 rifles were found in their possession. Congressman Guerra was said to be a leader of this group, and to have fifty followers. A committee of Liberal Congressmen called upon President Palma, assured him of the loyalty of their constituents, and expressed regret that the disloyalty of others had been shown by the secreted stores of guns and ammunition. It appears to be admitted by representatives of the Government that there was fraud in the registration. There are more than 400,000 names on the lists, and the number of Cubans entitled to vote does not exceed 315,000.

—On Saturday last the American residents of the Isle of Pines ratified their recent election of Territorial officers and of a Delegate to Congress by a vote of 76 to 67, but decided that there should be no attempt to assume any office except by authority of the United States. Secretary Andrade, of the Cuban Cabinet, says that our Government will not be asked to preserve order on the island; all that may be required will be done by the Cuban Government, and if Americans attempt to assume office they will be sent to jail. The petition in opposition to the American movement has been signed by 1,500 Cuban residents. Edward C. Ryan, the American who was elected Delegate, was formerly a resident of Washington, and is a brother of a Pennsylvania politician. Some say that this accounts for Senator Penrose's interest in the claims of the American settlers and his opposition to the pending treaty of cession.

Trade With the Philippines

In an address at Kansas City, Secretary Taft argued earnestly that the application of our navigation laws to trade between the Philippine Islands and the States should be postponed until 1909, and that our tariff on Philippine products should be reduced to 25 per cent. of the Dingley rate. With re-

spect to the sale of Philippine products by Filipinos, he remarked, we were treating the islands as a foreign country, but in the matter of furnishing business for our merchant marine we were treating them as a part of our own country. This proceeding, as Secretary Taft very pertinently pointed out in his Kansas City speech, was an indefensible position. The attitude of our domestic sugar and tobacco interests toward the desired reduction of the tariff was, in his opinion, "the quintessence of selfishness" and was open to the severest kind of criticism.—The New York Board of Trade and Transportation has adopted by unanimous vote a resolution calling for the repeal of the Frye law, which applies our exclusive coast navigation laws to trade with the islands on July 1, 1906. These laws are in force with respect to trade with Hawaii, and complaint is made that the interests of the islands suffer because the supply of American ships is inadequate.

German Universities

According to official reports, the total attendance at the twenty-one German universities during the recent semester was 45,285. Of these 41,940 were regularly matriculated, 2,386 were male "hearers" and 960 were female hearers. The relative growth of university enrollment is larger than the ratio of population growth, and the fears so often expressed by Bismarck of a "learned proletariat," of an over-production of technically skilled specialists far beyond the actual needs of the state, are still entertained by many. One noteworthy feature is the flocking of students to the great cities. The four leading institutions of Berlin, Munich, Leipzig and Bonn have a total enrollment of 20,154, or nearly one-half of the total student contingent of the Fatherland. The smaller universities seem to be becoming smaller all the time. Greifswald, which only two years ago had over a thousand students, has now only 786. Erlangen has also come below the thousand line, and Rostock, the smallest, has 623. A peculiar feature is the fact that the women contingent is kept down, largely thru the influence of the Prussian universities, which are openly antagonistic to the

women. Berlin several years ago had an enrollment of more than six hundred women, but now it is only 365. Rather singularly the South German universities, which have opened their doors to women exactly on the same conditions that obtain in the case of men, do not attract the women students. The three universities of Bavaria, the two of Baden, the one of Wurttemberg, all of which immatriculate and give degrees to women, have together only 159 women on their lists, Munich reporting only 27. Evidently the women of Germany do not

sity of Münster, namely, 10. The other states of Europe furnish 2,775, and other than European states 403 women. Of European states, Russia heads the list with 1,153 students; America is represented with 268, Asia with 108 (mostly Japanese), Africa with 19, and Australia with 8.

✱

A Mutiny at Sevastopol

A very serious, because well-ordered, mutiny broke out on Friday, November 24, among the sailors on the ships and in the barracks at Sevastopol, and is not

Identifying the Dead in the Jewish Cemetery of Odessa.

want degrees, but only to get the best equipment, which is generally believed can be had at the Prussian institutions rather than at those of the smaller states. The German universities still attract the stranger as no other schools of the world. The foreign contingent is 7.5 per cent. of the whole student body. Berlin, naturally, leads with 976 foreign students, and all the universities without exception are represented in the total of 3,178 foreigners. The smaller number are at the exclusively Catholic Univer-

yet under control. The trouble seemed to have originated on the battleship which mutinied last June in the harbor of Odessa, the "Kniaz Potemkin." The name of the vessel had been changed to the "Panteleimon," but apparently the disposition of its crew remains the same. Some 800 sailors of the battleship and of the cruiser "Otchakoff" revolted at noon and raised the red flag. They sent a deputation to the sailors on shore and held a joint meeting with the workingmen and soldiers, after which they all

marched thru the town. Admiral Chouknin, commanding the Black Sea fleet, went on board the "Kniaz Potemkin," and addressed the mutineers, saying that the Czar was deeply grieved at their conduct and would listen to their grievances and remedy them. A sailor shouted "We know the value of the Czar's promises, and no longer trust them!" Admiral Chouknin was then ordered to go on shore. In the evening he sent Admiral Pisarevsky, commander of the practice squadron, to the barracks with a company from the Brest Regiment, and disperse the meeting being held there. When the sailors refused to disperse he ordered his patrol to fire upon them, but instead two shots were fired by the mutineers, wounding him in the shoulder and killing Captain Stein. During the night the mutineers, numbering about 4,000, elected officers and pledged themselves not to pillage, kill, or drink vodka, but on the contrary, to maintain discipline and prevent all rowdyism. On the following morning they marched in good order to the barracks of the Brest Regiment. The soldiers imprisoned their officers, including Gen. Nepludoff, commandant of the fortress, and joined them. Then soldiers, sailors, workmen, altogether some 10,000, marched thru the city to the place where the Bialystok Regiment was stationed. The troops were headed by their bands and colors. The Bialystok soldiers received the procession with the military salute and cheers, but refused to join in the mutiny. The mutineers planned to seize the naval vessels that had not yet joined them and take them to Odessa, but Admiral Chouknin checkmated them by having all the gun-locks smashed. The artillerymen of the fortress refused to obey Admiral Chouknin's orders to fire upon the mutinous vessels in the harbor. The authorities at St. Petersburg fear to send troops to Sevastopol lest they should join in the revolt, but they hope to keep the mutineers hemmed in their barracks, which are on the peninsula near Malakoff Hill, famous in the Crimean War, and under the guns of one of the forts and of the warships. The mutineers are maintaining their regular discipline. They have improved the quality of their rations, and are guarding the water works to prevent the authorities cutting

off their supply. They are in communication with the sailors at Kronstadt, and have received the following telegram from the Central Labor Union of St. Petersburg:

"The Council, in the name of the St. Petersburg proletariat, sends warm greetings to the soldiers and sailors of Sevastopol who have decided, following the noble example of the crew of the 'Kniaz Potemkin,' to fight for freedom in fraternal union with the workmen. May the events at Sevastopol be an example to the soldiers of all Russia, as the strike of the St. Petersburg proletariat in defense of the Kronstadt sailors was an example for the workmen of all Russia. Then a union of the revolutionary proletariats and the revolutionary army will put an end to all remnants of the autocracy and raise on the ruins a free, democratic State."

The Zemstvo and Present Congress

The sessions of the congress of the representatives of the Zemstvos and of the congress of peasants, held in Moscow last week, were of very great importance, for much depends upon their attitude toward the Witte Government. A strong effort was made by the friends of Witte to induce the Zemstvoists to compromise on their demand for direct universal suffrage and give unqualified support to the Government and the Duma, but they were defeated by two-thirds majority. The resolution finally adopted is a cautious one, showing distrust of Count Witte's intentions or of his ability to carry them out:

"The congress feels assured that the Ministry can count on the co-operation and support of the Zemstvoists and members of the Duma only in so far as it will correctly and consistently carry out the Constitutional principles of the manifesto. Every departure from these principles will meet with resolute counter-action on their part."

On the other hand, the Zemstvoists rejected the proposals of the radical members to send a deputation with an ultimatum to St. Petersburg or to establish a provisional government. The Congress unanimously voted resolutions of indignation and sympathy in regard to the Jewish massacres, and favoring the use of the local language in the primary schools of all non-Russian peoples. They reaffirmed their former demands, which include the prompt convocation of repre-

sentatives of the people elected by direct, equal, secret, and universal suffrage, the endowment of the first National Assembly with constitutive functions, and the adoption of a series of measures directed toward the pacification of the country, including the immediate promulgation of laws securing political freedom, the abolition of repressive measures, an impartial investigation of the recent outrages, the prosecution of officials for non-compliance with the laws, the promulgation of a temporary law extending the powers of the Zemstvos and Dumas for assuming public safety, full amnesty for political and religious offenses, and the abolition of capital punishment. A committee, headed by Ivan Petrunkevitch, will go to St. Petersburg to present to Premier Witte the resolutions of the Zemstvoists. —The Peasant's Congress adopted more radical resolutions, demanding a Constituent Assembly elected by direct universal suffrage without regard to sex, nationality or religion, and favoring the organization of the Universal Peasants' League to sustain a strike unless the demands of the peasants are satisfied. It

was resolved in the meantime not to buy land from the land owners, and, should a strike be necessary, to refuse to pay taxes or respond to calls for recruits or reservists. Moscow is still under martial law, and on November 27 the president and the principal members of the Peasants' Congress were summarily arrested. Among those arrested was Chirikov, the author of "The Chosen People," a play dealing with the Jewish massacres, which was presented in New York last winter by the St. Petersburg Dramatic Company. In some parts of Russia the peasants have taken possession of the estates of the nobility, generally without violence; in others they are waiting for the assembling of the Duma, confident that its first action will be to divide up the land which they have always considered theirs by right. In the province of Yaroslav the Governor sent troops against the peasants, but the soldiers left their arms and ammunition in the peasants' houses and assisted them in marking out the lots into which the estates were being divided. It is repeatedly rumored that the Czar has become tired of

The Great Demonstration on October 31st—Day of the Proclamation of the Constitution in St. Petersburg.
A Crowd with Red Flags on the Nevsky Prospect.

making futile concessions and is about to make Grand Duke Nicholas Nicholaievitch dictator, or to resign and make him regent.

Powers Unite Against Turkey

Decisive action has been taken by the Powers to enforce their plan for the financial adjustment of affairs in European Turkey. The plan was presented to the Sultan some time ago, but was not acted upon. Last week an acceptance of the conditions was demanded by the Powers within twenty-four hours, accompanied by a threat of seizing the Turkish custom houses in case of a refusal. This demand was met by a flat refusal, and a veiled hint at possible Christian massacres in case the Powers took any decisive action. With the exception of Germany, which is not participating in enforcing these reforms, all the nations interested had despatched two warships to the Peiræus. On the announcement of the Sultan's refusal, the allied fleet was at once despatched to Mitylene. The fleet anchored off the island on Monday; the English, French and Italians each landed 100 men, while the Austrians landed 200. This force seized the custom house and telegraph lines without opposition. Concerning the outcome of this affair there are widely varying rumors. The developments of the next few days are awaited with great interest. The financial scheme of the Powers provides for the collection of taxes by local authorities, such as the village headmen, the whole to be under the supervision of a representative of the Powers. A similar plan was submitted to the Sultan by a private syndicate a year ago, under the guise of a loan, which was to be guaranteed by the taxes thus collected, and ample funds were offered by London and Berlin capitalists, but the offer was rejected, chiefly because of the opposition of the Ottoman Bank. The plan would be acceptable to the Macedonians themselves, and would be most profitable to the Turkish treasury, as was proved by tests some ten years ago. The bulk of the taxes are now stolen by Turkish authorities appointed by the Constantinople Government.

China and Korea

Very important negotiations are now being carried on in Peking between the Chinese Government and Baron Komura, the Japanese Foreign Minister, in regard to the future relations between the two countries. No very definite or reliable information has been given out, but it is reported that the Chinese Viceroy is opposed to two of the provisions of the Treaty of Portsmouth, that China should buy back the Chinese Eastern Railway in Manchuria and then turn it over to Japan, and that Japanese guards shall be used to protect it. The Viceroy in general favors a close alliance with Japan as against America and Europe. There have been many rumors of late that the Germans were soon to withdraw or to be expelled from Kiao-Chau. These reports are officially denied by the Berlin papers, who assert that the most cordial relations exist between the German and the Chinese Governments. The purchase by China of the American concession of the Canton-Hankau Railroad, recently relinquished by Morgan, was made by means of a \$5,000,000 loan obtained from England. The dominant power in Chinese affairs now appears to be the progressive Yaun-Shih-Kai, Viceroy of the Chili Province and Commander-in-Chief of the Chinese Army. He has recently removed Wu Ting-fang, the well-known ex-Minister to the United States, from his position as Assistant Minister of Foreign Affairs, and made him vice-president of the Board of Punishment, replacing him by Toay Shao-yi, one of his own followers and former Commissioner to Tibet. The Japanese Government will ask the Diet for an appropriation of \$800,000 for telegraphs and telephones in Korea, Manchuria and Sakhalin. The Seoul-Gensau railway in Korea is to be completed at a cost of \$7,500,000. The indignation of the Koreans at the practical annexation of their country by Japan is shown by the act of a Korean who threw a stone at Marquis Ito thru the window of the railroad car in which he was traveling. He was slightly injured by the broken glass. The Korean was caught and punished by two months' imprisonment and 100 lashes.

Are Life Insurance Premiums Too High?

BY RUFUS W. WEEKS

[The following article by the President of the Actuarial Society of America, and the Chief Actuary of the New York Life Insurance Company, is of especial importance to the American people just now, when the subject of the cost of insurance by private companies and by the Government is being so extensively discussed.—EDITOR.]

IN fixing the premium rates to be charged for life insurance three assumptions must be made for the future: First, the rate of mortality to be expected; second, the rate of interest to be expected; and, third, the rates of expense to be expected.

1. In regard to rate of mortality.

The table generally assumed in this country for calculating premiums is the American Table of Mortality. In the early years of existence of insurance, the actual mortality is not so high as that called for by this table; this saving being due to the selection exercised by means of medical examinations and inspections at the time when the insured are accepted. This favorable effect, however, wears away in the course of a few years, being practically reduced to a small constant at the end of five years from the time the lives enter the company.

Of course, we do not know precisely what the mortality will be among insured lives of five years or more standing in the quarter century or half century to come. So much as this, however, we do know—that there has been no improvement in this respect during the last thirty years: that is to say, that lives in the insurance companies which have been insured more than five years show now as high rates of mortality as corresponding lives showed thirty years ago. This may be considered a singular fact in view of the advance which has taken place in medical and surgical science, the supposed better quality of food and more hygienic habits of living. Adult deaths from consumption and from acute fevers

have decreased, but this decrease has been made up by an increase in deaths from diseases of the brain and of the heart, and from suicide. It would seem to be the case that the tension of life for the adult male is greater and more perilous than it was a quarter of a century ago, to a sufficient extent to neutralize the benefit that has come from greater scientific knowledge. However this may be, the fact remains that the companies experience as high a mortality now as they did thirty or forty years ago, and could not safely count upon any lower mortality in the future.

The ultimate mortality—that after the effects of selection have worn off—probably averages as high as ninety per cent. of the American table in the companies taken at large; and since it is by no means impossible that changes may occur in the future which will increase the mortality above the present experience, it would not be safe for a life insurance company to assume any ultimate mortality scale lower than that of the American table. It is, however, doubtless safe to expect that the new lives insured in the future will, like those in the past, show a materially lower mortality than that of the American table during the first five years of insurance; and we may properly assume that the average rates of mortality for the first five years' standing of the risks will be three-fourths of the rates called for by the American table.

2. As to the rate of interest.

American companies are at present divided, in their assumption as to future rate of interest, between three and three

one-half per cent. There is no science which will enable us to foretell what the course of the rate of interest is to be. Immense changes are taking place in the manner of carrying on the world's business, and it is quite as likely that these changes will produce a marked and permanent decrease in the rate of interest receivable as otherwise. It is, therefore, certainly not safe to assume, for a long period of years to come, that a life insurance company, restricted as it is likely to be in the range of its investments, can count with confidence upon more than three per cent. interest.

3. As to rates of expense.

The expense, of course, must always be higher in the first year of insurance than in subsequent years. The time will never come when men will of their own accord offer themselves for life insurance. It is not in normal human nature that they should do so, for the pressure of the daily call for the daily income will always be stronger than any internal call to provide for the disaster of premature death. The healthy-minded man is fully occupied with the affairs of life, and he instinctively puts from him the thought of the possibility of death. This is as it should be, from the physical, mental and moral points of view. It is the business of life insurance thru its machinery of propaganda—agents, and the tools which they use—to make the vivid appeal to man which nature refuses to make, and this kind of work cannot be done except at considerable expense. After people are once insured, of course their policies can be taken care of at a much lower annual expense.

What, then, is the least measure of the expenses for the two purposes—acquisition and maintenance—which must be provided for in the future? There would seem to be no better way of answering this question than by taking the companies of the very best standing as to economy of management and finding out what are their present ratios of expenses of these two kinds. To establish a standard such that no one will question it, we may exclude the three largest companies, and, if we then take the following six, no objection can be raised:

Northwestern Mutual.
Provident Life and Trust.

Mutual Benefit.
Massachusetts Mutual.
New England Mutual.
Berkshire.

Let us, then, analyze and sum the expenses of these six companies* for the year 1904 into three groups of expenses: (a) those which pertain distinctly to the acquisition of new business; (b) those which refer distinctly to renewal premiums; and (c) those which are of the nature of general expenses. We find the expenses so grouped to be as follows:

of class (a).....	\$4,297,000
of class (b).....	3,478,000
of class (c).....	3,655,000

Total \$11,430,000

We now sum together the new premiums received in 1904 and also the renewal premiums, and we find the new premiums to have been.... \$7,251,000
and the renewal premiums. 53,187,000

Total premiums..... \$60,438,000

The expenses of class (a) should be charged against the new premiums exclusively, and we find that they are equal to 59.3 per cent. of such new premiums. The expenses of class (b) should be charged against the renewal premiums exclusively, and we find that they are 6.5 per cent. of the renewal premiums. The expenses of class (c) should be charged against the aggregate of premiums, including new and renewal, and we find that they amount to 6.0 per cent. of such aggregate premiums. The entire charge against the first year's premiums should, therefore, be the sum of ratios (a) and (c), or 65.3 per cent., and the entire charge against renewal premiums should be the sum of ratios (b) and (c), or 12.5 per cent.

The premium to be charged is made up of two elements—the net premium and the loading. The net premium is based simply upon the two assumptions of mortality and interest, and makes no provision for expenses, and, in order to be absolutely safe, the loading ought

* The New York Life belongs to the same class with respect to economy of management, with the above select group of companies; in fact, its figures for the year 1904 indicate a slight superiority in that respect to the group taken as a whole; since, while it pays higher rates of first year's commission, it spends so much less on renewals that the latter saving more than offsets the higher initial expenses, in the lifetime of its deferred dividend policies.

RUFUS W. WEEKS.

to include, besides the distinct provision for expenses, some further addition for contingencies in the way of extraordinary losses on investments or unexpectedly high mortality. Therefore, if we were to make our loading on the basis which would give us 65 per cent. of the first premium and 15 per cent. of the renewal premiums, we should not be making it any too high for perfect safety.

We will now proceed to calculate the life insurance premium upon the basis of the foregoing assumptions. Of course, life insurance is issued upon many different plans—the three principal being the Ordinary Life, on which the insurance is payable at death only and the premiums are payable until death occurs; the Twenty Payment Life, on which the insurance is payable at death only and the premiums are pay-

able for twenty years only; and the Twenty Year Endowment, on which the insurance is payable at death or twenty years after issue, if the insured is then living.

As representing an average of all the different plans and ages, let us take the case of the Twenty Payment Life, issued at the age of forty. A slight element not included above should be brought into the calculation of the premium for this case. After the premiums for the twenty years have been paid in full, the policy may still remain in force for many years later, and it should in those years make some small contribution to the current expenses of the company from year to year. We will assume that this contribution will be at the rate of \$1.50 per thousand dollars insured.

The process of calculating a premium upon the above assumptions is not a difficult one, but it is perhaps not necessary that it should be set forth at length here. Any person conversant with life insurance mathematics can test the accuracy of the result now offered. That result is that the Twenty Payment Life premium at the age of forty, calculated upon the foregoing basis, which is no more liberal than safety requires, is \$40.39.*

A question might be raised in regard to one of the assumptions made in the foregoing calculation—that which has to do with the rates of expense in the future. It might be thought not quite safe to assume that the expenses of life insurance in the future will not exceed those now experienced by the most economically managed companies. Let us, therefore, consider the case of companies which are not so happily situated as the six heretofore mentioned, in respect to moderation in expenses. Let us aggregate the various items of expense for the ten companies in New York other than the Mutual, the Equitable, the Metropolitan and the New York Life, in the same manner as has been done above for the group already treated. We shall find that these ten New York companies show the aggregate expenses of

class (a) in the year 1904 as.	\$4,331,000
of class (b).....	1,064,000
of class (c).....	2,971,000

Total	\$8,366,000
-------------	-------------

We shall further find that the new premiums received in 1904 were \$3,925,000 and the renewal premiums. 20,074,000

Total	\$23,999,000
-------------	--------------

We shall find that the expenses of class (a) are equal to 112.9 per cent. of the new premiums; the expenses of class (b) 5.3 per cent. of the renewal premiums; and the expenses of class (c) 12.4 per cent. of the entire premiums. We thus reach a total charge against the first year's premiums of 125.3 per cent., and against the renewal premiums of 17.7 per cent.

We proceed to calculate a premium for the case of the Twenty Payment Life issued at the age of forty in the same manner as before, except that we substitute these higher expense ratios, adding, as in the preceding case, $2\frac{1}{2}$ per cent. to the renewal expenses for unforeseen contingencies. The calculation brings out a premium of \$45.48.

We have thus established what may fairly be considered a maximum and a minimum premium on the basis of safety for the future, the maximum being, as already shown, \$45.48, and the minimum, \$40.39, the mean between these two being \$42.93. It will be interesting to compare with these rates the rates which are actually charged by the companies operating in the United States and Canada. The following table shows the premium rate charged, for a Twenty Payment Life policy issued at the age of forty, by each of the fifty-one companies listed in Flitcraft's Manual for 1905. It will be seen that the rates range from \$37.84 to \$42.79—the average rate being \$41.23.

PREMIUM RATES FOR A TWENTY PAYMENT
LIFE POLICY, ISSUED AT THE
AGE OF FORTY.

Altho much good effect in the way of economy, whether voluntary or enforced, may be anticipated from the present agitation as to life insurance, it is hardly reasonable to suppose that more can be accomplished in this direction than to bring down the expense of the companies in general to the level of the six

companies first mentioned. This being the case, it is clear that considerations of safety, which are, of course, paramount in this matter, would forbid any reduction in the premium rates at present in force.

In the actual experience of most companies the premiums charged have proved more than sufficient (tho this could not safely have been presumed on); and "surplus" has resulted in considerable quantities, available for returns to the policyholders under the title of dividends. Thus the margin in the premium which was prospectively a provision for the safety of the policies, appears retrospectively to have been a provision for dividends. Under the plan of annual distribution, the payments required from the policyholders are reduced by these dividends year by year, while under the plan of deferred distribution, the accumulated surplus becomes a substantial provision for old age, over and above any such provision guaranteed by the policy.

From the fact that the companies are steadily earning surplus, it has been argued by professors and others that lower premium rates ought to be adopted for policies hereafter to be issued. This argument is unsound; it is an example of false inference. The sources from which the surplus has been earned, and is at present being earned, are three: favorable mortality, interest higher than the assumed rate, and excess of policy reserve over surrender allowances on policies dropped. The first of these sources—mortality lower than tabular—arises mainly, as has already been shown, in the early years of the insurances, and for those years it has been taken account of in the foregoing calculation of a safe premium. As regards risks of more than five years' standing, altho such risks may up to this time have furnished a saving on the mortality provided for, the margin of such profit is not wide enough to make it safe to presume on its future permanence.

The second source of surplus—extra interest—has been steadily growing less, and, so far as we can tell, may continue to grow less in the future. It would be the height of imprudence to assume that because the companies have been earning

more than four per cent. interest for ten years past they will continue to earn the same rate, or anything approximating, for the twenty or thirty years to come.

As to the third source of surplus—consisting of profit, so-called, on policies discontinued—this is in the main illusory, as upon the greater part by far of the discontinued policies only one premium has been paid, and the actual profit on such policies, after paying expenses of acquisition, is practically *nil*. Furthermore, even as regards that portion of the profit from lapses which is real, we have no right to count upon it in the future, since it is a matter subject to the will of the policyholder whether he will continue his policy or not, and we cannot reckon on his decision. Besides this,

the very liberal guarantees contained in policies now being issued preclude the possibility of any considerable profit arising from this source in the future.

From all these considerations it is plain that the fact that the companies are now deriving considerable amounts of surplus from the premiums they are receiving on policies heretofore issued furnishes no certainty that this will continue to be the case in the same measure on policies now being issued. We hope that it will, and we have good reason for this hope, but we have no right to presume upon it to the extent of reducing premium rates below the limit of safety—and our duty therefore is to keep premium rates upon their present level.

NEW YORK.

A Thanksgiving Hymn

BY ANNETTE KOHN

For our blessings, Lord, we praise Thee
For the greatness that we know,
For the fullness of Thy bounty,
That doth move as oceans flow.

As we call up the dead nations
From their sealed graves and dust,
As we watch their shadows passing,
And we know that Thou art just,

Is there earth enough for kneeling?
Are words coined in which to pray?
Is there height or depth to measure
All Thy goodness in our day?

When we see our teeming coffers,
Do we know and understand
All the deeper, broader meaning
Of the wealth of this our land?

Do we hold our country's honor
Dear enough, as is her due?
All our best upon her lavish;
Are we always leal and true?

Out of pure love and thanksgiving,
Do we bring as sacrifice
Our own selfish ends and pleasure,
With rejoicing at the price?

Since the green trees first in Eden
Rose up proudly to the skies,
Never yet was there such promise
Of a coming paradise.

No flag like our own did ever
Lend such splendor to the air;
May it stream out like a blessing,
Float in glory ev'rywhere!

'Till our doctrine of man's freedom,
Like religion is believed;
'Till all peoples share the laurels
We so painfully achieved.

To the poor, the weak the helpless,
Let us prove a hope and strength;
In Thy righteous ways and holy,
Let us walk our days at length.

Let us drink of wisdom's fountain—
Sheathe our sword and guide our pen;
People city, vale, and hillside
With true women and brave men.

Let us conquer for dominion,
Strength of heart, and spirit-ease;
O'er our country wings of angels
Spread with message of Thy peace.

NEW YORK CITY.

A Bit of Troy Wall.

How We Took Troy

BY J. IRVING MANATT, L.L.D.

PROFESSOR OF GREEK IN BROWN UNIVERSITY.

THE omens were good as our little "Antigone" steamed out of the Golden Horn. To the fore frolicked a great school of dolphins and in our wake the sunset cloud lay like a luminous Golden Fleece. All night long we drifted dream-like down the storied waterway that opened to the Argo, but refuses *pratique* to the Russian; and sunrise found us at the Dardanelles. There the best of consuls and the real discoverer of Troy—Frank Calvert, Esquire—received us in his dewy garden; and two hours' negotiation with the Trojan Transportation Trust (Limited) issued in a contract for a three-days' excursion in a comfortable old Victoria, with a good pair of horses and a mount-

ed Turkish guard—all for fifty francs gold. And so, with young Philoktetides on the box—a clever lad who must have derived his name, if not his lineage, from the snake-bitten bowman of Lemnos—and our turbaned Zabtieh trotting ahead, we are off at noon for a Sabbath day's journey to Troy.

Now this road to Troy has been much maligned, and we found it far better than its reputation. The first hour of it indeed is distinctly rocky, with that Turkish loose-rockiness which is only less irritating than the corduroy roads that once tried men's souls in the miry West; and the scenery is tame, save as it is redeemed by the flocks and herds—sheep, kine, buffalo, and camels—and now and

then by laden camel-trains faring lazily in and out. But it gradually grows smoother; and, as you approach Renkioi, way and scene are all that heart could wish. Up pine-clad hills cleft by deep gorges winds loop on loop a fine causeway, offering glorious prospects over land and sea until at the top—where you look across the deeper gorge to Renkioi—the plain of Troy first comes in full view; and then, the gorge once cleared, the road ascends to a town so clean and neat and so girt with vineyards, olive groves, and fig orchards that no Turkish name can hide its pure Greek quality—the more so as it is May-day, which by the Eastern calendar is thirteen days behind ours, and the little town is *en fête* and every door hung with garlands. From this on a broad highway is grading as level as a floor and straight as a string—some miles of it already waiting to be spoiled by the broken stone piled alongside to macadamize it *à la Turque*; but by way of compensation it will be shaded by many a noble oak as is the old easy winding road we follow to-day. One of these great double oaks invited a halt and a siesta long to be remembered, before we drove on to ford the Simois. Then thru rich meadows teeming with flocks and dotted with oaks, we came out upon a wide plain outspread to the sea and, turning the corner of the plateau on our left, found ourselves under the walls of Troy.

Now I will not deny that for a moment it was disappointing. This lowly hillock the top of the world! We drove around three sides of it—as much as fleet-footed Achilles could have comfortably cleared in that chase—and it grew. We mounted the walls and looked down upon a labyrinth of half-unburied castles, and we knew that thirty centuries had builded and battled there before our era dawned.

It was but a brief reconnoissance, for the day was far spent and we were to prepare for the regular siege by a good night's sleep at Thymbra Farm. Now the pilgrim to Troy who stops short of Thymbra has missed the real felicity of the pilgrimage. In our ignorance of that, we had proposed to find night-quarters in one of the mean Turkish

hamlets—Hissarlik, or Chiblak—nearest Troy; but our good Consul thought of another thing. "We have a farm," he said, "an hour or so beyond Troy and my nephew will put you up there." With no little reluctance—for to sleep at Troy had been my heart's desire—I fell in with this plan; and so as the sun was sinking we drove on, as we supposed, to find a shake-down in the stead of a simple English farmer. Instead of that, we turned up in an Englishman's castle—a great quadrangular farmstead, commanding a domain of more than a thousand acres of the richest land in Asia—and in a household as charming as Hector's own. That is a forbidden topic indeed, but the Calverts are part of the tale of Troy and I cannot leave them out of this story.

When the two brothers first took Troy, I do not know; but from time immemorial (to me) they have dwelt in the Troad—one of them serving as British, the other as American Consul, at the Dardanelles. Jointly or severally, they had acquired large holdings, including Troy itself, and the rich bottoms of the Scamander and Thymbrius; and, while the elder brother gave himself to farming and particularly to developing Thymbra Farm, where his widow and son now dwell, the younger went in for archeology. It is forty years now, since Frank Calvert gave the *coup de spade* to the Trojan pretensions of Bunarbashi, and opened the mound at Thymbra in which, with true insight, he recognized the Tomb of the Trojans. About the same time he began the excavation of the Hill of Hissarlik and satisfied himself that it was the Homeric Troy; but his funds gave out and he offered the site to the British Museum if it would go on with the work. The Museum pleaded poverty; and so the ground lay fallow till one day Frank Calvert fell in with an eccentric German who had just come down from Bunarbashi and was hastening to embark for home. "There *was* no Troy after all," quoth this peevish pilgrim who turned out to be Heinrich Schliemann; but the cool-headed Englishman said: "Go and see Hissarlik, first." Said and done: Schliemann turned his back on the steamer, mounted a horse, and was off for Calvert's hil-

lock. Returning, he confessed his faith, got his firman, and dug up Troy—Troy, the first American conquest in the East, for was it not acquired and identified by an American Consul and explored by an American citizen under the shield of the Stars and Stripes? True, the American Consul presented Troy itself to the Ottoman Government and the American citizen gave the lion's share of its treasure to Germany; still by the higher warrant Troy is ours, a treasure not in earthen vessels, but in imperishable muniments.

own heroes—Schliemann's work at Troy was an archeological butchery. He carved out the core of Homeric Troy to get down to his Burnt City; and, when Dörpfeld finally laid bare the true Mycenaean walls, they enclosed but a narrow rim of the Homeric city and Schliemann's pits! Whatever time had spared of Athene's temple *ἐν πόλει ἄκρῃ*, or of Priam's very beautiful house with its fifty chambers of polished stone for his sons and twelve more for his sons-in-law, or of Paris' palace or Hector's—all this

Frank Calvert, Proprietor and First Explorer of Troy.

But what I would lay stress on here is that before Schliemann and Dörpfeld was Calvert; and no tale of Troy that fails to give him the first place among modern explorers is fair or just.

Alas, that Calvert or Dörpfeld could not have guided Schliemann's spade! That is the regret that deepens as we mount the walls again for an all-day siege. For, with all respect to his memory—and old readers of *THE INDEPENDENT* may remember that he is one of my

with the topmost terrace they crowned must have gone down before the German spade. Whatever time had spared, I say; for much of it had of course disappeared in repeated levelings, as successive builders prepared the ground for one after another of the five settlements that succeeded the Sixth City, and doubtless the Athenians of the seventh century B. C., who carted off half the walls of Troy to build Sigeion, could account for more of it. But the fact remains that in coring

Troy Schliemann made havoc of the Homeric city, whereas by patient approaches a Dörpfeld or an Evans would have first developed the walls and so saved all that was left of Priam's castle. Then soundings might have been made, as Evans has made them at Knossos, of the lower strata—sufficient at least to determine the earlier history of the site, if not to find the Great Treasure or uncover the wide paved way of the second or Burnt City. Little care we for the lords and ladies who flaunted those golden jewels and fared up and down that steep Broadway (*εὐπράγνια* indeed) a thousand years and more before the poet's Troy rose upon the thrice-buried ruins of their town; but we hold precious every inch of ground once trodden by Priam and Hecuba, by Hector and Andromache, by fickle Helen and chaste Theano.

I had recently devoted three days to the Palace at Knossos, where Evan's patient painstaking has preserved every detail as his constructive insight has set the whole labyrinth in order—a clean-cut masterpiece that scarcely needs a commentator—and, by contrast, I found Troy all the harder study, for a hot day. Even with Dörpfeld's many-colored plans in hand (unfortunately the ruins are not colored to match!) it is slow work spelling out this palimpsest of eleven cities—a far more real labyrinth than Evans's house of the Double Axe. And so, having gone about the walls and told the towers thereof—Priam's own walls and towers,—we stretch out on the grassy mound that may still cover the Scæan Gate and open the Book of Troy, that has happily fared better than Troy itself. As we turn the precious pages and recall point by point the old, old story, testing the picture by the outspread scene, the doctrine of an Aeolian Homer grows upon us. The poet knew this scene by heart—why not himself of the migration, doubtless by way of Aeolis Lesbos, which turned the Troad into Aeolian not so long after the fall of Troy? Does not Aeolian Kyme lead all the rest in the hackneyed epigram:

"Seven cities claimed great Homer, dead,
Thru which the living Homer begged his
bread." *

* Namely, Kyme, Smyrna, Chios, Kolophon, Pylos, Argos, Athens.

Whatever this butchered hillock may conceal or reveal, it is the poet's own scene feature by feature that our *τειχοσκοπία* brings out. How clear the outer landmarks: to north looms the bold peak of Samothrace, to south many-fountained Ida lifts its crown of snow. Both command Troy, as Troy commands them both; and the poet could not but post his Poseidon on the one lookout and seat Father Zeus on the other, each the rearward of his chosen people. Indeed, old tradition must have already given the brother gods these opposing seats; at least it was as inevitable for the Trojan to seat his Zeus on snowy Ida as for the Hellene to place his own upon Olympus. That Ida is only an out-station, so to speak, of the Olympian, may be charged to the poet's Hellenic bias. Inside Samothrace and near enough to afford a handy exchange (captives against wine) for the raiding Achaians, stretches the long blue wave-line of Imbros; and further down lies tiny Tenedos, one of whose sons appears upon the scene in time to read to us slowly, but clearly, some great lines of the Book. Even from Nestor's quarters, fair-tressed Hekamede the while she mixed that mess of Pramnian wine for her war-worn master and wounded Machaon and served it in the old man's Dove Cup—even Hekamede had ever under her eyes the long low line of her native Tenedos whence Achilles on one of his raids had carried her away captive and the Achaians had awarded her to the Gerenian knight—the first trained nurse in history! Of the nearer scene—the level beach, stretching from headland to headland, and forming a natural camp that no land-force could flank; of the Scamander and Simois, no longer uniting their streams but finding each his own way to the sea; of the flowery plain where once a thousand camp fires gleamed—suffice it now to say that it is all in the Book. If *the oak* before the Scæan Gate is missing, it has left uncounted scions; for the Troad is today one vast oak park, orchard upon orchard of wide-spreading valonias laden with the great long acorns whose tannic husk is the staple wealth of Troy, as it is of Keos. In their grateful shade—and three of them still shade as many intact points within the walls of

Troy—one remembers that the oak (this same acorn-bearing *φηγός*) is Homer's tree. It is under an oak that Homer's "lad and lassie, lass and laddie hold their tryst," as Theocritus' swains seek the whispering pine. And does not the wild fig tree still flourish under these walls, while the tamarisk is the only living thing, unless it be the tortoise, in the pits of the Burnt City?

But the midday sun of May beats hot

Again the Scaean Gates open, and out of the desperate fray a warrior enters—Hector, with his nodding crest and huge shield smeared with blood. Straight up to the ample palace that crowns the citadel he fares, and our hearts follow him thru scenes unmatched in song or story: that greeting of the queenly mother; that chiding of craven Paris; that high-bred, tender courtesy to guilty Helen. And then the same way back adown the

View from East Tower of Troy.

on windy Ilios, and our eyes weary of their watch. The actual prospect fades and again Troy *is*—the poet's Troy, with its god-built walls and holy fanes and palaces of polished stone. To this tower by the Scaean Gate, where the old king and his aged courtiers sit overlooking the embattled plain, and, like so many crickets from the hedge, send forth the lily voice, there comes robed in glistening white—ay, swathed in nectar—the fairest of womankind. How the old hearts throb at sight of the beautiful sinner, and what presentations at court are these!

well-built streets, lo! our hero hastens hither for the meeting and the parting at these gates. O Wife of Troy—Wife forever peerless among women—robbed by Achilles' ruthless spear of father, mother and seven brethren, yet not all forlorn:

“Εκτορ, ἀτὰρ σύ μοι ἐββί πατήρ καὶ
πότνια μήτηρ
ἦδὲ κασίγνητος, σύ δέ μοι θαλερός
παράκοιτις.” *

* But, Hector, thou art to me father and queenly mother,
And brother, too—thou art my goodly spouse.

O Babe of Troy, recoiling from the
bronze-mailed sire, till in blessed relief
to the strain upon our hearts

ὅτι δὲ γέλασσε παῖδ' ὅτε φίλος καὶ πότνια
μήτηρ

and Hector doffs his plumed helmet in
the dust to kiss and dandle his child.

And now the Man of Troy fares forth
to bear the battle's brunt again, while at
his behest Hecuba and the dames of Troy
wend their way to Athene's temple there
at the top of the town, bearing that most
precious robe from Sidonian looms, which
Theano lays upon the goddess's knees
with the prayer that even Pallas must
deny.

And so once more the Scæan Gates
swing wide and a mournful cortege en-
ters. It is Hector's last home-coming,
for grim Achilles has softened to the suit
of the father who had the heart to do
what never man on earth had done be-
fore—to lift to his lips the hand of the
slayer of his son; and now aged Priam
brings the ransomed body back, while all
Troy throngs these gates to meet him.
We hear Cassandra's cry from this
tower; we hear the death wails from the
fair halls whose light has gone out.

We see white-armed Andromache
clasping in her arms the head of man-
slaying Hector as she begins the lamenta-
tion:

"Husband, from life early thou has perished,
and me widowed
Thou leavest in the halls, and our babe is still
so young."

Oh, the pathos of that tribute that has
cost her all in all—in a lost cause, too—
and left her without one last hand-clasp,
one parting word to be remembered al-
ways, night and day, with streaming
tears! And now Hecuba takes up the
lament in a triumphant note: for Hector
was dear to the gods in life and in death;
after all the shameless dragging in the
dust, thanks to their care, he lies dewy
fresh as one whom Apollo with his pain-
less shafts has slain.

And last of all we hear poor Helen's
voice as she mourns the only soul in Troy
save old Priam who has never given her
one harsh word. How unerringly the
three Women of Troy touch the three
keynotes of the Man of Troy—valor,
piety, gentleness—and give us a portrait

that no tale of chivalry shall ever out-
shine!

"And so they went about the funeral of Hec-
tor tamer of horses,"

and the Book and the dream is done.

We have taken Troy as Homer took it
—not with spear or spade or critic's
cleaver, but with fancy free; and the sun-
set drive over the hills and through the
oak woods back to Thymbra Farm
rounds out our day of days. Not quite
so, indeed; for our good host waits to
show me old Thymbra—Homer's Thym-
bra, toward which lay Rhesus's camp
when Odysseus and Diomed raided it by
night and drove off those snow-white,
wind-swift steeds; Thymbra, where by
Apollo's temple (as later story tells) the
shaft of Paris pierced Achilles's heel.
Through the ancient graveyard, now one
wide wheat-field, we pick our steps as
Mr. Calvert points out here and there the
great broken *pithoi* wherein the old
Thymbræans, after garnering corn all
their lives, used to garner themselves in
death. I think this must have been the ear-
liest find of urn-burial on a great scale;
for some two hundred tombs, all of this
type, have been opened here, and their
yield of votive vases, now arranged in
the Calvert farm-house, would enrich any
museum. But *the* landmark of old
Thymbra, now Thymbra Farm, is the
mound opened forty years ago by Frank
Calvert and identified by him as the
Tomb of the Trojans. It will be remem-
bered that Schliemann found no Royal
Sepulchre at Troy to match either the
shaft-graves or the bee-hive tombs at
Mycenæ, as Evans has found none that
deserves the names at Knossos. But
here is a great tumulus covering one
continuous stratum of solid ashes six
feet deep. May it not be here the
Trojan ox-carts and mule-wains for nine
days long drew wood untold to build
Hector's pyre? Remember the twelve
days' truce, remember the encampment of
the Trojan allies toward Thymbra—thus
affording double safeguard—and the as-
sumption becomes at least credible.

Here above the fair flowing Thym-
brius, fringed with noble willows and
vocal with the nightingale, the Man of
Troy should sleep well. Certainly, in
all the rich domain of Priam there was
no serener vale than this; and here if

anywhere the Poet of Troy might have studied his "seasons" for the Great Shield. On the fat glebe, as we rode to Troy this morning, we saw many plowmen turning their teams as they drove this way and that—ox teams with wide yokes that keep the cattle eight or ten feet apart drawing plows as primitive as Hesiod's own—all hastening to come to the end of the deep

of the Shield rages like a forest fire in the mountains after a long drought (far too common a scene in Greek lands to-day), while his divine steeds trample the shields and bodies of the slain as broad-browed oxen tread barley in a threshing floor; and Mr. Calvert tells me that all the grain grown on this great farm is still threshed out by the trampling hoof.

Thymbra Farm.

fallow, albeit no one appears at the furrow's end to offer the cup of honey-sweet wine. And are we not even now tramping over the *τέμενος βαδυληιογ*, the wide wheat-field, almost ripe for the reapers with their keen sickles, and the binders and the sheaf-gathering lads, with many an oak tree under which the henchman shall presently dress the barbecue for the master as he stands by the swath leaning on his staff and rejoicing in the harvest, while the women make ready the barley porridge for the hands.

The Shield, indeed, has no picture of the threshing-floor, tho the Man

As we take our leave of hospitable Thymbra—

τῷ νῦν σοὶ μὲν ἐγὼ ξείνος φίλος Ἄργει
μέσσω
εἰμὶ, σὺ δ' ἐν Λυκίῃ, ὅτε κεν τῶν δῆμον
ἴκωμαι—

the colony of storks (thirty strong) nesting on the roofs of the farmstead suggests more than one fine simile for a poet's repertoire: was the long-legged bird, like the huge hump-backed beast that stands waiting for his burden in the courtyard, alien to Homer's Troad?

Be that as it may, our morning drive back to Troy is made memorable by a sign from Zeus, that quite trans-

ported us; there on our right toward many-fountained Ida floated in the blue a great eagle, in full view for half an hour; and when, after once more climbing the Citadel, we set out across the plain for the Achaian Camp, that same eagle or his fellow again floated on our right. We were following in the wake of Priam on that mournful mission, and without Priam's prayer Heaven's free grace had granted us Priam's sign:

"Father Zeus," he said, . . . "send your swift messenger upon my right hand, the bird of omen which is dearest to thee among birds, and his strength is mightiest, that I may see him with my eyes and trusting him go forth to the ships of the Achaians." The prayer is heard, and Zeus sends forth a black eagle, with spread of wing wide as the door of a rich man's high-roofed chamber, flying over the city on their right; "and when they saw him they were glad and their hearts were comforted within them."

Happy portent as we fared over the plain now clothed with flocks as once it blazed with camp-fires or groaned with the toil and moil of war. We forded the Scamander and the Simois, and the Battle of the River seemed just a little overdone, till we recalled Mr. Calvert's talk, on the banks of the Thymbrius, of the wild winter torrent sweeping great mountain oaks in its course. It was a winter battle, then, or fought when the spring freshet floods the plain; and when Xanthos and Simois join their forces Achilles has need of help from above. And so the god who forged the Armor descends to set the river on fire; he burns the elms, the willows, and the tamarisks, the lotus also, and the rushes and the marsh-grass that grew abundantly on Scamander's banks, as it grows today—indeed, every item is checked off in our three days' journal of the Troad.

We had hoped to drive straight to the right wing of the Achaian Camp, where Achilles and the Myrmidons were posted, and thence follow the shore of the many-murmuring sea to Ajax's station on the left; but the ground is too marshy for wheels, and we could drive only to the barrow on the Greek left, where (tradition says) poor Ajax rests. The mound

offers a commanding view of the camp and the plain, tho Troy itself is shut off by the near projection of Kallikolone, whereon Ares and Apollo with their Olympian partisans take post before the Battle of the Gods. 'Tis a peaceful scene today, with no life in the nearer view but a lone fisherman wading inshore and a shepherd with his little flock at the water's edge; but about the Achaian center, where Agamemnon's quarters must have been, frowns a Turkish fortress, facing its fellow on the opposite Chersonese, while between them ride some Turkish guard-ships—the wardens of the Hellespont. From the Tumulus I stroll down over plow-land shaded by olive and oak, and follow the sedgy Simois to its mouth to pace the sands once paced by Chryses in his sorrow and by Achilles in his rage and grief. But what is a morning hour, ἐπὶ θινὶ πολυφλοίσβοιο θαλάσσης! It is all in the Book and in the heart of him who loves the Book; and I charge him who would take Troy aright to begin his pilgrimage where ours must end. Either let him land at the *Scala* below the Αἰαντεῖον, where Dörpfeld with one hundred and fifty pilgrims from the Archeological Congress put in the other day, or let him take the road that turns seaward soon after passing Renkioi. He will find it as we do, on our return, a delightful drive or walk, shaded with noble oaks, fragrant with white myrtle bloom, and watered by the sweetest springs that ever welled up from the rock. The Turk is a water-drinker, and, with all his sins, he has many a wayside fountain to his credit; and Ida's own epithet holds good of the Troad—it is a land abounding in springs. If the Achaians drew water from such sources as our Elm Tree fountain above the spot where Ajax sleeps, they had something better than Pramnian wine or the vintage of Lemnos to quench their thirst. Let our pilgrim refresh himself there, climb the mound and (time serving) Kallikolone, too, and then walk, wade or swim, for he must clear two river mouths, to that other barrow where we would fain believe Achilles and Patroclus sleep. So he will have traversed the camp of the Achaians and be ready to take Troy, as they took it, from the sea.

JANE MURRAY'S THANKSGIVING

BY REBECCA HARDING DAVIS

IT was late in October and the Woman's Academy of Starboro was waking from its Summer's doze, and making ready for the Winter's work. The Academy, being a feeder for a great Woman's College, stood, so its prospectus declared, "in the van of the Movement for the Highest Development of Woman." Even the gardeners, who were taking up the dead leaves on the great lawns which sloped from the pillared porches to the bay, and the scrubbers, flooding the classrooms, their skirts pinned up and their heads swathed in dusty cheesecloth, worked as if they knew the tremendous importance of this building to the world's progress.

Miss Clemens, the Principal, gave them a stately nod of approval. She knew that they would not work so hard in an ordinary house. "Even these poor shreds of womanhood are driven by the Zeit-Geist upward—upward!" She repeated the word aloud. She always felt that the spirit of a great reformer was on fire within her gaunt, tall body.

She went round the veranda to find the painters, who should have been at work days ago, and observed that the windows of the apartment occupied by the Professor of Literature were open. She stopped, catching her breath with a look of annoyance.

"Has Professor Murray arrived?" she asked a passing scrubber.

"If you mean Mrs. Jenny Murray, she come here dâys ago. She's gettin' her rooms ready for school. They'll be as nate as two pins by tonight."

The Principal walked on, uncertainly, forgetting the delinquent painters. Of course, the Irish woman would take part with Mrs. Murray! That woman always had a singular attraction for the lower classes. All the servants treated her as

if she were the head of the school! She sat down on a bench, digging holes in the sward with her umbrella. She had meant to write to Professor Murray that night a letter conveying certain unpleasant tidings. But as she was here, she must give her the information at once. The Principal was seriously annoyed. Not because her message would be as a sentence of death to the older woman. She had not imagination enough to enter into the pain of any other human being than herself. But she knew that she should have given the information months ago.

"I shall be criticised because I did not tell her in the Spring!" she said. Trustees, parents, all the other dull folk with whom the world was filled were always criticising her! The water stood in her pale eyes at the thought of how little she was appreciated.

At that moment Jane Murray put the last book into its shelf, and looked around, smiling, at her little apartment. How homelike and tranquil her old rooms were. The very place, she thought, for a young girl to first hear the truths which the thinkers of the world had brought into it.

For to this little teacher the study of Literature was an actual daily companionship with the leaders of human thought. Her girls had plodded with Cicero to his farm, and loitered thru the muddy lanes of Stratford with Shakespeare; they had been barred with Savonarola into the cell at St. Mark's, and hated as fiercely as he did the mob outside; they had strolled on the Strand with Lamb and Dickens and Thackeray, and loved with them its old shops and homes and ways.

When Jane Murray's husband and baby died, leaving her alone in the

world, she had slowly taken these great living folk in books into her life, making them her friends and companions. Then she made them the friends and companions of her scholars. She had begun with a class which soon grew into a school. An idea went abroad that she gave to her pupils a hungry desire to learn. Besides, she had a curious charm of manner and speech, and anxious parents sent their daughters to her—as Northern girls now are sent to certain schools in Virginia and Maryland—that they might be trained, not so much into scholars as gentlewomen.

When the founders of the present Academy wished to establish it at Starboro, they found this prosperous, old-fashioned school already there, and proposed to Mrs. Murray that they should take it, enlarge and rechristen it (tho in fact Jane's school had no name), giving her charge of the Department of Literature. She was greatly flattered and pleased, and promptly accepted the offer. Some of her friends whispered that the good-will of the school should have been bought for a certain sum in cash. But Jane Murray seldom considered sums in cash. She hardly noticed that her salary was small. It was all that she needed for her board and clothes. For nine years now she had been busy bringing raw, well-meaning farmer's daughters into the presence of the great thinkers and seers of all ages, giving to the dullest girl a belief that she, too, could gain some help from them in her long journey.

When Mrs. Murray came up to her window and saw Miss Clemens' lean figure approaching, she shrugged her shoulders, and drew back. Secretly she considered the Principal a bore, and seldom wasted time with her. The next moment a strange figure on horseback came thru the gate, and Jane drew still farther out of sight. That was Maria Price. How big and loud she had been, even as a girl, when she took the course in Literature, and called Scott a vamping old humbug, and threw Dante down, declaring that American girls would do better to study the ins and outs of a Presidential election rather than the hell and heaven of a crazy Italian. She had gone into all sorts of public work,

now that she had come into her money. She wore a coat and trousers of Khaki, and sat on the horse like a man. Jane, when she saw that, shivered and turned her back.

Maria, at that moment, alighted and was talking to Miss Clemens. She was a trustee of the Academy, and one of its largest stockholders.

"School opens next week, and you have not yet told her she is to go!" she exclaimed.

Miss Clemens lost color. "That is all right! I will attend to that duty in season. I have provided her successor."

"Successor? I should say so! The girls must have no more of such fancy training; they must go thru the regular textbooks to make ready for the college exams. I tried them last spring on a page of dates—births and deaths of English writers—and they all flunked by a dozen years. On which Mrs. Murray remarked: 'It is not as important that the girls should know when these men lived as why they lived.' But what about her salary? What provision has she?"

"Oh, no doubt she has saved plenty of money. What expenses had she? A widow with not a human being of her kin."

"What's that? No kin? She's not young, either. Nigh to seventy, I should say." Maria struck her yellow trousers with her whip. "Well, you can tell her she's got to go. I'm off. I don't like the job," she said, jumping into the saddle.

Even Miss Clemens felt an uneasy qualm of pity as she sat in Mrs. Murray's pretty room ready for her task. What if the woman had not saved any money? Why were these unpleasant jobs in life always laid on her?

She bowed and smiled, however, as she delivered her message, and was pleased at her own fluency. But Mrs. Murray was unusually dull. She rose uncertainly, staring at the other woman.

"I don't understand. I am to give up my school?" she said.

"Oh, really! Your school! We may as well face facts, my dear madam. You are only a teacher here. The trustees consider that another system of instruction would be better for the school—questions and answers learned by rote

from text-books. In fact, we have secured the services of Professor Johns in your place. He is himself, as you know, a well-known author."

"No, I never wrote anything," said Jane with a dreary laugh. Her eyes wandered over the class-room, the cases of old books, the dainty little chamber with its easy chair and wood fire on the hearth.

"You mean—that I am to go away from here?"

"Of course. This wing is the Department of Literature, and Professor Johns——" Miss Clemens rose with an air of finality. "Be assured, madam, you will carry with you the best wishes of the Trustees and Faculty. I hope you have made provision for a comfortable old age?" she added, with a curious glimmer in her light eyes.

But Jane had come to herself now. It never had been her habit to make comrades of strangers.

"I have no reason to dread the future," she said, smiling. There always was something in the little woman's carriage of her head, with its rolls of white hair, and the gleam in her dark blue eyes, which made Miss Clemens feel dull and awkward.

"I am glad you are provided for," she said; "you could not expect to find any position elsewhere. The modern custom of discharging all employees at seventy obtains with women as with men; no chance for them. Too bad, but so it is!" Then she bowed herself out with a smile.

Jane shut the door and went back into the room, stooping to pick up a roll of paper which she had dropped. It was her lecture to beginners on folk-lore, that first groping of the human mind for enduring expression. She opened it, and then suddenly let it fall.

"Why, I shall not use it!" she cried. "I never shall use it again! I am not to teach anybody any more! Not my girls! What does it mean? I am nothing—nothing in the world!"

She sat for a long time, her hands over her eyes. An hour ago she had power over many human lives. She thought she had a great work to do. Now her hands were empty. She was thrown out useless into the highway, and

her work was given to a cheap, tawdry pretender.

She turned, shivering, to stir the fire, and then stopped.

"I have no right here! Professor Johns—— I have no home," she said, with a queer laugh. "I told her I had no reason to dread the future. I had some dull notion that God would take care of me."

Some sudden thought made her turn to her desk and take out her pocket-book.

"Ten dollars and a half," she said, staring out into the gathering twilight, "and that is all, every cent I have! There is not more coming anywhere. That is all I've brought out of my work of seventy years!"

Just then she saw Miss Clemens driving out of the gate in her new victoria, the coachman in livery.

"I've done better work than she in the world," she muttered.

And then Jane Murray, as most of us have done some time in life, when we were worsted or tortured, called God to account. Had this dumb, unseen Force that put her here no sense of pity or justice? If men were cruel, why did He not interfere? Was He blind or deaf?

She cried out to the gray darkness overhead:

"I have worked hard for seventy years, and my hands are empty! Is that right? Is that just?"

But there was no answer. •

Jane's ten dollars took her to Plowden. Plowden was the old Murray farm on the Shenandoah. They had sold it all but two acres of stony land and the old farmhouse, which was a wreck. Jane had owned it, but eight years ago, when her Cousin Polly Vance's husband had a stroke, Jane had put them into it. It had at least a roof to cover them. Her salary went down to Plowden regularly until Jim Vance died, and Polly sent it back, declaring she "could fend for herself." A year later, she bought the old place from Jane.

Now, in her extremity, Mrs. Murray remembered the old shanty and Polly's kind face, and betook herself to them. Two days had passed since she left the school. They seemed like a waste of years. One reason for this was that

whenever she knelt, from habit, at night, she quickly scrambled to her feet again.

"I have nothing to say to Him!" she would say. "He has forgotten me."

When she reached the little station, there was Polly with a stout mare and a buckboard, her face red and beaming. She eyed Jane's boxes of books.

"Don't tell me you've given up the school, and have come here to stay! I can't believe there is such luck ahead for me!" she gasped. "And me just going to advertise! to scour the country for a partner."

"I have no money for any business," said Jane, and tried to tell her story.

"It's not money I want," interrupted Polly. "Its brains, and a woman who will take an interest. To get Jane Murray! Heavens! What luck! What a Thanksgiving we will have next week!"

"I—keep Thanksgiving?" muttered Jane.

Polly's keen, gray eyes flashed on her, and then she flicked the old mare.

"Get on, Coley! Well, I say, what luck!" she muttered again.

The road wound thru the hills, gorgeous in their fall robes of crimson and gold; below was the Shenandoah roaring over its rocky bed—always the most picturesque of American rivers.

"There's your farm!" said Polly, as they came thru a gap. The old farmhouse, solid and comfortable, stood on a hill surrounded by orchards, gardens and clusters of bee-hives. Its windows shone with welcome.

"What does this mean?" said Jane. "How have you done it?"

"Bees and chickens, child. Nothing else. I began with one hive and a single clutch of eggs. But they were the best! My trade is very good. But the farm and house are yours, Jane. I have only borrowed them from you. You gave us a roof to cover us when we were starving. You gave him a home to die in. Now——"

She choked, and neither woman spoke until they alighted at the porch.

She led Jane into the very room to which she had come as a bride. There was the same old furniture, the fire burning on the hearth, and on the walls the photographs of the "Ecce Homo" and Tintoretto's "Descent from the Cross,"

which Miss Clemens had refused to allow Jane to take from the walls of her room. Had Polly, then, known all about it? Had she met and worsted Miss Clemens? Had she made ready this home for life for her?

In a few days Jane had settled down to work at Polly's books. They were in dire confusion. She could earn her living here fairly, she told herself. She did not want to be a beggar. When the day's work was done the two old women, who had been young together, had a thousand things to talk over as they sipped their tea. Jane was startled to find that these gossips were more interesting to her now than were even Dante or Lamb.

About a mile from the farmhouse there was a group of cottages, called a Rest-Home, owned by a charitable organization in the city. They were filled with tired women, worn out shop girls, starving seamstresses, etc. One day Jane received a letter from Maria Price, who was President of the Board of Managers, asking her to visit the Home three times a week, to read to the inmates, or talk to them, to give them some knowledge of books and of the help and comfort to be gained from them. A liberal salary was to be given for the work.

Jane went at once to the Home, and met Maria, who received her with marked deference. Jane was only coldly civil, tho the other woman wore skirts now, and not yellow trousers.

"You will take the work?" she said. "I thought it would attract you. The minds of these women need new, stirring ideas of life as much as their starving bodies need bread. Nobody can give it to them so well as you."

"Yes," said Jane, "I will take it. But no salary. It is enough for me to have my own work in the world again to do."

Maria was silent a moment.

"As you choose. Whatever will make you happiest while you live."

Jane suddenly rose and came up to her.

"Why did you give me this thing?" she said. "You took my work away from me——"

Maria, too, rose.

"Yes, there's no time to train the modern young woman by your dawdling methods, Mrs. Murray. But you—I

want your old age to be warm and full. Do you remember when I was an ugly, coarse child, years ago, one day I fought with some boys and was thrown into the mud and hurt, how you took me to your room, and bathed and put me in your own bed? You forget? I don't, then. Good-bye. We needn't talk things over. We understand it is all right between us."

In a day or two letters began to come to Jane, letters from all sorts and conditions of women—the scholars whom she had taught and helped by little and great kindnesses. They had heard of her dismissal, and they sent gifts to her—sometimes, even, money, but always the tenderest love and sympathy. She sent the money back. But the love and tenderness stayed with her and slowly made the days warmer and the world brighter. Never had the woods worn such gorgeous splendor. Never was a home so cozy and pleasant as this, or a comrade so considerate as Polly.

On Thanksgiving morning a light flutter of snow fell on the woods and carpet of red leaves below. Jane stood at her window, looking into the bright, silent Heaven beyond.

Always silent. He was dumb, no matter how cruel life was down here, no matter how we cried to Him, He did not answer.

But as she stood there, warmed by the splendor of the day without and by the fire and homely comfort of the room within, a thought suddenly stirred her heart.

Had He not answered?

There had been a wrench and agony which drove her to Him. She had been forced to see how near she was to the end. She had been forced to consider the few steps that were between her and the end.

But she had been left her own work to do until it came. Had He done this? Was it He who had sent her from every side love and tenderness because of the poor little kindnesses which she had been able to show in the years which were gone?

Not money, not power, but a great content now filled her life.

On that Thanksgiving Day, the soul of the poor little woman abased itself as it never had done before. For she knew that she had spoken to Him and He had answered.

PHILADELPHIA, PA.

A Thanksgiving

BY CLINTON SCOLLARD

That Thy white peace, O gracious Lord,
Above us keeps a sleepless ward;
That Plenty thru its golden gourd
Pours from its immemorial hoard;

That ours, the birthright of the free,
Is still before Thy sight adored,
Thanksgiving be!

For our forbears who fought and fell,
Or strove, unmurmuring, long and well—
Exemplars who held honor more
Than Eldorado's fabled ore—

For every precious memory,
For all the future's sun-bright store,
Thanksgiving be!

That there is yet a righteous trust
In Duty's often stern, "Thou Must";
That, tho the mists of Doubt prevail,
Hope's steadfast beacon does not pale;

That there is living Charity,
And Faith—beyond Death's darkmost veil—
Thanksgiving be!

CLINTON, N. Y.

The New York Jew Today

BY CLIFTON H. LEVY

[This article is particularly timely as this Thanksgiving the Jews of this country celebrate the two hundred and fiftieth anniversary of their settlement on Manhattan Island. Clifton Harby Levy was born in 1867, and graduated from the Hebrew Union College, Cincinnati, as Rabbi, in 1890. He organized the Baron de Hirsch classes for immigrants in New York City, remained in the pulpit for five years, when he began to write for magazines and newspapers on religious, archeological and scientific subjects. He has contributed to the *Review of Reviews*, *INDEPENDENT*, *Outlook*, *McClure's*, and other magazines as well as New York papers.—EDITOR.]

THE Jews in all the United States number not more than a million and a half. As New York is the chief port of entry of the country, and at the same time the metropolis, fully one-half of all these Jews are living permanently in New York, so that a study of the Jews in that city is a study of half of all the American Jews.

The celebration of the two hundred and fiftieth anniversary of the settlement of Jews on Manhattan Island is to be held on Thanksgiving Day of this year, altho strictly speaking it was 251 years in September since the first little colony fled to New Amsterdam from persecution in Brazil. From that day in

September, 1654, the Jews have lived uninterruptedly in what afterward became New York City, and now number at least 750,000 in Greater New York. This large element, constituting 20 per cent. of the total population, is well worthy of some study to those who would understand the controlling influences at work upon this great body politic, and the various forces there operative.

There is hardly any kind of business or trade in which they will not be found, altho driven into some special lines by the restrictions which have been applied to them for generations in Europe. The manufacture of clothing of all descriptions is one of these pre-empted lines

Stadt House, New York. Seat of Government when Jews First Landed.

forced upon the Jews in the Old World, and according to the census of 1900 there were 8,266 establishments in New York, with a capital of \$78,387,849, employing 90,950 workers of both sexes, to produce manufactures amounting to \$239,879,414 per annum. These figures are most interesting when it is noted that twenty years previously all of the capital in the United States employed in the clothing industry amounted to but \$88,000,000. Thus it appears that the concentration of so many operatives in New York has stimulated production in this line to large proportions. But there is another side to these figures: If only 90,950 persons were employed in the clothing industry, and some of these are Italians, then there must be a large number of Jewish workmen employed in other work; which is true. There are Jewish plumbers, carpenters, masons, glaziers—in fact, in no trade or profession can they be said to be altogether wanting.

Even the profession of the millionaire, to go to the other extreme of the economic field, claims some Jews, tho contrary to the popular idea there are not so many wealthy Jews in proportion to the

population as there are non-Jews. It is said that there are four thousand millionaires in New York, and as the Jews form 20 per cent. of the population, there should be eight hundred Jewish millionaires. The fact is that there are not two hundred, and even these are only moderate millionaires, counting a few millions rather than the tens and hundreds of millions in the hands of the Rockefellers and Morgans. A glance at these Jewish millionaires is interesting as an indication of the way in which large fortunes are accumulated. Some few of these are lawyers, but in every instance they are corporation attorneys, and have gained these fortunes within the last few years of extraordinary corporate development.

Another class of Jewish millionaires are those who have developed the department store idea. The department store is an evolution, an expansion and extension of the "country store," where everything is to be found. It was a gradual process of expansion of departments which led to the complete and all comprehensive store of our day, and the Jewish merchant was quick to see the

Joseph Silverman,
Rabbi of Temple Emanu-El.

possibilities of success in this wholesale method of doing retail business, so that now probably ninety per cent. of the business done in New York by large and small department stores is in Jewish hands. It marks a great step forward in the conduct of the retail business, for by its concentration and economy both in buying and selling the consumer is benefited, and the competition is so keen that the margin of profit is kept down to a fair level. It is true that small dealers are forced out of business or become clerks, but the large mass of consumers is certainly benefited.

Several large fortunes have been accumulated by the development of copper mines and silver mines, thus bringing considerable capital to New York and employing it productively in the West, whence it returns by the endless chain of investment and healthful production.

There are probably two leading firms of Jewish connection which have been identified with the combination of railways, the underwriting of bond issues, and enterprises of this kind, but the

larger number of the Jewish bankers have been and are concerned principally with the international financial operations for which generations of financial training have so well fitted them. At first forced to become the world's financial agents, the Jews now freely form the principal international financial arteries.

It may surprise some persons to learn that altho a large part of the banking

Felix Adler,
Of the Society of Ethical Culture.

business of New York, especially that having to do with other countries, is in Jewish hands, only ten per cent. of the members of the New York Stock Exchange are Jews, and most of the domestic banking business is in other hands than theirs.

The fact that the Jew is a citizen of the world, that he has been driven from land to land, has also had some effect in directing his energies into other special lines than finance. Jewels were easily concealed and easily transported from place to place, so it is not surprising to learn that about seventy-five per cent. of the jobbing of jewelry is in the hands of the Jews.

On account of the close connections existing with the Jews of the foreign

lands from which so many have lately emigrated, a considerable part of the import and export trade is handled by Jews. At least eighty-five per cent. of the business in fancy goods and notions is done by them; ninety per cent. of the feather business and ninety-five per cent. of the fur industry. It is an odd incident, and a matter of record, that the original Astor was taught the fur business by a Jew, Hayman Levy, who, according to his books, paid John Jacob Astor one dollar a day for beating furs.

Laces are largely imported, so it is not surprising that the Jews handle seventy-five per cent. of these delicate wares and fifty per cent. of the embroideries consumed. Millinery is almost entirely in their control, and ninety per cent. of

trolled by Jewish managers, both within and outside of the so-called "Trust." Possibly half of the actors are of Jewish stock, their lively imagination and ready adaptiveness fitting them well for this work. Jews, too, are the chief popular song writers and publishers, and much of the music used on the stage is composed by Jews, tho few have as yet composed any very great operas or oratorios, at least in America.

As illustrators and artists the Jews are furnishing their full proportion, and as caricaturists they are doing more than their share, possibly because of the natural wit with which they are gifted. The contributions of New York Jews to permanent literature are not yet very great, altho the massive Jewish Encyclopedia has just been brought to a successful completion there, but this is really the work of Jewish scholarship the world over. In journalism the Jew has always been interested, and as both managers and writers the Jews of New York are not behind in this department.

The natural tendency of the Jew to adopt a profession is also demonstrated in the very large number of Jewish lawyers and physicians in New York. They have attained eminence in both profes-

David Belasco, Playwright.

the ladies' neckwear worn is made by them.

The Jews make seventy-five per cent. of the belts, ninety-eight per cent. of the bonnet frames, and eighty-five per cent. of the cigars, controlling ninety per cent. of the tobacco trade.

Possibly fifty per cent. of the distilling trade in New York is Jewish, but only five per cent. of the brewing interest.

Amusements are almost entirely con-

Heinrich Conried,
Manager of the Metropolitan Opera House.

sions, and there are just as many struggling young lawyers and doctors of Jewish origin as of non-Jewish stock.

The Jews are an intellectual race and education is highly regarded even by the poorest, who compel their children to attend the public schools, and make great sacrifices so that these children may secure the highest grade of education. As a result, at least half of the graduates of the high schools, the Normal College and College of the City of New York are Jewish boys and girls. It follows naturally therefrom that a very large proportion of the teachers in the public schools are Jews, and it is to a Jewish Superintendent of Education that the entire system of Public School Free Lectures is due.

Feeling the need of technical training for both sexes, schools designed to furnish this type of education to boys and girls have been founded thru private individuals.

In the field of philanthropy the Jew has not been slow to adopt the best modern methods. Time out of mind the Jew formed various societies and lodges for the care of the dependent living or dead, and the Hebrew charities of New York expend hundreds of thousands annually,

Samuel Untermeyer, Corporation Lawyer.

I. N. Seligman, Banker.

but along such lines as to avoid pauperization. It is claimed that in all the three-quarters of a million Jews in New York there are not more than a dozen regularly supported by the charities. There are a number of volunteer organizations co-operating with the United, and each acts in its own district, within proper limitations. The tremendous influx of hundreds of thousands of more or less friendless and helpless Russian and Rumanian Jews within the last twenty years has necessitated the organization of various semi-charitable societies designed to aid the immigrant in earning his own living. These loan societies, inns, and labor distribution bureaus have provided for thousands in safe and sane ways. Agricultural aid societies have helped to place many families on farms in New England and New Jersey, and the Baron de Hirsch Trust, endowed with millions by the late Baron, has been most useful.

The need for educating and Americanizing the immigrants was early recognized, and soon the great Educational Alliance Building was erected in the tenement district to aid in this work. Thru the day classes conducted there

Jacob Schiff, Banker.

thousands of the children have been prepared to enter the public schools, always recognized as the best Americanizing agency.

The clubs and cultural classes for the adults have gone far toward counteracting the evil tendencies of tenement life.

With this overwhelming influx of untrained young people pouring into the overcrowded districts of the lower East Side arose some social problems not yet disposed of. The immorality so easily learned has shown itself not only in the "cadet system," in pickpockets and petty thievery, but in the development of a certain number of desperate criminals unknown among the Jews before this time. The prevention of crime is being fought by means of moral education and the repressive penal methods applicable; but the hope of stoppage lies chiefly along the lines of moving the people out of the environment, and to this end the labor distribution bureaus are working. The sporadic outbursts of anarchism developed only in the beginning of the immigration before the people recognized fully the difference between government as such in Russia and the United States. All that remains of it is now manifested in the trade unions and Socialistic agitation of an inoffensive kind, coupled with considerable mental power.

One of the great problems twenty years ago was to get the immigrants out of the tenement districts, to which they naturally gravitated; but this problem solved itself as some of the people obtained a foothold, and today the immigrants have spread all over the city, settling in large numbers in the Borough of the Bronx.

It seems probable that the people themselves will also solve the problem of removal from New York to other cities or to the country, for the movement has already begun, and within the last three years one Removal Bureau alone has sent out of the city some thirty thousand persons. To give a concrete instance of the wide variety of pursuits followed by the immigrants a glance at the classification of some of them sent out lately is more than interesting. There were 56 bakers, 9 barbers, 145 blacksmiths, 17 bookbinders, 106 butchers, 1 box maker, 11 bricklayers, 6 brush makers, 40 cabinet makers, 282 carpenters, 5 cigar-makers, 1 cigaret maker, 63 clerks, 13 coopers, 3 druggists, 6 drivers, 8 electricians, 114 farmers, 7 furriers, 7 glaziers, 34 harness makers, 73 iron, brass and copper workers, 1,115 laborers, 108 locksmiths, 55 machinists, 4 masons, 191 operators, 87 painters and

Oscar Solomon Strauss,
Diplomat and American Member of Hague Court.

paperhangers, 40 peddlers, 1 photographer, 10 plumbers, 7 printers, 61 pressers, 224 shoe makers, 1 shirt maker, 339 tailors, 69 tanners, 15 teachers, 109 tin-smiths, 7 trunk makers, 18 upholsterers, 4 waiters, 13 watch makers, 29 weavers, 11 wood turners, 4 wood carvers.

In this way the congestion of the immigrants in New York is being relieved, scattering skilled workmen of all trades through the country, but in a systematic way, placing them directly in positions where they are at once self-supporting. The Agricultural Aid Society is also doing excellent work, taking those fitted for it to the farms of New England and New Jersey, the latter settlement, founded fourteen years ago, being now in a thriving independent position.

The development of philanthropic institutions during the past twenty years has been marvelous, and it had to be in order to keep pace with the demands of circumstances. During that period the single orphan asylum has been supplemented by three more large and efficient institutions; the single hospital, Mount Sinai, has been removed and rebuilt at a total cost of \$2,750,000, with an annual expense of more than \$300,000; and it too has been supplemented by other hospitals, one built and supported by the immigrant stock itself; by the Montefiore Home for Incurables, with its country sanitarium for consumptives, quite a number of whom have been produced by the crowded tenement life; and by shelters and homes for the aged.

The Clara de Hirsch Home for Working Girls, founded and endowed by the Baron's widow, has gone far toward smoothing the path of the laboring girls, and the Young Men's Hebrew Association, with its adjunct, the Young Women's Hebrew Association, have been of great assistance along cultural lines.

The directly religious work of the Jews is not easily covered by statistics, which are more or less misleading. It is true that in the religious census taken it appeared that a comparatively small number were directly connected with established synagogues and temples (as the places of worship of the Reformed wing are called), but it should not be forgotten that it is especially true of the immigrant Jews, orthodox as a rule, that the

home-life is bound up with religious ceremonies, and that on the holy days every hall in New York almost is used as a place of worship, and that there are numerous religious schools conducted by the sisterhoods of each of the large congregations. One brotherhood has been started for reaching the young men, and others will doubtless follow, so it is only fair to admit that the Jew recognizes his religious responsibilities not only for himself, but also for those who might otherwise become alienated from the religion. In order to have rabbis and teachers a Seminary has been founded and liberally endowed, so that the entire machinery for religious work has been perfected and is in constant operation.

On the other hand, the thoroly Americanized Jew in New York, subjected to the same distracting influences as his non-Jewish neighbor, is not to any marked degree more punctilious in attendance at religious services than his Christian friend, for human nature is the same in all.

From the social side the development of the Jew has kept pace with his material advancement. There are at least a half a dozen clubs, founded for social purposes chiefly. They are not like the other clubs of New York, for men only, but more like the German organizations of this kind—a meeting place for young men and women, where balls and dramatic entertainments are given. There are classes, sets and cliques in this society, as in all other organizations of the kind, and there is just the same desire to get into certain clubs and associate with certain people as there is in Christian social circles.

There is so much of this social life among the Jews, and the number is so large that without any special clannishness there is no necessity to go beyond Jewish circles for "Society," and as a result the number of intermarriages between Jew and Christian are very few.

In this society as a whole are all grades of culture and all types of character. Extremes do not meet socially here any more than in other society. But they do grow toward each other, as is the true American fashion.

The immigrant who landed in the United States with hardly enough to

gain him admission has in many instances, within fifteen or twenty years, accumulated a competency. The children whom he brought with him have become thoroly Americanized in manner, in thought, and it is difficult to distinguish them from the native American, so wonderful is their adaptability. They associate freely with the other Jews, intermarry, and are assimilated in a generation. This is the process in many instances.

All do not succeed so well, but most manage to make a fair living, and in all instances the children are given a thoro education, for mental training is almost a superstition with the Jew, ingrained now by the training of countless generations. As a rule the Jewish family life is pure and wholesome, for this, too, is an age-long heritage, and it is this home life which aids materially in the preservation of the body as a whole. If in ex-

ceptional cases some who have mixed freely with their neighbors have been too apt pupils in lightly regarding their family obligations, the ostracism with which they are visited acts as a powerful deterrent upon all others.

In all the 750,000 Jews there are rich and poor and well-to-do. There are brilliant and stupid and moderately intelligent. There are honest and criminal and those who keep on the safe side of the law. But as a rule the Jew is industrious, thrifty, intelligent, contributing at least his full share toward the moral, material and intellectual store of New York. Considering the difficulties under which this has been brought about, he is at least no worse than his neighbor, and need apologize to none for being there. Be this as it may, this is the New York Jew as he is, with his faults and his virtues, his mistakes and his achievements.

NEW YORK CITY.

A College Professor's Wife

[The author of the following autobiography lives with her husband and children in a famous college town of the Middle West. For obvious reasons she does not wish to have her name appear.—EDITOR.]

MANY of the people in our town think that we members of the college faculty dwell on Mount Parnassus; that we eat of the ambrosia of books and drink of the nectar of music and painting. No burdens of ordinary mortals come near us, no sordid struggles engage us—ours is a life of high ideals and beautiful thoughts. The color and making of the next ball-gown certainly never is discussed, but in place of it there is careful planning to see if a suit and a half for the boys may be gotten out of their father's old one. The latest fad in dinner-serving is unheard of, but we professors' wives do try to learn the most attractive way to prepare the family breakfast without the luxuries of coffee and meat.

An income of \$1,100 a year and four children and house rent, a taste for

books, art and music, and travel—and no struggles, think you?

My day begins at six o'clock the year round with giving or superintending cold baths for the four children and myself. Then there are backs to button and hair to comb, and it is easily quarter after seven, our breakfast hour, by the time all are ready.

Bertha, a student who earns her room and board with us during term time, prepares the breakfast of oatmeal and cocoa.

After the meal there are the Professor and two boys to start off to college and school, respectively. Each needs personal inspection—a loose button tightened, an application of the whisk-broom, or the tie retouched. Then the little girls come with me into the kitchen, and we wash and put away the breakfast dishes, scalding all the milk pails and pans and skimming the cream for the

butter. Then we make the beds and put upstairs in order. (Bertha cares for her own room.) The study and other living rooms come next, and when they are dusted and neat, it is time to prepare the vegetables for dinner.

It is while I am getting dinner that Ruth and Mary have their book-lessons. We do not care to have our children enter school before the third grade because of the class of children that attend our ward school. The two little girls use a wooden box for a desk, sitting on two lower ones, in a snug corner of the kitchen, where I can teach them as I peel potatoes, pare apples or move about the room mixing a pudding. It takes some time to prepare a meal for seven people, four of them hungry students. One thing that makes it harder is not having any water or sink in the house. By half after twelve the dinner is on the table, and I have spent a morning in careful planning, with quick, sure strokes to get all the work done, and yet have time to stop occasionally, as I have to, to teach the children. They come first, after all.

In winter the dinner consists of a cheap cut of meat, usually beef, that I grind up or steam tender and then cook in all sorts of ways to make a palatable variety; potatoes in various forms, frequently dried beans or peas, baked or boiled, from time to time relieved by parsnips, carrots, turnips, or maccaroni, rice and escalloped tomatoes, a large part of the latter being bread-crumbs. For dessert, clear fruit is too luxurious, so I prepare it with tapioca; batter pudding, corn-starch or bread crumbs in different puddings. I begrudge the time it takes to make these simple puddings, but we cannot afford an apple, orange or banana apiece per diem at winter prices.

During the summer we rarely buy meat, but eat the eggs from our own hens. We also have many fresh vegetables from our garden patch; but we can't touch even canned ones in winter, much less dream of fresh ones. The tomatoes used for escalloping in Winter are some I put up from our own garden.

The dinner over, Bertha takes charge of dining-room, kitchen and door-bell.

The Professor takes care of the children, and I have one quiet, restful hour alone, the only one in the twenty-four that I can call all mine. That is not always uninterrupted, as every mother knows. In that hour I have to make my simple toilet for the afternoon and take a nap. A cat-nap it is; but oh! it is so much needed, for housework tires me out. Perhaps if the muscles for housework had been developed in girlhood it would not wear on me so much. Then, best of all in my hour, I lie down on the bed and read for twenty minutes—sometimes a full half hour. I read—I devour rather—some rare morsel of rich, condensed thought-food, and I digest it later as I sew, enjoying it quietly, deeply.

From two-thirty until ten o'clock I sew, stopping at half-past five for a half-hour's walk with my husband and some of the children, followed by supper at six. If informal callers drop in during the afternoon, I continue sewing, they often bringing theirs with them.

I give half an hour of music to each of the children during the afternoon as I sew. Except for his half hour at the piano or violin, each child lives out of doors all afternoon, no matter what the weather, and a rosy, jolly little group they make. On my constitutional with James the children skip and dance around us as we walk out over the prairie toward the glorious West sky. Then comes the most pleasant meal of the day, supper. Then my husband's class work is over, and we are all hungry from the fresh air, and we have the fun of a foreign language. We have French and German suppers on alternate days, in conversation only, the bill of fare being good American cereals and bread and milk.

After supper, if it lacks seven o'clock, the little girls' bed time, we all gather around the piano and sing some simple songs in English, French and German, or I play while the children dance. The little dances they know I teach them on Saturday mornings, when Bertha takes some of my housework.

At seven, James carries a little girl upstairs on each shoulder and puts them to bed, a privilege he has made his own. In the meantime I have my talk with the boys. They tell their little confidences

more freely being both together, each one helping the other by loving suggestion. They are so unlike that each has a great admiration for the other. In half an hour they scamper upstairs and take possession of their father.

By eight o'clock my turn comes. James sits by me as I sew, and we talk alone together for the first time in the day. Sometimes he reads aloud to me, but at half after eight his evening's study begins. If my work is on a garment that does not need turning and shifting about so that I make no motions to divert his attention from his books, I sit silently by him sewing, sewing without a word, glad to be near my faithful, plodding man. When ten o'clock comes, I bid him good-night and go off to my little Ruth and Mary, leaving him still working. Sometimes a neighbor spends the evening with me, sewing or reading aloud. What a delight to be read to as I sew! Because I loved books and music too well, I hardly knew how to handle a needle before I was married. But the college days and study in Europe help the needle thru hard places now. All this sewing does not mean that I am an atom in a sweatshop system. It means that I am taking the only, the last way possible, to make ends meet on our salary and yet live with my children in their work and in their play. My husband's clothing and my winter under-woolens are all that we buy ready made. I make study jackets for James to save the wear on his sacque coat, and keep a piece of carpet in his study chair to save the trousers. Of course, all repairs, relinings and pressing on his clothing I attend to. My coats and dresses are my hardest task, harder even than the boys' suits. All of the children's clothing, both outer and undergarments, I alone make, many of them from the sound parts of their parents' clothing. Then there are carpets to mend, comfortables to make, and other household supplies to keep up. The regular weekly stocking darning and other mending for an active family of six is no small item.

Our student helper, Bertha, does her own ironing and bakes the bread twice a week. I frequently help her with the mid-week baking. She cooks breakfast and supper, washes the dinner and sup-

per dishes, and fills the lamps. On Friday afternoon and Saturday morning she gives me two extra hours each for sweeping. In exchange for these services she receives her board and room, well furnished and heated, and enters into the family life as one of us at meals and other times. Often I help her with her lessons during the evening.

One part of the week's work I hire done for me. That is the washing and as much of the ironing as can be crowded into the same day, subject to the discretion of our whimsical dusky Minerva. The rest of the ironing for the family falls to me.

The poorly built house adds to my difficulties as maid of all work. All of the water has to be carried into the house from the cistern pump, ten or fifteen feet from the kitchen doorsteps. There is no sink or waste pipe of any kind, so all the waste water has to be carried some distance from the house and thrown on the ground. When it is below zero those two things amount to hardships, almost, for a family of our size uses a good deal of water. We have no cellar, except a small excavation in the clay soil under our dining room. It is called a cyclone cellar, and might be used as such if we were not in as great danger of drowning—as it is utterly useless for anything but frogs. When we asked our landlord to have it drained he laughed, and answered that he did not think we needed any more piping than the nightly frog songs. That is all that came of it, except, perhaps, a doctor's bill or two, but other interesting features about the house have their part in these little notes, "For services rendered." Rain and snow and wind sift in around the door and window frames and thru the corners of the house, where we can often see light shining at the joint in the mop-board. Certainly they swell the fuel bill. The care of four stoves, three of them heating and one a cook stove, is no small matter. The boys help their father carry the coal from the barn, the only place to store it. Soft coal is bulky and dirty, but anthracite is far beyond our means here in the Middle West. The same strong arms bring in much of the water also.

We pay eighteen dollars (\$18) a

month for this poorly built, eight small-roomed house, its three lots and barn made of piano boxes and other odds and ends of lumber. We could not hope to rent a better built house, merely a larger one, for more money, unless we were willing to go over forty dollars. Families have come to live in our town faster than houses could be properly built, and it is hard on the man who has not capital enough to build for himself. The three lots that go with our leaky house are very useful, for they furnish us a garden of rich soil in Summer and a playground for children and chickens in Winter. The cow and the coal repose in our barn, and each has about equal space in its luxurious proportions. That cow is a big saving of money, but it adds to our labor, for we make our own butter, but we must have it to help those proverbial "ends." There is plenty of prairie south and east of us for pasturage.

Others of the faculty are trying to tie those flying *ends* too. Mrs. A—— does about what I do for her three little girls and gives piano lessons to the neighborhood besides. Mrs. B—— has her three year old boy and housework, including the washing, and tutors in mathematics and Latin five hours every day, four of the five hours coming after seven o'clock at night, when the little fellow is in bed. Mrs. C——, who has no children, writes book reviews and has charge of the Woman's and Children's Page in our paper. All of the wives of the faculty are busy women, trying each in her own way to add to her husband's pittance. Where the men are not full professors, that pittance is less than my husband's.

With all this straining to live comes a wish from the President and Trustees of the college that we mingle more in town society; that it will be a good advertisement for the college to be well represented everywhere. Who can afford the evening dress to go? Or the evening's sewing left undone? Who can return invitations? Who has the strength—and this is at the highest premium—who has the strength to spare? Not one of the wives of the Trustees who desire this has ever called on a professor's wife, much less done anything to bring the college people into her circle of acquaintances. We meet them at

the college receptions; they always express their interest in the college, and that is all.

The little social life we have is among ourselves almost entirely. We gather informally at a house for an hour and a half or so, chat awhile, then, perhaps, have an impromptu entertainment of music, or an account of a book lately read, a bit of a lecture on a topic of general interest; then light refreshments and home by ten o'clock, for the next day's hard work is before us all. There are college lectures, debates and entertainments that those of us who have few or no children attend; but the children mean spending no admission fees, however small. Of course, it would be a real benefit to the students as well as ourselves if we could keep in touch with these broadening influences; but it is in other ways we are forced to help them. It is expected that we subscribe to the football, baseball, glee club, Y. M. and Y. W. C. A., and other college student funds. To some of these we would volunteer to add as liberally as we could, but not to all, when we hardly are clothed warmly enough all Winter. Anyway, we do not like to have the sum we are expected to raise announced to us, with the request that we see that the vote passes in faculty-meeting. If the request, or demand rather, came from the student-body it could be resisted.

There is one way in which James and I rejoice to help the students. Whenever we treat ourselves to a roast of meat we share it with one or two self-supporting students. It is reward enough that they bring us their joy or suffering, even coming back after graduation to share their life-crises with us.

It has been suggested to us not to live in such and such a house because it is not in keeping with the dignity of our position (!). We are to entertain in such and such a way, for we have had the best advantages in social life that this country can boast (!). (I add the exclamation with respect to our superiors.) The discrepancy comes between the ideal and the actual possibilities of our salaries. We who have had comforts, even luxuries, do not avoid them now because we were satiate. True, our tastes and education make us companions

of the refined in easy circumstances, but our incomes are those of mechanics. The mechanic may be refined and have lofty ambitions, but he does not *need* travel, close contact with good libraries and large minds, an intimacy with the fine arts and the sciences to keep him ready to help those under him, as a professor does. It is enervating to work by one's self, going over the same ground every year, always alone, with but a new book or two on the subject. Oh! how I long that my husband may have the chance to study under somebody, with some one of his own or greater education and intelligence! If it were but for a Summer it would give him a new impetus. But how is this possible on our \$1,100 a year? This is just how it all goes:

Rent	\$216.00
Food (including fodder for cow in winter)	300.00
Clothing	125.00
Fuel and light.....	55.00
Hired help for washing (52 weeks at \$1.25)	65.00
Hired help for housecleaning (4 days at \$1.25).....	5.00
Magazines and books (including technical books for professor and school books for children).....	35.00
Church and college contributions.....	40.00
Life insurance and fire insurance on furniture	105.00
Doctor's and dentist's bills.....	20.00
Carfare, postage, etc.....	30.00
Household furnishings, tinware, garden implements, etc.....	40.00
Sundries (Christmas presents and other expenses larger than average)	64.00

Where does the possibility to travel and study elsewhere come in here? To get away from one's cow and vegetable patch must help to quicken a man's wits

in itself, to say nothing of our stultifying Summer heat.

It is because we with our needs and tastes are not receiving a living salary that there is a constantly changing element in the faculty, especially among young married men with no children. They consider their connection with our college temporary, taking it as a stepping-stone to larger institutions. They do us a real harm with their inexperience in teaching and their restlessness. An occasional one would not be so detrimental, but it is demoralizing for the students to change instructors in a study every few years, just as the former one begins to understand how to teach it. This spirit of self-interest is more noticeable in the science and music departments than others, it seems to me.

I overheard a conversation between James and Mr. E——, a Ph.D. from Halle, a while ago. They were standing in our little hallway when Mr. E—— asked James for a letter of recommendation to a teachers' agency.

"Why do you want one?" James asked.

"Stay here! I'd rust."

"Oh, no, you wouldn't. Men who carry double schedules don't rust."

"Perhaps you can stand grinding all your life for nothing, but I've got to have a better place."

I thought about it afterward. "A better place!" He might find a more remunerative one, but after all, is there a better place than here, and time than now, for giving one's best? Are not these hardworking, serious young men and women worth helping as much as their more delicate, high-strung Eastern cousins?

Literature

The Religion of the Ancient Egyptians

After a five-year interval, the fifth of "The American Lectures on the History of Religions" has now appeared* since the organization of the committee in 1892 for instituting "popular courses, by the best scholars, after the style of the Hibbert Lectures in England." The present incumbent, Dr. Steindorff, Professor of Egyptology in the University of Leipzig, is an original scholar, of practical experience in explorations in Egypt, and of large literary output, ranging from a Coptic grammar to a Baedeker guide-book. There is no doubt that he is competent for the work in hand, and proof thereof is given by the sober reticence of his statements, and the sparing yet clear and full outline of the subject that he presents. By fullness one means, of course, a complete statement of the principal positions now assured, with brief significant illustrations.

Toward the close of his exposition occurs this statement of his purpose: "I have endeavored to describe to you in broad outline the rise and fall of the Egyptian religion, the beliefs held by the Egyptians on the Last Things, their worship of the gods and the dead." (P. 159.) And then follows his own judgment of the results of this inquiry: "The Egyptian religion contained no deep mysteries; the last word of wisdom was not there spoken, as the Greek thinkers once fondly imagined." (P. 171.) And—to dive at once into the central whirlpool of Biblical controversy—we may quote the following as an indication of the answer to his question: Did the Egyptian religion influence Judaism and Christianity? Is it a religion of great significance in the history of the world? (P. 160.)

"It is very possible that, in the poetical portions of the Bible, many an Egyptian phrase may have been preserved, that whole departments of biblical literature—I am

thinking more particularly of proverbial poetry—may bear traces of Egyptian influence in their form. But, on the other hand, it must not be forgotten that there are points of close agreement between the Babylonian and the Hebrew hymns. . . . what is best in the poetry of the Bible belongs without any doubt to Israel itself."

In other words, his tendency is to believe as much as he can of the ancient tradition. He tries hard to make out a case of connection between the Egyptian religion and the Old Testament, but only dubiously succeeds. Neither Joseph nor Moses is mentioned in the Egyptian records, yet the name Moses is Egyptian (Mose meaning "child"), and "sections of Pentateuch reveal so excellent a knowledge of the conditions in ancient Egypt that we ought not without further parley to eliminate them as unhistorical." (P. 166.) "To the best of my belief, we ought hardly to assume as historic facts more than the existence of Hebrew tribes in Egypt and the personality of Moses." (P. 167.) A meagre gleanings for such wide research; flimsy material with which to build.

But to resume the natural order of his exposition. After a statement of the deeply religious nature of the life and the remaining writings of the Egyptians, taking precedence in this respect even over Israel and the Old Testament, and vindicating the judgment of Herodotus, in the fifth century B. C., that "The Egyptians are exceeding God-fearing, more than all other peoples," we are presented with a compressed sketch of Egyptian history, convenient, like a table of contents, for purposes of reference. The first characteristic of the religion of Egypt, technically speaking, was Particularism: "In the beginning there was no uniformity of religion in Egypt. Every city, every town, every hamlet, possessed its own protecting deity, its own patron." (P. 17.) "Originally the mission of these guardian deities was exhausted in the protection of their cities, outside of which their power ended." (P. 19.)

The second stage was Syncretism: The priests of Heliopolis concentrated

* THE RELIGION OF THE ANCIENT EGYPTIANS. By Georg Steindorff, Ph.D. New York: G. P. Putnam's Sons. \$1.50 net.

all worship upon the sun-god, the various divinities being regarded as "Names" of the one single god. (Pp. 41-42.) "It is probably within the mark to say that the greater part of Egyptian religious literature was produced, or at least published, in that city." (P. 46.)

Enormous contradictions thus arose thru these consolidations, but these absurdities were not felt as such: "They (the priests of Heliopolis) saw profound wisdom in the contradictions, and set themselves with unparalleled ingenuity to disentangle the perplexities of their own creating." (P. 46.) A crude material monotheism of the solar disc later arose (under Amenophis IV, c. 1392 B. C.), in which, rejecting every personal representation of the deity, "worship was paid solely to the visible sun, portrayed as a round disc, from which proceeded long rays, ending in hands which hold out the symbols of life to the king and his family as the representatives of humanity." (P. 63.) This worked a revolution and counter-revolution which convulsed the land, resulting in a double confiscation of temples, and erasure of pictures and inscriptions from the monuments. After this the priests resumed the ascendant, with their older worship of the sun, and religion became stereotyped, concluding its evolution with the degeneration of Set, the god of the Ramses dynasty, into a devil, and his expulsion from the Pantheon; and the brilliant but brief reign of Serapis (as properly it is spelled), imported from the Greeks under the Ptolemies, to perish with incoming Christianity.

Home Life in France

No country has suffered more than France at the hands of its own men of letters. They have made French morals a byword and a reproach, and Frenchmen are coming to see this. French writers of fiction have so gravely sinned against the truth and fitness of things that the average novel must be accepted as a travesty no more resembling French domestic life than the traditional French caricature of John Bull resembles the typical Englishman. Conditions such as those forming the world of "Madame Bovary," to name but one great novel,

exist and may be an appropriate setting for the unsavory characters in that masterpiece, but they are not typical of France. The foreign reader, however, accepts them as such. The authors, however, are men whose work has artistic finish as distinguished from flippant smartness.

To correct the common opinion of domestic life in France, Miss Betham-Edwards writes her book* with a knowledge that comes from many years spent in France, and a sympathy that comes from real acquaintance with the men and women in all parts of the country. She writes, furthermore, with a simplicity and directness that carries conviction. The positions she takes are well supported by concrete examples, and her comment upon them is fair and convincing. The book makes no pretensions at being a sociological study. There is no parade of scientific terminology or system. But there is evidence everywhere of a scientific accuracy of observation, wide induction, and cautious generalization. The too evident purpose of the book, to defend the good name of the French people by interpreting their home life, detracts from the impression the author would otherwise have made. The weakness of the book is that it does not show enough of the unfavorable side of French character, and the reader is tempted occasionally to doubt the impartiality of the author. But this weakness is involved in the fact that the author holds a brief for one whom she regards as an innocent defendant. Much of the book is not new. It has been done before, but it was well worth doing again, especially when so well done.

The main thought of the work may be summed up in a quotation from Gabriel Hanotaux's *Le France Contemporaine*: "Every Frenchman works for the future and accumulates for posterity, saving methodically in matters of his own comfort and pleasure what is necessary for the comfort of future generations and heirs whom he does not know." This idea the author traces thru every rank in society and almost every

* HOME LIFE IN FRANCE. By Miss Betham-Edwards. 8vo, pp., 310. Chicago: A. C. McClurg & Co. \$2.50.

walk in life. She shows the domestic servant saving from her pitiful wages, the middle classes saving for their children, the higher classes planning for the welfare of the family. Everywhere the family as the mainspring of action is put before the reader with an almost irritating persistency. He feels that such an extended treatment of one theme called for a more organic division of the subject matter and not what after all seems like patchwork. For part of the book was written in the form of magazine articles. So produced, the iteration did not strike the first readers. But as now presented the force of the plea is weakened by its form.

George Barr McCutcheon,
Author of "Nedra."

Nedra

George Barr McCutcheon has a genius like that of the late Frank R. Stockton's when it comes to making the impossible seem plausible. But this very gift which has made him so popular with a wide circle of readers seems likely to mislead him in the end. In his last novel* he has exercised his faculty for the incredible even more than usual, but he has been flagrantly careless in presenting those details where art counts for more than imagination.

His readers are delighted when the pair of rich Chicago lovers elope to Manila, where they expect to be married and escape the nuptial functions attendant upon wedding occasions in their social set. The adventures they have in New York prior to their flight and during the voyage are all set down in McCutcheon's best manner. We know that the plot thickens when another man on board falls in love with Grace Vernon and when Lady Tennys is drawn toward Hugh Ridgeway in spite of her old husband. We accept the beginning of the *dénouement* with confidence when a storm wrecks the ship, and Ridgeway saves Lady Tennys by mistake from the cruel waves instead of his betrothed bride—with confidence because we remember the happy adventures Mr. McCutcheon always provided for his readers in the famous principality of Graustark. But when Ridgeway and Lady Tennys are washed ashore upon an unknown island, where they pose before the savages there as god and goddess, when they do the same things that people have always done in such situations since Robinson Crusoe set the fashion, except that they live in primitive luxury, then we are kin to the street gamin who is not to be taken in by an old fake, and we exclaim: "Aw! what yer givin' us, Mr. McCutcheon?" And it is bad enough that the whole thing has been given so often before, but the author's carelessness in developing the situation almost amounts to an affront when we consider how able he is to do better. Thus, after spending the greater part of a stormy night in a boiling sea, Lady Tennys sits like a Gibson girl among the rocks and tucks up her hair with "tortoise shell combs." Now, can any woman remain twenty minutes bareheaded in the mildest surf without losing every hairpin she possesses, much less her tortoise shell combs? And the man's grief for his lost love does not last two hours. He rages and curses Lady Tennys; then sobs with delight because he has saved her. The next morning, altho she has lost her husband and he his bride, they are very gay. He ties a palm leaf under her chin and she performs a like service for him. Really, it is scandalous. Savages do not forget their dead so soon.

* NEDRA. By George Barr McCutcheon. New York: Dodd, Mead & Co. \$1.25.

But that is not all. Later on when Ridgeway overhears Lady Tennys offer a perfunctory prayer that Grace Vernon may have escaped a watery grave, Ridgeway sulks for two weeks. He is obviously offended because the woman he has is decent enough to hope that the other one still lives.

In other ways the author crosses the line of good taste even when there is no humor on the other side. They need, for instance, a white signal to attract the attention of any ships which may be passing. Lady Tennys furnishes it and with a remark that would cause Bernard Shaw to blush with envy because he has never thought of anything to say so suggestive and *risqué*.

In short it is not that the thing is posteros, but it lacks the chief charm of the incredible, originality, and it has been so badly done by an author who can do so well.

The Upton Letters. By T. B. New York: G. P. Putnam's Sons. \$1.25.

Letters have two values—the literary and the psychological—and both these values are very significant in *The Upton Letters*. They purport to be written by a master in one of the public schools of England to a friend who has been obliged to take up his residence in the Island of Madeira for his health's sake. It will, of course, be understood that the term "public schools" is here used in the English sense—that is, preparatory schools for the sons of aristocratic, plutocratic and professional families. Eton, Harrow, Rugby and Winchester may be mentioned as examples. The literary value of *The Upton Letters* is undoubtedly high. They are written in graceful, but forcible, English, and the style is that easy and flowing one which comes, as it were, naturally to the man of culture. The psychological value is curious, for we have here a man whose innate optimism is ever striving against an equally innate morbidity—a curious mixture. He pours out his thoughts to his friend upon a variety of subjects—the mentality and moral character of his boys, the temperaments of his fellow schoolmasters, the curriculum of the school, the feelings called up by the rendering of the Psalms in divine serv-

ice, his ideas of art and literature, and the pleasures of vacation tours and recreative bicycle rides. It is in these last that we see him at his best, for in this country the criticisms upon the curriculum of an English public school will have but little interest. The descriptions, however, of his recreations are charming glimpses of the way in which a sensitive, refined and educated mind looks at things around him, noting landscape, street, old manor house, and cathedral, listening to song of bird and sigh of wind. Especially interesting are the letters on literary subjects in which he writes of Charlotte Brontë, George Meredith, Henry James, Mrs. Humphry Ward, George Moore, George Gissing, Thomas Hardy, H. G. Wells. One gets quite a respect for his critical insight from these, and this is increased by a letter in which he takes the part of the Memoir of Mark Pattison. On the other hand, when he writes as he does about Herbert Spencer, judging him exclusively from his Autobiography, without having read half a dozen pages of his philosophical writings, as the author himself confesses, judging the man superficially by his appearance and the cut of his clothes, we must call in question his fairness and critical powers.

The Lure of the Labrador Wild. By Dillon Wallace. New York: Fleming H. Revell. \$1.50.

Like the sea, the wild has always had vast drawing power for adventurous spirits, restless under the complications and delays, the surface tameness and the artificial conditions of civilization. They must touch life, tho it be but death that they arrive at in the process. And like the pioneers of every age, Wallace plunged again into the unknown—the little of the physical unknown remaining now unvisited on earth—"to verify existence, and taste the variety of human fate," and this week we have heard the great news that he is living, and has succeeded where Hubbard failed and perished. And of this variety the bleak monotony of the Labrador is a real element, at least as a foil for feeling, a vent for the expansion of activity, a means to whet the appetite for life. Any one fond of the romance

of strenuous physical exertion, and of the atmosphere of actual outdoor adventure, will rejoice to read this book; for it is amazingly well written, in its ability to recall the million incidents, and to reanimate the spirit, of that monotonous and desperate march. And yet this very notable minuteness of record, and the impression of monotonous endeavor faithfully reflected therefrom, involve the book in gathering gloom and tedium, unrelieved, in the first three-quarters of it,

for any but a lover of the wild and of his struggling kind. Then comes the change, prepared for by this preliminary discipline and, perhaps, indispensable purgation, and we leap at once onto the peaks of tragedy, sublime, Shakespearian, broadly blended of humor and of pathos, exciting both to body and soul alike. No one should miss this conclusion, however little they may care to penetrate into the "terrific interiors" of the book. The dead man (Hubbard) in

DILLON WALLACE,

his tent, calmly reposed after this more than mortal strain; his comrade, snow-blind and delirious, searching and circling, sometimes almost within call, had any call availed, exposed, half-naked to the drifts and whirling gales of Winter that made the hardy trappers of that region wrap in thickest furs, yet practically unhurt because of long habituation to exposure; and George, the guide and savior of the sole survivor, with his ingenious and incredible endeavors, naïve emotions, humorous soliloquies, human ejaculations, adding the laughter thru the tears—this end remains almost unmatched in this history of hardihood for epic intensity and tragic breadth of human appeal to all our faculties.

Literary Notes

THE unique autobiography of Anthony Trollope, a greater work than any of his novels, is reprinted in an attractive edition by Dodd, Mead & Co. (\$1.25.)

....Macmillan & Co. publish an excellent edition of Thackeray's "Henry Esmond." It is bound in one volume of some four hundred pages, and furnishes at once a handsome and compact work. (\$2.00.)

...."A Postal Dictionary" is a handy booklet to have on your desk or pocket. It contains practically as much information as can be found in the bulky and ill-arranged Official Guide. (Grafton Press, New York, 25 cents.)

....A vest pocket guide in the use of correct English, containing an alphabetical list of common errors in pronunciation and grammar, is published by G. W. Ogilvie, Chicago, under the name of "Faulty Diction." (Cloth, 25 cents; leather, 50 cents.)

....Eggs may be served in fifty-nine different ways and still preserve their identity; omelets, for instance, excluded. All this information, and more, is included in Olive Green's handy little book, "What to Have for Breakfast." (Putnam's, 90 cents.)

....Marion Harland and Virginia Van De Water have written a book on "Everyday Etiquette," which is one of the few books of this character which has any practical value. The advice is sound, and the subjects sanely and simply treated. (Bobbs-Merrill, \$1.00.)

...."Divorce and Remarriage; the Other Side," by Will B. Osman (Mayhew Pub. Co., Boston, \$1.50), is a fiery attack, largely in italics, upon the high church doctrine of the indissolubility of marriage. The author argues that any "home" where the married couple are strongly antagonistic should be broken up in the interest of the children, the parents and society.

...."Don't kiss your dollar good-bye before treating your best beloved. Spend what you can afford with kingly carelessness, and make

up your laundry bill in another quarter." Other advice of this kind is to be found in the very bright "Fussers' Book." (Fox, Duffield & Co., 75 cents.)

...."A Memoir of the First Treasurer of the United States," by Rev. Michael R. Minnich, is a very interesting sketch of Michael Hillegas, an important character, and somewhat neglected by historians. During the stormy times of the Continental Congress, Treasurer Hillegas was a strong man at the financial helm. The book is privately printed by the author.

Pebbles

A NEW magazine is called *Human Life*. Every State has a statute against taking it.—*Puck*.

....*Colonel Highflyer*—What are your rates per column?

Editor of "Swell Society"—For insertion or suppression?—*Life*.

....Don't ask a girl to marry you after dark when she is dressed fit to kill. Call on her, and when you leave inadvertently drop a glove on the piano. Return for it the next morning at 9 o'clock. If she comes to the door with one shoe and one slipper on, her hair done up in curl papers, dressed in an old mother hubbard, our advice is to take to the woods. But if she appears in a neat house dress, her hair done up and a rose in the top of her hair, grab her quick.—*Marionville (Mo.) Free Press*.

....What has become of the old fashioned man who carried a shot bag in his pocket to keep change in?

Who wore barn door trousers?

Who kept a boot jack to pull off his boots?

Who had his trousers lined with unbleached muslin?

Who wore a long linen duster when traveling?

Who carried an old flat carpet bag?

Who greased his boots on Sunday?

Who wore a shawl?

Who wore a watch cord with watch key fastened to it?

What has become of the old fashioned woman who kept a bodkin in her work basket.

Who baked custard for tea when she had company?

Who made impressions around the edge of pies with a key, to make them look fancy?

Who wore calico bonnets with pasteboard slats?

Who gave catnip tea to babies?

What has become of the old fashioned people who poured tea in the saucer and blew on it to make it cool?

Who drank sassafras tea in the spring to purify their blood?

What has become of the old fashioned elocutionist who read "Widow Bedott Papers" at entertainments?

Of the old fashioned young men who greased his hair with bear's oil scented with bergamot?—*Atchison Globe*.

Thanksgiving

IN the old New England days Sunday was somewhat too holy a season to be profaned by introducing into the pulpit any political topics; but there were two days in the year when the pulpit might properly discuss affairs of state, of course, from the moral or religious standpoint. One of these days was Thanksgiving Day and the other was Fast Day. To be sure, the preacher stood on Mount Gerizim on Thanksgiving Day, and on Mount Ebal on Fast Day; but it might be the same proclamations from either, one ending with an assured blessing and the other with a warning curse. Thanksgiving was a day for praise and hope, but yet for correction in righteousness; while Fast Day was a time to reckon up our shortcomings and national sins, and rebuke them in the name of the Lord. How bravely they denounced slavery in a thousand pulpits, and the Fugitive Slave Law, and intemperance, and women's rights! They put their best labor on these sermons and printed them. Now Fast Day has gone. People would not, could not, lose Thanksgiving Day, for it had become the day for family reunion, the glorification of the home and the joy of the harvest. But Fast Day perished of its own inconsequence. It came to be a holiday without meaning, simply a needless occasion to neglect work, a holiday for boys' games and no longer for abstinence and prayer. Healthy people do not want to fast; they can pray and confess just as well with the good dinner which the Lord has given them.

So the religious and the civil thought of the two days gathers about the one. On Thanksgiving Day we thank God that, notwithstanding our failures and faults, the Lord is yet good to us; and we can qualify and moderate our enjoyment to a certain agreeable measure by whipping ourselves gently for our sins, or putting a hair shirt over, not under, our silken vests. We can gather some comfort out of the discovery of public evils, in the little interval of worship that we give from the main service of the day,

when families gather about the loaded tables, and grandsires rejoice in gathering their children's children.

After giving thanks for the usual or unusual mercies of the year—homes unbroken, abundant harvests, comfort and prosperity, national honor and strength—one may properly rejoice that our people have begun this past year to feel the shame of corrupt government, especially in our cities. Such a wave of municipal righteousness we have seen hardly ever before. We have been whipping out our dens of thieves, but first we had to whip ourselves to the effort. It has succeeded in some considerable measure. Great cities have been aroused to search out the selfishness and greed and corruption of those whose craft and graft had given them power, and they have removed or even punished them. A special reason for rejoicing is this, so far as it goes; but it still needs the sort of attention a Fast Day would give it.

The ripping up and exposure which the examination of great financial institutions have received of late calls for special thanksgiving this day. It is not agreeable—it is very disagreeable—to find all this dishonest graft and craft in what we had taken to be almost benevolent institutions. We are amazed and pained when we discover that men of high repute have persuaded themselves that it is right to do wrong, and that it has been their effort to circumvent the laws and conceal their methods under the cover of new laws of high finance. Now we have found them out. We are stopping their robberies, which they regarded as legitimate if only not palpably illegal. This is a good work for the year, and not yet finished. For this our thanksgiving may be brief and moderate, for there is much more to be done of the Fast Day sort. High reputations have been smirched, and men in high positions yet remain to be removed from the rule of corporations and from the United States Senate.

While we rejoice with thanksgiving this day for escape from such fearful misrule as has appeared in the massacres of Russia and Turkey, and while we re-

joyce that our Government has had its part in restoring peace where there was horrible war, we may as well consider for a little while what are our own shortcomings, how many are our own murders and lynchings unpunished, and what is the injustice which we show, if not to Armenians and Jews, yet equally to races yellow and black that live among us. There are signs of improvement for which we may rejoice, such as the overwhelming defeat of discriminating injustice in Maryland; but our treatment of the Chinese has had a sharp rebuke and retaliation in the East that may well give us thought. And very far are we yet from settling the proper duty we owe to the laboring population of our whole country, and the proper restraints to be put on the power of those who exploit our industries.

But these more serious thoughts are only for an hour today. The day belongs to the frolic of children and the sedate joy of their parents, and the serene gratitude of those who remain to us from the elder generation. They have seen marvelous changes and improvements in the civilization of their seventy years. This is a different world from that of their childhood. What shall these children see at threescore and ten? Will what we now boast then seem crude or even cruel, in the light of new discoveries and a fairer show for every man? Why not more inventions, more truth, more justice, a nobler country, a better world?

Unworthy Senators

SENATOR BURTON has been convicted again. Last year he was tried, found guilty, and sentenced to be confined in jail. This punishment he avoided by a successful appeal to the court of last resort. He was released then, not because due weight had not been given to evidence tending to establish his innocence, but merely for the reason that the money which he received for breaking the law had been paid to him outside the jurisdiction of the court in which he was tried. His guilt was clearly shown in the first trial, and it has been shown in the second. But he is to appeal again, and by means of the delay so caused he

may keep out of jail thru the remainder of his Senatorial term.

That term will not expire until March, 1907. Kansas should have two honest and competent representatives in the Senate. If Mr. Burton should have the brazen assurance to occupy his seat while his appeal is pending, he would be worthless as a Senator and the State would be disgraced by his presence in the Senate Chamber. If he does not take his seat, Kansas will have only one Senator and one vote, instead of the two to which she is entitled.

How is a State to get rid of a Senator who is clearly unfit to hold his seat, if he will not resign and if the Senate will not expel him? Senators are elected to serve for six years, and even at the beginning of this long term their unfitness may be shown. Mr. Burton and Mr. Mitchell (of Oregon) have only a little more than a year remaining, if they can stave off a disqualifying final decision of the courts; but there are others, also unfit, who may dishonor their States for several years to come. A large majority of the people of Pennsylvania would be glad to be relieved of Senator Penrose, but his term will not end until 1909. That year will also mark the expiration of the term of Senator Thomas C. Platt, of New York. And Senator Chauncey M. Depew is in the first year of his term, which ends in 1911.

If the people of the State of New York, with the testimony taken by the Armstrong Insurance Committee fresh in their minds, could go to the polls now and vote upon the question whether Mr. Platt and Mr. Depew should be retained in the offices they now hold, great would be the majority for the retirement of both. Even the Legislature of the State, some members of which are less susceptible than their constituents to influences that excite righteous indignation, would emphatically reject both of these men if they were now candidates for reelection. But the two Senators will continue to misrepresent New York at Washington—unless they resign, and this cannot be expected.

New York, the great Empire State, with its 8,000,000 of people, is unfortunate in being compelled to carry this load; but it must submit, unless it shall

resort to great mass-meetings of protest and legislative resolutions of sharp condemnation. These might force those resignations that are so much to be desired. No ordinary pressure of public opinion will cause the two Senators to retire.

In Los Angeles provision is made by the city charter for what is known as the Recall, and we remember that an unworthy Councilman was removed from office there last year by the votes of his constituents. Out he had to go, and a good man was put in his place. Those who desire to be represented honestly and decently by their elected public officers should inquire concerning the merits of this new device. If the Recall were now available to the people of the State of New York as a part of their accepted political machinery, it would be used promptly, we think, to give them relief in the Senate.

The Proprietors of America

THE dominion of the white race in America began with a parceling out of the Continent, so far as it was known and explored, among great proprietors. Some of these were individuals, others were corporate bodies. As actual colonization went on, the people that came here to dwell and to work came or were brought for the most part as tenants or hirelings. The thought that they and their descendants might some time own this virgin domain probably never entered their heads. Feudal relations they accepted as a natural, or at any rate an established, order of things.

There were exceptions to this rule. To Massachusetts and Connecticut came little bands of men that had conceived the idea of building up in this new world commonwealths on the basis of a social covenant and popular proprietorship. Their purpose was to combine economic independence with citizenship and religious liberty. A fair degree of success in realizing their purpose made them a potent example to their fellow colonists to the southward; among whom, as time went on, many causes operated to awaken the desire for economic and political liberty. To a great extent the feudal system was undermined in the colonies be-

fore the Revolution, which swept away the whole structure. Then followed nearly a hundred years of democratic development. The new independent nation extended its sway to the Pacific Ocean. Yeoman proprietorship of the soil became the established economic basis of society in the Northern States. A suffrage restricted to some extent by property qualifications gave place to practically universal manhood suffrage. The wealth of the nation consisted in millions of moderate individual fortunes. There were few millionaires, and comparatively few paupers.

Nothing could be farther from historical fact, however, than an assumption that ever at any time this American nation has been consistently and throughout democratic. Very rapidly after the War of Independence the system of labor on great plantations developed throughout the South. With the overthrow of slavery by the Civil War, and the break-up of the plantation system, we were apparently rid finally and forever of the last survivals of a feudal regime. That the downfall of Southern aristocracy and slavery would be followed by the rapid growth of a gigantic system of plutocratic industrial feudalism in the conquering North, was a fact that only the most far-seeing observers of social evolution could have foreseen. It was as a matter of fact foreseen by men as unlike as Macaulay and Karl Marx. But their prevision was only smiled at by the incredulous multitude.

And to-day America, this land of the free, this realm of the greatest experiment in political democracy that has ever been tried, is no longer owned by the people. The facts set forth by Justice Grosscup in a magazine article, entitled "Who Shall Own America?" are attracting much attention, but only because he has set them forth in a clear and telling way. The facts themselves have long been matters of familiar knowledge. Vast as is our agricultural wealth—the value of our farm and farm equipment, still owned for the most part by individuals, amounting to over eighteen billion dollars—the wealth owned by corporations exceeds it by more than five billion dollars. Leaving city real estate out of consideration, more than half of Ameri-

can wealth is now the property of corporations, and more than half of the American people are directly dependent upon corporations for their livelihood, and are subservient to them as were the serfs and liegemen to the mediæval baron. Very rapidly, moreover, the great corporations are absorbing the small ones, and the multi-millionaires in the directorates of the great corporations are obtaining the holdings of the small millionaires. In a word, if the present tendencies should continue unchecked for another quarter of a century, ten or twelve men at the outside would own more than half of the wealth of America, and fifty or one hundred men would own three-quarters of it. We should have returned to an exaggerated form of the proprietary system under which most of the American colonies were planted, and the little day of democracy would be over.

We need not fear, however, that this potential transformation of the Republic into a new feudal domain will be carried through to ultimate realization. The spirit that wrested liberty from oppression in the later colonial period, that won independence in 1776, and that put down slavery in 1861, is already addressing itself to the corporation oligarchy, and will make its power increasingly felt. Judge Grosscup's discussion of remedies for the existing evils does not seem to us to be altogether adequate, but it includes suggestions worthy of consideration. He errs in looking upon the public ownership of natural resources and public utilities as more to be dreaded than corporate proprietorship, and we think him wholly mistaken in supposing that a wide distribution of the shares of corporate property among the people would satisfy the requirements of either equity or expediency. What Judge Grosscup forgets is that in moral right all men are the true owners of all natural advantages not created by individual men, and of all artificial advantages created by act and authority of the State. So long as legislative bodies and courts corruptly convey these forms of wealth to private corporations, the growing disparity of economic conditions must continue. Only when the community fully understands that wealth which can be held by individuals only under a State-given franchise right-

ly belongs and must legally belong to the whole public, will it be possible to make material progress in distributing the shares of other wealth now held by corporations, thru the devices that Judge Grosscup suggests. Let us by all means have a simplification of the corporate organization, let us have a national incorporation, and let us have a strict accountability of trustees and directors. But do not let us imagine that these reforms alone, and apart from an increasing public proprietorship, will once more make the people the proprietors of America.

Football as a Training for Life

CRITICISM of football is no new thing. There have always been Philistines in the outside world who, looking at the question from a utilitarian and unacademic standpoint, have made fun of it or called it brutal. Some fond parents have objected to having their sons maimed or killed for the greater glory of the college. An occasional professor has ventured to complain that it interfered with studies. Such protests as these, of course, could be disregarded, but this year even coaches who derive their living from the game, and college presidents, who have depended upon it for their best advertising, are beginning to talk of abolishing it.

Many of the attacks now being made upon football are so obviously unjust and exaggerated, and based upon such misapprehension of the purposes of the game, that in all fairness it is desirable to call attention to what can be said in its defence. The friends of the game have always insisted upon its value as a training for life. Since this is the avowed aim of the formal college course as proclaimed by the presidents in catalogs and commencement addresses, it is obvious that if this can be accomplished with greater success on the gridiron than in the classroom, it does not matter how much the latter is replaced by the former. This argument has not, however, had its due effect upon the opponents of the game because its advocates have not been explicit enough in showing just how football gives the preparation most needed to meet the conditions of modern life.

This deficiency we now propose to supply.

About its physical benefits it is unnecessary to speak. After making all allowance for those whose injuries in the game prove to be permanent, those who get Bright's disease from the protein diet of the training table, and those whose sedentary occupations in after years do not enable them to keep in healthy condition their abnormal muscular system, it is undeniable that the rest of the players, undoubtedly a majority of the whole number, have acquired a physical development which they could have obtained in no other way except by some other form of exercise. We shall therefore turn our attention to the mental and moral effects, which are of the greater importance in that they are shared by the spectators as well.

First of these is the cultivation of indifference to the sufferings of other people. A certain degree of hardness of heart is necessary for success in the increasingly intense struggle for existence. Ruthlessness is the chief attribute of the superman, and his progenitors have already appeared upon the earth. The captain of industry knows that each new undertaking involves a sacrifice of many lives, but he must not allow that to deter him. Our railroads kill some 12,000 persons a year, and this cannot be avoided, except by the sacrifice of some of the profits. If we stopped to sympathize every time we saw some one run over by an automobile or a trolley car we should be late to church or theater. Such vestigial squeamishness as we have inherited may be most easily extirpated by a season spent on the grandstands, where the mildest maiden soon learns to turn down her thumb like any vestal virgin in the Coliseum.

It is not true, as charged by the enemies of football, that deliberate cruelty is common. On the contrary, almost all the players much prefer not to kill or to seriously injure their opponents if it is possible to win the game without it.

Second, among the advantages of football is learning how to combine against an individual. The team play by which the weakest man on the other side can be downed by a concerted attack of half a dozen of the strongest is the best pos-

sible training in trust methods. The secret signals correspond to the telegraphic code books of the corporations, and the principle and tactics are substantially those which have proved so advantageous in modern business. The code of the duel, man to man, is antiquated. The commercial world has acted up to our national motto, *E pluribus unum*, and has added to it *et plures contra unum*.

A third lesson the football player learns is a self-sacrificing devotion to an irrational ideal. It is on the face of it absurd that such efforts should be made to get a pigskin between the poles, but it is not more irrational than many of the aims for which men and women strive in post-graduate life. Rank, titles, decorations, applause, trophies, badges, flags, formulas, hypotheses, platforms, creeds, rituals, fashions, statues, tombstones—all such things for which we sacrifice ourselves and others have in them much of the symbolic, the sentimental and the fictitious.

Fourth, there is the cultivation of the spirit of blind partisanship. The young man hesitates in the choice of a college between several apparently equally good, but once in he feels very differently about it. He has nothing but cheers for his own college and jeers for all the others. The interclass and intercollegiate contests are excellent drill for that combination of loyalty and intolerance which is one of the pillars of our present civilization. Without it party lines would be obliterated, ecclesiastical sects would fuse, social castes would dissolve and wars would cease.

Fifth, the gambling, which is an inevitable concomitant of football, is so similar to the operations of the stock exchange that proficiency in it is almost equivalent to a business college course. This is a commercial age, and the sooner a boy learns that an opinion is not respected unless it is backed by money the better. One who learns in his youth how delightful it is to get money out of other people without earning it will never forget it. The joy of high hazard and chance fortune once tasted acts as a constant incentive to rise above the level of commonplace industry.

Sixth, additional training in the meth-

ods of the higher finance is obtained in the handling of football funds. To collect \$20,000 or \$40,000, in part by per capita assessments upon unwilling students, enforced by the most rigid of all forms of social control, college spirit; to expend this on objects for which a tenth of the sum would be sufficient, and to make both ends meet with a creditable balance sheet at the end of the season, qualifies a man for lucrative positions, like that of president of a life insurance company.

Seventh, the enforcement of the rule against professionalism has cultivated a nice sense of class distinctions hitherto lacking in America. Boys are learning that it is wrong to run a race for a gold medal stamped by the United States Mint. We are beginning to feel about it here as they do in England—that to do anything for money is essentially degrading. The Rocky Mountain ranchman thinks it wrong to shoot a deer for fun; he only kills one when he is out of meat. The gentleman hunter holds the reverse principle equally strongly, and, as is usually the case, each despises the other on account of his different code of ethics. Now that we are growing a leisure class it is well to have our youth trained in the aristocratic ethics of the essential superiority of the amateur.

Eighth, the disregard for the authority of the umpire, developed in both players and spectators, will be found very useful to those who enter the higher walks of life in politics and commerce. The players learn by experience how easy and how profitable it is to dodge the umpire, and deceive their opponents, while the spectators learn how powerless is a single man—clothed in a little brief authority—against the clamor of a mob. This is invaluable training for the heads of corporations in the intimidation of public officials who try to interfere with their business, and for the populace on those occasions when they take the law into their own hands.

The games of youth are always imitations of the occupation of their parents. Football is the epitome of our competitive commonwealth, the real national game, the symbol of our civilization, the rehearsal of the drama of life,

and it is very irrational to object to the students practicing in miniature the game they will afterward play in earnest.

A Substitute for Insurance

AN article which we publish this week on the cost of life insurance traverses a very different subject from that which has been considered by Mr. Hughes in the legislative examination now going on, the results of which we discussed editorially last week. In the present article a distinguished actuary explains the principle on which the charge for life insurance is fixed, and argues that the cost cannot be materially reduced.

The reader will see that so long as it costs so much to persuade men to insure their lives no great reduction can be made. Something can be done by less waste in extravagance and graft; but after all it is the soliciting of insurance that makes a chief item. How can that expense be reduced?

Perhaps nothing immediate is in sight, but if we will look far enough ahead we may discover what is likely to succeed life insurance, at much less expense. At present people do not go for insurance; they have to be urged to take it. When everybody is insured, and is required to take it, then it can be had with less cost to each; but it will be a different kind of insurance.

In Germany there is a system of compulsory insurance for working people, of which one-third is paid by the employer, one-third by the workman, and one-third by the State. If one hires a servant he is obliged to put each month stamps in his or her book to the required amount, and this is inspected to see that it is done. This provides a pension against sickness and old age. A similar system, or even more extensive, has been adopted in New Zealand. It is a kind of compulsory insurance, applied to certain classes. We are not yet ready to adopt it, for we let older countries, where conditions are more stressful—and New Zealand—try a great many experiments for us. We do not even yet have postal banks, or parcel post, or municipal trolleys, or Government railroads, much less old age pensions. We apply the system only to our

Army and Navy, not even to our Civil Service. But it is likely to come one of these days; and we may very likely see a system of pensions developed beyond that for the working classes, which will replace insurance and make the present system unnecessary. It may perhaps connect itself with a system of income tax, by which the amount to be received will depend on the amount of income tax paid, but with an upper limit of perhaps \$1,500. Thus, as is proper in taxation, the wealthier will pay more, and the poorer less, than their proportion, while it will be the poorer that receive the principal advantage. The system will be applied so as to provide for widows and orphans, as well as for the support of the wage-earner during his lifetime.

It may be suggested that State control of insurance will be expensive because it will give opportunities for graft. This is hardly the time to bring forward such an objection. Insurance as now managed by corporations does not seem to be clear of the same complaint.

The Country Home

EVEN those who return to their city homes before Thanksgiving Day do it with regret. The conviction is growing on business men that somehow they have made a failure of home-building, even when they have got marble fronts, with picture galleries. Not long ago, at a Chamber of Commerce meeting, a man of wealth and social standing remarked, "I am not satisfied; and as far as I am satisfied I am alarmed. We are coming to a great awakening by and by, and I hope it will be soon. When I think it over, I don't wish to measure my life by so much office work, and so much accumulated property, nor by money-graded social standing. Somehow I have a growing feeling that I am lacking something, and have been starving the best part of my nature. Can the country give me this something that the city cannot? I begin to think that it can." The city at its best cannot get down to the heart of life. No man can live a right life who does not live in contact with nature.

On the other hand, the farmer has also grown dissatisfied. He wants something that he cannot, or has not, got—in way of comfort, conveniences and rest. Heretofore he has pushed into city life and village life to get these things. Has he got them? As a rule he has given up more than he has gained. He, too, will have to say that the city, at its best, leaves him still lacking something. It is a sorry chapter in American experience that recounts the story of the retired farmer. He has generally found himself badly adapted to crowded life, and if he has engaged in town business he has as a rule failed in competition. A man who has spent the best part of his life with his elbows free, on the farm, has unfitted himself for the close rivalry of town life.

The new conditions of country life are more satisfactory. Nearly all the privileges which have heretofore been characteristic of city life have gone out into the country. On the other hand, a small fraction of country life has become identified with city living. The coming city will have a good deal more of suburbanism. Yet it cannot be overlooked that while the ratio of increase in population in the United States has become much more largely identified with the country during the last ten years, yet only 2 per cent. of recent immigration finds its way out among the hills and valleys. This leaves the problem of city improvement very seriously handicapped. No change for the better can take place anywhere comparable with what is going on in the country. Intensive farming is rapidly cutting up the great farms into small ones and working them with machinery. Five or ten acres gives a better home and more satisfactory income than the old-fashioned farm of one hundred acres or more. The trolley and free mail delivery are working wonders in suburbanizing outlying districts. But just now the feature of country life which is most notable is organized effort for betterment on the part of the farmers themselves. Pursuit of happiness is even better than the achievement. What the philosopher said of truth the farmer can say of comforts and pleasures: If I had them all in hand, I would open my hand

and let them fly away for the pleasure of pursuit. Farmers' clubs do not confine their discussions to animal breeding and dairy interests, but are in close conference with the educational, political and social forces of the country. Looking ahead, the farmer sees the States organized in the interest of agriculture.

Country life is simple life. Under present conditions it puts no severe strain upon the physical organism of the cultivator. It does put an increased tax upon his intellectual powers. It calls into action all the forces of his being, and so creates a balance, conducive to long life, as well as full life. The old-time farmer was broken down at fifty; the farmer of to-day is active at eighty. It is almost impossible that he shall not live a natural life. He is surrounded by birds and brooks and bees and trees. The first impulse of a man who finds himself in the country is to roll in the clover. He breaks loose from conventionalities, is unbound and free. The wife digs in her own garden, manages her own bees, or learns the art of cross-breeding fruits and vegetables. Husband and wife live together and work together, as they cannot in the city.

It is not so much a cursory view of anything, but an underview or interview of a few things that gives real pleasure. That is what we get from modern farming. Botany, entomology, ornithology, all contribute; but most of all the art of plant-breeding—creating new things. Some one said, we think it was Kant, that a single leaf contains more than a long life can completely study. Each year unfolds new revelations to the sincere farmer. His acres are one of the Books of God. "The boor," says Emerson, "has not power to possess; he can only work his acres; I own them." The late Theodore Dwight asked in one of his law classes, "How far up do you own, above your real estate?" "As high up as heaven," answered one of his pupils. "Some do," replied the professor. Modern farming is bringing this about—fewer acres but vaster possessions. "He that hath eyes to see let him see;" "he that hath ears to hear let him hear." The new country life quickens all the faculties.

The new country home will be more economic in principle, while it will be en-

larged greatly in its privileges. It will not be harassed by questions of water rates and rent. The rural telephone will not cost to exceed twelve or fifteen dollars per year; and the trolley will come to the door, to carry its products directly to market. The housewife gathers half her dinner directly from the garden, while her meat bill is mostly met by the contents of her chicken yard. She knows nothing about paying forty cents a dozen for eggs. On the other hand, she can add greatly to the income, while subtracting as largely from the outgoes. The question of child labor does not disturb the country. Every child can take part in the economic life of the family. Eight hours a day labor will be enough to make the home successful—but these eight hours will be spread over more than half of the day.

The new country home will, best of all, create society without destroying individuality. It will so enlarge, multiply and enrich home industries that the whole family can co-operate in purpose and labor, and so construct a society of its own. Home education has already acquired a new impetus. We are breaking the habit of farming out our children to all sorts of institutions, while ourselves vacating the office of parents, and voiding the responsibility of training. The result spreads from the family to the town; reviving the old-time town spirit. Homing will retake its place as a social force. It is no longer necessary to consider a boy a failure who does not "get away from the farm." Here he will have full swing for his genius and the exercise of all his talents.

What we now need is to bring this new instinct for country life down into the low strata of city population. So far we are getting the best classes, while the submerged are still merged. In a republic this is dangerous. The masses vote as well as the individuals; and the former may outvote the latter. Furthermore it is unwise to leave at the ganglia of social and political organization the least differentiated. The movement of the masses will be of necessity accomplished in due time. The future of American society will escape from the extremes imposed by European immigration.

The Duel for Manliness

The amazing fact is brought to the knowledge of the people that in our Naval Academy, and equally in West Point, there prevails a system of settling difficulties between students based on the ethics of the duel, except that fists have taken the place of pistols. And this system is allowed by the officers in charge, and defended as necessary to protect the "honor" and develop the "manliness" of the students. We do not need this system to develop manliness in civil life. That such a system should prevail tends to prove the persistence of a lower type of civilization in the fighting profession. We have passed the stage in civilization of the duel in most parts of the country, for we find legal and Christian methods of protecting honor and manliness. Indeed, what is there manly in trying to beat each other senseless and in forcing another to fight? That the authorities in charge are most to blame we have no doubt. They know it, allow it and approve it. We recall that shortly before the Civil War there was the real duel in vogue in the Naval Academy, and that after a sad result of a duel the officers stamped it out completely, and so it continued for some years. It is not a dozen years, we are informed, since this new duello sprang up, and already it has its laws of provocation, its code of procedure and its rules for the referee, and every few weeks sees a fight pulled off.

Submission of Turkey

The legations at Constantinople understood the condition of the Sultan's mind better than did the omniscient correspondents. While the writers were threatening war, and particularly the massacre of Christians all over Turkey, and were telling us how the Sultan was in the hands of a mysterious organization of Moslem fanatics having its headquarters in Morocco, the Ambassadors of the six Powers paid no attention to all these alarms, but sent their fleets (Germany excepted) to Mitylene and seized the custom house. That was the first step and it was enough. The Sultan had waited for this and was ready to yield. The old missionary, Dr. Jacob Chamberlain, tells of a balky horse he once owned in India

that would not move until its ear had been twisted. At last it would turn its head to have its ear twisted. Somewhat like that horse is the Porte. The Sultan is by nature vicious and balky, but he knows that when the protectors of his iniquitous throne make up their mind to insist on reform it must be made, and he is ready for it. The assertion that he cannot yield for some religious reason resting on Moslem law is baseless, as was years ago proved when similar misgovernment in Syria took the appointment of a Governor out of the hands of the Sultan and gave it to the European Powers. Since then Syria has been fairly well governed, and so will Macedonia be when a similar or more thoro system of reform is taken in hand, committed, perhaps, to execution by Austria. And this raises the question whether it is purely sympathy with Turkey or a certain jealousy of Austria which dictates the course of Emperor William.

The Russian Revolution

Things are moving rapidly in Russia. The impossible has already happened. Anticipations have been falsified. That Japan should crush the Russian power in the East seemed incredible; but it was done. That peace would beat down the growing revolutionary movement in Russia we all feared; it has only given it resistless strength. We knew that the autocracy was doomed, and were glad that constitutional government, under the Czar, was to take its place; we are now anticipating with astonishment a Social republic. Count Witte tried to stem the tide by giving Russia what Germany has; but the Russian people will have no such half way liberty; they want the fullest measure and think they are ready for it. The explanation of this surprising development and possibility seems to be in the fact that the only propaganda Russia has had is that of Socialism. She has had not the least experiment in any more moderate form of self-government, and so she is ready, under the lead of these extreme teachers, to pass suddenly, without experience, with no gradual preparatory transition, from autocracy to Socialism, and, we fear, thru a period of prolonged masacre and anarchy. More and

more desperate seem the conditions. Witte has occasion for all his diplomacy. Almost it looks as if the Zemstvoists cannot help him, and as if the Duma comes too late. The French Revolution seems to be returning. Then the experiment of constitutional government had not been fairly tried, and Socialism seemed the only alternative to autocratic power. Now, popular representation under a monarchy is the accepted and usual custom of rule, and the leaders in the Russian revolution understand it. Can it be that they will avoid the rock on which the French Revolution perished, and that we can have in Russia a great Social republic, to startle and perhaps instruct the world? And what will happen in Germany and Austria when *proximus ardet Ucalegon*? To maintain the Czar on his throne the Emperor might well think it necessary to send an army to St. Petersburg and Moscow and lose his own throne in the attempt to save it.

Segregation and Integration In an admirable address at the meeting of the American Missionary Association, its president, A. H. Bradford, D. D., spoke on "Race Segregation and Race Integration," and he used an effective illustration. He had said that in Atlanta there has lately been erected the finest railroad station in all the South, a magnificent building; but that he had been informed that no negro is allowed to enter its main doorway. He turned to another speaker of the evening, the Rev. H. H. Proctor, pastor of a colored church in Atlanta, and asked if such is the fact; and Mr. Proctor said it was. "Shame, shame, shame!" said Dr. Bradford, and the great audience expressed agreement with his sentiment. But we suppose Atlanta is not a peculiar case. Generally in the South we believe that a separate waiting room, with a separate entrance, is provided for negroes. It is a part of the system which requires separate cars on the railroads and separate seats on the trolleys, and separate schools, and its purpose is to humiliate the negroes and teach them that they are an inferior, out-caste race, out of which they cannot be allowed to rise.

At the end of the year Sunday schools are selecting their plans for the coming year, and still the larger number of them will be studying the International Lessons. We would commend to them a consideration of those plans which are not confined to the study of a dozen or so verses, but which take up connected topics, and especially such as provide for the several grades of classes, such as we have in our public schools. Much has been done in the last few years to bring up the standard of Sunday school teaching, so as to compare somewhat with that in our public schools, and the school is behind the times which does not appreciate the value of true methods of instruction.

Russia joins the other powers to demand that the slaughter of Christians stop in Turkey. But Russia massacres the Jews, and the Sultan smiles sardonically. And then the United States begs the Czar to stop killing Jews, and the United States is infamous for the number of its murders by mobs. And the Czar listens and wonders if the American Bible omits the passage about motes and beams.

The London *Municipal Journal* says that all the municipal telephone enterprises in England are now paying returns on their investment, even tho they are charging only about half the rates of private companies. And yet there are many people in this country who believe municipal ownership impracticable and dangerous.

We are asked to give our support to a bill fathered by the Humane Societies of this State to forbid the docking of horses' tails. It has our hearty support. Such a bill has failed twice in the New York Legislature. The custom is a cruel one, and no gentleman, and still more no lady, should consent to drive a horse thus mutilated.

Now Norway has taken on an incumbrance, a King. How strange it would be if, while the most democratic country in Europe takes a King, Russia, the most autocratic, should proclaim a republic.

Financial

Our Prosperous Farmers

A TIMELY report for the Thanksgiving season is that of the Secretary of Agriculture, with its statistical proof of the unprecedented prosperity of the American farmer in the present year. Farm crops have never before in this country been harvested at so high a general level of production and value. While only one crop, corn, reached its highest yield in 1905, four crops—corn, hay, wheat and rice—reached their highest value. The enormous total of farm output was \$6,415,000,000, as shown in the following table:

	1905.	1904.
Corn	\$1,216,000,000	\$1,088,000,000
Hay	605,000,000	529,000,000
Cotton	575,000,000	600,000,000
Wheat	525,000,000	510,000,000
Oats	282,000,000	280,000,000
Potatoes	138,000,000	151,000,000
Barley	58,000,000	59,000,000
Tobacco	52,000,000	53,000,000
Rice	14,000,000	14,000,000
Dairy Products...	665,000,000	611,000,000
Other Products...	2,285,000,000	2,264,000,000
Total	\$6,415,000,000	\$6,159,000,000

Included in the products not specifically enumerated (\$2,285,000,000) are eggs and poultry to the value of \$500,000,000. The annual output of eggs is twenty billions. The farm horses have a value of \$1,200,000,000, and \$252,000,000 may be added for mules. The number of cows (value \$482,000,000) has been increasing, but the year has seen a decline in the number of cattle and of sheep. Since 1900 the aggregate increase in the value of farm animals has been \$249,000,000. Farms themselves are worth more by 33½ per cent. than they were five years ago. During the preceding ten years the increase was only 25 per cent. Indications of the farmer's prosperity are seen in the 1,754 small national banks organized during the last five and a half years, nearly all of them in the rural districts, and more than one-third of them in the South; also in the increase of bank deposits in agricultural States, notably in the upper Mississippi Valley, and especially in the South, where, for the year, it has been nearly 23 per cent.

It is now practically admitted that the St. Paul road will be extended to the Pacific Coast, with terminals at Seattle and Tacoma.

....THE Middlesex Banking Co., of Middletown, Conn., of which Robert N. Jackson is President, will pay upon presentation, with interest to date of payment, certain debentures due December 1st, January 1st and February 1st.

....Of the new Japanese 4 per cent. loan (£25,000,000, redeemable at par at the end of twenty-five years), \$3,250,000 was taken for issue in this country by Kuhn, Loeb & Co., and offered on the 28th at 87 and accrued interest by Kuhn, Loeb & Co., the National City Bank and the National Bank of Commerce.

....A new trust company, to be known as the Columbia Trust Company, will begin business in this city on December 4th, with a paid-in capital of \$1,000,000 and a surplus of \$1,000,000. It is independent of control by any single interest, and will do a general trust company business on conservative lines, with courteous regard for the interests and convenience of its patrons. Robert S. Bradley is President, and the Vice-President is Clark Williams, formerly Vice-President of the United States Mortgage and Trust Company. The Chairman of the Executive Committee is A. B. Hepburn. Among the directors are Samuel G. Bayne, President of the Seaboard National Bank; William H. Moody, Attorney-General of the United States; Charles O. Gates, President of the Royal Baking Powder Co.; William H. Nichols, President of the General Chemical Co.; Clarence W. Seamans, President of the Union Typewriter Co.; Arthur Turnbull; and Clark Williams, the company's Vice-President. The new company's place of business will be at the corner of Nassau and Cedar streets.

....Dividends announced:

Buff. & Susq. R. R. Co. (Preferred), quarterly, 1 per cent., payable December 1st.

Buff. & Susq. R. R. Co. (1st Mort. Coupons), payable December 1st.

U. S. Leather Co. (Preferred), \$1.50 per share, payable January 2d.

Central Leather Co. (Preferred), \$1.75 per share, payable January 2d.

Southern Pacific Co., various Coupons, payable December 1st.

Iowa Central R'way (1st. Mort. Coupons), payable December 1st.

Minn. & St. Louis Co., Coupons, payable December 1st.

The Independent

VOL. LIX. NEW YORK, THURSDAY, DECEMBER 7, 1905. No. 2975

Survey of the World

The President's Message

The first session of the Fifty-ninth Congress was begun at noon on the 4th. Twenty minutes later the Senate adjourned as a mark of respect to the memory of the late Senator Orville H. Platt. In the House Mr. Cannon was again elected Speaker, having been unanimously nominated by the caucus of his party. He received 243 votes; for John Sharp Williams, Democratic nominee, 128 were cast. On the 5th the President's Message, a very long one, was received and read. In it much space is given to a discussion of questions relating to railway companies and other corporations. The fortunes amassed thru corporate organizations are now so large, the President says, and vest such power in those that wield them, as to make it a matter of necessity to provide for effective supervision of them by the Federal Government. Both the corporation and the trade union have come to stay; each can do and has done great good; each should be favored as long as it does good; but each should be sharply checked where it acts against law and justice. It is useless to seek adequate regulation and supervision of great corporations by State action. The President believes such regulation and supervision can be obtained by Congressional legislation. If this proves impossible, the necessary power must ultimately be obtained by a Constitutional Amendment. It is unfortunate that national laws on this subject have in part sought to prohibit what could not be effectively prohibited:

"It is generally useless to try to prohibit all restraint on competition, whether this restraint be reasonable or unreasonable; and where it is

not useless it is generally hurtful. Events have shown that it is not possible adequately to secure the enforcement of any law of this kind by incessant appeal to the courts. The Department of Justice has for the last four years devoted more attention to the enforcement of the anti-Trust legislation than to anything else. Much has been accomplished; particularly marked has been the moral effect of the prosecutions; but it is increasingly evident that there will be a very insufficient beneficial result in the way of economic change. The successful prosecution of one device to evade the law immediately develops another device to accomplish the same purpose. What is needed is not sweeping prohibition of every arrangement, good or bad, which may tend to restrict competition, but such adequate supervision and regulation as will prevent any restriction of competition from being to the detriment of the public—as well as such supervision and regulation as will prevent other abuses, in no way connected with restriction of competition."

Perhaps the chief of these abuses is over-capitalization, because of the myriad evils it brings in its train. "The debauchery of politics and business by great dishonest corporations is far worse than any actual material evil they do the public." Railway rate regulation is the subject of a large part of the message. Our readers are already familiar with the President's views and arguments. So far as legislation is concerned, a law securing such regulation and supervision by agents of the Government as shall prevent the imposition of unjust or unreasonable rates and shall put "a complete stop to rebates in every shape and form" is "the most immediate and pressing need." Mr. Roosevelt's policy has undergone no change, except that the rate to be prescribed by the Commission is to be "the maximum reasonable rate." He regards "this power to establish a maximum rate as being essential to any

scheme of real reform in the matter of railway regulation." The following novel suggestion is made:

"It sometimes happens at present, not that a rate is too high, but that a favored shipper is given too low a rate. In such case the Commission would have the right to fix this already established minimum rate as the maximum; and it would need only one or two such decisions by the Commission to cure railroad companies of the practice of giving improper minimum rates."

Various kinds of rebates are considered, and all are condemned. Among these are included private car line agreements. It is urged that railway companies' books should be kept according to legal regulations and be open to inspection by the Government. "Only in this way can violations or evasions of the law be surely detected." The system of examinations should be like that which is applied to national banks. Congress is urged to provide for "expeditious" action by the Commission in all these matters, because the efficacy of the present law has been to a great degree destroyed by the weapon of delay. Speaking of the power of the companies to regulate rates by "honest agreement among themselves," the President makes the following remark concerning agreements now forbidden:

"The power vested in the Government to put a stop to agreements to the detriment of the public should, in my judgment, be accompanied by power to permit, under specified conditions and careful supervision, agreements clearly in the interest of the public. But, in my judgment, the necessity for giving this further power is by no means as great as the necessity for giving the Commission or administrative body the other powers I have enumerated."

Railroad men who wish to do well should not be exposed to competition with those who have no such desire and who violate the laws.

"At present we face such utter lack of supervision, such freedom from the restraints of law, that excellent men have often been literally forced into doing what they deplored because otherwise they were left at the mercy of unscrupulous competitors."

It is far better, the President says, that the railroads should be managed by private individuals than by the Government:

"But they can only be managed on condition that justice is done the public. It is because, in my judgment, public ownership of railroads is highly undesirable and would probably in this country entail far-reaching dis-

aster, that I wish to see such supervision and regulation of them in the interest of the public as will make it evident that there is no need for public ownership."

✱

Labor, Insurance, the Tariff, Etc. Much that is found in the President's remarks about labor he has said in previous messages and in public addresses. He repeats his recommendations concerning an employer's liability law, factory laws, etc., for the District of Columbia. It would be most unwise, he says, to deprive the courts of the power to issue injunctions in labor disputes, altho the power has been misused by some judges. The procedure should be regulated by requiring the judge to give due notice to the adverse parties before granting the writ. He asks for an investigation of general labor conditions, with special attention to child labor, and for "a thoro investigation of the conditions of women in industry," because the introduction of women into industry is working change and disturbance in the domestic and social life of the nation. Congress is asked to consider the excessive hours of railway employees in train service. Speaking of insurance, he says that State supervision is inadequate, and that Congress should carefully consider whether there should not be further legislation in the direction of national supervision. It has been only too clearly shown that certain of the men at the head of "great insurance companies" "take but small note of the ethical distinction between honesty and dishonesty, but draw the line only this side of what may be called law-honesty, the kind of honesty necessary in order to avoid falling into the clutches of the law." In a brief paragraph on the revenues, the President speaks of the need of stability, and says that any change in the methods of raising revenues is "inadvisable unless for grave reason," owing to the shock and strain to the business world which change would cause. But the laws must be readjusted if expenses continue to exceed receipts. Consideration of a maximum and minimum tariff is recommended. There should be added to our currency system, the President says, an element of elasticity, but no legislation is suggested. The recommenda-

tion of last year as to the publication of election expenditures and campaign contributions is repeated, with the addition that "all contributions by corporations to any political committee or for any political purpose should be forbidden by law," and that the use of a corporation's money in connection with any legislation, save for the employment of counsel in public manner, for distinctly legal services, should be prohibited by Congress and the State legislatures.

Insular Questions and Other Subjects

Reference to the coming conference at The Hague is accompanied, in the message, by a statement as to our Government's attitude toward peace. "As the world is now, only that nation is equipped for peace that knows how to fight and that will not shrink from fighting if ever the conditions become such that war is demanded in the name of the highest morality." A general arbitration treaty should be negotiated among all the nations represented at the conference. A long passage on the Monroe Doctrine leads to the case of Santo Domingo, the President describing the good effect of the temporary arrangement and earnestly urging that the pending treaty be ratified. Among the recommendations concerning the army are those in behalf of promotion for merit and of an increase and reorganization of the medical department. As to the navy, the President says that for the immediate future it will be sufficient to substitute efficient for inefficient and obsolete ships, and that probably one new battleship each year will be enough. Our criminal laws, now too largely in the interest of the criminal, should be revised. Hawaii is too heavily taxed, the President says, and three-fourths of its internal revenue and customs receipts should be set aside for education and public improvements. There should be explicit legislation conferring American citizenship upon all citizens of Porto Rico. Large corporations should be encouraged to invest in the Philippines and Porto Rico by a relaxation of the restrictions upon the ownership of mining claims and the holding of land. All our tariff duties upon imported Philippine products should be removed, except those on sugar

and tobacco, which should be made 25 per cent. of the Dingley rates until 1909. Our navigation laws should not be applied to trade with the islands before that year. Oklahoma and Indian Territory should be admitted, the President thinks, as one State, and New Mexico and Arizona as another. This should be done at once. In the course of a long discussion of immigration evils, and of our duty toward the Chinese, the recommendation is made that hereafter no immigrants except natives of the two countries be admitted from Canada or Mexico.

National Topics

United States Senator Burton, of Kansas, has been sentenced to be imprisoned for six months in jail, to pay a fine of \$2,500, and to be debarred forever from holding any Federal office. An appeal having been taken, he is at liberty under a bond of \$5,000. Senator Mitchell, of Oregon, recently convicted and sentenced, but waiting for a final decision on appeal, has written to Washington asking that he be permitted to retain the Chairmanship of the Committee on Inter-oceanic Canals.—In answer to inquiries from reporters, Senators Depew and Platt, of New York, deny that they intend to resign. They refuse to discuss the evidence given by themselves and others before the Armstrong Life Insurance Committee in New York.—The National Committee on Inauguration, composed of residents of Washington and the Governors of the States, unanimously recommend that the last Thursday, in April (instead of March 4th), be chosen as the day for the inauguration of Presidents.—A census bulletin shows that the number of those persons over ten years of age in this country who cannot write is 106 in 1,000, against 133 in 1900. For native whites the number is 46; for foreign born whites it is 128; for negroes it is 445. In the rural districts the number of illiterate children in a thousand is eight times greater than in the cities.—Franklin K. Lane, of San Francisco, is to be appointed a member of the Interstate Commerce Commission.—It is shown in the Civil Service Commission's annual report that the number of competitive positions is now 171,807 (against

154,093 last year), out of a total number of 300,615 for the entire executive civil service. During the year 148,730 applicants were examined, 116,000 passed, and about 40,000 were appointed.—The Government's proceedings before Judge Phillips, at Kansas City, against the Atchison and other railroad companies, for giving rebates on salt in Kansas and coal in Colorado, have come to nothing. Judge Phillips granted a motion to quash them, on the ground that his court had no jurisdiction to issue the original restraining order of March, 1902, which the companies were accused of violating. This was the case in which Mr. Paul Morton was interested, and in connection with which the letters of President Roosevelt, Attorney General Moody, Judge Harmon and Mr. Morton were published.

The Recent Election in New York

An examination of the ballots in four of the five election district boxes which were opened in New York by order of the court discloses errors by which Mr. Hearst makes a net gain of 17 votes. The official count had given Mayor McClellan ten too many and Mr. Hearst seven less than were cast for him. It was also discovered that in these four boxes there were more than sixty ballots so marked that under the recent ruling of Justice Giegerich they are void. The entire number of the ballots alleged to be void is about 140, and three-quarters of these had been credited to Mayor McClellan, the remainder going to Mr. Hearst. A majority of the ballots in question, it is alleged, were so marked that they could be identified; that is to say, they fall under the ruling on that point. Mr. Hearst's attorneys will ask for the opening of about a thousand boxes. They predict that the correction of errors made in the Mayor's favor and the rejection of void ballots improperly counted will elect Mr. Hearst.—Samuel K. Ellenbogen, City Marshal, and a Tammany election district captain, has been convicted of perjury in a registration case and sentenced to be imprisoned in the penitentiary.—Speaking at a dinner given by the City Club, last week, District Attorney Jerome (recently re-elected) attacked the Supreme Court

Justices of the metropolitan district. There were too many elective offices, he said, "and worst of all is an elective judiciary. I have no reverence," he continued, "I have not even every-day common respect, for the Justices of the Supreme Court of the First Department." They had to go with their hats in their hands to the Tammany leader, Mr. Murphy, for renominations. They were influenced by reason of the large assessments exacted from them, and some of them were largely interested in private business. The cowardice of the Bar was responsible for all this. Mr. Jerome's remarks have led ex-Judge Alton B. Parker, formerly the head of the New York judiciary and nominee for the Presidency, to publish a defense of the Supreme Court Justices. At the same time he urges the Bar and the public to labor earnestly for the nomination of men of high character for the bench and for the renomination of judges who have done well.

Cuba and the Isle of Pines

In a letter to Charles Raynard, President of the American Club of the Isle of Pines, Secretary Root clearly sets forth the views of our Government as to the movement for a political separation of the island from Cuba, and gives the American colonists a warning. Mr. Raynard wrote to him on October 25th, asking for advice as to the necessary procedure for establishing a Territorial form of government "for the Isle of Pines, West Indies, U. S. A." Having said that it was "no part of the duty of the Secretary of State to give advice on such subjects," Mr. Root continued as follows:

"There is no procedure by which you and your associates can lawfully establish a Territorial government in that island. The island is lawfully subject to the control and government of the Republic of Cuba, and you and your associates are bound to render obedience to the laws of that country so long as you remain in the island. If you fail in that obedience you will be justly liable to prosecution in the Cuban courts and to such punishment as may be provided by the laws of Cuba for such offense as you commit.

"You are not likely to have any greater power in the future. The treaty now pending before the Senate, if approved by that body, will relinquish all claim of the United States to the Isle of Pines. In my judgment the

United States has no substantial claim to the Isle of Pines. The treaty merely accords to Cuba what is hers in accordance with international law and justice.

"At the time of the treaty of peace which ended the war between the United States and Spain the Isle of Pines was, and had been for several centuries, a part of Cuba. I have no doubt whatever that it continues to be a part of Cuba, and that it is not and never has been territory of the United States. This is the view with which President Roosevelt authorized the pending treaty and Mr. Hay signed it, and I expect to urge its confirmation.

"Nor would the rejection of the pending treaty put an end to the control of Cuba over the island. A treaty directly contrary to the one now pending would be necessary to do that and there is not the slightest prospect of such a treaty being made.

"You may be quite sure that Cuba will never consent to give up the Isle of Pines, and that the United States will never try to compel her to give it up against her will."

—Herbert G. Squiers, for the past three years American Minister to Cuba, resigned by cable on the 29th. His resignation was immediately accepted, and Edwin V. Morgan, recently Minister to Corea, was appointed in his place. No official explanation of the change has been made, but it is reported that Mr. Squiers offended the Cuban Government by openly sympathizing with the American colonists on the Isle of Pines and by his vigorous opposition to the pending Anglo-Cuban treaty. It was publicly asserted that he was assisting a movement for the annexation of Cuba to the United States. Some months ago he exerted his influence in favor of a bill in the interest of the Louisiana rice planters (under instructions, it is said), and for this was attacked by the Havana press. The Cuban Government denies that it asked for his removal.—The presidential election, on the 1st, was a very quiet affair, and the vote was light because there was no Opposition ticket in the field. President Palma and all the other nominees of the Moderate party were elected. This party will have large majorities in both branches of Congress after April next.

Railways in Chicago and Cleveland

The Chicago Council's opposition to Mayor Dunne's plan for municipal ownership and operation of the street railways was clearly shown last week, when the Council's

Transportation Committee reported and recommended for passage a long ordinance giving the railway companies a franchise for twenty years (in lieu of all existing franchises), upon condition that they thoroly reconstruct their plants, provide new equipment, introduce electric power, and pay the city a part of their gross receipts, beginning with about 4 per cent. annually, and rising to 11 per cent. for the last five years of the term. At the same time, the committee made an adverse report upon the Mayor's latest proposition, which was that \$75,000,000 in Mueller law certificates be issued for the purchase of the roads or the operation of municipal lines in competition with them. It is estimated that under the committee's ordinance the city would receive \$45,900,000 in twenty years, and that the companies in the first four or five years would spend about as much in the work of reconstruction.—By a decision of the Ohio Supreme Court, Mayor Tom L. Johnson, of Cleveland, wins a victory in support of a franchise for three-cent fares upon certain streets of that city not occupied now by the railway companies, or in which they no longer have franchise rights.

Labor Controversies

The New York Court of Appeals has decided, two judges dissenting, that a contract in which an employer undertakes to employ union men only is binding upon him and may be enforced at law. The case was one in which an employer who had made such an agreement with a union broke it and was sued by the union for breach of contract. His defense was that the agreement was not enforceable because it was against public policy and in restraint of trade. The court rules otherwise.

The Balfour Cabinet Out

On December 4th Premier Balfour tendered the resignations of himself and the members of his Cabinet to King Edward, who accepted them and summoned Sir Henry Campbell-Bannerman, the Liberal leader, to form a new Cabinet. We published on July 27 a character sketch of the new Premier by W. T. Stead. Mr. Balfour has been for a long time a mere-

ly nominal leader, and it was only because there was no vigorous and unified opposition that he has not been forced to resign. He has been surprisingly successful in holding his majority without committing himself to a definite fiscal policy, while at the same time the real leader of his party, Mr. Chamberlain, has been making a strong campaign for a tariff. He favors a policy of retaliation, but without placing any tax upon imported wheat, while Mr. Chamberlain holds that retaliation is impossible without a general tariff, and that, unless foreign wheat is taxed, it is impracticable to give a preference to that from the British colonies. This tax, he says, need not and ought not to exceed 2 shillings a quarter. The new Premier is not personally a very popular leader, and he will have a hard time establishing and holding his position, because the Unionists have still a majority in the House of Commons and the problem of the unemployed in London is a serious one. Premier Balfour was not able to offer any practical remedy to the deputation of the wives of the poor of London which visited him, and the donation of \$10,000 by the Queen can do no more than show her own sympathy. The procession of 30,000 unemployed which marched thru the city streets to Hyde Park was remarkably orderly, but their banners bore such mottoes as "Curse your charity; we want honest work," "A starving man has a right to his neighbor's bread," and "Old version—Thou shalt not steal; new version—Thy children shall not be stolen from." The Socialist leader, Keir Hardie, is trying to form an alliance between the forty-five labor members and the seventy-five Irish members in Parliament. The proposal of Alfred Lyttelton, Secretary of State for the Colonies in the Balfour Cabinet, to hold a conference of all the colonial governments on the fiscal question and to form a permanent commission, to be called an "Imperial Council,"

SIR HENRY CAMPBELL-BANNERMAN.

New English Premier.

has not met with universal acceptance, and the Secretary has cabled to the colonies to have it postponed until 1907. Cape Colony, Natal and Australia agreed, but Canada and Newfoundland objected, and New Zealand deferred a definite answer.

Mitylene and Lemnos

The occupation last week of Mitylene by the fleet of the allied Powers seemed to have no effect on the Sultan. On Monday, therefore, a second island, Lemnos, was seized. In both cases there was not even a hint at resistance. Some five hundred marines were landed, who seized the custom houses and telegraph lines. The Sultan's policy of resistance has been strengthened by the publication of the memorandum of the Balkan Committee, which shows clearly that the financial control of Macedonia would

only be a step toward the entire loss of Turkish prestige in that region. The dissension among the Powers makes the enforcement of their demands difficult, while the Sultan has it in his power at any time to close the Dardanelles to commerce or even to instigate a massacre of the Christians in Constantinople. The situation in that city is becoming very much strained. American tourists have been advised to depart on account of the hostile attitude toward the foreigners. The cruiser "Minneapolis" has been ordered from the Baltic to the Azores.

The Sevastopol Mutiny Quelled The rebellion of the sailors of Sevastopol did not prove so serious as it threatened to be. In spite of its extent and apparently thoro organization, it collapsed upon the first attack by the loyal regiments and ships. The sailors expected that they would be joined by the troops on shore, but of these the Bialystok regiment refused, and the Brest regiment, which at first imprisoned its officers, soon repented of this action and released them. The command of the mutineers was taken by Lieutenant Schmidt, who had been discharged from the naval service a few weeks before because of his revolutionary sympathies. On the night of November 28th he raised the red flag on the cruiser "Otchakoff" and seized the torpedo boat "Svirepy" and three other vessels. Boats full of armed men were sent to the battleship "Panteleimon," formerly "Kniaz Potemkin." The officers of this battleship were captured and taken to the "Otchakoff." Lieutenant Schmidt then notified the authorities on shore that if the "Otchakoff" was fired upon all the captured officers would be hanged. The other naval vessels in the harbor refused to mutiny, and in the afternoon they co-operated with the shore batteries in an attack upon all the shipping flying the red flag. The "Otchakoff" and the "Svirepy" replied, but after a few minutes both were disabled and set on fire. The "Otchakoff" showed the white flag and Schmidt, disguised as a common sailor, was captured in the attempt to escape. A large number of the mutineers were killed and

the "Otchakoff" was completely burned. The torpedo transport "Bug," loaded with explosives, was sunk by her crew to prevent being blown up by a chance shell. The town and the other ships were not injured by the bombardment. On shore the mutineers in the Lazareff barracks, numbering some 2,000, were attacked by three batteries of field artillery stationed on the Boulevard, 1,500 yards distant. The soldiers of the Brest regiment were given a chance to retrieve their honor by capturing the barracks. Their commander, Colonel Dumbadze, whom a few days before they had imprisoned, addressed them in these words:

"You stained the reputation of your regiment by failing in your duty to the Czar. His Majesty, who took pride in your loyalty, was greatly grieved by the news of your defection. True, you returned to your duty, but the memory of your insubordination is fresh. It is not, however, indelible. If your repentance is sincere, prove it. In yonder barracks are enemies of the Czar. His Majesty now orders you to bring them to a sense of duty. Occupy those barracks by force and you will have washed away forever the blot on your regimental escutcheon. Forward!"

The men obeyed, and the mutineers surrendered. At the Colonel's request, the Czar ordered the regiment forgiven and all record of the incident expunged from the annals of the regiment. Admiral Chouknin, who was in command of the Black Sea fleet when the mutiny occurred, has been replaced by Admiral Skrydloff.

The Russian Crisis The situation in Russia is more obscure and perplexing than ever, because of the general strike of the telegraph and postal employees, which for several days completely isolated Russia from the rest of the world. In consequence of the uncertainty and the alarming rumors in circulation, Russian bonds on the Berlin, Paris and London stock exchanges fell to a lower point than at any time during the war. The demands of the telegraph and postal employees are partly political and partly industrial. They threaten to keep all lines of communication closed until their union is recognized and given a share in the management of the service, and until the Czar announces the convocation of a constituent assembly based

upon universal suffrage. The telegraph operators and postal clerks in all the offices were called out either by persuasion or force, and the efforts of the Government to utilize soldiers to deliver mail and send messages were checked by the strikers by the threat of an armed and universal strike. Most of the telegraph lines are cut. The Government messages were at first sent by the railway lines, but the Central Committee of the Union ordered the railways to refuse all official messages. This committee, variously called the League of Leagues and Union of Unions, the official head of the loose federation of the labor, trades and professional clubs, is rapidly assuming the form of a provisional government of more real power than the cabinet which meets in the Czar's palace at Tsarskoé-Selo under the presidency of Count Witte. It is reported that the continued turbulence, in spite of the repeated concessions made to the people, has weak-

ened the position of Witte; that reactionary influences are again dominant in court circles. A military dictatorship is looked upon by many as the logical outcome of the present chaos. Minister of the Interior Durnovo is openly opposing Premier Witte, and declares his ability to put an end to anarchy by the aid of General Trepoff thru the vigorous use of the army. Count Witte has won over Father Gapon, the ex-priest, who led the procession of the workingmen at the time of the St. Petersburg massacres. Father Gapon has issued a plea to the people to cease from violence and accept the concessions already made to them, but the Socialists have openly repudiated him. It has been discovered that even the Guard regiments selected for the protection of the Czar's person have been affected by the revolutionary agitation. Twenty of the officers and 250 of the men stationed at Tsarskoé-Selo have been arrested on the charge of conspiracy.

The Czar's Council Chamber in the Tsarskoé-Selo Palace, Where the Witte Cabinet Meets.

Lines on the Death of Alexander 1st, Emperor of Russia.

By JOHN GREENLEAF WHITTIER.

[This poem of Whittier's was written before anything of his was ever published, and has never been in print. This was written, as is shown by the Quaker date, only a short time after the news of the death of Alexander 1st reached this country, and before Whittier had any other educational advantage than the district school. Alexander had the reputation of encouraging the introduction of Western civilization in his empire, and he abolished serfdom in the Baltic Provinces. His part in curbing the ambition of Napoleon was probably uppermost in the Quaker boy's mind, when he wrote these lines, which are the earliest extant in his own handwriting.—SAMUEL T. PICKARD, Amesbury, Mass.]

The pride of the North to the tomb has descended,
The glory of Russia has sunk in decay;
For departed is he whose dominion extended
O'er Tartar and Cossack with absolute sway!

Cold and still is the heart of the princely Commander,
The star of his glory is set in death's gloom;
The clods of the valley enshroud Alexander,
And Azof's tide washes the base of his tomb!

As a tyrant and despot the world may upbraid him,
And vilely with infamy his memory brand,
Unlike to the time when with awe it surveyed him,
The wonder of Europe, the pride of his land.

But look to the records of grandeur and glory
Of absolute monarch and despotic chief,
How few can be found within History's story,
More worthy than he of the tribute of grief?

Long ages may pass, and the distant sun fling out
Its cold beams on many an Emperor's tomb,
And the bells of St. Petersburg merrily ring out
A welcome to others to rise in their room;

And there may not be found when the long record closes,
Of those who have sat upon Russia's high throne,
A prince more deserving than he who reposes
Where Azof's tide washes his monument stone!

Our Country is the World, our Countrymen are all Mankind.

REDUCED FAC-SIMILE OF THE HEADING OF "THE LIBERATOR."

Garrison and Whittier

BY THOMAS WENTWORTH HIGGINSON

[William Lloyd Garrison was born December 10th, 1805. His intimate friend John Greenleaf Whittier's birthday was a week later in the month, but he was two years younger. They were very different in temper, altho both wrote poetry, and both were filled with a consuming passion for liberty. We are very glad this week to print on the previous page an unpublished poem by Whittier, and to present a critical sketch of the merits of the two friends, by Colonel Higginson, who was himself an intimate friend of both men. We follow this by an appreciation of the work of Mr. Garrison written by Professor Du Bois, who belongs to the race for whose liberation Mr. Garrison gave all the energies of his life.—EDITOR.]

THAT two youths—of eighteen and twenty years, respectively—should be seen talking together at a farmhouse door beside the Merrimac River on a fair June morning; what circumstance could seem less important than this to the casual passer-by? In what farming community between the Atlantic and the Pacific is not some such simple event liable to occur on any spring day? How idle and worse than idle would have seemed to any observer the prophesy that from this particular interview there was to follow a twinship of human lives—lives whose joint work was destined to lead within half a century to a vast public agitation, rocking a nation with war, changing its very basis from slavery to freedom and striking the chains from fifty million men! Yet it requires no great stretch of fancy to trace all this vast result to one such meeting, for, in the case of which I speak, the names of those young men were William Lloyd Garrison and John Greenleaf Whittier.

The situation was as follows: Garrison, a young printer's apprentice just

embarked on a weekly newspaper in his native town of Newburyport, fourteen miles from Haverhill, had published in his twelfth number some verses entitled "The Exile's Departure" and signed "W., Haverhill, June 1st, 1826"—verses to which the young editor appended this note: "If W. at Haverhill will continue to favor us with pieces as beautiful as the one inserted in our poetical department of to-day we shall esteem it a favor." Over the poem itself it may be well to draw a veil. It was such a poem as is within the reach of most of us at the age of seventeen, and it was sent by his elder sister—we all have charitable elder sisters—for purposes of publication. The farther history of its reception is told by Garrison in a lecture on Whittier, never printed by himself, but from which this extract is given by Garrison's biographers, his sons:

"Going upstairs to my office, one day, I observed a letter lying near the door to my address; which, on opening, I found to contain an original piece of poetry for my paper, the *Free Press*. The ink was very pale, the handwriting very small; and, having at that time

a horror of newspaper 'original poetry,'—which has rather increased than diminished with the lapse of time,—my first impulse was to tear it in pieces, without reading it; the chances of rejection, after its perusal, being as ninety-nine to one; . . . but, summoning resolution to read it, I was equally surprised and gratified to find it above mediocrity, and so gave it a place in my journal. . . . As I was anxious to find out the writer, my post-rider one day divulged the secret—stating that he had dropped the letter in the manner described, and that it was written by a Quaker lad, named Whittier, who was daily at work on the shoemaker's bench, with hammer and lapstone, at East Haverhill. Jumping into a vehicle, I lost no time in driving to see the youthful rustic bard, who came into the room with shrinking diffidence, almost unable to speak, and blushing like a maiden. Giving him some words of encouragement, I addressed myself more particularly to his parents, and urged them with great earnestness to grant him every possible facility for the development of his remarkable genius."

Later, the youthful poet sent another poem, entitled "The Deity," which was also published by Garrison with these words:

"The author of the following sketch, which would do credit to riper years, is a youth of only sixteen years, who, we think, bids fair to prove another Bernard Barton, of whose persuasion he is."

Three years later yet, when Garrison edited the *Journal of the Times*, at Bennington, Vt., he printed in it four poems by Whittier, and wrote of him:

"His genius and situation no more correspond with each other than heaven and earth. But let him not despair. Fortune will come ere long with both hands full."

Whittier was by this time editing the *American Manufacturer*, in Boston, and a little later, in that same year, when the young Garrison was in England, Whittier wrote to him, November 10th, 1833:

"I have, my dear Garrison, just finished reading thy speech at the Exeter Hall meeting. It is full of high and manly truth, terrible in its rebukes, but full of justice. The opening, as a specimen of beautiful composition, I have rarely seen excelled."

Thus far with honest and ardent mutual admiration the friendship went on. The parallelism was really a curious one. Of equally fine personal presence, both humbly born, they were bred to different pursuits, yet were equally given to that shoemaker's work which was then a common winter interlude on every New England farm and is commemorated by the little shoe-shops one still sees adjoin-

ing farmhouses. They both began literary life as editors, both at first changing from town to town and from State to State in that capacity. Both supported what was called "Henry Clay and the American system," and both were finally detached from Clay because they could not support a slaveholder for office.

When it came to anti-slavery action, the two young men were still side by side. In 1830, the time Whittier took the editorship of the *New England Review*, Garrison had been imprisoned in

Colonel Thomas Wentworth Higginson.

Baltimore as an Abolitionist. In January, 1831, he had established *The Liberator*. In 1833 Whittier had printed an anti-slavery pamphlet. In doing this, he not only bade farewell to success in politics, for which he had shown a strong yearning, but risked personal danger. At that very time Dr. Reuben Crandall, of Washington, who was arrested for the crime of merely lending Whittier's pamphlet to a brother physician, had been confined in the old city prison until his health was

destroyed, and he was liberated only to die. The fact is mentioned in "Astræa at the Capital," where Whittier says:

"Beside me gloomed the prison cell
Where wasted one in slow decline
For uttering simple words of mine,
And loving freedom all too well."

Thus far the co-operation between Garrison and Whittier had been complete, but the time approached when

their separation was coming and they were to work in parallel lines only. The divergence proceeded in part, no doubt, from the different religious schools in which they had been trained. The very vocabulary of Garrison was largely influenced by the stern school of old-fashioned Calvinism, which held that "the least of sins was infinite," in the words of the English Catholic poet, Faber. At

THE OLD GRAMMAR SCHOOL, NEWBURYPORT.
GARRISON'S BIRTHPLACE.

twenty-three Garrison wrote: "It is impossible to estimate the depravity and wickedness of those who at the present day reject the gospel of Jesus Christ." In later years he wrote of slave-holders as a class: "They are dishonest and cruel—and God and the angels and devils and the universe know that they are without excuse." "Without excuse!" When we now look more deliberately at the actual facts of the case, we see that in all the leading slave States the slave-owner, had he been Garrison himself, was powerless to free his slaves without the special consent of the State authorities as he would have been to swim the Atlantic with those slaves on his back. This was the case even in Virginia; the humanest slaveholder was held in by a law that all freed slaves must be removed from the State within a certain time—often an expensive process—in default of which they would be sold at auction to the highest bidder. I can find nothing in Whittier's severest writings which compares with such a verdict as Garrison's "without excuse." All this is to be borne in mind in considering his other divergences and antagonisms during the period when the main line of cleavage in the anti-slavery body was between the Garrisonians, who finally became avowed Dis-unionists, and the voting Abolitionists—called by their opponents "New Organizationists," but by themselves "Liberty Party," and then, as they expanded, "Free Soilers," and finally, when still further expanded, "Republicans." The feud was complicated by business questions, of which the transfer of the "Emancipator" newspaper from the Garrison side to the "New Organization" was the chief. It

was in connection with this transfer that the calm and moderate Whittier, who was a New Organizationist and one of their leaders, said to me of Garrison: "I know him thoroly and know that he is a despot," and also spoke of him as having acted the part of Robespierre. He told me also (on September 21st, 1844) that he had personally seen a letter from Mrs. Maria Weston Chapman, Garrison's firm ally and one of his ablest, in which she used the expression, "as to Whittier, the only question is whether he

is more knave or fool." These phrases hint at those bitter internal hostilities of the early anti-slavery days which have been only too well preserved in the life of Garrison by his sons, on the one side, and in the life of William Birney by his son, and Goodell's "Slavery and Anti-Slavery" on the other.

I need only say that in my judgment, as a younger Abolitionist, coming into the movement after its extreme bitterness had begun to subside, that neither side did full justice to the other, and both parties kept on the whole higher laws than they broke. I have spoken at meetings held by both wings of the

great movement, and while the "New Organization" or voting Abolitionists had always to offer the stimulus of election day, yet that thing itself brought with it the dangers of political manœuvring, while the Garrisonian meetings, where all pretense at such discretion was thrown away, had a freedom, a vigor, and a variety which made them far more attractive and more stimulating. Their tone may have been narrow, but it was the narrowness of the lightning flash. We cannot, of course, say that slavery was formally abolished

Wm. Lloyd Garrison.

by them; of course it was not, nor by any band of Abolitionists as such. Slavery was destroyed, not by their direct influence, having doubtless within itself its own sure doom, yet by their secondary influence. When Abraham Lincoln said to ex-Governor Daniel H. Chamberlain, of South Carolina (April 6, 1865), "I

Garrison's weekly newspaper, *The Liberator*, had from the very beginning taken, as he personally always held, a non-resistant attitude, on which point he was one of the few consistent apostles. I can see him now, when excited meetings were held during the fugitive slave cases in Boston, placidly setting up types for

CAUTION!!

COLORED PEOPLE

OF BOSTON, ONE & ALL,

You are hereby respectfully CAUTIONED and advised, to avoid conversing with the Watchmen and Police Officers of Boston,

For since the recent ORDER OF THE MAYOR & ALDERMEN, they are empowered to act as

KIDNAPPERS

AND

Slave Catchers,

And they have already been actually employed in KIDNAPPING, CATCHING, AND KEEPING SLAVES. Therefore, if you value your LIBERTY, and the Welfare of the Fugitives among you, Shun them in every possible manner, as so many HOUNDS on the track of the most unfortunate of your race.

Keep a Sharp Look Out for KIDNAPPERS, and have TOP EYE open.

APRIL 24, 1851.

Broadside Issued in Boston on April 24th, 1851.
Reduced Facsimile.

have been only an instrument; the logic and moral power of Garrison and the anti-slavery people of the country and the army have done all," he summed up the whole history of abolitionism; and Whittier as well as Garrison represented the anti-slavery people.

the next issue of *The Liberator*—for he always did his work himself without allowing a compositor to intervene—with his strong, calm face absolutely undisturbed. To pass from this to the non-voting attitude was for him an easy transition, and he carried with him, when the

time came, the bulk of his Anti-Slavery Society, James Russell Lowell and his wife Maria being among the few to vote against it. Thru the ordeal of the Civil War he never wavered in this attitude, altho his close ally, Wendell Phillips, could not always refrain from encouraging the departing soldiers. Whittier also opposed the war, moderately, and only from the point of view of the Society of Friends, nor did this prevent him from decorating his study with a bayonet from the field of Antietam. One would hardly, I think, have ventured

the value of his services. There are few living who have done so much to operate upon the public mind and conscience and heart of our country for the abolition of slavery as John Greenleaf Whittier."

Whittier, on the other hand, closed his preface to Oliver Johnson's "William Lloyd Garrison and His Times" by this fine tribute to Garrison (1879):

"The verdict of posterity in his case may be safely anticipated. With the true reformers and benefactors of his race he occupies a place inferior to none other. The private lives of many who fought well the battles of humanity have not been without spot or blemish. But his private character, like his public,

THOMPSON, THE ABOLITIONIST.

That infamous foreign scoundrel THOMPSON, will hold forth *this afternoon*, at the Liberator Office, No. 48, Washington Street. The present is a fair opportunity for the friends of the Union to *snake Thompson out!* It will be a contest between the Abolitionists and the friends of the Union. A purse of \$100 has been raised by a number of patriotic citizens to reward the individual who shall first lay violent hands on Thompson, so that he may be brought to the tar kettle before dark. Friends of the Union, be vigilant!

Boston, Wednesday, 12 o'clock.

Circular Printed at the Office of the "Commercial Gazette," Boston, Mass., October 21st, 1835.

to offer any such ornament to Garrison. Whittier had, as Mr. Robert S. Rantoul said so admirably:

"a good deal of the natural man left under his brown homespun waistcoat and straight collar. He had the reticence and presence of an Arab chief, with the eye of an eagle."

Whatever may have been the divergence between these two strong men, even to the extent of one's calling the other Robespierre, there always remained a friendship at heart. Garrison at the thirtieth anniversary of the founding of the American Anti-Slavery Society, 1863, spoke of Whittier as known and honored thruout the civilized world, and added:

"I have no words to express my sense of

knew no dishonor. No shadow of suspicion rests upon the white statue of his life, the fitting garland of which should be the Alpine flower that symbolizes noble purity."

Of the two men, Garrison died thirteen years the earlier, and Whittier wrote of it in advance to a friend:

"I am greatly pained to hear of the illness of our old friend, Garrison. For how many years he has been an important part of our world! Much of my own life was shaped by him. It is very sad to think I shall see him no more."

Writing afterwards to Mrs. Child, he said of Garrison's funeral:

"I did not see thee at our dear Garrison's funeral. Was thee there? It was a most impressive occasion. Phillips outdid himself and

Theodore Weld, under the stress of powerful emotion, renewed that marvelous eloquence which, in the early days of anti-slavery, shamed the church and silenced the mob."

Then he adds:

"Garrison's faith in the continuity of life was very positive. He trusted more to the phenomena of spiritualism than I can, however. My faith is not helped by them, and yet I wish I could see truth in them."

To another near friend he writes, speaking of Edwin Arnold's poem:

"He died at Azan." . . . I know of nothing ancient or modern which is so filled with a robust and satisfying faith as this little poem."

Thus the two friends closed the long parallelism of their lives by approaching death with parallel convictions.

CAMBRIDGE, MASS.

Garrison and the Negro

BY W. E. BURGHARDT DuBOIS.

AUTHOR OF "THE SOULS OF BLACK FOLK," ETC.

SEVERAL times a feeling has been voiced that the Negro Americans are not always appreciative of the great efforts which men and associations have from time to time made in their behalf. True it is that recently the note of complaint among colored men in this land has drowned out the voices of thanks and gratitude, and the watchword in the black world today is certainly agitation and censure rather than praise.

On the other hand, nothing is more significant than the spontaneous outburst everywhere among colored people of a desire and determination to celebrate the one hundredth anniversary of the birth of William Lloyd Garrison. These celebrations will usually be local church and school affairs, but the movement is general and the spirit behind it notable. No people are more appreciative of kindness to them or sacrifice in their behalf than colored people. And when it is exhibited in the wonderful devotion and sacrifice of a man like Garrison, the desire to acknowledge it is well nigh universal.

On the other hand, there is a feeling today among Negroes that certain classes of men are more desirous of making the Negro problem one of almsgiving and charity rather than of manhood and manhood rights. To this they are righteously opposed, and when in good faith some earnest workers in this great

field point to the columns of figures showing the money spent for Negro churches and schools, there prevails among colored people, along with all their thankfulness, a spirit which a widely read Negro paper has recently voiced:

"For all time, charity, which neither pauperizes nor patronizes heaven's unfortunates, but gives itself with its gifts, all praises and thanks are due. But chilling, unfeeling, vaunting, pretension, masquerading in the mantle of charity, deserves neither respect nor consideration. The neediest prefer to bear the ills of want and wretchedness rather than be the miserable objects of prying pity or condescending curiosity which proffers alms today, that it may defer justice and fair play tomorrow; which comes, if ever, only to keep the word of promise to the ear and break it to the hope."

Such words and such a feeling must be respected. It contains the germs of manhood, self respect and self hope. The period of universal Negro charity is passing—slowly, to be sure, all too slowly—but passing. When, then, these millions turn to celebrate the birth of a great and good man, who gave not his money (for he had none), but himself to their cause, what wonder is it that they make the meetings an occasion of consecrating themselves to the carrying out of the principles Garrison advocated, rather than of mere eulogy?

The words, therefore, of the following "Garrison Pledge of the Niagara Movement" are of especial significance, as they

are to be widely used by Negroes in this celebration:

"Bowing in memory of that great and good man, William Lloyd Garrison, I, a member of the race for whom he worked and in whom he believed, do consecrate myself to the realization of that great ideal of human liberty which ever guided and inspired him.

"I hereby pledge myself to fight for freedom: freedom of speech, freedom of thought, freedom to vote, freedom to enjoy public conveniences and freedom to associate with those who wish to associate with me.

"I propose to enter this great moral battle with head up like a man, saying, as he said:

"I will be harsh as truth and uncompromising as justice.

"My reliance for the deliverance of the oppressed universally is upon the nature of man, the inherent wrongfulness of oppression, the power of truth, and the omnipotence of God. My cause is a holy cause:

"Opposition cannot weary it out, force cannot put it down, fire cannot consume it. It is the spirit of Jesus, who

was sent to bind up the broken-hearted, to proclaim liberty to the captives and the opening of the prison to them that are bound; to proclaim the acceptable year of the Lord and the day of vengeance of our God. Its principles are self-evident, its measures rational, its purposes merciful and just. It cannot be diverted from the path of duty, tho all earth and hell oppose.'

"I will remember that 'The success of any great moral enterprise does not depend upon numbers,' and that 'It is possible that a people may bear the title of freemen who execute the work of slaves.'

"Therefore:

"I solicit no man's praise.

"I fear no man's censure.

"Our trust for victory is solely in God. We may be personally defeated, but our principles—Never.

"I am in earnest.

"I will not equivocate.

"I will not retreat a single inch.

"*And I Will Be Heard.*'

"A million men behind such a pledge will not let the spirit of William Lloyd Garrison die."

ATLANTA, GA.

Thanksgiving Aftermaths

BY MARGARET FITHIAN

For grief and fear that fill my life today,
For which I cannot *give* Thee thanks, O Lord,
 Take thanks of me;
For well I know that in the afterwhile
 I shall give thanks to Thee.

For that fell stroke which all my plans laid low,
The stroke that shut out life and hope and
 heaven,
 Take thanks of me;
For well I know that when my vision clears
 I shall give thanks to Thee.

For every prayer unanswered, every wish
That in Thy Father-love has been denied,
 Take thanks of me;
For—dost Thou not remember, Father, as be-
 fore,
 I shall give thanks to Thee.

The Rights of the Insured

BY JOSEPH W. FOLK

[The following statement by Governor Folk, of Missouri, given in an interview to a representative of THE INDEPENDENT, follows the unflinching line of attack against public corruption and graft, which in a few years has made him a leading figure in national politics.—EDITOR.]

IN considering the proposed action of the State of Missouri against the New York Life Insurance Co. and other insurance organizations which may be convicted of carrying on fraudulent practices, it is a mistake to suppose that the individual State has not authority to supervise the business of insurance companies. Insurance is not inter-State commerce; it may be regulated by each State. The State has a right to permit foreign insurance companies—that is, insurance companies incorporated under the laws of another State—to do business within its own boundaries, and it has an equal right to exclude such companies. In pursuance of this power, the State can authorize its own official to examine an insurance company in another State, and if this official finds that the company is in such condition as to make it hazardous to the citizens of the State for it to do business within the State, then its license can be taken away.

Missouri has provided by law for an Insurance Commissioner, who licenses all insurance companies that do business in the State. Whenever he thinks the interests of the policyholders are jeopardized by any company continuing to do business in the State, the Insurance Commissioner can revoke the license of such company. The State in this manner exercises supervision over all of the insurance companies doing business

within its limits, altho these companies may be located, and most of them are located, in other States.

The funds of a mutual company constitute a fiduciary trust, held and administered for the sole use of those named as beneficiaries, many of whom are or will be widows and orphans; and many thousands of people have taken insurance in such companies because of this very fact and the assurance that every dollar of assets belongs to the policyholders. That any portion of the policyholder's premiums, or profits on premiums, should be diverted to political purposes or other uses not contemplated when the premiums were paid in, and not consistent with the avowed purposes of a life insurance organization, must be considered by all right-thinking people as a gross violation of a sacred trust.

It has been learned that life insurance companies of New York, controlling many hundreds of millions of dollars, have been attempting to dictate elections by contributing immense sums of money to political campaign committees, which the officials who contributed it took from the trust funds placed in their care, with no more authority than the treasurer of a State would have to use the public funds for that purpose. Worse than this is the startling revelation that three of the largest insurance companies have for years maintained a trust to control legislation of the States and to elect and de-

feat men for office according to the wishes of these companies.

In the testimony before the New York investigating committee it was established that a bureau was organized in 1895 to control legislation. One man was put in charge of the legislation of the United States and Canada. He would select the best men to handle legislation in each State. No vouchers were required of him except his requisition, and he was expected to deal with men who could produce results. It was his province to bring pressure to bear and prevent re-election of men who were not to the liking of the insurance magnates. There was paid him by one company alone in the last four and one-half years \$45,000 as salary and \$981,000 for various other purposes, of which the sum of \$476,000 was for work as legislative agent.

It will occasion no surprise to learn that one of the companies sent \$2,500 for this purpose to Missouri four years ago. The legislative agent had absolute authority to draw on any branch office for any amount of money that he wanted, and was not required to give any information as to what the money would be used for. The checks showing how some of this money was spent were very prudently destroyed. To any one familiar with legislation and the ways of those who seek to influence legislation by corrupt means, it is manifest that the fund so raised was for the purpose of influencing legislators directly or indirectly.

With these companies in practical control of the money supply of the United States, having more power over the money market than the Government itself, they could in the course of time have absolutely owned State legislatures, and their avarice might have gone further in securing the election or defeat of State and national officers. In the course of time, instead of having a government by the people and

for the people, it would have been a government by the few, with wealth enough to purchase official favors. No man who loves his country can but be alarmed when he contemplates the possibilities if there had been no interruption in the operation and methods of some of these companies.

I do not believe any company whose officials divert funds without objection on the part of the directors, or that is willing to corrupt our legislators, should be allowed to do business in this State. They should do honest business or no business. If they cannot exist without surreptitious violations of law or bribery it is better for the people that they be excluded from the State entirely. The laws cannot be too strict and enforced too aggressively in regulating the conduct of those intrusted with such power as those have who handle the insurance millions, and they should be held to the same degree of accountability before the bar of justice as public officials are.

It is not wealth about which the people complain; wealth in itself is a blessing; but the abuse of wealth is a curse. It is not insurance companies the people object to, but the breaches of trust on the part of some of those running the insurance companies. The people understand these things, and know while some insurance people are crooked, just as some bankers are crooked, it does not follow that all insurance men or all bankers are without honor. While demanding the exposure and punishment of insurance crooks and crooks of every other kind, the people of Ohio the other day elected a president of a life insurance company as Governor of their State. He is an honest man, and eminently qualified and worthy of the place. This shows that the people are not so blinded by the exposures as to strike madly at any connected with the same line of business. They can discriminate between the good and the bad.

JEFFERSON CITY, MO.

New Russia

BY DR. MAX NORDAU

AUTHOR OF "DEGENERATION," "THE DRONES MUST DIE," ETC.

IT would take a big volume to say all that ought to be said on the present situation in Russia. I am ashamed to treat in a few brief aphorisms the greatest event in modern history.

The Russian revolution completes the French revolution. Henceforth white humanity, with the exception of the Mussulman world, will live under the triad of liberty, fraternity and equality.

Autocracy is still in a position to commit crimes, but they are the last convulsions of the wild beast. It is dying. The revolution has killed it. With it dies the reaction in all Europe. The Russia of the Czars has been the last stronghold of feudalism. Thru it the Middle Ages have lived into the twentieth century, and the counter-revolution has been able to resist the attack of modern democracy. The complete breakdown of the whole system of Russian tyranny is sure to come, is not far off, and the ruin of absolutism thruout Europe will follow.

But the Russian liberals, who have so gloriously secured for Russia the rights of man and citizenship, should be careful not to make a mistake which would be mortal. They should not imitate the French Third Estate, who, having vanquished Royalty and the aristocracy, closed the door and left outside the

Fourth Estate, thus disinheriting a body of fellow citizens who had fought side by side with this selfish Third Estate. The end of the Russian revolution will only come when is ameliorated the condition of the Russian laboring classes. The minimum of reforms should be a limitation of the hours of work, a pension for the worker at sixty-five, insurance against accidents and forced stoppage of work during the dead season.

It is possible—it is even probable—that the artificial unity of the Russian Empire will not weather the present storm. But I see no evil in a friendly federation of autonomous states, supplanting the present monster without organic cohesion, kept together by the chains of a despotic administration.

The new Russia will no longer strive to carry out the pseudo-testament of Peter the Great. It will be too much occupied with its liberal and democratic evolution to think of conquests, and too modern, too moral to dream of military glory. The new Russia will be pacific, will avoid mixing up in quarrels which do not concern it. But it will be capable of strong acts in defense of its ideals wherever they are in danger. This new Russia will thus be a better ally for a friendly France who will stand as an example for its democratic zeal.

PARIS, FRANCE.

The Recent Excavations at Bismya

BY EDGAR JAMES BANKS

Field Director of the Expedition of the University of Chicago to Babylonia.

ABOUT two years ago an irade was granted by the Sultan of Turkey, permitting the University of Chicago to conduct excavations at Bismya, a group of mounds situated in Central Babylonia, about twenty miles south of Nippur. Altho European explorers had expressed an opinion that the ruin did not date from Babylonian times, it was selected by the present writer as a site for excavations; the choice was based chiefly upon the reports of Dr. Ward and Dr. Peters, the two American scholars who have visited the ruins. From December 25, 1903, to June 1, 1904, the excavations were continued without interruption. During that period of five months what were the results of the excavations, or what additions have they made to the history and to the art of the ancient world?

A discovery of importance was the identification of the ancient city which Bismya represents. Dr. Peters, in his book "Nippur," thought it probable that the ruin marks the site of Isin, an important Babylonian city closely associated with Nippur. In the winter of 1901-02, when the great stone recording the Babylonian code of laws was discovered in Persia by de Morgan, its inscription mentioned among other cities one called Udnunki, and its temple E-mach. The names were new to Assyriologists. Inscriptions upon the shoulder of a marble statue, upon bricks, stone vase fragments, seals and tablets, which came to light in the excavations, con-

tained the names of the city and of the ancient temple of the Hammurabi code.

It has generally been supposed that the square tower peculiar to the Babylonian temple, and familiar from the imaginary pictures of the Tower of Babel, was first employed by the great builder, Urgur, king of Ur, toward the beginning of the third millenium B. C. While trenching and tunneling below the foundation of the tower constructed at Bismya by Dungi, the king of Ur, and beneath the bricks of Naram-Sin and of the famous Sargon of 3800 B. C., we came upon the lower stage of a tower of nearly solid masonry. Its bricks were small and plano-convex in shape, and were, according to Assyriologists and my

own observation, employed at a period not far from 4500 B. C. The base of this tower is still in an almost perfect state of preservation, yet how many stages it originally possessed, or how high it reached into the air, it is impossible to determine. The Babylonian tower is therefore not a peculiarity of the later temple, but as the story of the Tower of Babel suggests, it seems to date from the earliest civilization of Babylonia.

A discovery of great value to archeologists in determining the relative ages of the earliest Babylonian cities, is the history of the evolution of the Babylonian bricks. Bismya yielded an extremely great variety of bricks, more than forty in number. The upper strata contained

Statue of David.

the usual brick, about thirty-three centimeters square, common to every Babylonian ruin. Beneath them appeared the huge bricks of Sargon I., nearly half a meter square. Still lower the bricks were long and thin, and with a width equal to half their length; upon their upper surface were grooves, formed by drawing the fingers along the brick before it was baked. Some of the grooves ran lengthwise, others diagonally, and still others formed a Saint Andrew's cross. As the excavations deepened the number of the grooves decreased, the bricks became smaller, thicker, and more convex on the top, and finally the grooves disappeared. In a stratum still lower appeared the unmarked plano-convex bricks, and beneath them were the bricks of unbaked clay resembling the Mexican adobe. The grooves represented the royal marks and served the purpose of the brick inscriptions of a later period.

Apart from the sun-dried bricks the first burned Babylonian brick was small and plano-convex. As the brick grew larger and thicker, the first inscription was a thumb mark, which was prolonged into grooves varying in number and direction. Sargon was among the first to employ the square brick, and to discard the grooves for the more satisfactory brick inscription. While exploring the

mounds of Central Babylonia, the relative ages of the cities buried in them could, with the assistance of this series of brick marks, sometimes be determined at a glance.

Because of the absence of ancient Babylonian graves, it has long been supposed that the early inhabitants of Mesopotamia burned their dead. Excavations at the east corner of the Bismya Temple tower revealed an ancient crematory consisting of two large rooms. The inner was oval in shape, and sunk to the depth of about four feet below the level of the other; the outer was square and communicated by means of a passageway with the exterior of the temple. Close to the opening connecting the two rooms, and slightly elevated above it, was a circular platform about six feet in diameter, upon which were placed the bodies of the dead to be cremated. The flames from a furnace in the outer room enveloped them, while the smoke escaped thru a vent above. The mark of the smoke upon the wall of the adjoining tower is still visible. After the bodies were consumed, their ashes were brushed from the platform into the pit beneath, where nearly two feet of them were discovered.

This part of the temple was constructed entirely of adobe and plano-

Ruins of Bismya.

Bricks from Bismya.

convex bricks; some of the latter still in place at the top of the walls of the oval shaped room clearly indicate that originally the crematory was covered with a dome. Thus, more than 6,000 years ago, the dome, still so generally employed in the East, where wood is scarce, was one of the methods of roofing.

One entire marble statue and the fragments of several others were discovered in the ruins of the temple. The archaic character of the inscription, the style of the art, and the location when found, point to the period of 4500 B. C. The Stele of Vultures, found by de Sarzec at Telloh, now in the Louvre, portrays in low relief a number of small, short proportioned figures, nude to the waist and draped with an embroidered skirt reaching to the ankles. Like them the face of the Bismya statue is beardless; the eyes are triangular; the nose forms nearly a straight line with the forehead, and the shoulders are square. This oldest of all statues is eighty-eight centimeters high; its arms are free from the body, and in this respect it is unique. Its Sumerian or pre-Babylonian inscription of three lines upon the right shoulder gives the name Da-udu, or David, as that of the king whom it represents, and thus explains the derivation of the

name of the Biblical king. David is an old Sumerian royal name transmitted to the conquering Semites.

In a corner of the temple enclosure was the old temple dump, from which several dozens of baskets of the fragments of stone vases were recovered. Among them was a large conch from which a portion had been cut in such a manner that it formed a perfect oil lamp, while the valve at the end served as a rest for the wick. The conch was so difficult to obtain that imitations of it were made in marble, and in this old temple dump several shell shaped marble lamps appeared. The sea shell is therefore the ancestor of our modern lamp.

At the northern end of the Bismya ruins was the residential quarter of the city, dating from the time of Sargon I, for there the name of this famous king appeared. The small houses, containing from one to three rooms, and supplied with cisterns and drains, give us our first picture of a Babylonian city of 6,000 years ago.

The city was protected by a wall of plano-convex bricks. In a trench along its outer edge were thousands of sling balls of baked clay and marble, which in some ancient battle were hurled by the

Clay Sling Balls from Bismya.

enemy against the city. The balls vary in size from an English walnut to an orange.

When the two thousand or more Babylonian tablets or fragments which the ruins have yielded shall have been read, the history of Bismya may be reconstructed. Shafts sunk from a stratum of ruins dating not far from 4000 B. C., thru thirty feet of earlier ruins, to the sand of the desert below, suggest for the first occupation of the site a date in comparison with which the age of Sargon

seems recent. The size and magnificence of the plano-convex brick temple point to about 4500 B. C. as the period of the city's greatest prosperity. Long before the other cities of Babylonia, once considered ancient, had come into existence, Bismya had lost its power. Early even in Babylonian history the city seems to have been forgotten, and only its low mounds, like an uninscribed tombstone, have marked the place where it lay.

CHICAGO, ILL.

A Woman's Litany

BY CHARLOTTE LEECH

God, the Father, name Supreme,
Guard young maidens while they dream,
Lest, awaking, they blaspheme.

Hear us, Holy Father.

God, the Son, of Mary born,
Teach all women, travail-worn,
Love's true symbol is a thorn.

Hear us, Holy Jesu.

Holy Ghost, that, increate,
Didst brood upon the waters great,
Like Thee, may we only—wait.

Hear us, Holy Spirit.

Ever blessed Trinity,
Three in One, and One in Three,
Maid, and wife, and matron, we

Pray Thee, hear our Litany.

BROOKLYN, N. Y.

One of Our First Families – Gramineæ

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

Any one who has seen the sun rise, and throw its spears of light thru the miles of corn that cover the prairies of our Western States, fingering every leaf, and putting life into the growing kernels — anticipat-

ing a harvest of over two and a half billions of bushels of this single cereal—must acknowledge that corn deserves to be reckoned as king of the family. But when we come to add wheat, rye, oats, barley; and estimate how much the human family depends upon these for sustenance; then take breath once more to consider the millions whose food is almost entirely confined to rice—still another member of the family; what shall we be able to say too much of these grains, which have been developed in the long process of time; most of which we are accustomed to group under the head of cereals? But even yet we have not touched the outer rim of this marvelous grouping. While human beings are feeding on the seeds of these plants, the same and other members of this family furnish food for nearly all the domestic animals necessary to human welfare.

Altho corn is generally spoken of as of doubtful origin; and maize is simply suggested as a possible evolution from *Teosinthus*, a Mexican grass, I have in my own garden, by reversion, carried on carefully for several years, taken corn back very closely to grass. I have lifted every ear back to its old home, at the top of the stalk; reduced the kernels to the size of wheat, and had my rows of corn standing about two feet high—like rows of well-cultivated timothy. Of course, it is our ambition not to carry it backward, as I did by way of demonstration, but to carry it forward, and create new varieties—ripening in shorter season, and producing heavier crops.

It was a wonderful achievement of Nature when, raising grass upward to create corn, she lowered the ears, which grew too heavy for the stalk, and placed them at the axils of the leaves. The Indians, long before white men came to this continent, must have carried on a great deal of skillful culture, for maize or corn was already the staple food of these people, and it was from them that the white settlers first learned its value. General Sullivan, in the report of his raid against the Iroquois, tells us that his soldiers would not have succeeded, had it not been for the vast magazines of corn that they found. It was part of his achievement to destroy these stores, upon which our aboriginal farmers must subsist. He also cut down orchards of apples, and plums, and sugar trees, that frequently numbered over one thousand trees. The stores of corn were accompanied by peas, beans and pumpkins; all of which had undergone evolution under the hand of the Indian. We shall have to study these people from another standpoint some day. They were farmers that we might be proud of even at the present time. That they fought for their villages and orchards and farms, is not to their discredit.

"Sweet corn" is first spoken of in American gardening, as being grown around Plymouth, Mass., but it was received from the Indians of the Susquehanna Valley, in the year 1779. As late as 1850 there were only two varieties known. At that time it was considered only suitable for roasting, and one of the most delightful episodes in boy life was to kindle a fire in the field, or edge of the forest, where, with his companions, he could roast ears purloined from a neighboring corn field. Harriet Martineau, in her "Notes of American Travel," in 1835, says:

"This day, I remember, we first tasted green corn, one of the most delicious of vegetables,

and by some preferred to green peas. The greatest drawback is the way in which it is necessary to eat it. The cob, eight or ten inches long, is held at both ends, and having been previously sprinkled with salt, is nibbled and sucked from end to end, till all the grains are got out. It looks awkward enough; but what is to be done? Surrendering such a vegetable, from considerations of grace, is not to be thought of."

Now we have as one of our greatest industries not only the production of sweet corn for Summer use, but canning it as an article of commerce. The annual corn pack for the United States and Canada is already over five millions of cases; each case containing two dozen two-pound cans.

The Old World gave nothing in the way of annual vegetation to compare with corn. It is the one crop which luxuriates most freely in the rich prairie soil of our Western States. The problem now before Americans is how to raise the average crop per acre, from the fifty or sixty bushels of our best sections, to one hundred and fifty. There is no more stimulating sight, nor one more pregnant with prophecy than the "corn train," which carries Professor Holden and his assistants here and there about the State of Minnesota, to teach the farmers improved culture of this remarkable food. He would have them select the most perfect seed, and have it preserved in the most perfect condition, promising that by good culture he will increase the corn crop one-half. With improved varieties and common sense culture—in other words, with science applied to farming—we have gone far enough to know that we can more than double the food products of the United States. There is no good reason why the corn crop of any section should average only thirty or forty bushels per acre, or even eighty to one hundred.

Not least remarkable is the evolution whereby the corn stalk has become of value nearly equal to that of the grain itself. The shredder renders almost every particle of the fiber of value for our animals. The pith of the corn stalk is also finding its values and its market. No part of the corn stalk, or the corn itself, will hereafter go to waste. Meanwhile, the conservative Old World, which until recently refused to accept of our maize, as it once refused our potatoes,

is learning its great value in supporting the masses. Instead of being compelled to burn our corn for fuel, we have the world's market, demanding more than we can supply, and still keeping up the price. Corn at fifty cents a bushel, and wheat at nearly double that price, means that this one family is creating *prosperity* for the American farmer.

It is easier to believe that our common cereals—wheat, rye and oats—are only grasses elevated in the rank of vegetation. The old Latin name for wheat was *triticum*. From this we have now three cultivated species: the one-grained wheat, the Polish wheat, and the common wheat, or spelt. The farmer finds infinite interest as well as profit in the study of varieties. There are the naked wheats and there are the bearded wheats. The crop for 1904 in the United States reached the immense sum of 550,000,000 bushels. In the markets of the world we are compelled to compete with Argentina, India, Hungary, Rumania, Bulgaria, and Russia. Our markets are found mainly in France, Italy, Germany, Spain and Great Britain. The largest annual production was, I think, in 1891, when our States reached a wheat harvest of nearly 612,000,000 bushels. Some one has said that the world could be revolutionized by the production of wheat that would give us double the present average per acre. Another has said that we will yet create that wheat. It is not at all probable that the middle of the Twentieth Century will be growing any of the varieties now in our fields. Evolution is going on with immense strides in all forms of vegetation.

Unfortunately our wheats, so far, are subject to so many vicissitudes that the grain enters into speculative trade far more than is good for either the farmer or for commerce. It is influenced by climate and by soil, not only as to its quality, but its average production. A drought or a surplusage of water, or a few days of burning wind is enough to upset all our calculations, and turn our Boards of Trade into boards of gamblers. Fortunes are made and fortunes are lost, while the farmer is left to the mercy, not only of the weather, but of fictitious prices. The chinch-bug and the wheat-midge have had a great deal more

to do with limiting farmers' prosperity and human comfort than many creatures much larger and more easily dealt with. We still wait for the time when science, which has already done such wonderful things in the way of combating our orchard rivals, will enable us to defy these minute pests.

Strange as it may seem, this family of grasses has worked out, in another part of the world, the salvation of the Turanian stock. It is not extravagant to say that one-third of the human race would find it impossible to live if rice were annihilated. It has been cultivated in India as far back as authentic history reaches, and in China since three thousand years before the Christian era. It was cultivated in Europe in the thirteenth century, and was brought into Virginia with the earliest settlers. Notwithstanding its importance in American agriculture, it is beginning to be understood that not only the culture, but the grain can be greatly improved. Japanese rice and Japanese methods are being tested, and will displace our cruder ways of growing this important product. Up to our War of Independence the rice product of the United States reached about 75 million pounds. It is a curious commentary on slavery that for the next hundred years there was but very little increase in rice production; the total product of 1880 being a little over 85 million pounds. In 1893 the production had leaped up to the amount of over 200 million pounds. Those who understand the South know that, since the departure of slavery, improved agricultural methods and machinery have been rapidly working a revolution. The Southern States are not only gaining on the Northern in manufactured products, but in agricultural. They are becoming what Nature intended them to be, the garden of the continent.

Rice comes nearer to being a perfect food for mankind than any other single product of Nature. It is deficient in flesh-forming material, but with fish or milk or cheese or beans, it becomes a balanced ration for human beings. Its almost perfect digestibility is of great importance in the United States, where so little time is given to the stomach to prepare material to build up the body and keep it in repair. We are told by

hygienists that rice should be cooked very thoroly, and should be used for food only when it has been well ripened by storage—that is for three or four months. Corn and other members of the family have heretofore not entered largely into competition. We have our geographical rice belt, and our geographical corn belt—as food zones. But corn is moving southward and rice is moving northward, as articles of increased consumption. It is not improbable that in a few years more we shall be as great consumers of rice as the Orientals. It will certainly be necessary, as our population increases, that we learn how to grow, not only much larger crops, but to use the most concentrated foods.

Corn, wheat, rye, oats, rice, barley, Nature worked for uncounted ages to develop out of some simple branch, or several branches, of the grass family. Without them civilization would be stopped, and human beings would be hurled back into the rudest barbarism. The rose family, with its magnificent fruits, and the solanum or potato family, with its invaluable products, could be as easily spared as these cereals. Yet all these foods are products of the great family of grasses—are grasses developed. Nor do we know how much more there is to come. We are seed-eaters, and probably more naturally such than flesh-eaters.

Evolution has still left behind enough of the family, as simple grasses, to feed those animals which do not care for or thrive on such foods as are required by human beings. There are three thousand species of these grasses, nearly all of them being of direct or indirect value to man and domestic animals. The more commonly known are about ten in number, not including the cereals which we have named above; they are timothy, red-top, oat grass, sweet-vernal, June grass, orchard grass, couch grass, Bermuda grass, meadow foxtail and the fescues. These grasses clothe the earth with verdure, and turn deserts into meadows. They form the connecting link between the chemical elements of the soil and animal life. These elements raised into creatures suitable for food are elevated still more as they nourish the king of animal life, the image of the Creator. It would be difficult to over-estimate the

importance of these humble grasses as an intellectual power in the world. Poetry has, from the earliest ages, been associated with the barley and wheat harvests—the corn of the Old World. We owe to this that exquisite pastoral in the Bible, the story of the gleaner Ruth. From the same source came the inspiration of many of the finer lines of Homer and Virgil.

Nature has worked out many a beautiful problem under the soil, as well as above, with the grasses. She uses them not only to carpet and beautify the fertile places, but to bind down loose soils and tie them to place; to turn sand dunes into meadows. The couch or quack grass, which so troubles the farmer when it is out of place, is the finest possible illustration of natural persistency in doing a good thing. It is invaluable for soils that will grow no other plant. It will travel under the surface, straight thru a potato, or around a stone; sending up its spikes, which are really spears of grass, until it has possession that only man can contest. The flower of grasses is a lily in miniature. The pampas grasses are simply our own beautiful orchard grasses enlarged and glorified. Then, lifted above all the rest, are the *Bambusæ*—including the bamboo of the tropics, standing one hundred feet high, and one foot in diameter. Their economic uses, from house building to blow

guns, would alone glorify the family. But when all has been said, we turn back once more to our beautiful and noble American corn plant, as the princely head of the most useful family of plants in the world. I am looking down from my hillside balcony, over a valley, where not one of the hundreds of homes considers that it can endure a year without sweet corn, in succession, for two months, or possibly three. The great flat meadows along the creek are flanked and divided with corn fields, whose product goes to the mill that sits by the roadside, compelling the water to grind all day long, monotonously. The stooks in the field are Yankee, in every sense of the word; and our succotash, and Indian pudding, and samp are as national as the Stars and Stripes.

It was for their fields of corn that the Pilgrims gave special thanks; and Thanksgiving Day was selected just as husking time came to an end. The corn-cribs were full of gold, and the hearts of the folk warmed with gratitude. But for corn—which we must never forget was and still is Indian corn, a gift of the despised aborigines, it is not likely that we would ever have secured a permanent footing on this continent. The history of the human race would have been turned aside into absolutely different channels.

CLINTON, N. Y.

London's Topics

BY JUSTIN McCARTHY

IN London just now the great topic of conversation, unless, indeed, among those who take no interest whatever in politics, is the condition of things in Russia. Once again during the last few weeks this subject has become the engrossing topic of our talk. The mere outsider, who like myself cannot pretend to any intimate personal knowledge as to the significance and the proportions of events in Russia and its dependencies, is almost absolutely bewildered by the

utterly contrasting judgments which he hears expressed by men who profess to know all about the subject. I am not now speaking of Russian visitors or Russian exiles in London. We can all readily understand the views which a Russian diplomatist visitor to London or a Russian exile settled in London might form concerning the present crisis. I am not speaking either of English politicians whose sympathies and training pledge them beforehand to the side of

the established Government or to the side of the threatened revolution. But I am sometimes amazed and almost bewildered to hear the irreconcilable opinions offered and conclusions maintained by Englishmen whom I know to be well acquainted personally with Russia and to be pledged neither to the principle of imperialism nor to the principle of ultra-democracy.

I was conversing a day or two ago with an English friend of mine who has spent a great part of his life in Russia, who has traveled and sojourned in most of its provinces and still makes frequent visits to that Russia which was once his abode for more than twenty continuous years. He is a fair and liberal minded man, and he is not in any sense a strong politician so far as British politics are concerned. This friend of mine regards the democratic uprising in Russia as hopeless of producing any real benefit to any class in Russia, and he gravely insists that the great misfortune to the Russian Empire does not consist in the system of government, altho that he admits to be bad enough, but in the utterly savage character of the vast majority of the Russian population. He did not put this forward as an effort in startling and sensational novelty, but as the deliberate result of his long and close observation. Then, again, I have another English friend, a man who is still and has been a great many years an habitual resident in Russia, for the most part in the capital or in one of the great Russian cities, who has seen and studied most parts of the great empire and is as familiar with the Russian language and the Russian ways as if he had been born and brought up under Muscovite rule. This friend of mine has lately been visiting England, and he has given me the results of his observation. He tells me that he has the most thoro faith in the inherent manhood and capability of the Russian population generally, and that he feels sure the people only need a system of free, civilized and humane government in order to make the country one of the most prosperous and peaceful in the world. All Russia's troubles, according to him, come, and have ever come, from despotic rule, from a barbaric thirst for invasion and conquest on the part of the

despotic rulers, and from the trampling down of every effort and every aspiration toward liberty, equality and the light.

Now I take these two men merely as illustrations of the difficulty which many in this country who are trying to solve the great Russian problem must have to deal with when they come to consult the opinions of what might be considered expert witnesses and witnesses who are not Russian by birth, family or bringing up. I do not think it is likely that I can have had any extraordinary or even any very rare experience in my endeavors to get at the opinion of competent English observers on such a question. I can sincerely maintain that either of the two men whom I have mentioned would be accepted by all who know him as thoroly qualified to give an opinion worth listening to on any subject brought within the sphere of his close observation, and yet I can find no way of establishing any manner of reasonable compromise between the judgment of the one man and the judgment of the other as to the causes and the issues of this most momentous Russian question.

I may say that for myself I have long since formed an opinion of my own, altho I cannot pretend to say that my opinion is sustained by any intimate knowledge, or indeed personal knowledge, whatever as to the condition of things now existing in Russia. My own conviction is from all that I have been able to read and to hear on the subject that the great majority of the Russian working people have in them a full capacity for enlightenment, for peaceful progress, and for civilization, and that the barbaric system of despotism under which their best energies and aspirations have so long been crushed is the main obstacle in the way to the development of a really great Russia. I do not fail to take into account some of the hideous events which have disfigured this present Russian struggle, such as the assassinations of prominent public men and the murderous attacks made by uprising mobs against detested Jewish communities—detested because they are Jewish. But I cannot call to mind the history of any great uprising against a despotic monarchical system which was not dis-

Her Majesty Queen Alexandra.

figured by some such crimes as these. Where a people is kept in utter subjection by hereditary tyrannical rule it must be expected that among its populations here and there will be now and then some outbursts of disorder and crime. Where oppressive power for its own ends maintains ignorance it must make up its mind that such enforced ignorance and servitude will break out into convulsive and even unmeaning demonstrations of passion and of hatred. I do not believe that the present Czar of Russia has anything in him of the conscious tyrant or of the deliberate oppressor, but he has succeeded to a heritage of wrongdoing, and he probably does not yet see his way how to remove and redress the wrong. I have still some faith in him and much faith in the long-oppressed Russian population.

Queen Alexandra, the wife of our sovereign, King Edward VII., has always been very popular in the British Islands, and she has just now been making herself even more popular by a most timely, suggestive and generous act. She has been giving a donation of £2,000 as an

incentive toward the creation of a fund and an organization with the object of providing employment for the unemployed masses in these islands. The subject has of late been attracting much public attention. An immense number of honest and industrious artisans are frequently out of work here merely because there is no immediately paying work for them to do, and all the while there are public works which ought to be carried out, and are waiting to be completed or even to be taken in hand because the State and the various public bodies are always thinking of something else, and we are all too much taken up with discussion as to the business and the menaces of war to turn our attention to the industry of peace and of domestic prosperity. An attempt was made by the present Government to bring in a measure which might in some way make the State active in providing employment for industrious artisans who have now no work to do, and at the same time promoting industrial enterprises which would bring benefit to the whole community. This measure, however, has proved a total failure, and there have lately been some earnest and serious demonstrations made by the working classes here in order to impress the Government with a genuine sense of the national responsibility.

Mr. Balfour, the Prime Minister, received a few days ago a deputation of workmen and of workingwomen, and I am sure he must have been much impressed by what he saw and what he heard, but he did not in the reply which he delivered to the appeal seem to have any suggestion to offer as to adequate measures of State interposition. Queen Alexandra, in her letter accompanying her donation, seems to me to have touched the very heart of the question. She urges that at all events it should be recognized as a public duty to make the care of the unemployed as much a part of our national system as the care of the pauper and of the penniless sufferer from heavy illness. With this object she offers her gift as the beginning of a fund to meet the immediate necessities of the crisis, and thereby allowing some time for the legislative measures needed in order to meet efficiently the ever-growing

difficulties about the condition of the unemployed. Perhaps I may add that the Queen is not, as sovereigns go, endowed with any large amount of wealth, and has indeed but limited means of doing good by gifts of money when compared with a very large number of her own subjects. The happy and immediate effect of her letter and her gift will be to direct the attention of the whole community to the existing need and to the best means for its complete removal in a manner which could not have been effected by the most benevolent appeal from any private philanthropists.

We are still left in ignorance as to the time when we may look out for a General Election. Meanwhile there seem to be increasing difficulties, and fresh disagreements, leading to other difficulties, coming up among the Conservative front-ranks. Some of Mr. Balfour's official followers are believed to be regarding Mr. Chamberlain with increasing distrust, while, on the other hand, Mr. Chamberlain loses no opportunity of assuring his followers and the public generally that Mr. Balfour and he are really quite in agreement as to financial policy. Such is the subject of daily discussion among the newspapers and the public thruout Great Britain, and these evidences of Conservative disunion cannot but have a disheartening and enfeebling effect on the constituencies. Every election we have lately had has only gone more and more to prove that the Conservative strength is falling off thruout the constituencies, here, there and everywhere, and these recent disagreements among the Conservative leaders can only have a fresh and very distinct influence in the same direction. Whenever Mr. Balfour is announced as about to deliver a speech in public, and such occasions are not many, we are always expecting to hear some distinct explanation of ministerial policy as to the time for the appeal to the country by means of the General Election, and we always find that the Prime Minister has committed himself to no such declaration.

On the other hand, it certainly cannot be said that the Liberal leaders are very closely allied among themselves, or that they have given to the public any clear and definite announcement as to their

policy on some important questions. I find it, for myself, not easy to understand how such men as Lord Rosebery and Sir Henry Campbell-Bannerman, Mr. John Morley and Mr. Asquith, and some others whom I could name, are to bring themselves into actual agreement on some of the most important questions which must have to be considered when the program of the Liberal policy comes to be made out. Meanwhile the Irish National Party looks composedly on, perfectly clear as to its own course whatever may happen in the coming session, quite prepared to take the General Election next week if it should come, or to wait for it until any part of next year which the Government now in office may think convenient. Mr. Redmond and his followers will support any party or section of a party which promises to do justice to Ireland's national demands, and will not be content with vague promises or mere half measures intended only for the purpose of evasion or indefinite delay, whether they come from the Ministerial benches or from the benches of the Opposition. The Irish

A. Froude.

Nationalists form, I should think, the least anxious party in the House of Commons now.

In my last article I said that a new volume of stories by Mr. Hichens had just been published by Messrs Methuen; since then I have read the stories, and think them among the best he has written. Mr. Hichens is one of the few successful living writers of short stories in English, and in this volume we see him in many moods. The first story, from which the volume takes its name, is "The Black Spaniel," and is very painful while wonderfully clever—the sense of horror is conveyed to the reader in the most extraordinary manner. The second story is frankly farcical and extremely amus-

ing. The stories which make the rest of the volume are most of them stories of the desert, and in such Mr. Hichens is always at his best. There is no one who can give the atmosphere of the desert more marvellously than he can, as he has done in his last novel, "The Garden of Allah"—perhaps his best work so far. One of the most beautiful of all the stories in this volume is the last, "Pancrazia's Hair: A Story of Sicily."

Mr. Herbert Paul's "Life of Froude," to be published by Sir Isaac Pitman & Sons in a few days, supplies one of the most interesting announcements for this month, and I hope to say something of it in my next contribution to THE INDEPENDENT.

LONDON, ENGLAND.

The Serpent and the Woman in Fiction

BY MRS. L. H. HARRIS

THIS is a queer world, anyhow, and it is queerer still since the novelists began to interpret it. The author of the Book of Genesis might have learned much from them. The trouble is, they have learned so little from him. The noble simplicity of that first scene laying and Man-making does not appeal to the dessert-plate imagination of these modern apocrypha writers. Not one of them can create the earth and the fullness thereof in three sentences that lie like stretches of immortal light along the horizon of all literature. And not one of them can command the heaven-wide conditions of peace that spread over that first Edenic landscape.

But the modern novelist has crowded into the original apple tree, and for the same malevolent purpose Satan had in the beginning. He has a forked-tail sense of life which causes him to make a dramatic feature of temptation in art. The very rocks and hills in his stories lead up to the fall of man, and he is coiled before nearly every heroine to be found in this year's novels. Thus women appear to have become the root of all evil in fiction. No matter how guileless

and good they are, they begin to have the worst possible effect upon the men before tea time in the first chapter. And the worse they are, the more do they suggest innocence while they are doing wrong. And it is the business of the star character to do wrong. She is the prima donna of charming wickedness. Take the case of that lady who is perhaps the most fascinating heroine in any novel of this season. She is married, but manages to remain "tremendously interesting" to men—a most suspicious circumstance in itself, but that is not all; the nearest woman friend she has "adores and despises, loves and most bitterly hates" her. The reason is not far to seek. She lives to act, and she acts to show off the attractions of a singularly versatile temperament. Her idea of the moral law governing the relations of women to men does not go beyond her own satin corset-staves. She goes out the first time she can tempt the man to ask her, and spends the day in the country on a pleasant spring branch with another woman's lover. She reasons very simply about the propriety of doing so. It is no harm to visit the country, and it is not her fault if the man is another

woman's lover, nor even if he were a husband. The climax is that after behaving with the utmost discretion all day, he kisses her on the way home. "And in the very midst of his emotion . . . she preserved so wonderfully the air of not being responsible for the thing, of being quite passive, of just having it happen to her." Now, of course, if women are not morally responsible, this is the right view to take of such a performance, and it is undoubtedly the way some of the best novelists are listing them this year.

But if fiction is in any sense an interpretation of life, what are we to infer? That at last the scarlet woman has also evolved into this kind of delicate, diabolical lady-abbess of evil, who fashions her redness, not as of old, out of her own personal shame, but out of every man's honor with whom she comes in contact.

And in these novels, at least, the men seem singularly willing to part with their honor to such a woman. They do not hold out against her odds, but recognizing fully what she is they yield gladly, as if she had offered them a social distinction. They make no secret of their bondage; all the female acquaintances of such a man know that he is enjoying a disgraceful experience. And so soon as the episode is over, the good, nice stick of a girl who loved him aforetimes invites him to dinner. He is in society again—*available*. She endures the stench of his confidence, and then marries him with a glad air of thankfulness. Really it is scandalous that a book which portrays most of these details and intimates the others should be considered among the best works of fiction this year, and justly so when it comes to the literary art of expression.

And even when the woman in the story does not yield to the serpent intrigues of the author, she holds out against them blindly. Another heroine of the season, who is quite as popular as the one just mentioned, belongs to this class. There is no power of goodness in her. Her course represents merely the forlorn retreat of virtue into heaven. She is snared on all sides, and keeping somewhere in the region of righteousness, she has forever the sense of guilt which comes from a sort of helpless spirit iden-

tification with her environment. Now, if it is a fact that the beautiful, brilliant women who move in the great social circles of the country are so impotent when it comes to preserving their honor and reputations, if they are compelled to walk so near the edge of shame and to make shift at being moral at all, why should they have nearly always the star rôle in our fiction? Are good women less interesting than bad ones, or does it require greater genius to portray one and a better-bred mind to appreciate one than our novelists or readers appear to possess?

Things were not always thus. Women used to have ridiculous nerves and mouse-like spirits in novels, but they did a sight of good. They leavened the whole lump with their tears and their pretty sprig muslin virtues. It is the fashion now to laugh at "St. Elmo," but Edna Earl was a very proper young woman. She minded her scriptures and did the square thing. No unscrupulous person could have got her in his power, as the Jew did Lily Burt, because he had seen her leaving a man's bachelor apartments, because Miss Earl never could have thought it an innocent lark to visit a gentleman there. What is more to the point, she was instrumental in her lover's reform. Now has a single heroine in this year's fiction helped anybody to reform? On the other hand, one trembles to think what would have happened if St. Elmo, or wrestling Jacob himself, had come under the influence of Ora Pincen.

There is a conviction these days, founded upon cynicism and selfishness, to the effect that good women never can get bad men to reform. Such people only remember the failures, but the foundations of society rest in no small measure upon the success of this vocation wherein women are called. And if some of those novelists who torture their wits for a new situation and a new motive would dramatize the idea that love and virtue are a woman's supreme ability it would be at least as interesting as this notion that she is the snare of sorrow to herself and the root of all evil to others, and the story would teach something besides different kinds of fashionable degradation.

English Football

BY JOHN MORGAN

[Now that the football season ends amid such a hue and cry against the game it is interesting to learn the views of an English football player on the advantages of the English game —EDITOR.]

I AM in complete accord with your timely remarks on football in this week's issue of THE INDEPENDENT, and sincerely hope your suggestion will be taken up by the minor universities. I see that already the fatal injuries for this season total up to nineteen, and if this rate of fatalities keeps up this season will be a record breaker. When consideration is taken of the fact that the American season is a very short one, and that at best but comparatively few play the game, these fatal results are a terrible indictment of the modern American college game. Coming as I do from England, I am from a country where football is well nigh universal, as it is *par excellence* the national game, as the football season lasts even under Rugby rules anything from twenty-six to twenty-eight weeks, and under "socket" rules fully eight months. Personally I have played under "socket" rules seven seasons for a junior league team in Liverpool, and seldom taking part in less than forty matches each season, and came out scathless. Of course, I have received odd and sundry kicks on shins, ankles and other parts of my understandings, but never received any bodily harm, and never in all that time saw any one carried off the field. Afterward I left the playing field and followed the great professional league teams, having witnessed hundreds of first league matches, scores of cup ties, dozens of international matches, been present on three occasions at the final of the English Cup at the Crystal Palace, where the attendance at each of the three finals I witnessed totaled over seventy thousand; also I have seen at least a dozen internationals under the Rugby code, seen the crack Welsh Rugby teams operate, and during my twelve months' sojourn in the neighborhood of Manchester have witnessed dozens of league matches under the auspices of the quasi-professional North-

ern Rugby League, which possesses the cream of British Rugby talent, so therefore am in a position to speak with a certain amount of authority on football as played in the "home" of the game. I lived in New York eighteen months, have been up in the Lake regions, down in the so-called glorious Southwest, and in the various States forming this intermountain region, and have seen the modern college Rugby game, misnamed "football," played in each and all. Everywhere I have come away disappointed and disgusted, and have seen rough play on college gridirons, the supposedly homes of culture and gentlemanly conduct, that would absolutely disgrace teams drawn from the rough and rowdy colliery districts of Lancashire. Neither English spectators nor officials would stand for the brutal tactics seen on American college gridirons for one moment. The English public have been educated to a high standard of clean play in football, and they attend in their thousands, not to see this or that team win, but to see *good* football, and in general they care little which team wins, so long as they see the "goods." Cheering and enthusiasm is only aroused by good play and comes *spontaneous*, and is not "got up" or "engineered," as it is on this side, by "cheer leaders."

Brutality exists, and no efforts of the apologists can belittle the fact. Yet football can be played with all these drawbacks eliminated. Take England, for instance. Under Rugby codes in Lancashire alone there are at least three times as many Rugby clubs there as in the whole of the United States under college codes. Within twelve miles of Manchester Town Hall there are, counting both Rugby Union and Northern Rugby Union, fully 350 clubs engaged in *league* games only every Saturday afternoon, and that will leave out the scores of schoolboy league teams play-

ing under the two codes of the Rugby game as played in England. In Lancashire there are six clubs playing soccer for every one playing Rugby, yet more fatal accidents have occurred already this year under the American college game with its few players and fewer teams than have occurred in Lancashire under both Rugby and soccer for the last twenty year. Twenty year matches in Lancashire means ten times more football contests than have occurred in all America north of Panama since the introduction of the game. In the Liverpool district alone there are over five hundred league soccer clubs, not counting Rugby, and a club undergoes a small list that does not undergo twenty matches in a season.

Yet English football is not a ladies' game, and those who on this side think it is would receive a rude awakening even before going thru half their league table, let alone the cup ties. English players are not afraid of a shower of rain or cold, biting, miserable weather, as most of the American college huskies are, but keep it up in all weather, good, bad or indifferent, and they don't need the help of hundreds of cheering students with their college yells to help them on. The amateur English player will turn out to play the game no matter how bad the weather, even if there was not a single soul to watch and cheer him, simply for the love of sport, which is inherent in him. I am sorry I can't say the same for his American cousin, but it is the truth all the same.

Looking at a fast game under Northern Union rules, and then looking on a so-called fast game between Yale and Harvard is like turning from viewing a horse race and watching cart-horses going through the same performance. The stoppages under the American code are far too many to make the game interesting from a spectator's viewpoint; the game is too close, too involved, too much stress is put upon possession of the ball; there is little kicking, punting, less drop-kicking and no dribbling seen, and so as football it is inferior to the English style of Rugby. There is so little drop-kicking seen in the college game that the player who does such a simple thing as drop-kicking a goal from field is at once

lionized and made a hero as it were. Yet under Northern Union rules players are so clever at drop-kicking that the rules had to be altered and only 2 points awarded a drop-kicked goal, as they were getting too common. But, then, under English Rugby rules they do use their feet, and no player can get on any class team unless he can drop-kick with *either* foot, and at occasions dribble the ball. There may be science of some kind in the college game, but of scientific *football* there is almost none.

Yet the game has got with all its drawbacks a firm hold on the populace. It has its good as well as its bad points, but to say the least it needs revising. Several dark-looking features can be eliminated, such as the dirty knock-out blow, etc., and by placing absolute power in the referee to order off any offending player or stop the game. The game could be improved, and if a league can be formed among, say, the minor colleges for that purpose it will soon get the sympathy and support of the sport-loving public. But when it comes down to football—real, genuine football, fast, open and spectacular—"socket" has all kinds of Rugby beaten to a standstill. Those who have judged "socket" solely by the visit of the Pilgrims can't form any idea as to the capabilities of the game, as at present there is no team in America able to extend them. But they must visit the gigantic enclosure of the big professional league teams and see the wonderful footwork of the players, the marvelous command they have of the ball when traveling at full speed, the intricate passing and wonderful team work, the way the ball is passed so accurately both by head and feet, the thrilling dashes by the fast outside wing man, and the marvellous way they center the ball obliquely, at right angles, across the goal mouth, clear from near the corner play without stopping to steady themselves or the ball, and do that hampered by opponents; to see the marvelous saves some noted goalkeepers effect, their barefaced coolness and audacity in literally taking the ball with their hands off the feet of the opposing forward when about to score. When he sees this and the marvelously fast way the ball travels from goal to goal, one minute bombarding this goal,

and in the twinkling as it were of the eye a break away and a rasping shot sent into the other goal, and this kept up ding-dong without a stop, with the exception of the five minutes' interval for ninety minutes, then you will get an inkling of what fast, open, spectacular football means. There is not an American team, whether Yale or Harvard, that has got the training to stand such a ding-dong racket for a month, much less a season of eight solid months, as stamina and good wind are requisites which American athletes as a whole fail in. No wonder with such a game that "socket" in England attracts attendances weekly that completely overshadow the Yale-Harvard game and make the attendance at baseball games look like fleabites in comparison.

At Liverpool three weeks ago there were over 52,000 at the league match between the two local first league teams, Everton and Liverpool, while so far this season the 30,000 mark has been passed on at least twenty different occasions. At the final English cup last year, or rather season, in April last, over 100,000 paid for admission, being 10,000 short of the record, which occurred six years ago, when a London club figured in the final.

I am glad to see the way "socket" is gaining ground in this country. It is a game in which the little person has an equal chance with the giant. It is free

from danger, and yet calls for the same manly qualities as Rugby. It will never supplant Rugby on this continent. I for one don't wish it to, as there is ample room for both codes; but this I do predict: that once the American public has caught on to it and the country develops players anything near the capability of their English cousins, it will leave the present college Rugby in the rear, as it has already done the same across the pond. The game is now established on every continent on the globe, fast growing in popularity in Continental Europe, especially Austro-Hungary and the Low Countries, and as all adopt the rules of the international board of Great Britain it is possible to have international matches, and the comparative merits of the various countries can be ascertained. No other country in the world, as far as Rugby goes, will adopt the American college rules, and so on this side you see the ludicrous spectacle of naming an all-American team who have no opportunity of showing what they can do. If it was on "socket" they could test their merit against England, Wales, etc., or an United Kingdom eleven, or against Germany, Austria, etc., Australia or South Africa, or India, as they thought fit. It is impossible to get international or intercontinental games unless rules are the same.

'Possum an' 'Taters

BY SILAS X. FLOYD

'Possum an' sweet pertaters
Is bettah 'n tu'key an' ham,
To make Eph say
Thanksgivin' Day,
Praise God an' Uncle Sam!

Dah ain't no doubt about it—
I's tried it fur an' wide—
Dah's nothin' to beat
De 'possum's meat,
Wid 'taters on de side.

I's heahed o' milk an' honey,
An' 'bout de wine dat flows,
In heaben above
Whar all is love,
An' whar de good folks goes.

But I tell you now, my bruddahs,
Dat ol' heaben fer me won't do
Unless I fine
Dat I kin dine
On 'possum an' 'taters, too!
AUGUSTA, GA.

How I Lightened My Housework.

BY LAURA CLARKE ROCKWOOD

I AM the slave of custom. At any rate I have frequently been told so by the good man of the house, for heredity and environment together have combined, and made me believe that a certain domestic routine is necessary for the welfare of my family.

In my childhood, a soup, roast meat, two vegetables, with condiments, salad, and heavy dessert were considered essential for any well-ordered home dinner, so when I became mistress of a little vine-clad cottage I thought Tom must have these things every day, and inasmuch as we could not afford both a servant and this much dinner every day we went without a servant and had the dinner, which I prepared. We frequently also had dyspepsia, but we considered this our misfortune and never even dreamed that it was within our power to be free from the malady entirely.

I held out bravely, and we had our complete and well-appointed dinners until before the twins came; then we relinquished soup. I argued that it was as much trouble to prepare as a meat course, much trouble to serve, and made extra dishes to wash, and I must curtail labor somewhere. So almost with a prayer to the shades of my ancestors and their customs I abolished the course. Tom did not appear to object much. He was glad of any innovation which would relieve me, but for weeks I never sat down to the dinner-table, so much was I the slave of custom, that I did not feel apologetic for the absence of that soup course.

After the twins came our married life became fuller and richer, but with inefficient help my domestic difficulties thickened, and when our third child was born I had to simplify still more, and in my ignorance of real food necessities I decided that the salad course must go, thinking that it was the least nourishing of any of the articles of food. I at that time did not know of the therapeutic value of a green salad with oil dressing each day.

And so at the time this story is supposed to begin, our family consisted of ourselves, four children, ages six and

three and a baby; a young lady student, who helped with the work when she was not too much engrossed with other things, and a male cousin, who made our house his stopping place when he was in the city.

On the momentous day in question which marked the turning point in our domestic management, I felt that my nerves had reached the limit of self-control. It had been one of those mornings when all animate and inanimate things pertaining to a household combine into chaos, and a pall of utter hopelessness is apt to settle down over the mistress of the house, who feels that she is utterly incapable by education or otherwise to cope with existing conditions. To begin with, the baby was teething and fretful, and could easily have made use of all of one person's time, and the three-year-old had been correspondingly uneasy, taking his cue apparently from the general disquieting atmosphere. Then in addition the water pipe had burst and my pantry was flooded, and my frequent telephoning for a plumber brought no relief. On going down cellar to see why the furnace did not work better I found that the grate had tumbled out. In addition my student girl came in at noon singing cheerfully because her aunt had sent her a pass to go to Chicago for over Sunday.

I was in a mood for reform of any kind, for in the midst of the usual routine of dusting and bed making and the other extra duties I had persevered and prepared a very appetizing little dinner, with the result that every muscle and nerve in my body was crying out in protest. The twins came home from school boisterous, happy and hungry from their exercise in the fresh, crisp air.

Tom came stepping briskly and cheerfully, and on entering the house came, as is always his custom, to seek me if I am not on hand to greet him. He took me in his arms, and at one glance into my flushed face he exclaimed: "Belle, I wish you would not work so hard; you cannot stand it."

"I do not see how I can help it. I

have just about strength enough to get thru the day if nothing unforeseen happens, and this morning everything has gone wrong."

He sat down to the prettily appointed table, where a beautifully baked fish with stuffing served as a central dish, garnished and surrounded with an egg sauce. Mashed potatoes and pickled beets were the vegetables. On the side table rested a most appetizing looking lemon pie and the cups ready for serving the coffee. In my married life I had made almost a fetish of well cooked and well served meals, no matter at how much inconvenience to myself, because of the fact that when Professor Tom had married me some of the wise old ladies had said that I had too much interest in outside matters and higher education ever to make a successful house-keeper.

Then and there I had resolved to devote my life, if need be, to proving to them that they were entirely wrong in their surmise, and that one college woman at least considers that no better use can possibly be made of a college education than in properly maintaining a home—the unit of national welfare.

Professor Tom is a chemist, and when he looked over his dainty dinner table and proceeded with the rest of the family to do justice to its dishes, he said, as he glanced at me with my food untouched, for I was too tired to eat: "I'll tell you how to economize labor. Give us less to eat. We do not need so much. How long did it take you to prepare dinner?"

"I can't tell very well, for I mixed the dinner in with other things."

"Just give me a rough estimate."

"Well, half an hour to fix the fish, and half an hour for the pie, and fifteen minutes, each, for the beets and potatoes, and perhaps another half hour for cooking and serving. I'll say it took me two hours of work to cook the dinner and get it on the table."

"How would you have liked it if you could have prepared dinner in half an hour and have had the other hour and a half to read Browning or something and to rest?"

"I would have been thankful enough to have had time to hold the baby, poor little chap, this morning; so this time

Browning would not have had much attraction for me. But you know you always want meat and potatoes and pie for dinner, and the rest of us like vegetables and more variety than you have, so I cannot help getting ready about so much."

"I suppose I am just as much the slave of custom as I say you are," replied Tom; "but I for one think it is time to call a change in home management when one woman with the care of four small children is compelled to spend six or more hours of the precious day in just preparing food. I for one am ready to be offered as a sacrifice to a new movement for the betterment of home conditions."

I could not help but smile in spite of fatigue, for the thought of conventional Tom living in any way different from his usual custom seemed impossible.

"We might just as well use more milk and cereals, ready prepared, and fruit."

"We—that is the rest of us—might, I know, for we can eat anything; but I'd go a good way to see you contentedly living on that kind of a diet."

"I think it would be great fun to try it," said Edith; "for then I would not have nearly so many dishes to wash."

"Another saving of labor," said Tom.

Then he went on to tell us, as best he could in the confusion of the children's chatter, that there are three essential food elements—the proteids as found in meat and eggs and cereals; fats, and carbohydrates, such as sugar and starch. He explained that a man at moderate labor will eat, if available, in the course of a day about 4.2 ounces of solid protein, 2 ounces of fat, and 17.6 ounces of carbohydrates, not counting water and indigestible material which must be consumed in order to get the solid nutrients.

He explained, also, that we might just as well get our proteids from the milk and cereals as from the meat, if we only thought so, for meat is expensive, and troublesome to prepare. We like the taste of the meat, and that is why we eat it.

"I wish to experiment somewhat with certain diets for my chemistry work, and if you wish it we will make out some *menus* tonight, after the children are in

bed, which will lessen your housework." That night we made out a *menu* of simplicity. It was difficult to do, because of our likes and dislikes; but we finally triumphed, and the determining factor in this especial diet was the fact that Tom wished to experiment with pruin free foods; so we started our experiment in simple housekeeping with this class of foods. Because he was going to make chemical tests, every article of food was weighed for himself. The rest of the family ate from this class of foods, but weighed nothing. We ate what we wished in quantity, except Edith, who also had hers weighed. For two weeks this was Tom's diet:

	Quantity.	Cost.
Milk,	1350 c.c.	\$0.09
Force,	35 grams.....	0.01
Cream,	50 "	0.0125
Sugar,	20 "	0.0025
Oyster Crackers,	250 "	0.05
Cheese,	30 "	0.01
Eggs,	96 "	0.04
Apples,	90 "	0.01
Wheat Bread,	25 "	0.005
Butter,	15 "	0.01
Sugar Candy,	50 "03

Est'd fuel value, 2975 calories. \$0.27

After the first few days the novelty and self-consciousness wearing away, each subject declared himself in the best of condition, comfortable and happy, and willing to try any simple combination which seemed desirable.

The chief trouble with this diet was that it was too abundant for a man of mental work. In considering quantities remember that there are 28 grams in an ounce. On subsequent experiments with a similar diet Tom reduced the quantity of some things, so that he was hungry for each meal.

In making out this bill-of-fare cheapness had not been the first consideration. If we had wished to make it especially cheap we might have lived at a cost of 11 cents a day, as did one of the laboratory students; upon Force, milk and maple sugar.

My husband divided this bill-of-fare as follows:

BREAKFAST.

Force. Cream. Sugar. 1 Pint of Milk.

DINNER.

Eggs. 1 Pint of Milk. Cheese. Bread and Butter. Apples and Candy.

SUPPER.

Crackers. 1 Pint of Milk.

When the two weeks of the first experiment were over we were all so much pleased with the simplicity of it that we decided to continue the simple, easily prepared diet, only with some changes which comfort seemed to indicate. For instance, this particular diet had been too constipating for some of us. So less crackers, milk and cheese were eaten and more fruit of whatever kind that was convenient, appetizing and seasonable.

Then for the morning cereal we used any of the other crisp prepared cereal foods. Formerly we had had oatmeal and cream for breakfast, and we found the change to a crisp cereal, which we were obliged to masticate, most beneficial. The twins especially grew rugged and rosy upon the dry cereal, for being obliged to chew it so thoroly they seemed to assimilate much more nourishment from it than from the oatmeal mush, which they usually had swallowed in haste. We varied the eggs by cooking them in different ways.

In conclusion I wish to add, so that this manner of living may not prove misleading to any one, that we do not always live on this kind of food. We are all as fond of good cooking as are the members of any family, and gain much enjoyment sometimes from elaborately prepared dishes.

Professor Karl Groos of the University of Basel, in his book on "The Play of Man," classes the sense of taste as one of the forms of play, and says that some people derive from the sensations of the palate pleasure like that produced in others on the ear by music.

So I will say that our family is not deficient in the sense of pleasure which comes from the ear or from the palate. But when the bottom falls out of the furnace, and the water-pipes burst, and the maid leaves, and the baby cuts teeth, I have the supreme consciousness of knowing that science will protect me in giving my family simple, easily prepared and easily digested food. And so this paper, while recording facts in our own household *régime*, is intended merely as a suggestion for wider application of its truths in other families, or for no application at all, as seems to them best.

IOWA CITY, IA.

Literature

The Debtor

If any one would study the difference between the work of an author who adjusts himself obsequiously to his readers' lack of artistic sensibility, and one who considers simply and sincerely the business of interpreting certain types in a given situation, regardless of the popular demand for vaudeville features, he will find a remarkable example of the latter literary virtue in Mary E. Wilkins Freeman's new novel.* It contains all the material out of which a sensational story might have been written, but she has kept her conception sane and true to life.

The elements of good and evil in the world are always the same. And in real men and women they show thru with a certain kind of temperance. We are hedged about with so many decencies that evil never can take entire, open possession of a man; and we are limited by so many native frailties that nobody gets to be perfectly righteous. But we know how it is in fiction. The villain is a character created expressly to be bad and to do wrong. All the author's faculties are engaged to produce a consistently evil mind. Such people rarely exist. No one has the magnificent power of concentration to hold steadily to the diabolical formula. And that which impresses the thoughtful reader of this novel is the fact that the Debtor is a villain working against the better nature which is in us all.

The exigencies of the story require that he act out virtue on the sly with a melodramatic flourish, but in the main it is a veracious interpretation of a man who is of average moral stamina but who handicaps himself along the way with a desire for revenge upon his enemy, with extravagant habits and with a grace at swindling which is fascinating. He had the "promoter's" temperament. He was courteous and magnetic by nature, and he had the power of inspiring confidence where another might excite suspicion. Now these are the elements of character

and disposition which insure the success of good men. And come to think of it, good and bad men who succeed along their respective lines are endowed exactly alike. The difference is in which handle they take hold of in turning their wheel of life.

This truth is expressed or implied by the various men and women in the story. Some of the women hold aloof, daintily irresponsible to the last. And nothing is truer to life than their attitude. In every community these passing phases of incoherent femininity are to be found, women who are identified by their manners and clothes rather than by their morals or lack of morals. And, as is the case in this story, they are often the most unscrupulous people in it when it is a simple, savage matter of self preservation.

Other characters in the story are attractive and familiar. This is why each chapter is so peacefully interesting that we are in no hurry for the sequel, just as we are not morbidly curious to know the ultimate fate of the people with whom we associate from day to day. The love story flows in naturally, like the sun which fills in the dark places of the world with warmth and light. No better book of the honest, old fashioned kind has appeared this year.

A History of All Nations

The new volumes of the universal history now being published by Lea Brothers* are much to be commended. They are readable, the tone is judicial and the typography and binding are excellent. The illustrations are profuse and striking. Ancient manuscripts, art, architecture, historical portraits, coins, contemporary drawings and prints are among the subjects chosen to illustrate the various periods. But no scholar of today, however industrious, can have a

* A HISTORY OF ALL NATIONS. In 24 volumes. Vols. VIII. to XII. The Age of Charlemagne, The Age of Feudalism and Theocracy, The Age of the Renaissance. By Hans Prutz, Ph.D. The Age of the Reformation, The Religious Wars. By Martin Philippson, Ph.D. Philadelphia and New York: Lea Brothers & Co.

* THE DEBTOR. By Mary E. Wilkins Freeman. New York: Harper Bros. \$1.50.

first-hand knowledge of even two or three centuries of European history, and these volumes, tho written by German authors of repute, do not escape the inevitable shortcomings of such a history.

Dr. Prutz writes the first three volumes dealing with the period from Charlemagne to the Protestant Reformation. Contrary to the expectations raised by the title, Dr. Prutz's third volume on the Renaissance is not devoted to the literary and artistic development of the fourteenth and fifteenth centuries but to the interminable and often fruitless wars, intrigues and dynastic struggles which make the period seem like a barren waste to the average reader. Even the chapter on Italy and her influence is largely a record of petty domestic struggles, humanism, printing, and the Renaissance being dismissed with a few pages.

Dr. Philippson's volume on the Reformation is the best of the group. The social and intellectual preparation for Luther's teachings is described without any concealment of secular forces or any air of superior Germanic morality. The spread of Lutheranism as a religious and secular movement is fully described; there is an excellent chapter on the internal conditions of the Romance nations in the sixteenth century; the Reformation in Switzerland, France and England is traced; the foundation of the Jesuit order and the course of the counter-reformation are adequately treated. Dr. Philippson's second volume is largely taken up with the endless intrigues and ruthless conflicts of the Thirty Years' War. Only one chapter on Richelieu's government and policy relieves the tedium of the lurid drama in which Gustavus and Wallenstein figure so prominently. The story is told well enough, and will suit the tastes of retired army officers.

Our authors' treatment is largely narrative. There is no systematic presentation of the economic life of the people at the various periods. Tho covering the age in which feudalism was at its height, there is a notable absence of a careful analysis of the elements of that system. The conflict between the empire and the papacy is discussed at great length, but nowhere is there given a clear and adequate presentation of the structure and functions of the medieval

Church. Where the narrative is broken, it is for the sake of emphasizing the cultural, literary and artistic rather than the economic and institutional aspects of history.

The best part of this history is that which deals with Germany and France. A casual glance at the chapters concerned with the other nations of Western Europe reveals some positive errors and misconceptions, which show a scanty acquaintance with some important recent literature. Among the several examples which might be given are the following: According to Professor Prutz's interpretation of Magna Carta, that document "revived trial by jury"—a theory which has been exploded for the last twenty-five years. In the section dealing with the age of discovery, the statement is made that about the time of Prince Henry the Navigator the possibility of reaching India by rounding Africa first dawned on the minds of men. As a matter of fact traditions had been handed down from the Phœnicians to the effect that they had rounded the Cape, and two hundred years before Prince Henry's day Italian seamen had made an attempt to reach India by that route. Professor Philippson's account of the separation of the Church of England from Rome does not show a firm grasp of the real facts in the case, and is misleading and inaccurate.

Higginson's Essays

A man whose days span the whole period of notable American letters, himself for fifty years a valuable factor in those letters as essayist, novelist, lecturer and historian, may well have something to say on purely literary matters. It is chiefly that part of a man's life with which he is concerned in the fourteen essays just published.*

He was a young man when the Transcendentalists flooded the suburbs of Boston with the "Oversoul"—young enough to tell the story of the overflow as a lover tells the virtues of the first lady he loved and failed to get, one so commonly his senior by some happy years. He was young enough to be able, from personal

* PART OF A MAN'S LIFE. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co.

recollection, to write delightfully of the men and women in the Brook Farm community, or who looked into it over the fence—Emerson, Curtis, Alcott, Margaret Fuller, Hawthorne—not yet old enough to persuade us, as his types will have it, that the "Lyrical Ballads" of Coleridge and Wordsworth, first published in 1798, in a small edition of 500 copies that never sold—an edition containing the memorable poems "Christabel," "The Ancient Mariner" and "Tintern Abbey"—could have been "hailed" in Philadelphia, twelve years earlier, "as the opening of a new intellectual era."

The essays we have to do with are occupied with themes pat enough to our times—"American Audiences," "The Aristocracy of the Dollar," "The Cowardice of Culture" being those most carefully worked out, glittering with gems of the best vein. Things of grace and beauty, not so delicately laced and bejeweled for the lecture audience, are those on "Wordsworthshire" and "English and American Cousins." Lighter still, but quite happy in its way, and recalling a beautiful nature, is the "Una Hawthorne," a pleasant reminiscence of a lady whose literary expression the author does not exaggerate. She was the eldest of Hawthorne's three children, inheriting in a high degree his skill in humanizing as well as materializing her ideal creations. The Roman fever sapped her life, and her literary production, if it now exists at all, exists only in manuscript.

With that part of a man's life which one naturally associates with Colonel Higginson only one of these essays is directly concerned. Being one of the "uneasy reformers," his enemies would have preferred to describe him in the language which he quotes a child as using in regard to Bunyan's "Pilgrim's Progress." She had long hung enraptured over the book, but appears to have shut it with some emphasis, crying, "Those Apollyons must be a bad kind of fellows to have about!"

"Intensely Human" is the one essay that recurs to the old anti-slavery theme, to illustrate, as it does admirably, a burning question of to-day, and "intensely human" is the description one might apply to the work as well as to the man

himself, who seceded from the World's Temperance Convention in 1853 because women were denied admission to its committees, who, a year later, assisted in the formation of the Emigrant Aid Society to run rifles into bleeding Kansas as fast as Missouri could run Bowie knives in,—who received a wound in what he called at the time a "most judicious" attack on the Boston Court House, to rescue the black slave, Anthony Burns,—who, at thirty-two, was in correspondence with "Ossawatimie" Brown, and heartily favored, as he darkly hinted at the time, "letting the heavy, saddened spirit of humanity out from its perplexity by some new door it did not know until it opened,"—who, two years before John Brown was hung at Harper's Ferry, said "Tomorrow may make this evening only the 'sound of revelry by night' before Waterloo." At that date he was ready, with Mr. Garrison, to go out of the Union; equally ready, apparently, to let the other party go out. But in 1862 he joined a million men in holding them in with the black bayonet. It is pleasant to see, in regard to this intensely human part of a man's life, that he can still point a pen not greatly corroded by the rust of days.

The City: The Hope of Democracy

Most critics of American politics, including even so able and impartial an observer as Mr. Bryce, have agreed that the government of our cities is the one conspicuous testimony to the very partial success, if not to the failure, of our democracy. Yet Mr. Howe, with an appearance of paradox worthy of George Bernard Shaw, asserts that the city is not the despair but the hope of democracy.*

He accepts joyously the predictions of Mr. H. G. Wells as to the extension of our cities, and is not appalled by the prospect of the whole of Manhattan Island becoming "a mountainous pile of sky-scraping buildings, devoted to banking, business, wholesale establishments, offices and public purposes," the population being driven for residence "far out into New Jersey, Connecticut and New

* THE CITY: THE HOPE OF DEMOCRACY. By Fred eric C. Howe. New York: Charles Scribner's Sons. \$1.50.

York State." He foresees Pittsburg and Cleveland with two million inhabitants each, and "the intervening region, as well as the southern shore of Lake Erie, one long succession of manufacturing towns, like unto the midland cities of England." But the squalor, ugliness, vice and misery of those same English midland cities, the blasting of human life in the inferno between Birmingham and Wolverhampton, he expects to see prevented in America and eliminated in Europe by the beneficial action of democracy, and yet more democracy.

In language fervent with conviction and faith, and somewhat too profuse and over-emphasized for literary effectiveness, he sketches a program of possible advance which will give the next generation an earthly paradise instead of an inferno in urban districts. Not that the most incorrigible optimist can be blind to the terrible cost of city life to-day, to the social wreckage—the diseased and the criminal, the family decay and extinction—caused by the uncertainty of employment, the unrelenting stress, and the high rents and incidental charges in crowded areas. But in the very places where a few years ago the gloom was deepest the evidences of a dawning day of social uplifting are at present brightest. Just that crowding of humanity, that excitement and rush which break down the weakest, produce the political ferment and force the recognition of social solidarity which are bringing a cure.

Not among the fields and the mountains, but in the hotbeds of humanity, has the spirit been born which promises to transform our political and social life. Even since Mr. Howe's book was written a new birth of democratic rule has been celebrated. "Today," he says, "Boss Cox rules the servile city of Cincinnati as a medieval baron did his serfs." Already that boss has retired, wounded unto death in the great battle of November 7, when also other bosses equally strong and hoary in sin went down before the hosts of the reformers in Pennsylvania, Ohio, Delaware and New York.

Most valuable is Mr. Howe's exposition of the controlling part that franchise corporations play in the debauching of our politics. He shows with cogency that municipal ownership and

operation of public monopolies alone will remove the temptations to the subsidizing of bosses, the bribing of voters and the corrupting of legislators. So long as "business men," connected socially with the "best" sections of the population, have a chance to reap unearned harvests of fabulous richness by controlling the monopoly in city services, so long will the interests and the conscience of the educated and the powerful be in conflict and the way of the reformer be hard. But speedily the plain folk, whose vision is undazzled with the gleam of "made dollars," are setting themselves to remove this irresistible temptation from before their "betters," as the votes in New York, Cleveland and Chicago have recently shown. They are determined to brave the risks of inefficient management, high wages for municipal employees and low charges for consumers rather than continue to pay incalculable millions to money-mad magnates for their corrupting services. Even the influence of civil servants in elections they are willing to face in preference to the influence of franchise owners.

Along with the new democratic program of municipal operation goes a strengthening determination to furnish the lowliest citizens, by collective effort, with the means of education, recreation and health on a scale never before imagined. Parks, baths, vacation schools, gymnasiums, lectures, concerts, theaters, technical institutes, civic centers under city control—these and a score of other things to make a full human life easy to every city dweller—must be furnished out of the common purse.

"But how shall they be paid for?" the alarmed taxpayer will ask. Mr. Howe has a complete answer. The unearned increment of land values, which a thriftless public now allows the private landlord to appropriate, shall be reserved for its creator—the community. The amount of that increment is colossal beyond the dreams of the unheeding. New York city's bare land is worth the unthinkable amount of \$184,884,430 per annum, and increases each year by about \$140,000,000 in capital value. The full value would pay for a track of farms worth \$50 an acre which should be a mile wide and girdle the entire globe four times.

Philadelphians pay their landlords for the use of the city's site some \$44,000,000 a year and allow these favorites of earth to add \$19,000,000 each twelve months to their fortunes as the result of the joint exertions and necessities of their fellow citizens. "That stupendous monument of jobbery, the City Hall, which has been in process of erection for years, could have been paid for in sixteen months out of this annual increment alone." Chicago, San Francisco, Cleveland and every other city makes a similar exhibit. Why should an awakened democracy continue to lavish these more than regal gifts upon a few land owners while its own children by the millions are starving for better opportunities of life? Notice that our author does not propose to recall the reckless gifts of the past; he only suggests that we cease to waste our substance in the future. True, he does argue for the transfer of all city taxes from buildings and personal property to land values; but such a scheme nobody would call confiscatory, any more than the higher charges upon realty caused by the present lax collection of personal taxes is confiscatory. And since such a change would make all taxes easy to collect and would stimulate house building and so reduce rents, an alert community is likely to adopt it.

Every leader in city politics will find facts and arguments in this book to stimulate his hope and to pilot his activities.

The Words of Garrison. Boston: Houghton, Mifflin & Co. \$1.25.

The sub-title of *The Words of Garrison* reveals its purpose, viz.: "A Centennial Selection (1805-1905) of Characteristic Sentiments from the Writings of William Lloyd Garrison, with a Biographical Sketch, List of Portraits, Bibliography, and Chronology." The selections are put before the biography, either from modest reverence or because they are considered of first importance, and then follow, for a small book, the burdensome addenda. A criticism lies implicit in this statement. If the selections are of first importance, they might be bettered, and their arrangement might be bettered. It is impossible to believe that a richer selection could not have been compiled,

even if also this were attained partly by omission of what is here presented. Also some of the selections are wofully slight in space if not in substance, like "Politics" and "Woman's Rights"; more burning words than these must have been spoken. Finally, many of the selections called "Miscellaneous" might well have been otherwise distributed, for instance, in the section marked "Autobiographical." The biography itself, also, is stiff and clumsy, apparently unskilled (which scarcely can be), and unclear from the effort to say too much at once. Now these may seem small matters to make a touse about, and so they are; but here is a memorial by his children, a generation after his death and a century after his birth, of a national and international reformer, one of the world's heroes; and we submit it should be easily possible, in the face of instances that come to every memory where the thing has been done, and well done, to improve with but few pains on this production.

The Resurrection of Miss Cynthia. By Florence M. Kingsley. New York: Dodd, Mead & Co. \$1.50.

The dedication of this book is significant of its contents: "To my friend, Edwin Markham, to whose inspirational utterances concerning the life that now is, the author owes certain cheerful and enlivening ideas which appear in humbler guise in this book." Now, it is all very well to have hard-knuckled ideas about the dignity of labor and the heroism of the common life; but, carried a trifle too far with his dogmas, "the man with the hoe may become a vandal. In this story, for instance, a maiden lady treasured her family constitution, relics and traditions too much. But when the doctor tells her that she has only a year to live, she reforms herself too much. She gives away all of her furniture, burns her heirlooms, and puts on brilliant clothes after having been in mourning a long time for different members of her very distinguished family. The effect is better on her own health than it is on the community. She takes a new lease on life, and the sagacious reader is likely to suspect that the author has added a little touch of Christian Science to Edwin Markham's "inspirational utterances."

However, the story is interesting and wholesome, provided nobody attempts to follow Miss Cynthia's example too closely. For of all people, Americans need most the consciousness of having old, respectable things left over from former generations. We are inclined to be too young, even down to old age, and nearly all our houses and belongings are too new.

Back Home. By Eugene Wood. New York: McClure, Phillips & Co.. \$1.50.

Here is a book that warms the heart and brings a little tingle to the eyelids, as tho tears were not far from eyes full

very like an apple: juicy, ripe and red with garnered sunshine. It is altogether wholesome and sweet to the core, where are sound seeds of homely wisdom; and we cannot advise a better Christmas present than this to take some friend *Back Home* again with gratitude and delight. Any book which, like this, embodies "recollections of early childhood" conveys "intimations of immortality." The truly rural drama plays nightly in every large city to audiences of country-bred capitalists, and a book which depicts country life so sympathetically ought to be equally perennial. Mr. Wood's pleasant chat about the old

THE OLD SWIMMING HOLE.
From Wood's "Back Home," McClure, Phillips.

of smiles. Here is an author who has so little forgotten that he was once a boy that we are all children again, as we read, trudging to "The Old Red School-House," eating wedges of pie. "You took the piece of pie up in your hand, and pointed the sharp end towards you and gently crowded it into your face." And there were always apples, "real apples. I think they must make apples in factories nowadays." The book itself is

swimming hole, the Sunday school, the circus and the county fair will revive pleasant memories for those who have such memories to revive, and those who have not will wish they had.

The Fair Maid of Graystones. By Beulah Marie Dix. New York: The Macmillan Co. \$1.50.

Of late we have not had so many medieval novels—possibly for this rea-

son, or because the book possesses some unique charm of its own, but it is a fact that Beulah Marie Dix's new story is really interesting. There is nothing new in the conception, the women are jealous, "light," or shrews, or just young like the "Fair Maid" herself. The men fight, steal, crawl thru windows in the "nick of time," which is always in the dead hours of the night, and everything comes to pass in the same bloody manner that is characteristic of stories of this kind. But there is still enough of the aboriginal carnage mind in us to enjoy the performance when it is well done and when the right man and the right maid win out together, as they do in this tale.

Jay Gould Harmon. By George Selwyn Kimball. Boston: C. M. Clark Co. \$1.50.

Bravery is a quality that always has been, and always will be, highly esteemed. We love to see brave deeds, and we love to read about them in books. Jay Gould Harmon is a fine, manly character, and plays his part among the rough and trying incidents of the Maine logging camps in a way that excites the admiration even of those men born and brought up in a land where fearless courage is an everyday characteristic. In one of the scenes where Harmon is lowered down into a log jam to set some sticks of dynamite his coolness in the face of probable destruction is amazing. The book contains a little of everything, from a love affair to a baseball game. There is a noticeable flavor of the dime novel about it.

Standard American Encyclopedia. 8 vols. Philadelphia: The John C. Winston Co. \$12 cloth, \$20 library binding.

This popular reference book will find a place in many homes and schools where the more expensive and scholarly encyclopedias could not be afforded and would not be read. In these eight volumes of moderate size, each of some 500 pages, a large amount of useful information has been condensed and put into a convenient form by dividing it into numerous short topics like a dictionary. It is quite free from errors, and an effort, not entirely successful, has been made to bring the articles up to date. It is illustrated with stock cuts, some new full-page pic-

tures and autograph letters, and thirty-two pages of good, clear maps. The pronunciation of all the proper names is a valuable feature.

Addresses and Other Papers. By William Williams Keen, M.D., Professor of Surgery, Jefferson Medical College. Philadelphia: W. B. Saunders & Co.

Dr. Keen is one of the most distinguished members of the medical profession in America. He has been honored by the office of president of the American Medical Association, and is probably more widely known and more thoroughly appreciated by his professional brethren in this country than any other. It is from his addresses, therefore, that the ideals of the medical men of our generation can best be gleaned. Perhaps more false impressions with regard to medical thought would be corrected by a casual reading of this volume than in any other way that we know. Dr. Keen stands for a deep sense of religious obligation, and inculcates to others the lesson so plain in his own life, of reverence for the great mysteries of life and death, with which physicians are brought so intimately in contact. Religious principles he considers necessary, and religious practice very advisable, for the fulfilment of the deep obligations that are necessarily put upon the conscientious practitioner of medicine. There are many who still pretend to believe that a preliminary education is not of great importance in the profession, but Dr. Keen is not among those, and he quotes very aptly the expression of Celsus, nearly two thousand years ago, who said that a liberal education did not make a physician, but it rendered a man much more suitable for medical study and practice. It is especially for the teacher of medicine that Dr. Keen considers a liberal education of importance. Indeed, he does not hesitate to say that to be a successful teacher of medicine a man needs almost necessarily to have a liberal university training. Dr. Keen is one of those who have followed most closely the subject of vivisection, as experiments on animals have come to be called, and who is in a position to know how much has been gained by this practice. His address on vivisection was delivered some fifteen years ago,

but by means of notes it has been brought thoroly up to date, and Dr. Keen is an ardent advocate of the value of such experimentation.

Rebecca Mary. By Annie Hamilton Donnell. New York: Harper & Bros. \$1.50.

These stories are of a little girl with a thin, pointed face, and a puritan conscience, who lived with her maiden aunt. She is the life and character of New England in miniature, and the stories show that it is not merely the sins of the fathers that are visited upon the children with unhappy results, but it is their virtues. A child may practice innocently and cheerfully all the sins of its great grandparents without being morbid or unhealthy, but let it be obliged to live up to certain "blue laws" of righteousness, and it is likely to become abnormal. So *Rebecca Mary* was a lonely little taper, set on her hill to shine too soon. And she deserves to live in our hearts along with Mrs. Rice's "Lovey Mary."

Two Bird-Lovers in Mexico. By C. William Beebe. Boston: Houghton, Mifflin & Co. \$3.00.

The two bird-lovers are Mr. Beebe, the Curator of Ornithology in the New York Zoological Park, and his wife; the former gives a pleasant description of

the collecting tour across Mexico, from Vera Cruz to the Pacific and back, and the latter tells "how we did it" in a way that will be a help to others who want to do it, or something like it, for themselves. Besides his birdskins, the author brought some good photographs of Mexican scenery and animal and bird life, a hundred of which are admirably reproduced in this volume. The book shows how much can be seen in travel by a trained observer who is not so much of a specialist that he fails to notice everything of interest which comes within range of his sight or hearing.

Problems of the Panama Canal. By Brig.-Gen. Henry L. Abbott. New York: The Macmillan Co. \$1.50.

Brigadier-General Abbott in this book presents an exhaustive investigation of the relative merits of the Panama and Nicaragua routes for an interoceanic canal, and the conditions of the canal problem in general. The author, as a member of the Comité Technique and consulting engineer of the new Panama Canal Company, has devoted seven years to the technical study of the problem. The book is more for the engineer and student than for the average reader. It contains a map, fifteen figures and thirty-four tables, which give accurate

BROKEN TAIL OF IGUANA.

From *Two Bird Lovers in Mexico*. Houghton, Mifflin & Co.

statistics of all matters from barometric pressure to tidal oscillations. A major portion of the book is devoted to discussing the relative merits of the two routes, a much argued and also a closed subject. The author says in regard to the health question: "It is certain that much wild exaggeration has been circulated, founded on the experience of ill-acclimated laborers engaged in excavating surface soil." As to a sea-level canal, the author considers the obstacles too great and the result to be obtained not important enough "to waste an extra ten or dozen years and untold millions of dollars."

✱

Law and Opinion in England. By A. V. Dicey. New York: The Macmillan Company. \$3.00.

To the ultra-patriotic pressmen and speechifiers who are accustomed to tell the American people that public opinion in the United States acts more effectively on our Government than the public opinion of any other country, it will be disconcerting to read Mr. Dicey's calm proof that "nowhere have changes in popular convictions found anything like such rapid and immediate expression in alterations of the law as they have in Great Britain during the nineteenth century." This book is an explanation, illustration and defence of that thesis. Clear thought, wide scholarship, and lucid writing make the defence as strong as the facts will warrant, and the facts are so conclusive that few flaws can be found in the proof. Most interesting is the revelation of the slow but certain change of public thought from an acceptance of the Benthamite "greatest-happiness-to-the-greatest-number" philosophy to the support of a vague but potent Collectivism. The distance from the Benthamite liberalism of 1830-1870 to the Democratic Collectivism of 1905 is immense; but legislators and judges, following in the wake of public opinion, have traversed it with steady march. At no moment has the change been very plain to contemporaries, but the total difference is as marked as the change from midnight to midday. Similar broad differences may be noticed in American thought between 1870 and 1905. At the earlier date municipal ownership,

regulation of railway rates, limitation of the hours of labor for children, women and even for men; legislative reduction of charges for electric light, such as was made in New York last Winter; stringent sweat-shop regulation, and the other "collectivist" legislation which occupies our Federal and State Houses, would have been ridiculed as Paternalism, Socialism and un-Americanism. But, as Mr. Dicey points out, circumstances, the most potent of educators, have changed ideas, and slowly, very slowly, our statutes are being brought into conformity with our new convictions. But our written constitutions, our clashing State interests, the alertness of our business corporations, when they imagine their interests are attacked; the heterogeneous character of our population and the enormous extent of our territory all combine with the doctrine of Individualism, on which several generations of our forefathers were nurtured, to make the adjustment of laws and administration to the collectivist thought, which is in the air, slower and more painful for Uncle Sam than for John Bull.

✱

Knock at a Venture. By Eden Phillpotts. New York: The Macmillan Co. \$1.50.

We think of England as a conventionalized island, with a tamed and groomed landscape, and inhabited by a sophisticated race. We forget the wild spots and wild passions that linger in such fastnesses as Dartmoor, until Mr. Hardy or Mr. Phillpotts reminds us that London and Kent are not all of England, nor is the cockney its only inhabitant. In the volume of Dartmoor tales entitled *Knock at a Venture*, we find the primitive savage breathing the keen airs of the uplands, little changed by the centuries since his forefathers reclaimed their farms and wrung a rough living from the stony moor. These people are like thorn trees—bent, gnarled and twisted by the rage of the winds that sweep the crests of the tors, and yet they are often likable. Most of their stories are tragedies; they are swayed by primitive passions, primal loves and hates; like old Yelland, they get "their patience an' sense from the land, an' their wisdom an' sweetness of disposition from the

Bible"; they are uncouth and untaught, but they are always interesting. No better company could be had than some of these shrewd, humorous, hard-headed old fellows, whose racy talk is a constant temptation to quote.

"You'm a very religious woman, an' nobody knaws it better than you," a downtrodden husband of forty-three years' standing plucks up courage to say to his wife, together with other bits of desiccated wisdom, like:

"As for religion . . . there be room in the Lard's mansions for all of us, an' if the roads be narrer, theer's plenty of 'em, an' plenty o' gates to the Golden Jerusalem."

Wagner and His Isolde. By Gustav Kobbé. New York: Dodd, Mead & Co. \$1.00

Perhaps the most important and interesting "human document" that has yet been published bearing on the life of Richard Wagner and its transmutation into his wonderful music is the composer's correspondence with Mathilde Wesendonk, which issued from the press in Berlin last year. It was Frau Wesendonk who inspired "Tristan and Isolde," Wagner's loftiest, most impassioned work and the finest music drama ever written. In one of the letters to her Wagner says:

"My poetic creations always have been so far in advance of my own experiences that I may regard my moral development as almost wholly due to them. 'Flying Dutchman,' 'Tannhäuser,' 'Lohengrin,' 'Nibelung,' 'Wotan'—all of these were in my head before anything in my own life had led up to them. But you can readily comprehend in what wonderfully close relationship I stand to 'Tristan.' I confess freely, if not to the world, at least to a consecrated soul, that never before has a theme been so fully developed from actual life. In it the proportion between inspiration and experience is so finely balanced that a commonplace effort to adjust it would only mar it."

And again: "That I should have composed 'Tristan' I owe to you, and I thank you from the depths of my heart in all eternity." This "good, pure, beautiful one," as he apostrophized her, was the good angel of a considerable part of his exile in Switzerland. She provided him with a retreat where he could work in peace and quiet for him unprecedented. She exerted an altogether new and wonderful influence over him and his art. It was not to be wondered at, therefore, that Wagner, whose conjugal

and domestic life was a sorry botch as long as his first wife lived, should have fallen madly in love with Mathilde. It was the heart crisis of her life also, but while she became the heroine of a passion, she did not, thanks largely to the tact and good sense of her husband, allow herself to become the victim of a liaison. Mr. Kobbé's little book is made up of selections from the letters and journals bound together by a connecting narrative of his own. He says it was written and put into type before the complete English translation by Mr. Ellis was published. The story is such a fascinating one that, in spite of Mr. Kobbé's limitations in the direction of tact, good taste and good English, he who begins it will not lay the book aside until he has finished the last page. And then he will want the complete translation.

The Cherry Ribband. By S. R. Crockett. New York: A. S. Barnes & Co. \$1.50

This latest venture of Mr. Crockett into his beloved Gallovidian country takes the reader back to the time of King Charles II. In the opening chapters the heroine, Ivie Rysland, steps out of the hazel bushes, bringing the "flash of her white teeth" to bear at once on the susceptible heart of the lover of romance and on that of Raith Ellison, the hero. She is, of course, with those small white teeth and a certain kind of lively, erratic temperament, both spicy and saucy—a will-o'-the-wisp pattern of girl, a wild "daughter of the regiment," competent at the mess table, and yet apparently, in the author's opinion, left out of palaces by mistake. Raith Ellison, on the other hand, is a shy child of the Conventicle, a reluctant Cameronian. How they change parts, the lover drifting to the wars for his lass, and pursuing her under the favoring eyes of the bloodiest of fathers, and how the regimental lass, in the meantime, creeps into the Cameronian camp and lays her fair head on the lap of the hero's mother, a converted sinner, and yet, for practical use against the unregenerate, retaining a whip-lash and a smoking pistol—all this is the story of many pages. There is much in character and in the turn of events, as managed by the author, that

is superhuman, much that is human and pleasing, some that is crudely less than human, but all perhaps admissible in the romance which deals in the old way with those days. The reader finds it difficult to keep track of the young girl's rapid changes of mental temper—to find sufficient reason for them, in fact, except on the theory that the movements of the will-o'-the-wisp are presumably erratic. Furthermore, he finds difficulty in steadying his nerves under the rapid-fire pistol practice of both hero and heroine and their military friends and enemies. Another difficulty—chiefly the author's, for the reader can skip—is the burden of carrying a large delegation of inert Cameronian folk, fisher folk, and an absentee villain thru a somewhat complicated plot. With a lighter to take this excess of freight, one might sail happily along, gladdened by the pleasant sound of crisp Scotch-English talk. There is bloom in the wayside Scotch scenery, and, under the author's enthusiastic guidance, a certain homely attractiveness even in Galloway kail-yards.

Literary Notes.

"SEVENTY SCOTTISH SONGS," published by Oliver Ditson, Boston (\$1.50), include all the old favorites and many of the less familiar songs. A selection of national songs is often unsatisfactory on account of omissions, but in the case of Scotland their unique music is so limited that almost all the songs can be gathered in a small compass.

....A volume of selected poems from Robert Browning has been edited by A. J. George. All his well known shorter poems, and parts of the longer ones, with the exception of "The Ring and the Book," are included. The comments on the poems are not only by the author, but by famous men of the day. (Little, Brown & Co. \$1.50.)

....Mr. Warren K. Moorehead, who is now curator of the Department of Archeology at Phillips Andover Academy, will issue two or three pamphlets a year on American Archeological subjects. The first of these pamphlets was on "The Explorations of Jacob's Cavern," the second discussed "The Winged Perforated Stones." The price of these bulletins is 50 cents.

....In order that the widest possible circulation should be given to the report of the Inter-Church Conference on Federation of the Churches, recently held in New York, it has been decided to publish the proceedings at cost. Therefore, the large octavo volume con-

taining seventy-five to one hundred addresses from representatives of almost all the evangelical churches will be sold at \$2. It will appear early next month, and orders should be sent in advance to W. T. Demarest, 90 Bible House, New York. Every clergyman who wants to keep in touch with this great movement for Christian unity will find this book necessary for reference and as a source of inspiration.

....Mr. Alleyne Ireland, Colonial Commissioner of the University of Chicago, whose work on "The Far Eastern Tropics" we recently reviewed (Vol. LVIII, p. 1362), has undertaken the preparation of a very comprehensive work on "Colonial Administration in the Far East," to be published by Small, Maynard & Co., Boston, in ten or twelve volumes at \$10 each. The countries which will be included in the report are Burma, British North Borneo, Sarawak, Hongkong, the Straits Settlements, the Federated Malay States, Tonkin, Annam, Cochin China, Cambodia, Laos, Java, and the Philippine Islands. This wide range of inquiry will thus cover British, French, Dutch and American colonial methods, under every form of dependent government now in force in any part of the tropical world—Crown Colony Government, Chartered Company Government, Protected Government, Indian Provincial Government, the Residential System, and Government by Commission. There is no subject of our national politics on which there is such a dearth of reliable information as tropical colonization, and this work should be placed in all our collegiate and public reference libraries. As the edition is limited, subscriptions should be sent in promptly.

Pebbles

....A little girl in Washington surprised her mother the other day by closing her evening prayers in these words: "Amen; good bye; ring off."—*The Churchman*.

....A young Irishman in want of twenty-five dollars wrote to his uncle as follows:

"Dear Uncle.—If you could see how I blush for shame while I am writing, you would pity me. Do you know why? Because I have to ask you for a few dollars, and do not know how to express myself. It is impossible for me to tell you. I prefer to die. I send you this by messenger, who will wait for an answer. Believe me, my dearest uncle, your most obedient and affectionate nephew.

"P. S.—Overcome with shame for what I have written, I have been running after the messenger in order to take the letter from him, but I cannot catch him. Heaven grant that something may happen to stop him, or that this letter may get lost."

The uncle was naturally touched, but was equal to the emergency. He replied as follows:

"My Dear Jack—Console yourself and blush no more. Providence has heard your prayers. The messenger lost your letter. Your affectionate uncle."—*Chicago Tribune*.

Editorials

The President's Message

As might be expected, it is a sound, sane Message. We give an abstract elsewhere. It is like Mr. Roosevelt, for it develops the moral duties. The President did not miss his business when he took to politics, but he would have made a rousing preacher.

The Message is not radical. Perhaps the hortatory prevails over the constructive. And yet everybody knows that he has the constructive instinct. He loves to develop policies. Yet his policies have been already so far developed that he could hardly bring forward any new surprise. He wants corporations, especially railroads, controlled, but not seriously restrained. The subsidiary companies should be controlled by the Interstate Commission, and over-capitalization prevented. There should be power to control rates, subject to the courts.

As to labor, the same may be said. Earlier recommendations are repeated. He would have the hours of labor limited, at least on railroads; the matter of employer's liability studied; he would not have the power of the courts to issue injunctions in labor disputes withdrawn, but would have the judge required to hear the other side. It is well known what an interest the President has in marriage, and it is interesting that he would have the Department of Commerce and Labor investigate the employment of women in business, because this tends to withdraw them from family life.

It was expected that the President would be interested in the insurance investigation, and he speaks of the corruption discovered as "flagrant." But he goes no further than to suggest, as before, that Congress consider what it can do.

Whether he is a "stand-patter" on the tariff we do not learn from this Message. He implies that he is, for he says it is not yet time to judge whether we need further legislation on the tariff, altho we certainly need economy, in view of the deficiency the past year. Not even reciprocity treaties are advised, except as far as a general system is suggested to prevent discrimination against us.

Much he has to say about peace, and The Hague tribunal and its next meeting, and the Golden Rule, and of the Monroe Doctrine as a power for peace, and this brings up—not Venezuela, which he omits entirely—but Santo Domingo. He is right in saying, with more than usual definiteness, that it is our duty to respond to its appeal for help, and he urges the confirmation of the treaty under which we are already bringing peace and protection to the island.

Some principle of selection is recommended for the Army and Navy, by which the inefficient should be weeded out, and promotion by mere seniority ended. He agrees with the Secretary of the Navy that no increase of ships is needed, but more efficient ones substituted for those that are getting obsolete.

What the President says on immigration is generally good, if not new. We cannot accept his view that the entire class of Chinese laborers, "skilled and unskilled, legitimately come under the head of undesirable immigrants." While these are all shut out, he would have the laws so framed and executed as not to insult Chinese students and professional men—and this should be provided for by examinations abroad by our consuls.

The President can only make a favorable report of progress in the Philippines, where an increasing number of natives are in Government service. The recommendations of Mr. Taft for the relief of conditions he approves, especially the withdrawal of all laws which confine coasting trade to American vessels, and the rule of free trade between the Islands and the United States. Best of all is his proposal that the Congress confer American citizenship on the people of Porto Rico. "There is no excuse," he says, "for failure to do this."

The President recommends that two new States be admitted, one composed of Oklahoma and the Indian Territory, and the other of New Mexico and Arizona. That is an easy solution and perhaps the right one, but it needs careful consideration, especially as to the proper protection of the Indians.

The question of the Panama Canal is

not discussed, but is left for a special message. All the President now asks is an appropriation to carry on the work.

These are the principal matters considered in the message. They are none of them radical, none of them likely to raise any conflict with Congress.

The Collapse of Russia

FOR several days a most extraordinary condition of things has existed in Russia. The immense Empire has been shut out from the world almost as completely as if it had been sunk in the sea, like the fabled island of Atlantis. Only one such other case have we had in modern times, and that was when Peking was secluded by the insurrection there from all the world, and for weeks no one could learn whether the foreigners there were alive or dead. They were alive and were attacked by a horde of mad zealots, to whom the Empress gave her support, so that the armies of Europe and America, and of even Japan, were forced to unite and capture the city and drive the Empress to flight. Now for days telegraphic and railroad connection with St. Petersburg, Moscow and nearly all the rest of Russia has been stopped by the strikes of operators, so that we have not known whether the Czar was alive or dead. The Czar has been for a year in hiding in his palace, has not dared to show himself to his troops, and now we do not know whether to believe the sinister rumors of mutiny in the troops that surround him or of an attempt by Grand Dukes to assassinate him.

One cannot help seeing that the people are coming to their own. What right has a Czar, or any other ruler or lordling, depending on his birth for his superior claim, to pretend to rule over any one else? Are we not all born equal? Is any one really born to the purple? There are those who teach, even in this country, that suffrage is a privilege and not a right. We do not agree with them. We are told that the right to rule belongs to birth, or caste, or culture. Another lesson this revolution is teaching. The old French acclaim was right: "Liberty, fraternity, equality." Europe is in a fair way to learn—and strange that Russia, even Russia, should teach the les-

son, that to claim the right of birth to rule over subjects is a crime, is a robbery, a robbery which the people robbed of their rights will some day resist—and how soon? There is a handwriting on the wall, and it says: "*Perès*, Thy kingdom is taken from thee and given to mujiks and artisans." The day of the French Revolution seems to have come to Russia. Is the year of '48 to return to Europe, when kings fled from their thrones, and for a few days the people were supreme? Can European thrones still rest on the points of bayonets? That is the question.

Already the disturbances in Russia are spreading to the westward. The power of the secret committees of the revolutionary societies and political and Socialistic organizations to convulse Russia by so simple a device as the strike, cannot but suggest what might be done in other countries where there are wrongs to be righted. There is not only a Russian Poland; there is an Austrian and a Prussian Poland. That the fraction of Poland assigned to Prussia in its dismemberment is quite dissatisfied at the methods used to suppress the Polish language is seen in the refusal of the Polish nobles to attend on the Emperor when he visits their land, so that at his late visit the Emperor William had to address in his speech, in large measure, the Germans who had been persuaded to settle there, and whom he told that it was their patriotic duty to remain where they had settled, and not to go back as soon as they had acquired a competence, to reside in the more agreeable society of Berlin. In all Austria, and not in Hungary or Austrian Poland alone, there is a ferment. Fejervary's having proposed universal suffrage for Hungary, there has arisen immediately a very strong agitation for the same right in German Austria. There have been formidable Socialist demonstrations in Vienna and other principal cities, as the example of Russia has proved contagious; and Minister Gautsch has tried to calm the disturbance by a bill for universal suffrage. But the people ask that suffrage be not only universal, but equal. We have word of the immense demonstration of over a hundred thousand men marching silently before the Palace to show the

Emperor what they ask, and that the vote of the classes shall not outweigh the vote of the masses. The Austrian nobles already anticipate their downfall under democratic equality. If France can have a republic, why not Austria? If the people have risen in their might in autocratic Russia, why should not the people of Germany and Austria claim their own?

The Business of the Boss

Is the *débauche* of the bosses an outburst of anger against a lot of particularly bad bosses, which will accomplish nothing more than a sweeping change of personnel in the political field, or is it the first wave of a popular movement that is destined to work important changes in our political system?

This question is not to be answered by academic theorizing on the inevitableness of leadership. We can predict probabilities only if we understand what kind of leadership the boss stands for, what concrete things he does for his money, and exactly what conditions make his rule either necessary or possible. When we know all this, perhaps we can interpret the recent uprising so as to make a more or less good guess as to what next is likely to happen.

The boss, as we know him, is a product of the American party system, and that system is a product of conditions created, quite unwittingly, by the framers of our State and national constitutions, who supposed that a separation of powers, whereby legislature, executive, and judiciary should be quite independent one of another, was necessary to prevent a usurpation of authority that might overthrow our republican polity. Experience demonstrated that an actual separation of powers might easily become a practical paralysis of government, thru the antagonistic action, or the merely uncorrelated action, of its three great organs. A way to prevent such failure was found in the party system. By making the nominees for public office responsible to a party, they all, whether legislators, executives or judges, could be made to stand for one given policy, and in the main to work together to carry it out in one given way.

But just because it is a great correlating agency, accomplishing its function thru its hold upon candidates for office, the party can preserve its own integrity only as it is often successful in winning elections. It therefore becomes an intensely active instrumentality for "getting out the vote." Now intense activity by any composite body is business-like, and is fruitful in results, only if the great economic principle of the division of labor is observed. Somebody must plan, and somebody must take responsibility for marshaling and distributing the forces. This would be a comparatively simple matter in political campaigning if all voters were both patriotic and honest. Thousands of voters happen to be unpatriotic and venal, and from this circumstance complications arise.

At one or another price the venal voter can be bought. For one or another consideration the indifferent voter can be induced to go to the polls. If he happens to be an "up-State" farmer who "hates to spare the time" from "his fall work," to drive two or three miles to a polling place, two or three dollars paid for his "lost day" may awaken his political interest without disturbing his conscience.

The practice of spending money to "get out the vote" operates as feeing, subsidizing and bribing operates in every sphere of life. It enlarges the purchasable vote and puts up the price, until the cost of winning an election becomes altogether greater than the candidates in the field can meet out of their own pockets. Until this limit is reached any active politician may be the chairman of his local political organization and an active campaign manager, but the moment the costs of party success begin to exceed the financial abilities of officeholders a new development of the party system begins. The "machine" and the "boss" are evolved to meet the exigency.

A source of revenue must be found. It is discovered in the coffers of enterprises that want tariff protection, and in the treasuries of corporations that enjoy or are asking for franchises, or that may be held up by threats of governmental interference with their affairs. How can they be made to contribute? By the simplest process in the world; by finding

out what legislation they want and what legislation they dread. If they can be assured of the passage of bills that they ask for, and the killing of bills that they fear, they will "come down," as handsomely as may be desired. How can such legislation be guaranteed? By making a sufficient number of legislators beholden to a party leader, who will tell them what bills they must stand for and what bills they must vote down. How can they be made beholden? Simply by assuring them that their political career depends on their loyalty to the organization. If they vote as they are told, they can depend on obtaining as much money for distribution in their respective districts as may be necessary to "get out the vote." If they are recalcitrant, or entertain foolish notions of responsibility to their constituents, they will be defeated if money can defeat them.

All this means the development of the party manager into a business agent whose business is to maintain working relations between the source of revenue and the legislative body. To the contributors of funds he must deliver the *quid pro quo*, namely, the legislation desired. The legislators he must hold in line by a proper apportionment of the revenues in his hands. For his own services he must have "a rake off" on all transactions large enough to make it worth the while of a man of ability to hold the job. The political functionary thus specialized is "the boss."

Thus understanding his position and functions, can we imagine that we shall exterminate him by seething him in a few ebullitions of political wrath? The thought is childish. However often we throw him down, the boss will pick himself up and resume business at the old stand as long as the conditions that have created him prevail. Those conditions will prevail as long as we have vast private interests which demand favoring legislation and are able to pay for it. While these conditions last men of ability, of effrontery, of shamelessness, of unscrupulous daring, will be found to take the money and to deliver the goods.

We shall never get rid of the bosses until we get rid of private corporate interests that are enough bigger than public corporate interests to buy out and

betray the public. The boss will disappear when we have public ownership of public utilities.

Radio-Active Christmas Presents

PROFESSOR CURIE, of Paris, had a unique experience a few years ago. He became the first radio-active man. He was obliged to stop his experiments for a time because his apparatus, the walls of his laboratory, his clothing and his own person had become impregnated with the mysterious emanation from his new element, radium. He could not handle a photographic plate, even in its box or holder, because the rays of "dark light" from his finger tips would penetrate its shield and leave an imprint upon its sensitive surface. If he approached an electroscope its gold leaves would fold together and droop like the leaves of the mimosa when it is touched. A letter that he had written could be distinguished from all other letters in the postman's bag, because it alone was radio-active. The visitor who had shaken hands with him carried away something of his radiant personality. He could no longer search for new radio-active minerals, because specimens of every common rock became radio-active in his presence. It reminds one of Lanier's poem about "how Love sought for Hell" thruout the universe and could find nothing but love even in those dark places of the world where only sin was thought to dwell.

Nowadays the poets are limping far behind the scientists. Truth is not only stranger than fiction; it is more imaginative, more inspiring, more spiritual. The rational sciences give us better symbols of the unseen than the pseudo-sciences. Professor Curie's radium emanation is a finer analogy of the radiance of personality than Mrs. Besant's polychromatic auras.

The reason why Christmas gifts are so often valueless is because they lack this radiant emanation of personality. The gift without the giver is dead. The only thing worth giving is ourselves. The barbaric custom of cementing a friendship was actually to mingle the blood of the two persons. We have grown above this gross symbolism. We know that the

circle of one's individuality extends beyond the limits of one's skin. It covers also one's intimate belongings. "Personality" and "personalty" are as closely related in meaning as in sound. A true gift, then, carries with it something of the giver's self, not in a physical or a metaphysical, but nevertheless in a very real sense. And gifts without this are to the recipient merely the acquisition of so much wealth. The object of an exchange of gifts is the mingling of personalities.

The true gift is the material expression of the friendly sentiment. The curator of one of our great museums of natural history has defined a museum as "a complete collection of accurately prepared and systematically arranged labels, accompanied, wherever convenient, by the objects referred to." In a similar way a Christmas gift may be defined as a card bearing the good wishes of the giver, accompanied, if convenient, by an object of value. The Christmas card and the souvenir postal are, therefore, the gifts of friendship reduced to their lowest terms. A gift book of which the flyleaf is not worth more than all the other pages is not a true present. If you have a friend who loves you do not give him a new book; give him one from your own library, containing your own book plate, one that opens spontaneously at your favorite passages, that is interlined and annotated by your own hand, one that you have used and that has become part of yourself. Then, if necessary, buy a new copy for yourself.

The ideal present is that which expresses equally the personality of the giver and recipient; one that would be inappropriate if coming from any one else to any one else, as individual as a private letter. It should represent the common taste of both, the one point where the two spheres of personality touch each other. Therefore give what you value most to the one person in the world who will value it more than you. The book to give to a friend is the one you would enjoy reading aloud to him, knowing that he would enjoy listening. The picture to give is the one you would enjoy looking at together. It is not necessary to enclose your card in a gift of the proper sort. If you have made the

right selection, your friend will know it is from you as soon as he sees it. The best gifts need no label. (This is an apparent contradiction to what we said above, but that does not matter, since both statements are true.)

Obviously one cannot give many presents in this way. And this is well, for Christmas giving has become promiscuous, perfunctory and commercial. We give from a sense of duty, not from a spontaneous impulse. A present should always be something of a surprise, in form if not in occasion. This is the reason for that atmosphere of ostentatious mystery which envelops the home at this season. Were it not for the fact that we are apt to neglect anything which has not a fixed date assigned to it, it would be better to scatter gifts thruout the year, rather than bunch them at Christmas to the impairment of their value and the embarrassment of the clerks of the store and post office. Christmas Day should be multiplied by 365.

The desire to impart something of one's own personality to one's gifts has led many to adopt the custom of making all their Christmas presents by hand. This is more commendable in theory than it is satisfactory in practice. Sometimes more labor and money are expended in the making of a useless and inappropriate article than would suffice for the selection and purchase of a gift that would remind the recipient still more vividly of the giver. The gift sentiment has been expressed in thousands of poetical forms, but they are all mere variations and elaborations of the two lines which have survived longest, because they express it most completely and succinctly:

"When this you see,
Remember me."

The gift should also be something that one would not otherwise get. The boy who prayed to Santa Claus not to bring him any useful presents this year had the right feeling about it. A Christmas present should be a luxury, however slight its money value may be. On the first Christmas the Kings of the East did not present the babe in the manger with clothing or a cradle, much as these were doubtless needed, but they brought

perfumes and jewels, the emblems of their own royalty, for the new born King.

Growing Unity

WHILE it is true that the invitations to the late meeting of the Inter-Church Conference on Federation were sent only to so-called Evangelical Protestant Churches, yet it should be understood that the object sought was inclusion of such as could now be included, and not the exclusion of others. Accordingly, while it would, under present conditions existing out of New England, have been impossible to form a federation in which Unitarians and Universalists should be included, there were expressions of regret by a number of speakers, such as Justice Brewer, that such was the case. This was similarly expressed by President Faunce, of Brown University, who said:

"Those who are sure of Christ ought to be patient with those who are feeling their way towards him."

One of the finest illustrations of Christian spirit has been shown by the attitude of these two bodies which were omitted in the call, not excluded. *The Universalist Leader* says:

"Every loyal lover of humanity must eagerly greet any promise of the union of Christian forces in their service to the world; and in all sincerity, even tho our own Church is at present omitted from the lists, we hail the movement as one of the most promising of the age and prophesy that in the very nature of its own composition it must become more and more inclusive until all followers of Christ, without regard to name, are keeping step in a great forward movement towards righteousness. Naturally we regret the omission of our Church from any movement for righteousness, but we are a patient body because we are assured of ultimate justice, and under the established conditions of membership, 'recognition of Jesus Christ, our divine Lord and Saviour,' it would appear that the Universalist Church is eligible under its own 'official' recognition of 'the spiritual authority and leadership of His Son, Jesus Christ.' The projectors builded better than they knew when they laid a foundation of a possible temple 'lofty as the love of God and ample as the wants of man.'"

Equally are we pleased to observe the attitude of representatives of the Catholic Church to this federation. Thus, in *The Catholic Mirror*, of Baltimore, Cardinal Gibbons's organ, the most prominent position is given to a long address

by Father M. M. Sheedy on union, devoted entirely to the discussion of the late Conference. It is most sympathetic, and laments the divisions of sects:

"Besides the scandal of a divided Christianity it is now generally recognized that the existence of so many religious bodies is a shameful waste of money and effort. . . . Unity, organization, co-operation—these would put a stop to the great leakage in religious bodies and would immeasurably strengthen the work of the churches. How often do we not see in the small town or village, four or five different churches where there are hardly enough church-goers to fill and properly maintain one? . . . These churches ought to be starved into decency. A determined effort is being made to put an end to the rivalries and jealousies that hitherto have existed among the different sects.

"To that end the most important and impressive religious gathering ever held among non-Catholics is now in session in New York. Its purpose is to organize a permanent federation of the churches in this country and to effect, if possible, a recognized basis of union.

"Now if this movement remains true to its practical purpose, it ought to succeed in showing that there is a sound basis on which the different non-Catholic denominations of the country can stand. We believe that if ever church unity is to be visibly attained, even in a moderate degree, it will be brought about under some such form as their great Conference in New York has assumed."

Father Sheedy then refers to the more cordial relations between Catholics and Protestants, and concludes his most significant address:

"From many quarters are heard sweet sounds to the music of heaven, that tell of this universal desire for unity and peace. . . .

"These are surely evident signs that religious strife and dissensions are rapidly passing away and that we are nearing Christian unity. The God of the Christian is the God of peace, and not of dissensions. And the churches of our day are coming to see the pressing need of the reunion of Christendom and are praying that 'they may be one as Christ and the Father are one.'"

Similarly also speaks that most influential Catholic paper, the *Boston Pilot*:

"A great Protestant religious gathering closed in New York on Tuesday, November 21. It represented thirty-two denominations with a total of 18,000,000 communicants. Better still, it represented the weariness of these of the religious divisions which have made all professed Christianity outside the Catholic Church a jest or a stumbling block to the unbeliever. Best of all, it was the occasion of a great public act of faith in the Divinity of Christ. . . .

"There was no bitterness in the gathering. Not once was the Catholic Church attacked, although for obvious reasons it could not par-

ticipate in the conference. Rather was it praised, as, for example, in Bishop Greer's reference to the Holy Sacrifice, which is the sun and centre of our worship.

"The Conference did not even assert essential Protestantism. It wants to call itself 'The Federal Council of the Churches of Christ of America,' and to hold quadrennial sessions, not to formulate creeds, but to help in extending Christian influences in all matters of common interest.

"Let us Catholics watch the movement in hope and prayer. The confession that sectarianism is a failure is in itself a good, decisive step on the way to Christian unity."

Thus are we coming nearer together, tho seemingly far apart, and the meeting of the Conference is justified by those who took no part in it.

The Cost of Our Army

Not long ago statistics were printed in certain journals to show how much larger were the expenditures for the United States Army than for those of foreign nations. The attempt was to prove that we are expending more for our standing army than Germany is for hers. Such fleeting comparisons, tho obviously erroneous, cannot always be traced to their source; but when a standard book of reference, which may well find a place on every editor's table, contains such misleading statements, it is important to correct them. Thus, in that excellent book, "Social Progress," edited by Dr. Josiah Strong, "A Year-book and Encyclopedia of Economic, Industrial, Social, and Religious Statistics," we find a table giving the "Armies and War Budgets of Principal Countries," compiled from Whitaker's Almanac for 1905. From this table it would appear that while the standing army of Germany in time of peace is 617,977 men and the standing army of the United States is 63,750, the expense to Germany is \$143,945,000, compared with \$240,410,000 to the United States. Thus the United States is represented as paying for its military establishment \$97,000 more than Germany pays for hers, altho the peace strength of the Germany army is nearly ten times greater than that of the United States. This apparent disparity is so astounding as almost to furnish its own refutation; nevertheless, confiding people are sure to be misled by it, and the statistical investigator

wonders where such figures come from. It should be said, in the first place, that Whitaker's Almanac, tho presumably reliable as far as British statistics are concerned, is evidently not trustworthy as regards this country. It takes totals from budgets and appropriation bills without analyzing their composition. So far as the relative strength of the armies of different nations is concerned, the comparison is easily made, tho the strength of the United States Army at the present time is 60,183, instead of 63,750; but when it comes to comparing the expenses of the different national and military establishments the budgets are made up in such different ways that no accurate comparison is possible without an extended analysis.

It is true, for instance, that tho the Germany army is ten times larger than that of the United States, the relative expense of maintaining the American army is much greater per man, because while the private in the United States Army receives \$13 a month, the private in the Germany army receives but \$2.50. The disparity is greater still with other nations; for in France he receives but \$1.74; in Austria-Hungary, \$.73 per month; in Japan, \$.60, and in Russia but \$.12 a month. Thus it costs the United States, at the rate of \$13 a month, for its army of more than sixty thousand soldiers, of whom 56,439 are enlisted men, more than Russia pays, at the rate of \$.12 a month, for its army of over four millions and a half. In a comparison between the rations and the clothing of the army of foreign nations to those of the United States, Secretary Taft says:

"It is no exaggeration to say that the troops of the United States are the best fed, best clothed, and best sheltered troops in the world."

Nevertheless, Germany, though it pays its private soldiers about one-fifth of what they are paid by the United States, having an army ten times as large, expends three or four millions of dollars more than the United States for the pay of troops.

The misleading character of the figures in Whitaker's Almanac, however, is not to be accounted for merely by expenditures for food, clothing and pay.

The compiler has probably tossed into the total the whole amount of our river and harbor appropriations, and very likely the \$150,000,000 we expend for pensions.

Those who really want to know what the military establishment of the United States costs can easily find out without recourse to a foreign almanac. The appropriation for the military establishment proper, including salaries, subsistence, horses, clothing, the medical department, the ordnance department and the military academy, was, for the year ending June 30, 1905, \$77,655,162. Of that sum, \$29,510,364 was for the pay of the army; seven million dollars for subsistence, about thirty-two millions for the quartermaster's department, four millions for clothing and fifteen millions for transportation. In addition to these expenditures nearly eleven millions went for military public works in the preservation and repair of fortifications.

Then there are expenditures under the War Department of a purely civil character, such as the improvement of the Yellowstone National Park and the buildings and grounds in Washington. There were spent for river and harbor improvements of a purely civil character nearly eleven millions. In addition to these, nearly five and a half millions went for miscellaneous items having nothing to do with the present maintenance of the army; \$126,000 on national cemeteries, in addition to \$61,000 for the pay of their superintendents; \$50,000 for headstones for soldiers' graves; \$20,000 on roads to these cemeteries; \$1,850 on the Confederate cemeteries at Camp Chase, Ohio, and in Chicago; \$5,000 for marking civilian graves. In the medical department the appropriation for the last year for artificial limbs was \$120,000, and for the present year \$425,000. Besides all this, the Government spends \$5,000,000 on national and State soldiers' homes.

Taking all the appropriations together, however, they amount to but \$107,519,000, instead of the \$240,000,000 of the Whitaker Almanac. As to the military establishment proper, excluding the amount spent for the civil expenses quoted, it is less than ninety millions.

We do not know how the figures for

other countries are compiled for Whitaker's Almanac, but if they are no more accurate than for the United States, it would be better to leave the whole subject to the imagination of the reader.

A Cause of Postal Deficiency

CONGRESS, deliberately, we may almost say of malice aforethought, creates an annual postal deficiency of \$13,000,000 to \$14,000,000 by confining our rural post-wagons to the handling of letters, newspapers and magazines. The sixteen cents a pound tax, levied by Congress on merchandise limited to four pound parcels, effectually debars our farm-post wagons from the transportation of supplies, produce and baggage on their routes, and, on no condition, may a farm-post wagon carry a passenger.

The result is thousands of farm-post wagons at work—over 31,000 at present—collecting and delivering in the daily service of the 125 families on the average twenty-five mile route, less than twenty pounds of mail matter per wagon, less than half the load packed by Congress on over-burdened city foot-postmen, to whom Congress refuses the use of wagons. Forbidden by Congress to bring to the farmers the supplies they need from the village store or from the railroad station, or to take to market the butter, eggs and other produce the farmers have to sell, the average farm-post wagon collects on its daily rounds less than two pounds of letters, newspapers and magazines, practically the only matter carried in the rural mails, and brings in to the Post Office from this restricted service less than forty cents a day. The net loss on the average wagon is about \$1 a day.

Congress, therefore, has to face a deficit—if the estimates of the last report of the Post Office Department were correct—of over \$14,000,000 for the year ending June 30, 1905, and over \$13,000,000 for the ensuing year.

To meet this deficit, inevitable under existing legislation, and to enable the rural post-wagon to do a wagon's work for the rural public, Congressman Henry, of Connecticut, on December 21st, 1904, introduced in the House of Representa-

tives a bill to secure the full use of the United States rural post equipment and to place the rural post service on a paying basis.

In this bill all parcels collected and delivered within the limits of a rural route, in dimensions from a pint to a barrel, in weight from a half pound to 200 pounds, were placed in one class, whether sealed or unsealed, with rates of 1 cent on parcels up to 8 ounces, 2 cents on parcels over 8 ounces to 1 pound, 5 cents on parcels from 1 pound to 2 pounds, etc., up to 25 cents on a barrel.

It is safe to say that from the day such a rural post-wagon service comes into operation—it should include the transport of persons as well as merchandise—from that day the postal deficit would begin to decrease, and the steadily decreasing postal deficiency would be accompanied by a steady increase in the efficiency and usefulness of the postal service that would add to the wealth of the rural population by many millions of dollars a year.

We respectfully suggest to the present Congress that legislation enacted this winter providing for the full use of our rural post-wagons at low, uniform rates will please the people.

It is reported that the German Government has recently ordered several hundred automobiles to be employed in the German rural service. The least that can be fairly expected of Congress in the improvement of our free rural service is an appropriation of \$200,000 or \$300,000 for an experimental full post-wagon service, using two or four horse teams or automobiles on a considerable number of routes to be determined by the Postmaster General.

The Surrender of Halifax

GREAT BRITAIN has surrendered Halifax to the care and control of the Dominion of Canada. The two largest passenger steamers leaving Montreal before the ice closed the St. Lawrence called *en route* at Halifax and conveyed to England all the officers and men of the Royal Garrison Artillery. Henceforward the citadel and forts about Halifax harbor will be garrisoned by enlisted men in the service of the Dominion Government.

Canadian troops also garrison Quebec and Esquimalt; and now for the first time since England began the colonization of America, there are no troops whose pay is voted by the British House of Commons anywhere on the North American Continent.

This withdrawal of the insular British forces has much significance for the city of Halifax, for the Dominion of Canada, and for the United States. Before the Royal Artillery left the citadel, Halifax had ceased to be the headquarters of the British North American naval squadron. That change was made when the stations of the British navy were rearranged in consequence of developments due to the war between Russia and Japan; and now that the troops are also withdrawn, vast expenditures of British money in Halifax, which had gone on since 1749, have come to an end. British squadrons will from time to time visit Halifax, and the great dry dock there will occasionally be used for overhauling British war vessels; but a British admiral will no longer have his shore headquarters in Halifax, and the city has ceased to be the headquarters of the commandant of the British forces in North America.

The military expenditures at Halifax will henceforth be defrayed by the Dominion Government, and Halifax disappears from the list of naval and military stations at which there are large expenditures of imperial money. Hitherto British expenditure there has been on a large scale, for in the century and a half during which Halifax has been a naval and military station, nearly as much British money has been expended there as at Gibraltar. Commercially these expenditures have been of much importance to Halifax, and the presence of naval and military forces has had an important effect on the social life of the city.

The social effect has not been wholly good, for British naval and military officers usually hold social ideals for which there is no place in a new country where there is not much landed or inherited wealth. Halifax has never been characterized by the wholesome social freedom of Toronto or Hamilton. Its social atmosphere has differed from that

of the inland cities of Canada; and this difference has been largely if not entirely due to the social dominance of the British naval and military officers so long permanently quartered there. Halifax will have to adapt itself to the new conditions. There will for a time be some commercial loss; but the social readjustment cannot fail to be for the general advantage of the people of Halifax.

For Canada, as a whole, the significance of this change is that it marks the beginning of the end of the pupillage of the Dominion. The withdrawal of the insular British troops from Halifax and Esquimalt means the severing of another formal link with Great Britain; and the only obvious formal link, as distinct from the sentimental tie, that now remains is the presence at Ottawa of the Governor-General, who is, of course, appointed by the British Government, and who acts as the King's Viceroy. The significance for the United States of these withdrawals from Halifax and Esquimalt is, that they betoken the new and more cordial relations now existing between the Americans and the English. The only external danger that can threaten Canada must come from the United States; and the abandonment of Halifax and Esquimalt to Canadian militia and the withdrawal of the North American squadron form a good indication of how slight this danger is considered in Great Britain.

Secretary Bonaparte's Recommendations

Of special interest is Secretary Bonaparte's report. He does not favor an enlarged navy—all that he asks is that the present force be kept up and that old and useless vessels be gradually replaced. He allows two new battleships, and not three, as the naval boards recommended. This has been represented as a courageous resistance to the President's desire for a larger navy. Equally interesting is his comment on the case of the death of Midshipman Branch. He has no mercy for the "code," aping the duello, which exists at Annapolis. There is no more to be said, he tells us, in favor of such conflicts than in favor of the duel. The custom he calls "highly objectionable and

essentially unmilitary." That is true. It is unmilitary because the "code" in the Academy, allowed by incompetent and self-indulgent Superintendents, divides authority. It puts in the senior class authority which should belong entirely to the officers. It is further unmilitary because it is not the business of members of an army to fight each other, but to fight the enemy. For personal quarrels military law provides other remedies.

✱

The Coming Parlia- ment of Nations

We cannot publish this week the full report of the commission appointed by the Interparliamentary Conference held in Brussels, received just as we go to press. It opens the way for the realization of the plan for an International Congress proposed by Mr. Bartholdt, representing the American members of the Interparliamentary Union. The report favors, first, the transforming of the second Hague Conference into a permanent institution, assembling periodically and automatically, under the name of International Congress; second, the codification and development of the law of nations in the best possible way, which means that a subcommittee of the second Hague Conference ought to do the work of codifying the law of nations, or that a special commission should do it, and that the permanent Congress at The Hague shall keep it up to date; third, the turning the Interparliamentary Union into an official International House of Representatives, so as to act as the people's chamber of the international body. This is a step forward toward the realization of the grand object aimed at, the abolition of war by the creation of a Parliament of Nations.

✱

Dr. Crapsey's Case

The heresy case of Dr. Crapsey, of the Episcopal diocese of Western New York, would seem to have come to an end, but it may be reopened. Certainly the press of that Church does not appear satisfied with the conclusion. Dr. Crapsey has published a book, "Religion and Politics," in which he undertakes to deny whatever is miraculous in the birth, life

and resurrection of Jesus Christ. He says:

"In the light of scientific research the Founder of Christianity no longer stands apart from the common destiny of man in life and death, but is in all things physical like as we are, born as we are born, dying as we die. . . . The fact of His miraculous birth was unknown to Himself, unknown to His mother, and unknown to the whole Christian community of the first generation."

Of course this absolutely contradicts the Apostles' Creed; and yet when-complaint was made, and the Bishop referred the case to a commission of enquiry, no sufficient reason was found why he should be presented for trial. Let it not be understood that the commission were indifferent as to his views, but they find that he still declares his belief in the creeds, but in a sort of "spiritual sense"; and while they condemn his views, yet such condemnation is by inference rather than from direct evidence. What more direct denial is needed it is not easy to see. If a man can "spiritualize" away the plain meaning of words, theology may become, like diplomacy before John Hay, an art for the easy reversal of solemn asseverations.

During the past week one million and a half of Jews have been celebrating their quarter-millenary. They have much to boast of, but most of all, of late, over the grand contribution of over a million dollars the last few days to aid their co-religionists suffering in Russia. It should go, every cent of it, to Jews, not to Christians, much as some of them have suffered. Perhaps Christians have not aided in this as they should, but they have hardly been asked. The suffering has been fearful and might well appeal to the philanthropy of all. What we should at least do is to hold our doors wide open to the refugees that flee to our shores from Christian persecution abroad. But we hope that Witte's promise of religious freedom will be carried out.

The proud Conservative Government of the Right Honorable Arthur J. Balfour, for three years Prime Minister in succession to Lord Salisbury, and for ten years leader of the House of Commons, has gone down ingloriously. The country was tired of it, and its own support-

ers had quarreled. And yet it has been a Government that will be writ large in history. It consolidated all South Africa, suppressing the two republics; and it formed the alliance which allowed Japan without interference to conquer Russia. Against these achievements must be set the blunder of Church schools and the coquetting with the protective tariff. It is time that a Liberal Government should take its place.

It will be most humiliating if the European Powers shall back down after having made their demands for reform in Macedonia, and after sending their fleets to take possession of Mitylene. They ought to have anticipated the possible refusal of the Sultan. But we still anticipate that they will insist, and that the Sultan will find some way to harmonize his necessities with the requirements of Koranic law. The threat of massacre may be made, but the attempt to execute it would send the Sultan out of Constantinople, and then to some St. Helena. We do not fear any vast uprising of the Moslem world at his command.

The Mayor of Minneapolis has put his foot down and absolutely closed the saloons all day Sunday. He was afraid he could not do it; so he sent men to investigate conditions in St. Louis, a city not very puritanical, and he found the saloons were closed there, and at St. Joseph, and Pittsburg, and Boston. So he issued the order to the police, and it was obeyed, and the people approve, and most of all the families of those who spend their Saturday wages in the Sunday saloons. But if Sunday, why not Saturday?

We would like to call your notice to the page among the advertisements which has for several weeks been giving interesting information about the history and policy and plans of THE INDEPENDENT. Our purpose is, in part, to get our many new readers acquainted with what it has stood for in the present and the past. We intend to continue this series for some weeks, at least, and such a page is to be found in this issue, to which we direct special attention.

Insurance

The Insurance Investigation

THE reforms advocated in THE INDEPENDENT under date of November 23d are beginning to bear fruit. Richard A. McCurdy offered his resignation as President of the Mutual Life Insurance Company of New York, on the ground of ill health, and this resignation was accepted by the Board of Trustees on November 29th. It is expected that Mr. McCurdy's resignation is to be followed by other resignations not only of his immediate family. Justice Rufus W. Peckham, who has resigned as a Mutual trustee, in a statement issued by him giving his reasons for so doing, spoke of his "indignation and astonishment" at the recent disclosures. History is making fast in insurance circles just now, for upon the heels of the McCurdy resignation comes the announcement, reported in the public press, that George W. Perkins, of the firm of J. P. Morgan & Co., will retire from the vice-presidency of the New York Life Insurance Company and from the chairmanship of its Finance Committee at the coming election, next April. It is stated that this action is to be taken at the suggestion of Mr. Morgan himself. The Mutual Reserve Life Association has been under investigation, and there were certain developments regarding the gift of \$6,000 to Frederick A. Burnham on the part of Horace H. Brockway, proprietor of the Ashland House, because "Burnham was a good fellow and needed the money." In return for this altruism on Brockway's part he was placed upon the pay roll of the Mutual Reserve at \$300 per month until he had received, according to the recipient's own estimate, some \$6,500. Medical testimony was introduced before the Armstrong Committee to show that President Frederick Burnham was not in a condition to appear before the committee or to have his deposition taken. Indisposition on the part of insurance officials seems to be rapidly approaching the epidemic stage.

A bill extending Federal visitorial power over certain life insurance companies was introduced in the House of Representatives at the beginning of the present session by Representative Morrell, of Pennsylvania. This bill sets forth that

the investigation now going on in New York has "disclosed grave abuses and irregularities in the management of these companies, which are manifestly due to the lack of an efficient system of governmental inspection, supervision or control." It also recites that these companies "have become practically amalgamated with certain trust companies and banking associations, and are performing indirectly, by means of such amalgamation, many of the functions of banks, in addition to those of life insurance companies, thereby invading the province and imperiling the stability and usefulness of the National banking system."

Another bill, which seeks to place insurance companies under the control of the Department of Commerce and Labor, was also introduced at the same time. A third bill was introduced, which contemplates a joint investigation of insurance companies by House and Senate in order to ascertain to what extent Federal control and supervision is desirable.

A dispatch to the *Times* from Berlin, under date of December 1st, states that the Imperial Insurance Office has informed the Equitable that it will appoint a receiver to administer on the company's property in Germany in the interest of the German policyholders unless the company increases its premium reserves invested in Germany as required by the insurance law of May, 1901. The company has taken the ground that it is not subject to the operation of that law, since it no longer seeks or accepts new business in Germany.

If the threatened receiver is appointed he would take possession of the Equitable's buildings in Berlin and other German cities and administer them, or, if need be, sell them and devote the proceeds of such sale to the benefit of German policyholders.

Temporary President Cromwell, of the Mutual Life Insurance Company, has issued a circular to agents, in which he says that thoro reforms in the Mutual are being pushed, and that the financial situation of his company is such that its ability to meet all its obligations is largely above its liabilities. According to Mr. Cromwell's circular:

"Policyholders should be strongly advised that they will make a mistake if they surrender their rights or interests under their policies to those who, for their own purposes, seek to obtain them."

The New Head of the Mutual Life

Frederic Cromwell, who was elected Acting President of the Mutual Life Insurance Company of this city on November 29th, vice Richard A. McCurdy, resigned, was born at Cornwall-on-the-Hudson on February 16th, 1843. After graduating at Harvard University, in the class of 1863, he entered the service of the Mutual as Trustee in 1880, and has been the Treasurer of that Company since 1884.

He is on the directorate of the Delaware and Hudson Company, the Morris and Essex Railroad, the Sixth Avenue Railroad Company, the National Bank of Commerce, the Guaranty Trust Company and other financial institutions. Mr. Cromwell is a member of the Century Association, the Metropolitan, Tuxedo, University and Down Town Clubs.

Financial

Seventy-five Years Old

IN our comparatively young nation, seventy-five years is an exceptionally long life for a financial institution. To this ripe age has the New York Life Insurance and Trust Company now come, and its history has been most interesting and creditable. This institution was chartered in 1830, and there is only one other Trust company in New York as old. William Bard, an enthusiast in what was then the new field of life insurance, was the first President. In 1843 Stephen Allen succeeded him; John R. Townsend followed in 1845; and in 1846 David Thompson, who had been cashier of the Bank of America, became the head of the company. After twenty-five years of excellent service, he died in 1871. Whereupon Henry Parish was elected to the office, and he is still President. Under his skillful and conservative management the company's deposits have risen from \$6,000,000 to about \$34,000,000. Its capital is \$1,000,000, its surplus and undivided profits are \$4,342,594, and its assets exceed \$42,000,000. Long terms of service are noticeable in its history. With Mr. Parish (President for thirty-four years) was associated Joseph R. Kearney, who, at the time of his death in 1893, had been with the company fifty-six years, and for twenty-four years had been its Secretary. Some time ago the fortieth anniversary of the service of Mr. Walker, the present Cashier, was suitably celebrated.

The practice of the company has been of an exceptional character, in that it has never done any corporation business, or accepted corporation or railroad trusts, but has been content with acting in all fiduciary capacities for individuals and for charitable, religious and educational institutions. Retiring from the business of life insurance in 1840, it has now outstanding only fifteen policies, but it does a considerable business in annuities. It does not deal in securities, and we are informed that it has never been a member of a syndicate. But to the bankers who undertook, some years ago, in time of stress, to supply the national Treasury with \$50,000,000 in gold, it loaned \$2,500,000 in gold from its vaults. Its

shareholders have received 1,538 per cent. in dividends. After the panic of 1873, Mr. Parish decided that it was advisable to keep a cash reserve in the company's vaults, and this has been the company's policy ever since. The two Vice-Presidents are Walter Kerr and Henry Parish, Jr., and George M. Corning is Secretary. Among the Trustees are Joseph H. Choate, Cornelius Vanderbilt, John Jacob Astor, Stuyvesant Fish, C. O'D. Iselin, Augustus D. Juilliard and John Claflin.

THE Van Norden Trust Company, at a recent meeting, adopted resolutions providing for the maintenance hereafter of a cash reserve of 7½ per cent. It is thought that other Trust companies will take similar action.

.... The Lackawanna Steel Co., of Buffalo, has sold 6,282 tons of steel rails to the Government of Victoria, Australia, for about \$27.50 per ton, which includes the freight charges to Melbourne. The price in this country is \$28 at the mill.

.... John B. Daniels, George Mercer, Jr., William G. Brown, Edward S. Farrow, and William A. Griffith are organizing a bank, to be known as the Beaver National Bank, with a capital of \$200,000 and a surplus of \$100,000. It will be situated at Beaver, Pearl and Wall streets, and will serve the interests of merchants in that vicinity.

.... Harvey Fisk & Sons have underwritten \$8,000,000 of 5 per cent. first mortgage extension bonds of the Bethlehem Steel Company, at a price said to be 92½, and the same firm has an option on the underwriting of \$4,000,000 more. These bonds are secured by a first mortgage on nearly 75 acres additional area recently acquired at Bethlehem, Pa., and the costly extension of the company's plant to be erected thereon.

.... Dividends announced:

Amer. Chiclé Co., 1 per cent., payable December 20th.

International Paper Co. (Preferred), 1½ per cent., payable December 30th.

Amer. Can Co. (Preferred), 1¼ per cent., payable December 16th.

The Independent

VOL. LIX. NEW YORK, THURSDAY, DECEMBER 14, 1905. No. 2976.

Survey of the World

The Session of Congress

In the House, last week, the proposed emergency appropriation of \$16,500,000 for the Panama Canal was reduced to \$11,000,000, after a debate in which a desire for a detailed statement of all payments heretofore made and all obligations incurred was plainly shown. The Democrats, or a majority of them, asked that the sum be reduced to about \$7,000,000. There was a disposition in both parties to criticise the Commission.—Interesting bills relating to the tariff were introduced by Mr. John Sharp Williams, the minority leader, and others. Mr. Williams in his measures suggests a maximum and minimum tariff, the maximum to be the present rates, and the minimum to be rates 20 per cent. lower, for use in reciprocal agreements. He also provides for free trade with the Philippines and for a reduction to 100 per cent. of all duties now above that limit. A bill introduced by Chairman Payne, of the Ways and Means Committee, removes all duties on Philippine products imported into the States, except those on sugar and tobacco, which are reduced to 25 per cent. of the Dingley rates. At present the duties are 75 per cent. of these rates.—Many bills and resolutions relating to political contributions and insurance companies were introduced. Inquiries as to the Constitutional power of Congress to legislate for the national supervision and regulation of insurance companies were ordered. Mr. Jenkins, chairman of the House Judiciary Committee, has made an elaborate statement designed to prove that Congress has no such power. Senator Tillman spoke vigorously in support of a resolution calling upon the Treasury Department to show whether any na-

tional bank had made contributions for political purposes. He referred to the discoveries made by the Armstrong Insurance Committee in New York, and quoted (for publication in the *Record*) all of Senator Platt's testimony before that committee as to his collection of campaign funds. Reference was also made to the contributions received by Mr. Cortelyou from the life insurance companies in the last Presidential campaign. Mr. Tillman remarked that there were "some lame ducks" in the Senate, and he urged the Senate to take steps for lifting itself out of the disgrace and suspicion now attaching to it. Senators Platt and Depew were absent. In New York, Mr. Hearst's newspapers are circulating petitions asking the State Legislature to pass resolutions calling for their resignations. Mr. Tillman's resolution was adopted. In both houses bills were introduced forbidding national banks or corporations engaged in interstate business to contribute money for political purposes.—The Esch-Townsend Railroad Rate Bill of last session, with some changes, was introduced again, and in the Senate the Elkins Committee has before it the Commission's bill, Mr. Foraker's bill and others. It is predicted that the Senate will pass a compromise measure nearly in accord with the President's views. From the Merchant Marine Commission comes a Ship Subsidy bill. The California Representatives have agreed upon a bill for the exclusion of Japanese and Korean laborers. Mr. Goldfogle has introduced a resolution deploring the persecution of Jews in Russia and asking the President to use his good offices for securing action by the Russian Government that will prevent such persecution there hereafter.

One of Mr. Hearst's bills is designed to enable the Government to acquire and operate the existing telegraph system.—Senator John H. Mitchell, of Oregon, recently convicted of violating the law in certain land cases, died on the 8th in Portland of hemorrhage and exhaustion following the removal of several teeth. He had served in the Senate for twenty-six years. In the House there is no member from Oregon to make formal announcement of his death, one of the two Republicans having been convicted of land frauds and the other being under indictment for a similar offense.

From the Cabinet Reports

The annual reports of the Executive Departments have been published. We refer here to some of the recommendations and statements in them. Postmaster-General Cortelyou says that merit should be the controlling factor in appointments and promotions. To each post office is now given a careful rating, based upon inspectors' reports and other data, and this rating has much weight in determining the Department's attitude toward a postmaster's reappointment. "Fourth-class postmasters will be retained during satisfactory service." The ratings will be a guide for the Department in its recommendations to the President concerning postmasters of the highest class. The establishment of a separate parcels post is not recommended, but third and fourth class matter should be merged at one cent for two ounces. The laws concerning second-class matter (two-thirds of the bulk and yielding only four per cent. of the revenue) should be thoroly revised.—Secretary Metcalf, of the Department of Commerce and Labor, argues at length in advocacy of the supervision and regulation of all interstate corporations by Federal license. It would be better, he says, to give up all our trade with China if unrestricted immigration of Chinese is the price of retaining it; but the laws concerning the admission of Chinese should be amended. It is not clear to him that the Constitution permits Federal supervision of insurance companies.—Secretary Taft shows that the actual strength of the army is 59,814 officers and men, and nearly 12,000 of these are

in the Philippines. There are not enough officers. The reorganization of the militia has progressed steadily, and nearly the entire body of militia now conforms to the organization of the regular army. Much space is given to matter relating to the Panama Canal and to desired legislation affecting the Philippines. The Secretary's views on these subjects have recently been given to the public in his addresses.—Secretary Bonaparte recommends that provision be made for two Vice-Admirals and for a re-establishment of the grade of Commodore, to which rank he would have a dozen or more Captains promoted. Not agreeing with either the General Board or the Board of Construction, he asks for two battleships, of 16,000 tons, two scout cruisers, four destroyers, and several smaller vessels, at an estimated cost of \$23,300,000; also for 3,000 more enlisted men, more warrant machinists, and the organization of a service of marine engineers for shore duty only. Obsolete ships should be replaced by new ones, but he thinks that the number of ships built, under construction, and authorized is sufficient. Speaking of the death of Midshipman Branch, he says that while there is something to be said in favor of permitting such conflicts as the one in which the young man was fatally injured, such encounters are crimes, under the law, and the law will be enforced by the Department. He regards the custom of so adjusting personal controversies as highly objectionable and essentially unmilitary.—Attorney-General Moody recommends that imprisonment be added as a penalty for violation of the Elkins Rebate law, the penalty now being only a fine. He shows how difficult it is for the Department to obtain evidence as to discrimination in railway rates. If the Commission should be empowered to fix a maximum rate, he suggests, it might take the low and unlawful rate given to a favored shipper and make this the general rate. The company would have no reasonable defense, and courts would uphold the Commission's action.—Secretary Hitchcock makes a long and interesting statement as to the prosecution of the land thieves, referring with some indignation to the action of a court in Nebraska, where two wealthy and promi-

nent violators of the law who pleaded guilty were fined \$300 each and consigned to the custody of a marshal for six hours. The recent addition of twenty-six forest reservations makes the entire number eighty-three, and their area is 85,618,000 acres. The report of Mr. Leupp, Commissioner of Indian Affairs, is an admirable exposition of an enlightened and sympathetic policy.—Midshipman Meriwether, to whose encounter, or fist-duel, with Midshipman Branch Secretary Bonaparte refers in his report, has been sentenced to confinement within the limits of the Naval Academy for one year, and to be reprimanded publicly by the Secretary. He was acquitted of the charge of manslaughter, but found guilty of conduct to the prejudice of good order and discipline, and of violating the rule which forbids midshipmen from engaging in fisticuffs.

New York's Recent Election In the legal proceedings concerning the ballot boxes in New York, Mr. Hearst won a victory last week, when the Appellate Division of the Supreme Court unanimously sustained the original order of Justice Amend for a recount of the ballots in five district boxes, as against his modified order. The question was whether there should be a recanvass as well as a recount, and the final disposition of many counted votes alleged to be void was involved. The court's decision was that the recount should also be a recanvass, but a stay was granted in order that the Court of Appeals might decide finally whether a recount was permitted by the statutes. The question was taken up at once to the Court of Appeals, before which arguments were made on Monday last by eminent counsel. Mr. Alton B. Parker, representing Mayor McClellan, and contending that the law did not authorize the courts to direct either a recount or a recanvass, was confronted by his own opinion to the contrary, expressed not long ago in a decision made when he was Chief Judge of this court. That opinion, he said, was mere dictum, and after mature deliberation he had come to the conclusion that it was erroneous. Much depends upon the de-

cision of the Court of Appeals. If it be favorable to Mr. Hearst, hundreds of boxes will be opened. His supporters are confident that a recount and a recanvass will elect him, believing that thousands of ballots improperly marked were counted for Mayor McClellan.—Since the election eleven men have been convicted of illegal voting or of perjury in the interest of persons attempting to vote unlawfully. Eight of these are in the penitentiary. Joseph J. Cahill, formerly a member of the Legislature, was convicted last week. Many indicted men are yet to be tried.

Through the Northwest Passage

Dispatches received last week from Capt. Roald Amundsen, who was then at Fort Egbert, near Eagle City, Alaska, show that in his sloop of 47 tons, the "Gjoa," he has succeeded in making his way thru the Northwest Passage. This is the first time that the entire voyage from Baffin Bay to the waters north of Alaska has been made by one and the same vessel. Captain Amundsen, accompanied by Lieutenant Hansen and a crew of eight sailors, left Norway in June, 1903, his purpose being to make extensive observations in the neighborhood of the north magnetic pole and to pass thru to Bering Strait. His observations were made at Leopold Harbor and on King William Land, and he says they were very successful. In his opinion, the magnetic pole is within ninety miles of his station on King William Land, and he thinks he passed over it. From the north point of Peel Sound to the western end of Simpson Strait, the sloop's compasses were found to be useless. He is confident that the results of his observations, when the necessary work upon them is completed, will show the exact position of the magnetic pole at the time when he was in the neighborhood of it. The channel westward was very shallow and narrow. On August 13th, after the sloop had arrived at King Point (Mackenzie Bay), Amundsen left her (all on board were well) and started for the Alaskan settlements. A few days later he saw twelve whalers that had been caught in the ice. Five were

wintering near Henschel Island, others were not far away, and one had been wrecked. Leaving Henschel Island on October 24th, he arrived at Fort Egbert on December 5th. His first dispatch was sent to Dr. Nansen. At the close of it, having shown what he had done, he asked: "How is the political situation?" He will rejoin his men on the sloop, and it is said that in the Spring he will attempt to return to Norway by moving westward along the northern coast of Siberia, hoping thus to complete a voyage around the world in Arctic waters.

No More Railway Passes

It became known on the 6th inst. that the Pennsylvania Railroad Company had decided to issue no more passes. The words of the order were as follows:

"In view of the general agitation on the subject of legislation on railroad rates and the abolition of all forms of rebates and concessions, it has been decided by the management of the Pennsylvania Railroad that all forms of free transportation will be discontinued after the end of the present year."

On the following day it was announced that the New York Central had taken similar action two weeks earlier. President Baer, of the Reading and the New Jersey Central, said that no more passes would be issued by those companies; he intended to obey the Interstate Commerce Law and the Constitution of Pennsylvania. The Lackawanna, the Norfolk & Western and the Lehigh Valley followed the Pennsylvania's example, and it is expected that all roads east of the Mississippi will become parties to a no-pass agreement. Dispatches from Chicago say that while this action in the East is watched there with much interest, and openly approved by several prominent railway officers, no Western road is at present considering the question of cutting off all free transportation. Only by concerted action, it is said, can a successful movement against passes be made in the West. In the orders of the Eastern roads only the officers of railway companies are excepted; legislators, politicians, newspaper men and all other persons come under the rule. Free transportation has assumed very large proportions in some parts of the country. Current reports say that on the Pennsyl-

vania road it has amounted to \$1,000,000 a year in Pennsylvania alone.

Labor Controversies

The building industry in New York is again in danger of a general strike. Some months ago a strike against the American Bridge Company was ordered by the Housesmiths' and Bridgemen's Union because a contract had been sublet to a firm that employed non-union men. Afterward additional cause for the strike was found in the employment of twenty-five non-union men by the American Bridge Company at McKeesport. In New York the building firm of Post & McCord, engaged in erecting many steel-framed structures, was attacked by the union, which alleged that the firm was a constituent part of the Bridge Company. This the firm denied, asserting that it had not been connected with the Bridge Company for two years, and offering proof, which the union declined to consider. The firm is a member of the Employers' Association, with which all the building trade unions entered into an agreement last spring, providing for a "closed shop" and arbitration. The arbitration board, to which the firm appealed, ordered the men to resume work. They would not obey, altho the order was approved by a large majority of the unions represented. Therefore the Association stands by the firm, and has engaged non-union men for the firm's work. Some expect that all the unions will eventually be drawn into the controversy, owing to the use of strike-breakers on the firm's work by the Association. Thus far, however, the union men who stand by the arbitration agreement have not refused to work with the strike-breakers.—It is now reported that a strike in the anthracite coal districts next spring will be averted by mutual concessions, the union withdrawing its demand for eight hours, and the operators consenting to recognize the union by making a formal agreement with it.—At the recent election in New York all the proposed Constitutional Amendments were approved, including one giving the Legislature power to regulate the wages and hours of persons employed by the State or by any county, town or city.

or by any contractor or sub-contractor doing work for them. This Amendment is designed to permit the re-enactment and the enforcement of wage laws which were recently declared to be unconstitutional.—In New York the Typotheta, a large association of employing printers, is preparing to resist the demand of the Typographical Union for an eight-hour day after January 1st. Both sides are determined, and a bitter contest appears to be at hand.

Cuba and Porto Rico

Secretary Root's letter setting forth the views of our Government concerning the Isle of Pines has not restrained the American residents of the island from attempting to carry out their plans. They have sent to Washington their recently elected Delegate, Edward C. Ryan, and one of their leaders, Captain Percy, has already arrived in that city. In an answer to the Secretary's letter it is asserted that the American settlers had official assurances that the island belonged to the United States, that this was the expressed belief of Secretary Hay, and that they are suffering under the rule of corrupt Cuban officials.—There has been a considerable increase of the number of cases of yellow fever in Havana.—Gen. Manuel Sanguily has resigned the office of President of the Senate, owing to impaired health and an unwillingness to obstruct "the unrolling of the new situation."—Owing to some criticism of the Government's expenditure of \$29,000,000 for a settlement of the soldiers' claims, Minister Quesada asserts that Cuba was never before in a better financial condition. About \$19,000,000 is taken from the Treasury, and bonds are issued for the remaining \$10,000,000. The entire national debt will be about \$46,000,000. There has been a large increase of revenue, and the special taxes which guarantee the loan of \$35,000,000 are sufficient to pay interest upon the additional \$10,000,000 also. Of that loan, \$1,000,000 has been brought in and canceled.—Governor Winthrop, of Porto Rico, now in Washington, supports the request of Porto Ricans for a tariff duty of 5 cents a pound on all coffee imported into the States from foreign countries.

The New Liberal Cabinet

Sir Henry Campbell-Bannerman, on the evening of December 10th, presented to the King the names he had selected for his Cabinet and received the royal approval. It is regarded by all parties as a surprisingly strong Ministry, and the new Premier is congratulated upon his success in securing the support of all factions of the Liberals. On the question of Home Rule, which has divided the party ever since 1885, when Gladstone declared for it, there is, it is true, an agreement between the members of the new Ministry, but the Liberal leaders have pledged themselves not to bring a Home Rule bill before the present Parliament and not to make that an issue in the coming election. They will try to make the election turn upon the sole question of free trade against the protective tariff policy of Mr. Chamberlain, but the Conservatives, who are united against Home Rule, but divided upon the tariff question, will endeavor to force the Irish question to the front and take advantage of the division of their opponents. Sir Campbell-Bannerman recently reaffirmed his personal belief in the right of the Irish to govern themselves, whereupon Lord Rosebery, the last Liberal Premier, took occasion to say emphatically and explicitly that he would not serve under the Home Rule banner. He is not included in the new Cabinet, but his son-in-law, Lord Crewe, is, and he will doubtless give it his support so long as the Irish question is dormant, which is likely to be the case for some time, altho a majority of it favor Home Rule. Mr. Morley, its most enthusiastic advocate, has been placed in the Indian Office. For the first time a British Cabinet includes a labor leader, Mr. John Burns. The present Cabinet is unusually large; it contains three more members than the last Liberal Cabinet. They are as follows:

Prime Minister and First Lord of the Treasury—Sir Henry Campbell-Bannerman.

Lord Chancellor—Sir Robert T. Reid.

Chancellor of the Exchequer—Herbert Henry Asquith.

Secretary of State for Home Affairs—Herbert John Gladstone.

Secretary of State for Foreign Affairs—Sir Edward Grey.

Secretary of State for the Colonies—The Earl of Elgin.

Secretary of State for War—Richard Burdon Haldane.

Secretary of State for India—John Morley.

First Lord of the Admiralty—Lord Tweedmouth.

President of the Board of Trade—David Lloyd-George

President of the Local Government Board—John Burns.

Secretary of State for Scotland—John Sinclair.

President of the Board of Agriculture—Earl Carrington.

Postmaster General—Sydney C. Buxton.

Chief Secretary for Ireland—James Bryce.

Lord President of the Council—The Earl of Crewe.

Lord Privy Seal—The Marquis of Ripon.

President of the Board of Education—Augustine Birrell.

Chancellor of the Duchy of Lancaster—Sir Henry Hartley Fowler.

The following Ministers are not in the Cabinet:

Lord Lieutenant of Ireland—The Earl of Aberdeen.

First Commissioner of Works and Public Buildings—Lewis Vernon Harcourt.

The Abolition of the Concordat

The Concordat, concluded in 1801 between Pope Pius VII.

and Napoleon, by which the clergy were supported by the State, was abolished on December 6th, when the Senate passed the bill which, on July 3d, had been passed by the Chamber of Deputies. The measure has been debated at length in the Senate, but the majority would not permit any amendments of importance, however desirable, for fear that if returned to the Chamber it might not be passed before the next general election, and the members would be at a disadvantage in coming before their constituents with the confession that they had failed to accomplish what they had promised. The final vote on the separation of Church and State stood 181 to 102. The vote in the Chamber last July was 341 to 233. The Council of State will devote three months to working out the details of the transition. The public worship appropriation for 1906 will be reduced from \$8,400,000 to nearly \$6,800,000, and will continually decrease as the salaries and pensions of the bishops and priests now in office are withdrawn or expire. The effect of the new law upon the 38,000,000 of Catholics is uncertain. As the people are not

accustomed to supporting the Church by voluntary contributions, it will be difficult to keep up the services. Another very radical change in the organization of the Catholic Church is made by the provision which places the control of the church buildings and property in the hands of local associations (*Associations Cultuelles*) composed of laymen. The Clericals protested that this undermined the authority of the bishops, and, as a compromise, it was provided these associations should be established "in conformity with the general regulations of the form of worship the exercise of which they propose to maintain," a clause of doubtful meaning and one which will give the Government a chance to do about as it likes. The stringent laws relating to ecclesiastical associations, passed within the last few years to break up the power of the religious orders, will apply to these new associations, so the Catholic Church is by no means freed from Government control. Most of the church buildings will belong to the communes or municipalities and may be rented to the associations.

The Russian Chaos

It is impossible to discern any clear tendencies or logical outcome from the present confusion in Russia, complicated, as it is just now, by the irregular workings of the postal and telegraph systems. Rumors of the resignations of Premier Witte, of Minister of the Interior Durново, and of the whole Cabinet; rumors of the increasing influence of the deposed reactionaries, such as Trepoff, Pobiedonostseff and Ignatieff, are mingled with news of strikes of workingmen, mutinies of soldiers, assassinations of officials, massacres of the Jews, jacqueries of the peasants, petitions of the Zemstvos, appeals by the Government and manifestoes by the revolutionists. The strike in the postal service was broken partly by the destitution of the strikers, partly by the promises of pensions for employees who were disabled or killed in the service, partly by the action of aristocratic ladies of St. Petersburg, who took their places. Duchesses, princesses and baronesses entered the post offices, sorted the mail and delivered

it in their automobiles thru the city. These were not seriously molested, but when other outsiders attempted to do the work they were attacked upon the streets by the strikers. Many of the railway, postal and telegraphic employees had returned to work, and communication between the Russian cities and with the outside world had been partially restored, when the strike was again precipitated by the action of the Government in arresting the labor leaders. The Printers' Union, where the Central Labor Committee, the "Union of Unions," met, was surrounded by Cossacks on December 9th, and all the members present were seized, together with their papers. Afterward all but four of them were released, but the President of the Central Committee, a man who goes by the name of Krustaleff, the real leader of the unionists, is still in prison. In an interview shortly before his arrest he had made the following statement:

"It is probable that a general strike will be declared just after Christmas. Delegates who were sent to all parts of the country report that the proposal for a strike has been welcomed with enthusiasm, and in fact that the whole country is ripe for revolution. A vast majority of the workmen are true revolutionaries, though starvation sometimes compels them to subordinate their political aims.

"Preparation for an armed rising is highly advanced, but it cannot hope to succeed unless the insurgents are joined by a considerable body of troops. The propaganda, however, has made such strides in the army that the Revolutionaries are justified in counting on sufficient support from that source to insure victory.

"The peasants everywhere are willing to join the Revolutionaries. They are the principal sufferers from oppression and excessive taxation, and have lost confidence in the Emperor. The Revolutionaries have their own postal and telegraph services, through which they are able to keep in touch with their organizers throughout the Empire."

At Kief, at Kharkoff, at Ekaterinodar and other cities the troops and workingmen are reported to have joined forces, raided the arsenals and seized the forts. Lieutenant General Sakharoff, ex-Minister of War, who was sent to the Province of Saratoff to quell the agrarian riots there, was assassinated by a woman who called to see him at the Governor's house and fired three revolver shots at him. At Harbin, in Manchuria, the troops are said to be entirely beyond control. They

have not been paid for several months, and have been raiding the farmers and looting the shops. They attacked the hospitals to get the food and liquors kept for the patients, and bound the doctors and nurses hand and foot and left them in the snow-fields outside the city. The Cossacks are all that can be depended upon, and even they are beginning to take advantage of their position to demand favors. The Czar issued an address to the Cossacks thanking them for their

"self-sacrificing, untiring and loyal services to the throne and fatherland, both at the seat of war and in the preservation of order within the Empire."

The new press law is very disappointing and not in accord with what was promised. It retains the censorship over all criticism of the Government's policy, and the Minister of the Interior is entitled to suppress a newspaper at will without giving any reason. A delegation of loyal peasants from Tula, who came to the Czar to thank him for the removal of the land taxes and to appeal for protection against the revolutionists, was received with great honor by the Czar, who assured them of his intention to restore order. That Count Witte may soon be obliged to resign and a policy of severe repression be adopted has been often suggested, and it appears from the following language which he used in a recent interview that he has begun to despair of his task:

"If the alternative of recurring to coercion as a means of restoring order should come to pass it would be confided to somebody qualified to essay it. I assuredly am not qualified. My task is to solve the problem by moral means. If the problem proves insoluble it must be formulated differently and tackled by others."

Settlement of Turkish Difficulties After the pacific seizure of Mitylene and Lesbos, the Porte has acceded to the general policy of reform advocated for Macedonia by the Powers. The Sultan has asked, however, for a few modifications to the original demands. These modifications have been accepted by the ambassadors and have been sent to their governments for ratification. The alterations granted will not in any way affect the efficacy of the proposed reforms, but are merely

made for the sake of recognizing the sovereign rights of the Sultan, and not forcing him to a flat surrender. The changes granted provide for an Ottoman representative on the Financial Commission, and for the submission of all the Commission's decisions for formal imperial sanction by the Sultan. There is no doubt but what the Powers will ratify the treaty drawn up by their ambassadors, so that the incident may be considered closed.

The Suffrage Movement in Austria

Baron Gautsch, the Austrian Premier, showed his political insight when he objected to the introduction of the question of universal suffrage into Hungarian politics because it would tend to disturb Austria. The Socialists in Austria took up the issue with as much enthusiasm as their Hungarian brethren, and demonstrations occurred in all the cities, accompanied at first in some cases with more or less rioting and conflicts with the police or university students. Finally the Socialists determined to give a proof of their power to organize and manage the people by a monster procession in Vienna at the assembling of the Reichsrath. A strike of twenty-four hours was ordered and the demonstration so carefully planned and competently controlled that there was no disorder, notwithstanding that more people were assembled in the Ringstrasse than ever were brought together in the capital before. The procession included 240,000 working men and women, marching ten abreast for four hours past the Reichsrath building in absolute silence. The Socialist leaders had forbidden all singing and cheering. The 3,000 marshals appointed by the party organized, managed and dispersed the demonstrators without the assistance of the police. Maps of the city had been published in the Socialistic press marking the assembling place of each group, and every man knew his place. Red flags bearing the same inscriptions in all the languages of the Empire symbolized the unity of the movement transcending racial lines. But their opponents are not actuated by the same idea, and it seems impossible for Baron Gautsch to get passed even his moderate Franchise Reform bill in the face of the

bitter opposition of the Germans in Parliament. Burgomaster Lueger, of Vienna, a notorious anti-Semite, in a recent speech warned the Jews that their support to the Socialistic cause would cause atrocities in Austria like those of Russia.

China and Japan Come to an Agreement

The conference at Peking between the representatives of Japan and the Chinese Government in regard to Manchurian problems and the future relations of the two countries has practically come to an end. The Chinese members have been entertaining Baron Komura, the Japanese plenipotentiary, at a series of banquets, and Viceroy Yuan-Shih-Kai will give him a reception at Tientsin. The conclusions of the conference have not been made public and probably will not be. There is little doubt, however, that the result will be to strengthen the hands of the party, headed by Viceroy Yuan, which favors a policy of "China for the Chinese." Foreign railway concessions are being canceled and bought back, and twenty-four provincial boards have been by Imperial edict established under the control of the Board of Commerce to develop the mines and forests of the Empire. It is evident that the boycott is not directed against the United States alone, but is part of a general nationalistic movement of great force which is taking many forms. Literature stirring up hatred against all foreigners is being extensively circulated, as it was before the Boxer outbreak. The agent of the Standard Oil Company at Niu-chwang reports that the Japanese Government and military in Manchuria have ceased to purchase foreign goods. Under the influence of the native press mass meetings are being held in many places to protest against granting concessions to foreigners and to raise money for the support of the boycott. The viceroys are making great efforts to bring their provincial armies into a state of efficiency. The Government has been prompt in punishing those who took a prominent part in the massacre of the American missionaries at Lienchau. Three of them have been beheaded, eight have been sentenced to imprisonment at hard labor for terms from five years to eighteen months, and seven have received minor punishments.

St Bartholomew's Day

When the day
 is spent, with
 one consent
 Again we all
 agree
 To caper and
 skip it, trample and trip it,
 Under the greenwood tree!

A SELECTION FROM THE YEAR'S HOLIDAY BOOKS

By W. G. BOWDOIN

- How to Collect Books.* By J. Herbert Slater. Macmillan. \$2.00.
- The History of American Painting.* By Samuel Isham. Illustrations in photogravure and otherwise. Macmillan. \$5.00.
- How to Study Pictures.* With illustrative reproductions of famous paintings. By Charles H. Caffin. The Century Co. \$2.00.
- Our Neighbors.* Drawings by Charles Dana Gibson. Scribner. \$4.20.
- Pictures in Colors.* By Howard Chandler Christy. Four in a box. Moffat, Yard. \$3.50.
- Drawings.* By A. B. Frost. With an introduction by Joel Chandler Harris, and verse by Wallace Irwin. Fox, Duffield. \$3.00.
- The Days and Hours of Raphael, with Key to the Hours.* By Rachel A. La Fontaine. Illustrated. The Grafton Press. \$1.00.
- Art Lovers' Treasury.* Famous Pictures Described in Poems. Text by Carrie Thompson Lowell. Dana, Estes: Boston. \$1.20.
- Womanhood in Art.* By Phebe Estelle Spaulding. Paul Elder: San Francisco. \$1.50.
- The Art of the Venice Academy.* By Mary Knight Potter. Rubricated Title Page. Illustrated. Page: Boston. \$2.00.
- The Cities of Umbria.* By Edward Hutton. Colored illustrations. Dutton. \$2.00.
- The Casentino and Its Story.* By Ella Noyes. Illustrated in color and line by Dora Noyes. Dutton. \$3.50.
- With Shelley in Italy. 1818 to 1822.* By Anna Ben-neson McMahan. McClurg: Chicago. \$1.40.
- The Italian Lakes.* Painted by Ella Du Cane. Described by Richard Bagot. Embellished with many color plates. Macmillan. \$6.00.
- The Art of the National Gallery.* By Julia de Wolf Addison. Illustrations in duogravure. Page: Boston. \$2.00.
- Notable Pictures in Florence.* By Edith Harwood. Dutton. \$1.50.
- The Island of Enchantment.* By Justus Miles For-man. Illustrations in color by Howard Pyle. Harper. \$1.75.
- Saint Abigail of the Pines.* By William Allen Knight. Frontispiece in tint by George A. Williams. The Pilgrim Press: Boston. \$1.00.
- The Face in the Pool.* A Faerie Tale. Pictures and text by J. Allen St. John. McClurg: Chicago. \$1.50.
- My Lady's Slipper.* By Cyrus Townsend Brady. Pictures by Charlotte Weber Ditzler. Dodd, Mead. \$1.50.
- I. N. R. I. A Prisoner's Story of the Cross.* By Peter Rosegger. Six illustrations in color by Corwin Knapp Linson, from sketches made in the Holy Land. McClure, Phillips. \$1.50.
- The Line of Love.* By James Branch Cabell. Illustrated in color by Howard Pyle. Harper. \$2.00.
- Miss Cherry Blossom of Tokyo.* By John Luther Long. Lippincott: Philadelphia, \$2.50.
- An Orchard Princess.* By Ralph Henry Barbour. Illustrations in color by James Montgomery Flagg. Tinted marginalia. Lippincott: Philadelphia. \$2.50.
- His Version of It.* By Paul Leicester Ford. Illustrations by Henry Hutt and decorations by Theodore B. Hapgood. Dodd, Mead. \$1.50.
- The Poet, Miss Kate, and I.* By Margaret P. Montague. Decorations and illustrations by George W. Hood. Baker & Taylor. \$1.00.
- With the Empress Dowager.* By Katharine A. Carl. Illustrated. The Century Co. \$2.00.
- Romances of Old France.* By Richard Le Gallienne. Baker & Taylor. \$1.50.
- Rambles in Normandy.* By Francis Miltoun. With many illustrations by Blanche McManus. Page: Boston. \$2.00.
- Normandy. The Scenery and Romance of its Ancient Towns.* Depicted by Gordon Home. Colored illustrations. Dutton. \$3.50.
- Songs of the Open.* Words by Mary Grant O'Sheridan. Music by W. C. E. Seeboeck. Decorations by Enos Benjamin Comstock and George Markley Hurst. Rand, McNally: Chicago. \$1.25.
- Christmas Carols, Ancient and Modern.* Edited with notes by Joshua Sylvestre. Borders in Malachite tint. Wessels. \$1.00.
- Her Letter. His Answer and Her Last Letter.* By Bret Harte. Pictured in tint and in color by Arthur I. Keller. Houghton, Mifflin: Boston. \$2.00.
- Riley Songs o' Cheer.* By James Whitcomb Riley. With pictures by Will Vawter. Bobbs-Merrill. \$1.25.
- A Chorus of Leaves.* By Charles G. Blanden. Paul Elder: San Francisco. \$1.25.
- Motor Goose Rhymes.* For Motor Ganders. By Herman Lee Meader. Illustrated by Pal. The Grafton Press. 75 cents.
- Auto Fun: Pictures and Comments from "Life."* Crowell. \$1.00.
- The Mysterious Stranger, and Other Cartoons.* By John T. McCutcheon. McClure, Phillips. \$1.00.
- Pictures of Life and Character.* By John Leech. Putnam. \$1.50.
- Irving's Selected Works.* Miniature Edition. Limp ooze leather binding. 5 vols. in leather case. Crowell. Per set, \$2.50.
- Dickens' Christmas Books. A Christmas Carol, The Cricket on the Hearth, The Chimes.* 3 vols. in a box. With illustrations in color by C. E. Brock. Dutton. \$3.00.
- Silas Marner, the Weaver of Raveloe.* By George Eliot. With 24 colored illustrations by C. E. Brock. Dutton. \$2.00.
- The Garden That I Love.* By Alfred Austin. Illustrated with colored plates by George S. Elgood. Macmillan. \$2.00.
- Russia.* By Théophile Gautier, and others. Illustrations in photogravure. 2 vols. in a box. The Winston Co.: Philadelphia. \$5.00.
- Burma.* Painted and described by R. Talbot Kelly. Illustrations in color. Macmillan. \$6.00.
- In the Track of the Moors.* Sketches in Spain and Northern Africa. By Sybil Fitzgerald. Numerous color plates by Augustine Fitzgerald. Dutton. \$6.00.
- Japanese Life in Town and Country.* By George William Knox. Illustrated. Putnam. \$1.20.
- Chinese Life in Town and Country.* Adapted from the French of Emile Bard. By H. Twitchell. Illustrated. Putnam. \$1.20.
- Indian Life in Town and Country.* By Herbert Compton. Illustrated. Putnam. \$1.20.

The Cathedrals of Northern Spain. By Charles Rudy. Illustrated by Blanche McManus. Page: Boston. \$2.00.

Point and Pillow Lace. A Short Account of Various Kinds, Ancient and Modern, and How to Recognize Them. By Mary Sharp. Dutton. \$2.00.

Dean Hoffman. A Memorial Biography. By Theo. Myers Riley, S.T.D. Portraits and other illustrations in photogravure. 2 vols. in a box. Privately printed at The Marion Press, Jamaica, New York. \$5.00.

Stories of King Arthur and the Round Table. By Beatrice Clay. Illustrated by Dora Curtis. Dutton. \$2.50.

Una and the Red Cross Knight and Other Tales from Spenser's Faery Queene. By N. G. Royde Smith. Illustrated by T. H. Robinson. Dutton. \$2.50.

Football Grandma. An Auto-Biography, as Told by Tony. Edited by Carolyn S. Channing Cabot. Introduction by Thomas Wentworth Higginson, LL.D. Small, Maynard. \$1.00.

The Value of Simplicity. Edited by Marion Minerva Barrows. Introduction by Julia Ward Howe. Rose tinted marginalia. H. M. Caldwell: Boston. \$1.50.

The Value of Courage. Edited by Frederic Lawrence Knowles. Tinted marginalia. H. M. Caldwell: Boston. \$1.50.

A Corner in Women and Other Follies. By Tom Masson. Illustrations by Charles Dana Gibson and others. Moffat, Yard. \$1.60.

Eve's Daughters. Compiled by a Mere Man and Portrayed by Arthur G. Learned. Illustrations and marginalia in black and white. Dana, Estes: Boston. \$1.75.

Sovereign Woman Versus Mere Man. A Medley of Quotations. Compiled and arranged by Jennie Day Hains. Paul Elder: San Francisco. \$1.00.

A Child's Book of Abridged Wisdom. By Childe Harold. Paul Elder: San Francisco. 75 cents.

The Homes of Tennyson. Painted by Helen Allingham, R.W.S. Described by Arthur Paterson, F. R. Hist. S. Illustrations in color. Macmillan. \$2.00.

One Hundred and One Entrées. Compiled by May E. Southworth. Paul Elder: San Francisco. 50 cents.

Camera Work. Alfred Stieglitz: New York. \$3.00.

Christmas Bells. Words by Mary Drummond. Pictures by Louisa M. Gibson Pratt. McClurg: Chicago. \$1.00.

THE holiday books of the present year are characterized by more conservatism than ever before. Simplicity seems to have been the ideal of most of the publishers. Few, if any, freak books appear in the holiday offerings. Books with pincushion sides have entirely gone out, and there is not such lavish use of color plates among the American publishers this year as has been the case in previous years. A large number of English books of the present year in the gift class are more elaborate in so far as color plates are concerned.

Frontispiece from Haines's "Sovereign Woman Versus Mere Man." Paul Elder & Co.

For the most part, however, the best books are rich in their simplicity.

Those who have an idea that the way to collect books is to go into a book store and buy the current publications that are there exposed for sale will be undeceived when they read *How to Collect Books*, by J. Herbert Slater. Collections of books made with discrimination today are usually quite different in their scope and character from what they were but a century since. A library was then regarded as being good only to the extent of its capacity for answering the questions that might be addressed to it. Today the best collectors ignore all but the very early editions of the Greek and Latin classics; the polemical works of the Fathers are regarded as of no account, and the lexicons and grammars are not wanted at all. Just so soon as any person is seized with "book madness," the present Slater volume will become interesting. Even a hasty perusal will reveal new joys and new delights that await the book collector. In the earlier chapters a lot of alphabetic information is given that will be found very valuable. Mr. Slater in his book has lovingly described manuscripts, paper and paper marks, the title page and the colophon, early printed books or incunabula, illustrated books, some celebrated presses, bookbinding, great collectors, auction sales and catalogues, early editions and strange books. No one but a real collector could have set forth what Mr. Slater has put into his volume.

It is not so very long ago that a collector of paintings gathered together a Corot, a Breton, a Bouguereau, a Diaz, two or three De Neuilles, a Daubigny, a Detaille, a Fortuny, possibly a Gérôme, a Landseer, a Millet, maybe a Meissonier, of course a Troyon, and possibly a Vibert, together with others of the modern French school, and thought he had a collection of paintings. No one ever seriously considered American art. No one had any use for a Benjamin West painting, even though it might be so that one of those he painted with his famous cat-tail brush would be available for purchase. Step by step, however, American collectors came to realize the fact that an American school was growing up, which compelled some appreciation of American art. One evidence of this fact, if evidence is needed, lies in the publication of such a book as Isham's *The History of American Painting*. The careful study of this volume brings out the fact that we have many American artists of whom we may all be justly proud and whose work has taken high rank, even when compared with the best of the foreign artists. The art collector no longer spurns an Inness, a Whistler, a Le Farge, a Sargent, or any one of a score or more of American artists. On the contrary, he now includes as many of them in his collection as he can afford to buy and glories in their possession.

In *How to Study Pictures* the author has tried to present a survey of the whole field of painting rather than to write a history of artists or schools. If one can know what the painter of any picture had in mind when he was busy with the creation of the picture, the joy of beholding is intensified just so much as the observer can measure how near to the painter's own ideal he was enabled to come. Mr. Caffin's book was needed and will be found to contain much information not easily obtainable elsewhere.

The current Gibson book, *Our Neighbors*, possesses more than ordinary interest, because of the fact that this artist, with a smile on his lips, relinquishes a fortune in annual income that was assured and becomes a student again. It was a bold thing to do, and with this boldness before us it is interesting to study *Our Neighbors*. The Gibson Girl

Illustration from Harte's "Her Letter." Houghton, Mifflin & Co.

again figures, of course. She holds up her hands in mock horror at the thought of the present book being the tenth! The art student at the easel with palette and numerous brushes in hand has, perhaps, a touch of the prophetic lurking within it. Whatever else may be said of Gibson and his work, certain it is that he makes you see what he sets out to show you, and he does it pleasantly and with a deal of humor. Gibson, after the fashion of Whistler, continues to find subjects for his pencil wherever he goes. In the street, in society, everywhere. One of the most interesting pictures in the present collection is entitled "To See the Art

Editor." It is eloquent, besides being pleasing and well done.

The colorings in the *Christy Pictures in Color* are a trifle overdone in tint, but

life and its activities a perpetual charm. In his work he reflects all this, and many of his types will never die.

The chief value of *The Days and Hours of Raphael* as issued by the Grafton Press will be found to lie in the fact that most of those who read it will not have had any access to larger and more comprehensive works. The explanations of the illustrations the book contains are comprehensive and interesting. The book will have a place in any collection of Raphaeliana.

In the *Art Lovers' Treasury* an attempt has been made to assemble certain famous pictures and pieces of sculpture, and to bring into association with these certain poems that have been inspired by the various works of art that are pictured or which have been written as descriptive of them. The book may be described as "Famous Pictures Described in Poems." Many of the best artists are represented, as well as poets such as Dante, Keats, Browning, Longfellow, Whittier, Markham, and some others.

A rather sketchy consideration of "the female form divine" as interpreted by less than half a dozen famous artists bears the caption *Womahood in Art*. (As the little boy said of the butter, "It is good, what there is of it.")

Some of the ancient glory of Venice as she was when she was in reality the "Queen of the Adriatic," and exercising a decided influence on European policy, is incidentally reflected in *The Art of the Venice Academy*. The sovereign power of Venice still finds at least an echo in the Venetian art that has come down to us, and which has been given a refuge in the Venice Academy. Titian, Lorenzo, Giovanni. Bellini, Veronese, Tintoretto, Bordone, Adriaen Van Ostade, Hals and Van Dyck are some of those

whose works have been preserved in the Venice Academy, and every one of these are names to conjure with.

In *The Cities of Umbria* Mr. Hutton has gone afield along the byways and olive gardens of Umbria, the true Italia

THE POT OF BASIL.

A Painting by J. W. Alexander. From "The Art Lovers' Treasury." Dana Estes, Boston.

they form a splendid series and are in every way worthy of framing.

The *Drawings* by A. B. Frost differ essentially from those of Gibson, but Frost, like Gibson, loves to tell a story in his use of the pencil. Frost also finds in

The Tomb of Tokugawa Iyasu.

Specimen illustration from "Japanese Life in Town and Country," by George W. Knox; Extra-illustrated Edition. Reproduced by permission of the publishers, G. P. Putnam's Sons, for the Holiday Book Number of The Independent.

Mystica, whose saints have captured the world, whose valleys have beckoned many armies toward Rome. He has rested under the cypresses beside the Tiber, and in the course of his journeyings he has turned aside to see and then to describe Giotto's frescoes and some other things artistic.

About twenty-five miles northeast of Florence there lies, in the heart of the sterile Apennines, a green and fertile valley called the Casentino. Here the Arno takes its rise and flows for many miles of its early course, fed by a thousand rivulets on its way. It is with this region that *The Casentino and Its Story* are concerned.

Italy as it was during the early part of the nineteenth century inspires the book *With Shelley in Italy*. The Shelley poems and letters are the sources that have been drawn upon.

Another volume in the Italian series bears the suggestive title *The Italian Lakes*. This title is perhaps more comprehensive than is the descriptive text, since, as the author confesses in his preface that he has omitted all mention of the Lago di Garda, considered by many to be the finest, as it is the largest, of the Italian lakes, and the Lago di Varese, which also has its votaries. Enough is included in the volume, however, to compensate for almost any omission, and in the pages of this beautiful book there have been gathered enough pictures of the Italian lakes that have been included to make those who read to realize at least somewhat of the wonderful beauty of the lakes of Italy, even when they have not seen them. The Lake of Como in particular stands out in the color plates introduced, so as to appeal to every one who has half an eye for the beautiful.

The pictures in the National Gallery in London have been carefully studied and described in *The Art of the National Gallery*.

Notable Pictures in Florence is a book somewhat broader in scope, since it deals with the pictures in several galleries.

The Island of Enchantment takes the reader back to the fourteenth century and to Venice, and with all the glory and magnificence of a Venetian setting a love story is cunningly developed after the fashion of the old school. The story is

a good one to read during the holiday season.

St. Abigail of the Pines has to do with sea and shore. It also makes an appeal to every man and woman having any sentiment in their make-up. The story has the old New Bedford whaling days as a background, and is characterized by vivacity, perspicuity and pathos. The movement of the story is smooth and even. Considerable mastery of seamanship is characteristic of the author.

Since fairy tales and folk lore stories have begun to attract the attention of learned societies, the monopoly of them

ANGELA.

From a Photograph by F. Benedict Herzog in "Camera Work."

so long enjoyed by children is no longer theirs. Hence *The Face in the Pool; a Faerie Tale*, will be read by advanced as well as by juvenile readers.

If a book collector should limit his gatherings to the books written by Cyrus Townsend Brady he could gather together a considerable number of volumes. Possibly the number would not be as great as are the editions of Omar Kháy-yám or the Henty books, but then the number of the Brady books is constantly increasing. This year he writes *My Lady's Slipper*, in which he treats this theme much as he used to develop his sermons while at Overbrook, Pa.

When Christ suffered crucifixion there

were fixed at the head of his cross the four mystic letters, I. N. R. I. Peter Rosegger, the German peasant-author, has chosen these for the title of his latest book, and in *I. N. R. I.; a Prisoner's Story of the Cross*, he has set forth the life of Christ, telling of Jesus as a man, living and doing good among men.

The Line of Love is a love story, pure and simple. Some people have called such a tale "a sweet little love story," but the author rejects such a designation for his story with fine scorn, and says, no doubt with uplifted hands, "Love, then, is no trifle. And literature, mimicking life at a respectful distance, may very reasonably be permitted an occasional reference to the corner-stone of all that exists." Our reproduction in black and white of Mr. Pyle's delightful frontispiece in color gives almost no idea of its charm.

Miss Cherry-Blossom of Tôkyô, with Japan for its background, is issued in special dress. The author has contrasted Oriental and Occidental traits in his well known style.

From Cabell's "The Line of Love."
Copyright, 1905, by Harper & Brothers.

Another love story, in which the decorations are not the least of its attractions, is *An Orchard Princess*. The heroine is a real girl, which cannot always be said of romantic heroines.

Henry Hutt and Theodore B. Hapgood in collaboration have given a very dainty setting to Paul Leicester Ford's *His Version of It*, one of the cleverest of this author's short stories.

Miss Montague's volume, *The Poet, Miss Kate and I*, is very dainty.

China has been so much pushed to the fore during the last few years that a woman's point of view, as contained in *With the Empress Dowager*, cannot fail to interest a very large number of persons who have watched the unfolding of that great empire. The author of the book was entertained for several months in the palace of that very remarkable woman, the Empress Dowager of China, while she was engaged in painting four portraits of her. To be a staying guest at the palace of a Chinese sovereign is an experience that comes to but few persons, but when such a thing does happen it affords infinite opportunity for close acquaintance with the hostess.

Richard Le Gallienne has collected half a dozen French romances that are now published under the title *Romances of Old France*, with festal decorations.

The delights of rambling in a picturesque country like Normandy are well set forth in the volume *Rambles in Normandy*. The author has not tried to make a record of all the historic and picturesque features of the ancient province of Normandy, but has enjoyed a series of little journeys in and off the beaten tourist tracks.

A similar theme is continued in *Normandy; the Scenery and Romance of Its Ancient Towns*. A very successful attempt has been made to convey, by means of pictures and description, a clear impression of the Normandy which awaits the visitor. It is pleasantly set forth that the hotels of Normandy are not what they were twenty years ago. Great improvements have been made, both in sanitation and otherwise, so that the journey of today thru that country has not its former terrors. Something is said about Rouen, the ancient capital of Normandy, and the tragedy connected

Homer's *The Life Line*. From Isham's "History of American Painting."

with Joan of Arc that was enacted there.

Considerable variation in theme appears in *Songs of the Open*. "The Christ Child," "A Gaelic Lullaby," "A Valentine," "A May Song," "Birds in Spring," "Song for Plowing Time," "The Bonfire," "Easter Lilies," "October Song," "Morning Prayer" and "Good Night Song," are some of the titles taken at random from the book.

Joshua Sylvestre, under the title of *Christmas Carols, Ancient and Modern*, has collected and arranged some of these songs. The marginalia, printed in delicate green and introducing Christmas symbolism, is very effective. The illustration accompanying "God Rest You, Merry Gentlemen," which is perhaps the greatest favorite of all the carols now sung at Christmastide, is reproduced in connection with this article.

Harte's poems, *Her Letter*, *His Answer* and *Her Last Letter*, have been beautifully and sympathetically illustrated in holiday edition by Arthur I. Keller. These three classic American love letters are, in the present volume, grouped together for the first time. The combination is an exceedingly happy one.

The illustrations of Will Vawter in black and white and in color are features in a holiday edition of *Riley Songs o'*

Cheer. Mr. Vawter has admirably caught the Riley spirit as set forth in the poems he has illustrated.

Charles G. Blanden has written some pleasing verse under the title of *A Chorus of Leaves*. The tendency of it all is toward the sentimental. Mr. Blanden is positively at his best in the following lines:

THE WOMAN SPEAKS.

Because you love me, sir, so much
You have no tongue to shout it?
Pray, love me just a trifle less
And tell me all about it.

Motor Goose Rhymes are one indication of the growing popularity of cycling. The introduction is as follows:

Little drops of gasoline
Little bits of steel
Make a lot of noise and smell
Called an automobile.

Auto Fun contains a little more sentiment, and the work of such men as Kemble, Dirks, Taylor, Keller and others.

In *The Mysterious Stranger and Other Cartoons* it is possible to get a very satisfactory idea of the charm that attaches itself to the work done in this field by McCutcheon. The events of the day serve as *motifs* for his facile pencil, and as we look we have to laugh. No higher praise than that is possible for a cartoonist.

It is interesting to a degree to compare the work of John Leech in *Punch*, as set forth in *Pictures of Life and Character*, with some of our American illustrators of today, and note the difference between methods and mediums. Leech having obtained the point he wished to make in any drawing, went no further in his elaboration.

Irving's Selected Works, in Crowell's Miniature Edition, include "Christmas Sketches," "Bracebridge Hall," "Tales of a Traveler," "The Alhambra" and "The Sketch Book." They are $1\frac{1}{2}$ by $2\frac{1}{2}$ inches in size, and are bound in limp

in a new holiday edition of Austin's *The Garden That I Love* add much to the attractiveness of it.

Russia, by Theophile Gautier and others, bringing the history of that great empire, now in transition, down to her disastrous conflict with the Japanese, must now interest many people. The illustrations in the present edition are particularly noteworthy.

Mr. Kelly has described an out of the way corner of the earth in his *Burma*. He frankly states in his preface that he approached his subject without previous knowledge. His point of view is there-

"God Rest You, Merry Gentlemen."
From Sylvestre's "Christmas Carols." Wessels.

ooze leather, with gilt edges. In size they are much larger than are some of the English miniature books, but when compared with the ordinary 12mo book they are small indeed. The five volumes in their neat little leather case will make a very charming Christmas gift.

Charles E. Brock has pleasingly illustrated in color *Three Dickens Books*, viz., "A Christmas Carol," "The Cricket on the Hearth" and "The Chimes." The three in a box are delightful gift books.

Mr. Brock has also similarly illustrated a holiday edition of George Eliot's *Silas Marner*.

The Elgood illustrations that appear

fore that of a stranger. His book is a book of first impressions, possibly all the more vivid on that account. His stay in Burma was limited to seven months, but into this period he crowded many fatiguing journeys thru forest and jungle. The climatic conditions under which he worked were most unkind to the painter-author, and, as may well be imagined, his appraisal of a strange country and a strange people was not without much difficulty. Seen with this author's eyes, Burma is a country of great tropical beauty. His record of things observed during a journey of some 3,500 miles is full of charm, even if that record does

The Crucifixion

Specimen illustration from I. N. R. I.: A Prisoner's Story of the Cross, by Peter Rosegger, reproduced by permission of the publishers, McClure, Phillips & Co., for the Holiday Book Number of THE INDEPENDENT.

but touch the fringe of the immensity of subjects contained within the 156,000 square miles of Burma's territory. In Mr. Kelly's pictures we catch something of the charm of travel in a strange country and among people entirely unlike our own.

The feature of *In the Track of the Moors* lies essentially in its illustrations. The artist whose work illuminates the text has gone through Spain and Northern Africa, carrying pencil and brush,

varied to harmonize with the particular phases of the country described.

The author of *The Cathedrals of Northern Spain* has an unbounded love not only for Spain but for the Spanish people. He sees the cathedrals of the Castilian country with enthusiastic eyes, and he writes as he sees. He admits that Spain's architecture is both agreeable and disagreeable, but he excuses the disagreeable because it happens to be Spanish.

PREPARING FOR CHRISTMAS SHOPPING.

From McClutcheon's "The Mysterious Stranger and Other Cartoons."
McClure, Phillips.

using both when any encouragement has been offered. A lot of encouragement has evidently been offered, for there are sixty-three illustrations in color as well as many drawings in the text.

In Putnam's Asiatic series there are three volumes that have just been issued in new and more elegant form. They are, respectively, *Japanese Life in Town and Country*, *Chinese Life in Town and Country*, and *Indian Life in Town and Country*. The plan and scope of these volumes are all similar, altho necessarily

Mary Sharp's book on *Point and Pillow Lace* is a much more comprehensive volume on the subject than was the Goldenberg publication of last year. The point of view is English, but the style of the book is infinitely better, and it supplies to owners and lovers of lace clear information, easily referred to, by means of which they can ascertain the true name and nature of any particular specimen they may possess. In the Sharp book the historical and technical aspect of lace is kept well to the fore,

131 FROST.

"Whoa There," from "Drawings by A. B. Frost." Fox, Duffield & Co.

and almost no attention has been paid to its romantic side. There is one reference to sentiment, however, where it is set forth that lace bobbins were at one time used as love tokens between the young people of the day.

A particularly sympathetic memorial biography of Eugene Augustus Hoffman, under the title of *Dean Hoffman*, has been written by Theo. Myers Riley, S. T. D. The early life of the Dean and his subsequent career are interestingly sketched. He is followed from church to church until his entrance upon the deanship is reached as the crowning event in his useful life. Dean Hoffman was incidentally a bibliophile, and as such a worthy follower of Richard de Bury, Dibdin, Heber, John Allen, Lenox and the like. He made many gifts to the library of the General Theological Seminary. One of these gifts was a copy of the Gutenberg Bible, the first of printed books. He also completed the seminary's collection of Latin Bibles, which is now the finest in the world, surpassing in number those of the British Museum in London and the Bibliotheque Nationale in Paris. The present biography reveals Dean Hoffman as a singularly interesting and admirable type of the Anglican theologian. Never narrow in any respect, he stands before the reader of this book as an admirably balanced man, in whom the note of our common nature was always predominant to those who knew him best. The book was privately printed, in two volumes, at the Marion Press, Jamaica, Queens Borough, New York, and is an excellent example of the book making done by this press.

There are some spirited drawings and a very handsome colored frontispiece by Dora Curtis in Clay's *Stories of King Arthur and the Round Table*.

T. H. Robinson has similarly illustrated *Una and the Red Cross Knight and Other Tales from Spenser's Faery Queene*. Mr. Robinson's figure drawing in this volume is particularly good.

The point of view of the child is well set forth in *Football Grandma*. Colonel Higginson has ventured the statement in his preface that the material in the book will be real to children and to "football grandmas," and after this fact has been proved they may justly attract the attention of wise philosophers and even of college presidents.

Julia Ward Howe has written an introduction to *The Value of Simplicity*, in which she makes an earnest plea for simplicity, somewhat as Charles Wagner has set forth its desirability in his "Simple Life." The rest of the volume is made up of pertinent selections on the subject of simplicity, derived from various authors. *The Value of Courage* is along similar lines.

Tom Masson's *A Corner in Women and Other Follies* is made up of some

THE PLACE OF THE HONORABLE FESTIVAL.
From Long's "Miss Cherry Blossom of Tôkyô." Lippincott.

bright things contributed by the author to *Life* and other publications that have now been assembled in book form. They will afford no end of amusement to the reader who picks up the book at intervals and reads some of the prose or poetry it contains. All of the included items look upon life from its lighter side and will admirably serve to drive dull care away. It may be said in passing that there is only one Masson.

Eve's Daughters is a book of epigrams about women from world-wide sources. It belongs to a class of books somewhat similar to *The Entirely New Cynic's Calendar* of last season. The present book is somewhat garish in its decorative features. The epigrams have been chosen with considerable judgment.

Sovereign Woman Versus Mere Man is a book the plan and scope of which are along similar lines, except that the idea of contrast obtains in this book more than in the previously named volume. The following quotations are fair samples from the book:

"It is never quite possible to get at a woman's way, because it is invariably the other way."

"There is a tale of a man who spent his life in wishing he had lived differently; and when he died he was surrounded by a throng of spectred shapes, each one exactly like the other, who, on his asking what they were, replied, 'We are all the different lives you might have led.'"

A Child's Book of Abridged Wisdom is more likely to interest adults than children. The decorations are clever, and so is the verse it contains.

In *The Homes of Tennyson*, written from a personal rather than from a biographical standpoint, there is much material regarding the life of England's Poet Laureate. The book pleasantly deals with Farringford, in the Isle of Wight, where Tennyson usually spent the winter, and with Aldworth, on the borders of Surrey, and Sussex, the summer home of Tennyson's declining years.

One Hundred and One Entrées will appeal particularly to young housekeepers, as well as some housekeepers who are older.

The current *Camera Work*, as edited and published by Alfred Stieglitz, contains a number of admirable examples of his work and that of F. Benedict Herzog.

E. P. Dutton & Co.'s calendars for 1906, for the most part printed in Bavaria, are beautifully executed.

The Canterbury Company, of Chicago, issues a very artistic line of postal cards, etc., with suitable holiday inscriptions. The calendars issued by this concern are also very pleasing typographical creations. *The Cornhill Dodgers* and *Broadsides*, published by Alfred Bartlett, of Boston, Mass., are in the same class. McClurg also issues a pretty booklet called *Christmas Bells*.

Among the notable European Christmas magazines carrying colored illustrations are the *London Graphic*, *Illustrated London News*, *Pear's Annual*, *Sketch*, *Holly Leaves*, *Black and White*, *Paris Illustré*, *Le Figaro Illustré* and the *Art Annual*.

Juvenile Books of the Season

BY MONTROSE J. MOSES

WERE we to attempt a thoro analysis of the juvenile books which represent the holiday offering from the publishers we should go far beyond our allotted space. Happy the boy or girl who will receive the right book; that is, the book which represents or satisfies the *particular* taste. We enter a book-shop with our Christmas list, little realizing the difficulty before us. From a mass of bright covers that greet us by the hundreds, we are to select, maybe, one or two. The *embarras de richesses* is startling. Is it possible, in the face of the classics, indicated by school-boards for supplementary reading, that a market is found for these newcomers? What are they all about?

Fairy Tales

Æsop's Fables. Illustrated by J. M. Condé. Moffat, Yard. \$2.00.
The Ugly Duckling. Hans Christian Andersen. Moffat, Yard. \$0.75.
Told by Uncle Remus. Joel Chandler Harris. McClure, Phillips. \$1.50.
The Oak-Tree Fairy Book. Edited by Clifton Johnson. Little, Brown. \$1.75.
The Dwarf's Spectacles. Max Nordau. Macmillan. \$1.50.
At the Big House. Anne Virginia Culbertson. Bobbs-Merrill. \$1.25.
The Golden Heart. Violet Jacob. Doubleday, Page. \$1.25.
The Golden Goose. Eva March Tappan. Houghton, Mifflin. \$1.00.
Mother Goose in Prose. L. Frank Baum. Bobbs-Merrill. \$1.25.
The Only True Mother Goose. Lee & Shepard. \$0.60.
Humpty-Dumpty. Anna Alice Chapin. Dodd, Mead. \$1.40.
The Moon Princess. Edith Ogden Harrison. McClurg. \$1.25.
Queen Zizi of Ix. L. Frank Baum. Century. \$1.50.
Father Goose—His Book. Baum and Denslow. Bobbs-Merrill. \$1.25.
Fifty and One Tales of Modern Fairyland. F. Strange Kollé. Grafton Press. \$1.50.
The Red Book of Romance. Andrew Lang. Longmans, Green. \$1.60.
Stories from Wagner. J. W. McSpadden.
Stories from Plutarch. F. J. Rowbotham. Crowell. \$0.60 each.
Stories of King Arthur's Knights. Mary MacGregor.
Stories of Robin Hood. H. E. Marshall. Dutton. \$0.50 each.
Bold Robin and His Forest Rangers. Caroline Brown. Dutton. \$1.25.

In the Reign of Coyote. Katherine Chandler. Ginn. \$0.40.
The Story of the Champions of the Round Table. Howard Pyle. Scribner's. \$2.50.
Heroes of Iceland. Allen French. Little, Brown. \$1.50.
Northland Heroes. Florence Holbrook. Houghton. \$0.35.

We are confronted, first of all, by an unusual number of fairy tales. *Æsop*, with a series of illustrations, by J. M. Condé, has lost none of the classic flavor, and the morals dot the pages in bold-face type. Elizabeth Luther Cary writes an introduction for this book. The centenary of Hans Christian Andersen is the reason for a special issuance in attractive color and pleasing print of *The Ugly Duckling*, with pictures by M. H. Squire. No series of tales will be more welcome than the new instalment of *Told by Uncle Remus*, in which Joel Chandler Harris reveals the fact that the advance of years only makes his tone the surer in telling the negro folklore. The illustrations from various pens are wholly in accord, and the cream paper agreeable to the eye. There has always been a tendency to modify the cruel element in imaginative tales. The schools are divided upon this question, but to those who support the theory, Clifton Johnson's *The Oak-Tree Fairy Book* will make an especial appeal. The fact that Mr. Johnson edited the book shows that he is indebted to many sources which it would have been helpful as well as just to mention. These sweetened tales ought to be popular. *The Dwarf's Spectacles* and other fairy tales were told by Max Nordau to a little girl between her fourth and seventh birthday, and they are now gathered in this book for others to reap the pleasure. The volume is thick and its contents betoken good times. Belonging to the same school as *Uncle Remus* are the tales by Anne Virginia Culbertson in her thick and clever volume *At the*

Big House, where many a folk-legend is told in the negro dialect—surprisingly good dialect. Violet Jacob dedicated *The Golden Heart* to three little boys and little girls. To judge by the format of the book, and its romantic spirit, the author, in print, will have a much larger reading public. Eva March Tappan, through her tales, *The Golden Goose*, presents a series

for the author tries, in unified tales, to explain consistently the inconsistencies of the nursery rhymes. The other book is *The Only True Mother Goose*, a facsimile of the original Boston 1833 edition. Edward Everett Hale discusses its history, and facts are given as to the real Mother Goose. The woodcuts are odd.

"For a Little Distance the Fox Followed Its Channel."
From "Red Fox." L. C. Page & Co.

of Swedish legends, told in an interesting manner. Fairy stories are common the world over; they simply wait interpreters. Seek and you shall find. Two books, large and small, attract our attention. One is by L. Frank Baum, wherein *Mother Goose in Prose* is pictured by Maxfield Parish. The scheme is clever,

With its highly decorative pictures, done by Ethel Franklin Betts, *The True Story of Humpty Dumpty*, as imagined by Anna Alice Chapin, will please. Those who can't "make believe" had better read the book at once. The cover design is alluring in its conception and color. *The Moon Princess* is full of delicate shades;

it is told by Edith Ogden Harrison in a poetic manner, a fact which will take it beyond the reach of many children. Lucy Fitch Perkins adds much grace to the text by her line and color drawings. In the realm of fairy fiction comes *Queen Zixi of Ix*, by L. Frank Baum; all sorts of adventures occur through the workings of a magic cloak. Nothing is explained; in the end, even, the children do not "wake up." The same author has written some rather stilted verses for the gay Denslow pictures in *Father Goose—His Book*. Some new fairies with good morals for the nursery appear in the *Fifty and One Tales*.

It is an easy transition into the realm of lore. Legendary material is the brawn of a section or a country. The romance spirit comes to us down the ages, and Mrs. Andrew Lang gathers some of it into her collection, which Andrew Lang edits in *The Red Book of Romance*, a volume which opens up another vista of colored books, even as the fairy tales before this. The book is rich in appearance and varied in contents. Two little books of commendable value are *Stories from Wagner* by J. Walker McSpadden, and *Stories from Plutarch* by F. Jameson Rowbotham. They are both pleasingly told, and are of importance because of their student spirit as well as their simple interpretations. In more decorative form are the *Stories of Robin Hood* told to children by H. E. Marshall, and Mary MacGregor's *Stories of King Arthur's Knights*, where the atmosphere is well sustained. Every year these legends come to us variously told, but no one has yet struck the style that lasts. One always welcomes Robin Hood; he lends an adventurous spirit wherever he goes, and the bright cover to Caroline Brown's *Bold Robin and His Forest Rangers* excites somewhat our expectations. Miss Katherine Chandler's *In the Reign of Coyote* draws upon the folklore of the Pacific Coast; it is so arranged as to form a good supplementary reading book in schools. For years the sagas and legends of the North have remained buried to childhood, until through an educational impulse, doubtless, certain writers began retelling these romances and adventures in amended fashion. Beginning with Sidney Lanier and his boy Frois-

sart, we come to present days, and Howard Pyle is ever welcome in his *The Story of the Champions of the Round Table*, even as he was in his similar books before this. His bold pen drawings are strong and telling in execution. Full of virility also is the book by Allen French, called *Heroes of Iceland*. It is an adaptation of the "Story of Burnt Njal," and in his comprehensive introduction as well as his notes, the author gives a thoro setting. A map also is a thoughtful addition to the kind of book that needs one. In simpler form and for closer study is Florence Holbrook's *Northland Heroes*, wherein the story of Fridthjof and the story of Beowulf are traced by their significant details.

Educational

- How to Tell Stories to Children*. Sara Cone Bryant. Houghton. \$1.00.
Bible History. Pastor X. Koenig. McClure, Phillips. \$1.00.
Telling Bible Stories. Louise Seymour Houghton. Scribner. \$1.25.
The Life of Christ for Children. Florence Baillie Fitzpatrick. Westminster Press. \$0.50.
The Story Bible. Margaret E. Sangster. Moffat, Yard. \$2.00.
Japanese Child Life, and Girls and Boys. Eight illustrations in colors. Stokes. \$1.50 each.
Jogging Round the World and Children of Other Days. 35 half-tones. Stokes. \$1.50 each.

How to Tell Stories to Children is a matter discussed by Sara Cone Bryant in her little book of that name; it is pleasant to realize that she places more store by the imaginative force of the legend than its educative value, that she realizes the first requisite of the story is to give joy rather than to carry primarily useful information. In a deeper vein Louise Seymour Houghton, in her *Telling Bible Stories*, sketches the best way of outlining the Old Testament for young folks. Her discussion is of wider interest than mere educational guidance. Another particularly suggestive book for Sunday-school teachers is Pastor Koenig's *Bible History*; he here outlines and interprets fifty Old Testament lessons, systematically arranged. *The Life of Christ* has been written many times for children. One of the latest, by Florence Baillie Fitzpatrick, is so arranged as to cover a two-years' course. It is more faithful in attempt than beautiful in style. Margaret E. Sangster, in her narration of *The Story Bible*, is far more felicitous in her telling of the chief incidents of both Old and New Testaments. Four well

From F. Montgomery's "Frances the Irrepressible."
The Saalfield Company, Akron, O.

illustrated books published by the F. A. Stokes Co. give geographical and historical information in a way palatable to young children.

Yuletide Books

- A Chronicle of Christmas.* Jeannette Grace Watson. Saalfield Publishing Co. \$1.00.
The Little Colonel's Christmas Vacation. Annie Fellows Johnston. Page. \$1.50.
Kristy's Surprise Party. Olive Thorne Miller. Houghton. \$1.25.
Chatterbox. 1905. Dana Estes. \$1.25.
Jack and Jill. Under the Lilacs. Louisa M. Alcott. Little, Brown. \$2.00 each.
The Pilgrim's Progress. John Bunyan. Illustrated by Byam Shaw. Scribner. \$2.50.
Tales from Shakespeare. Charles and Mary Lamb. Scribner. \$2.50.
A Child's Garden of Verses. Robert Louis Stevenson. Illustrated by Jessie Willcox Smith. Scribner. \$2.50.
The Luxury of Children. E. S. Martin. Harper. \$1.75.
Pleasant Tragedies of Childhood. Pictures by F. Y. Cory. Harper. \$1.50.
Rhymes of Little Boys. Burges Johnson. Crowell. \$1.00.
A Christmas Carol, and The Cricket on the Hearth. Charles Dickens. Baker & Taylor. \$2.00.
Child Characters from Dickens. Retold by L. L. Weedon. Dutton. \$2.50.
A Little Princess. Frances Hodgson Burnett. Scribner. \$2.00.

Save their bright covers and their multiplicity, there is nothing about the juvenile books to indicate the festive season. A few volumes adhere to the spirit of the

year. *A Chronicle of Christmas*, compiled by Jeannette Grace Watson, is a Yuletide anthology, decorative in make-up, and varied in selections. Holly berries stamp the binding. So, too, in such a volume as Annie Fellows Johnston's *The Little Colonel's Christmas Vacation*, not only is the outside bright in red and green wreaths, but the jolly girls both at school and at home during holiday time are full of life and healthy fun. The little Colonel herself, with a marked accent, is heroic, and a romance gives a grown-up touch to the plot. Even as this is one of a series, so *Kristy's Surprise Party*, by Olive Thorne Miller, reminds us of last year's estimable *Kristy's Queer Christmas*. The little heroine is indeed lucky to have so many story-tellers as assemble in these pages. The cover design is wintry, but the illustrations are over-brilliant in color.

The very fact that Christmas would not be Christmas without certain books makes the reader expect certain things. *Chatterbox* is a staple product; in old-fashioned dress, it is as unvarying through the progress of time as human nature is, even beneath its changing fashions; the same melodramatic woodcuts and small print, yet always welcome! Two volumes of Miss Alcott's, *Jack and Jill* and *Under the Lilacs*, come in sumptuous form, with the soft and poetic pictures done by Alice Barber Stephens and Harriet R. Richards. It is to be deplored that the cover designs are equally as hideous as those on last year's volumes belonging to the same set.

It is uncertain whether any *edition de luxe* for children is to be desired; it is true, however, that for grown-ups beautiful volumes are pleasing to handle. Though not many children are brought up nowadays on *The Pilgrim's Progress*—how many of the mature beings know even who Bunyan is!—they could not easily resist the exquisite edition imported by the Scribners. The pictures are perfect examples of the printer's art, and the editor has done much with his marginal references. It is good to read from such a volume. In the same category may be placed the *Lamb Tales from Shakespeare*, where the comedies and tragedies are pictured by Norman M. Price, and the volume would have made the gentle

Elia curious and given him delight to handle. The most exquisite title page of recent years is to be found in the new edition of Stevenson's *Child's Garden of Verses*, pictured by Jessie Willcox Smith. The whole conception of the book is in perfect good taste. This is a volume to be looked at only when hands are washed and curls are not awry—to be treated as carefully as the Sunday sash or the party dress. The child-like appearance of Edward S. Martin's *The Luxury of Children* only adds to this agreeable essayist's philosophy regarding girl and boy land. The poetic play of imagination is seen in fine illustrations by Miss Stilwell, and this grown-up knowledge of youthful fancies is humorously continued in a book of Fannie Y. Cory's, called *Pleasant Tragedies of Childhood*, for which Burges Johnson wrote some perfunctory verses. However, this same writer of verses, in his *Rhymes of Little Boys*—a collection bound in brilliant plaid cloth—shows his knowledge of his younger brothers, especially in a series of soliloquies which are full of humor. His more serious attempts are not so successful. But the book is clever.

The humor and pathos alike in Dickens have always been treated humorously by artists; the special issue of *A Christmas Carol and The Cricket on the Hearth* seems to have been made so that George Alfred Williams, with his brush and pen, could act contrarywise; his drawings are strikingly sympathetic. L. L. Weedon has adapted many of the incidents from Dickens dealing with children, thus forming stories with an object to create further interest in the novelist. While not wholly wise in method, it is conscientiously done and most artistically published. Another volume enlarged and richly pictured by Ethel Franklin Betts is Mrs. Burnett's *A Little Princess*. Soon after this story was staged questions began to pour in regarding gaps in the plot, and Mrs. Burnett set to work to fill in, telling all the children wanted to know about Sara Crewe's sad little life with its happy ending. This special book is the outcome.

Historical

The Red Chief. Everett T. Tomlinson. Houghton. \$1.50.
A Soldier of the Wilderness. Everett T. Tomlinson. Wilde. \$1.50.

In the Days of Milton. Tudor Jenks. Barnes, \$1.00.
Captain John Smith. Captain Myles Standish. Tudor Jenks. Century. \$1.20 each.
Hernando Cortés. Frederick A. Ober. Harpers. \$1.00.
The Coming of the White-men. Mary Hazelton Wade. Wilde. \$0.75.
Ten Big Indians. Mary Hazelton Wade. Wilde. \$1.00.
American Heroes and Heroines. Pauline Carrington Bouvé. Lothrop. \$1.25.
American Pioneers. William A. Mowry. Blanche S. Mowry. Silver, Burdett. \$0.65.
French Pathfinders in North America. William Henry Johnson. Little, Brown. \$1.50.
Boys Who Became Famous Men. Harriet Pearl Skinner. Little, Brown. \$1.25.
Our First Century. Life in the Eighteenth Century. George Cary Eggleston. Barnes. \$1.20 each.
Our Holidays. Colonial Stories. Revolutionary Stories. Civil War Stories. Century. \$0.65 each.
Uncle Sam and His Children. Judson Wade Shaw Barnes. \$1.20.
A Frontier Knight. Amy E. Blanchard. Wilde. \$1.50.
The Boy Pathfinder. Wm. C. Sprague. Lee & Shepard. \$1.50.
Milton Blairlee and the Green Mountain Boys. Grafton. \$1.50.

The historical section of bookland is always easy to approach by way of biography. In this line Tudor Jenks is doing good work. His series of *Lives of Great Writers* is of such a character as to be welcomed by high schools and colleges. *In the Days of Milton* does more than give the mere facts; it reproduces the spirit of the age; in its appendix matter

From "Pleasant Tragedies of Childhood."
 Copyright, 1905, by Harper & Brothers.

it is concise. The same author has written *Captain Myles Standish*, equally as well told. We wish Mr. Jenks was as anxious to put maps in his books as he is careful to prepare excellent indexes. This map feature is regarded by Frederick A. Ober in his study of Mexico, which takes the form of a full account of *Hernando Cortés* and his various expeditions. Five books group themselves as being modeled with the same purpose in view. Mabel Hazelton Wade tells of the *Coming of the White-men*, starting with the Norsemen, and by the same author is *Ten Big Indians*, historical red men, whose romantic lives have been largely fact. The definition of history as the biography of great men might serve as a suitable inscription for Pauline Bouvé's *American Heroes and Heroines*, for therein one finds personalities sketched from different sections of the country. In simple form, but cut after the same pattern, is Mowry's *American Pioneers*—those of civilization and of reform. Of larger scope, and for older readers, William Henry Johnson has written his *French Pathfinders in North America*, dealing with such men as Cartier, Marquette and La Salle.

Out of a far different field Harriet P. Skinner has chosen her *Boys Who Became Famous Men*, biographies told as simple stories. More unified and distinctively historical is George Cary Eggleston's *Our First Century*. In the course of this book he points out our mistakes in the beginnings of the nation, when colonization resulted in suffering which was the outcome of mismanagement and ignorance.

Five commendable compilations with varied contents drawn from *St. Nicholas* are *Our Holidays*, *Indian Stories*, *Colonial Stories*, *Revolutionary Stories* and *Stories of the Civil War*. In these books fiction, fact and poetry are so arranged as to please the reader, whether in school or out. There is likewise a book entitled *Uncle Sam and His Children*, in which J. W. Shaw endeavors to indicate the strength of our resources, the dangers in our national life. While intended for grown readers, there is much in it to appeal to younger minds. Among the many stories wherein fiction, history and social conditions are so commingled as to create

atmosphere may be mentioned Amy E. Blanchard's *A Frontier Knight*, which, belonging to *The Pioneer Series*, is laid in Texas; W. C. Sprague's *The Boy Pathfinder*, which deals with the Oregon trail, and has Lewis and Clark for characters; Everett T. Tomlinson's two volumes, *The Red Chief*, of Revolutionary color, and *A Soldier of the Wilderness*, wherein the French and Indians of 1758 figure, and the *Green Mountain Boys*, a story of Ethan Allen.

Outdoor Land

- The Young Folks' Cyclopaedia of Natural History.* John D. Champlin. Holt. \$2.50.
Natural History for Young People. Rev. Theodore Wood. Dutton. \$2.50.
Red Fox. Charles G. D. Roberts. Page. \$2.00.
Animal Heroes. Ernest Thompson Seton. Scribner. \$2.00.
Woodmyth and Fable. Ernest Thompson Seton. Scribner. \$1.25.
The Race of the Swift. Edwin Carlile Litsey. Little, Brown. \$1.25.
Sá-Zada Tales. W. A. Fraser. Scribner. \$2.00.
Hector, My Dog. Egerton R. Young. Wilde. \$1.50.
Pup, the Autobiography of a Greyhound. Ollie Hurd Bragdon. Caldwell. \$1.50.
Tige—His Story. R. F. Outcault. Stokes. \$1.25.

We enter the realm of outdoor land through the *Young Folks' Cyclopaedia of Natural History*, a treasure-house for the young naturalist, and *Wood's Natural History for Young People*, which, on account of its sumptuous format, is for the library rather than for field and forest. The aforementioned books are concise in fact alone. Such a writer as Charles G. D. Roberts, however, can very agreeably combine fact with fancy, so as to give a human element to his accounts. This he has done in *Red Fox*, which is as charming in style as it is in atmosphere, and he is ably assisted in illustrations by Charles Livingston Bull. Equally as delightful are the *Animal Heroes* of Ernest Thompson Seton, for heart interest is readily appealed to through such a sketch as Arnaux, the homing pigeon. Mr. Seton also tells in a bright fashion for older readers *Woodmyth and Fable*, artistically decorated with pen and ink sketches. *The Race of the Swift*, by Edwin Carlile Litsey, belongs to the same school; and so, too, W. A. Fraser's *Sá-Zada Tales*, where the animals talk in a very virile fashion. Through the assistance of Egerton R. Young, *Hector, My Dog*, tells his own life, lived in the semi-Arctic regions, and in the same fashion *Pup, the Autobiography of a Greyhound*, is made public, through the ready pen of Ollie H.

Bragdon. It is with some hesitation that we place here R. F. Outcault's *Tige—His Story*, which, humorous as it is, belongs to a deeper negative philosophy, which makes us question whether Tige be dog or devil.

Fiction

- The Story of the Big Front Door.* Mary F. Leonard. Crowell. \$0.75.
Two Little Knights of Kentucky. Annie Fellows Johnston. Page. \$1.25.
Deerfoot in the Mountains. Deerfoot on the Prairies. Deerfoot in the Forest. Edward S. Ellis. Winston. \$1.00.
The Fort in the Wilderness. Edward Stratemeyer. Lee & Shepard. \$1.25.
Dave Porter at Oak Hall. Edward Stratemeyer. Lee & Shepard. \$1.25.
The Winning Run. Captain Ralph Bonehill. Barnes. \$1.25.
Winning His Degree. Everett T. Tomlinson. Griffith & Rowland Press. \$1.00.
Dan Monroe. W. O. Stoddard. Lothrop. \$1.25.
For the Mikado. Kirk Monroe. Harper. \$1.25.
The North Pacific. Willis Boyd Allen. Dutton. \$1.50.
Tales of the Fish Patrol. Jack London. Macmillan. \$1.50.
In the Line. A. T. Dudley. Lee Shepard. \$1.25.
An Island in the Air. Ernest Ingersoll. Macmillan. \$1.50.
The Dorrance Domain. Carolyn Wells. Wilde. \$1.50.
Nut-brown Joan. Marion Ames Taggart. Holt. \$1.50.
When Grandmama Was Fourteen. Marion Harland. Lothrop. \$1.25.
Sidney, Her Summer on the St. Lawrence. Anna Chapin Ray. Little, Brown. \$1.50.
Five Little Peppers. Ben Pepper. Margaret Sidney. Lothrop. \$1.50.
That Preston Girl. Nina Rhodes. Wilde. \$1.50.
Helen Grant at Aldred House. Amanda M. Douglas. Lee & Shepard. \$1.25.
Some Adventures of Jack and Jill. Barbara Yechton. Dodd, Mead. \$1.50.
The Queen's Page. Cornelia Baker. Bobbs-Merrill. \$1.25.
Wee Winkles and Wide Awake. Gabrielle E. Jackson. Harper. \$1.25.
Tommy Postoffice. Gabrielle E. Jackson. McClurg. \$1.00.
Micky. Evelyn Sharp. A capital story. Macmillan. \$1.50.
Pinky Perkins, "Just a Boy." Captain Harold Hammond. Century. \$1.50.
Sir Toady Crusoe. S. R. Crockett. Stokes. \$1.50.

Over the vast field of fiction we can do little more than cast our eye; the books are much of the same color. The moral tone of such a volume as *The Story of the Big Front Door*, by Mary F. Leonard, is healthy and good. It is repeated in a different fashion by Annie Fellows Johnston in *Two Little Knights of Kentucky*, where service is emphasized and a little waif made happy. This same author continues her popular style in the *Little Colonel Series*. There are some authors we may take on reputation. Young readers flock to Ellis, and his output is generally copious. Three volumes from the *New Deerfoot Series* have been written to fill a clamorous demand, and the Indian is brother of a younger age to Cooper's red man. Stratemeyer, author of many a series, depicts exciting adventure

in *The Fort in the Wilderness*, whose very title anticipates, and he touches very largely in his *Dave Porter at Oak Hall* on the same subject that Captain Ralph Bonehill, another boy idol, exploits in *The Winning Run*. The baseball cover designs of each are sufficient indications of what to expect. Everett T. Tomlinson tells a vigorous tale of college life in his *Winning His Degree*; while W. O. Stoddard, a veteran in the field, sprinkles Bunker Hill patriotism through *Dan Monroe*. This name recalls the author, Kirk Monroe, who in his tale, *For the Mikado*, becomes timely in his accounts of Russia and Japan; a subject likewise treated more minutely by Willis Boyd

From Sabin's "When You Were a Boy."
Baker & Taylor Company.

Allen in his story *The North Pacific*. The vigorous style of Jack London is clearly seen in his *Tales of the Fish Patrol*, wherein local color and adventure are plentifully spread. *In the Line* is the third volume of the "Phillips Exeter Series"; a stirring football story.

Girls are in equal luck. They will share similarly with boys in the pleasures of Ernest Ingersoll's *An Island in the Air*, and Carolyn Wells's *The Dorrance Domain*, where plucky characters have an odd vacation. Without asking why or wherefore, they will turn to such a book as *Nut-brown Joan*, whose title, and author, Marion Ames Taggart, are pleasant guarantees. Unfortunately, the other

books along this line can only be indicated by mention, since their story value and interest cannot be summed up in a word.

Miscellaneous

- When You Were a Boy.* E. L. Sabin. Baker & Taylor. \$1.50.
Lonely O'Malley. Arthur Stringer. Houghton, Mifflin. \$1.50.
The Home Kindergarten. Katharine Beebe. Saalfeld Publishing Co. \$1.00.
Occupations for Little Fingers. Sage and Cooley. Scribner. \$1.00.
The Boy Craftsman. A. Neely Hall. Lee & Shepard. \$2.00.
The Scientific American Boy. A. Russell Bond. Munn & Co. \$2.00.
A Little Garden Calendar. Albert Bigelow Paine. Altemus. \$1.00.
The Runaway Donkey. Emilie Poulsson. Lothrop. \$1.50.
More Adventures of the Happy Heart Family. Virginia Gerson. Fox, Duffield. \$1.00.
Verses for Jock and Joan. Helen Hay. Fox, Duffield. \$1.50.
The Story of Noah's Ark. Told and Pictured by E. Boyd Smith. Houghton. \$2.00 net.

There are the usual books that show an author's intimate knowledge of boy life. Edwin L. Sabin's *When You Were a Boy* is not more spirited than Frederic Dorr Steele's pen sketches. Arthur Stringer's *Lonely O'Malley* is more poetic in treatment, though none the less true.

Five volumes will bring delight to the practical minded as fun for children, and as marked guides for teachers—telling how to make things, how to plant things, how to play things. A test only need be given, for these books should be examined.

And finally, among the picture books, Emilie Poulsson brings her kindergarten knowledge to bear on simple tales and rhymes in *The Runaway Donkey*. Then there is the delightful conceit of Virginia Gerson, carried into a second volume, *More Adventures of the Happy Heart Family*. Helen Hay publishes *Verses for Jock and Joan*, accompanied by Charlotte Harding in pictures.

Most delicate are the paintings made by E. Boyd Smith for his *The Story of Noah's Ark*, a series of illustrations, exhibiting a rare sense of humor. Gertrude Smith's *Little Mother and Georgie* will delight the five-year-old.

Like those who rush from an overladen store, like those who go away from a picture gallery with aching heads, so we come precipitately to a close. We have done what we could to indicate, to warn you what to expect when you enter a book shop. Woe betide you if you do not know what Johnny wants. There is much of a common excellence. Whoever gives a book should know something about what he gives. There is one way of buying a railroad ticket by shoving your money through a window-slide and having a bit of cardboard thrust back. You will not take *any* ticket, however, though often you will take *any* book. *The* particular story lies among hundreds: do you know *the* particular taste? Take care, for it's a wise publisher who selects an exciting frontispiece.

The Great Word

BY ROBERT P. LEONARD

[These lines were found in the personal papers of the supposed author, an aged Scotchman, who lately died in Springfield, who lived and worked unknown, and in deep poverty, but who wrote much solely for his own satisfaction. This poem we have received from his literary executor, W. McCourtie, Esq.—EDITOR.]

"It is order," said the law court,
 "It is knowledge," said the school,
 "It is truth," said the wise man,
 "It is pleasure," said the fool;

"It is love," said the maiden,
 "It is beauty," said the page,
 "It is action," said the athlete,
 "It is rest," said old age;

"It is art," said the painter,
 "It is honor," said the knight,
 "It is Church," said the prelate—
 And I said, "Who is right?"

M. VINCENT D'INDY.

The French Composer who is Visiting the United States to Conduct the Boston Symphony Orchestra in his Own Works.

Vincent d'Indy

BY G. W. HARRIS

[In the manifestation of musical activity at the present time, France is surpassed by no other nation. Her living composers form a most interesting group. The most interesting man in that group—and, after the aged Saint-Saëns, whose work is probably done, the most accomplished and the most versatile—is M. Vincent d'Indy; for, most of the others—Massenet, Charpentier, Bruneau—have been obsessed by the national mania for the theatre. A visit from a man of such force in modern music as M. d'Indy is an event of the first importance. While here he is to conduct the Boston Symphony Orchestra in performances of his own works, not alone in Boston, but in all the cities visited by that excellent band; to appear with the Kneisel Quartet, and also to lecture at several of the leading universities. The following sketch of his career by Mr. Harris is, therefore, of very timely interest.—EDITOR.]

IN the realm of music the most interesting and the most important event of the current busy season is the coming of M. Vincent d'Indy to our shores. Ever since the death of César Franck in 1890 M. d'Indy has been recognized at home as the foremost representative of the modern French school; indeed, he and certain other pupils of the

shy, simple, gentle and kindly Franck have been humorously accused of trying to establish in music a "Republique Franckaise." They have at any rate accomplished something new in music, established a style and method of their own, recognizable at once as strikingly and unmistakably individual. They have tried many odd experiments in harmony,

attempted to find new bases for tonal relationships, and even expressed their thought in new melodic lines. Their music is a new language, and, as always happens with the new in art, it has aroused much discussion among musicians and critics, and no little condemnation. But it is a perfectly safe prediction that this new music will ultimately be adjudged far from devoid of beauty when the world shall have become familiar enough with it to make a just appraisal.

Among French musicians Vincent d'Indy is the master craftsman. He has the ripest scholarship and the largest skill. He has gone further afield than any of the others in his experimentation with and his development of musical form and expression. But in all his experimenting he is the sincere and conscientious artist. For many years the anti-Wagnerian cabal in Paris pursued him with the bitterest hostility for his espousal of the Wagner cause, and decried him and all his works unceasingly (a condition that is now happily long past), but through it all he was content to work for his art alone, regardless of popular heed, or praise, or blame. By his long and deep study, his patient perseverance, his persistence in his search for the right idiom in which to express his musical thought, Vincent d'Indy has managed to equip himself with a mental technic as a composer which has hardly been surpassed in the history of the noble art.

Paul Marie Théodore Vincent d'Indy was born in Paris on March 27, 1851, of a wealthy family of musical amateurs—his paternal grandmother having been an excellent pianist, his father a violinist and an uncle a composer of chamber music and *opéras de salon* that were popular in Parisian society half a century ago. His family designed him for the law, but his ambition from early youth was to become a professional musician. Only after a struggle that lasted several years against the uncompromising opposition of his family was that ambition realized. Altho he was an accomplished pianist at fourteen, and continued his musical studies with unremitting zeal, trying his hand at composition in several of the smaller forms, it was not until after the close of

the Franco-Prussian war (during which he served as a volunteer in the One Hundred and Fifth Regiment) that M. d'Indy was able to settle down to the serious work of fitting himself for his chosen profession.

In 1872 he met César Franck and entered that master's class at the Paris Conservatory; entered also Colonne's orchestra as a kettle drummer, and remained three years in order to obtain training in the details of instrumentation. He left the conservatory in 1875, but remained with Franck as a private pupil for several years thereafter, receiving from him a thoro grounding in counterpoint, fugue and composition. In the competition of 1885 M. d'Indy won the prize of 10,000 francs offered by the City of Paris for the best musical work by a French composer with his cantata, "The Song of the Bell," a setting for solo voices, double chorus and orchestra of Schiller's well-known poem. Together with Franck, Saint-Saëns, Fauré and others, he was one of the founders of the Société Nationale de Musique, which has done good service in fostering the love of symphonic and chamber music in France. Since the death of Franck in 1890, M. d'Indy has been the president of this society. In 1892 he was made a Chevalier of the Legion of Honor, and in 1896 a Commander of the Order of Charles III. of Spain. In 1895 the position of professor of composition at the conservatory was offered to him, but he declined it. The next year, together with Charles Bordes and Alexandre Guilmant, he founded a new music school in Paris, the "Schola Cantorum," of which he is the director and professor of composition.

While he appears to have kept himself fairly busy with studying, orchestral playing, chorus training, teaching and directing, the main activity of the man for the last thirty years has been writing music. His compositions extend to about sixty numbered works, and include pianoforte pieces, concertos, string quartets and other chamber works, overtures, symphonic poems, symphonies, many songs, choral ballads, cantatas, an operetta, and two music dramas. Among them, to mention only a few that are of importance—both intrinsically and as stepping stones in their author's development—

in the order of their composition, are: "The Enchanted Forest" (1878); a frankly impressionistic "symphonic ballad" after Uhland; "The Ride of the Cid" (1879), a Moorish-Spanish scene for baritone, chorus and orchestra; a "Wallenstein Trilogy," a descriptive symphony, which was begun in 1873, but laid aside for a while and not finished until 1881; "The Song of the Bell" (1879-83); a symphony for piano and orchestra "on a French mountaineer's song" (1886); "Fervaal" (1889-95), a music-drama which has been widely her-

alded as the greatest thing of its kind since the later tragedies of Wagner; "Istar" symphonic variations (1896), a curiously interesting work delineating in music the story of Istar, from the Babylonian "Epic of Izdubar," by means of a unique transformation of the hackneyed theme with variations form; "The Stranger" (1898-1901), a second music-drama, presenting an allegory of the typical artist's life; and a second symphony, in B flat major (1902-3), the most difficult but also the most impressive thing he has yet done.

NEW YORK CITY.

The Russian Crisis

BY VISCOUNT MELCHIOR DE VOGÜÉ

[The close political official relations existing between France and Russia should be borne in mind in reading the view given below. Viscount Melchior de Vogüé, of the French Academy, has a Russian wife and has written with authority on things Muscovite.

—EDITOR.]

THE incidents of the last few months in Russia are, very likely, but the preface of a new order of things, whose exact final character I do not at all pretend to be able to predict. But on one point I have a presentiment that I do not hesitate to express. It seems to me there is good reason for predicting that Moscow will again become the real capital of Russia. In the future National Assembly to be convened at Moscow—whatever may be the mode of its election or the form of that body—will be decided how to build up the New Russia on the ruins caused by the St. Petersburg bureaucracy. The sincere friends of Russia should hope that such will be the case, for if things political are left to worry on in the present capital, "confusion worse confounded" will be the order of the day for a long time to come.

It is my daily prayer that this noble Russian nation may escape the many dangers that now beset its path—an aggressive return to power of the discred-

ited aristocratic bureaucracy, now incapable of restoring life to the *régime* which it has killed; a prolonged period of anarchy, which will be utilized by the disorderly elements of society and chimerical theorists; a loosening of national ties, with an attempt to form a federative country, which would be playing into the hands of covetous neighbors; a shrewd exploitation of the nation's miseries by the powerful Jewish organizations, to-day victims of cruel injustices, tomorrow perhaps masters of Russia, exercising a secret power which would soon bring down on the heads of these associations fresh atrocities—such are some of the pitfalls which strew the thorny path of struggling Russia at the present moment.

It is to be hoped that there will come forth from Moscow, head and heart of historical Russia, enough light and patriotism to form the nucleus from which will spring the necessary creative elements of the New Russia, free and prosperous.

A Glackens Drawing.
From the Collier Exhibition.

Our Leading Illustrators

BY MARY H. BOTHWELL HORGAN

ILLUSTRATION is a comparatively recent art activity. It may almost be said to be the special art form of today. It has no "Old Masters" to learn from and it has developed beside the novel and the short story and in conjunction with the multiplicity of magazines. From being the pot boiling occupation of men who were striving always to leave it for the fields of color work, it has become the work by choice of men who have lifted it above the tentative stage and established it as well worthy of attention. The perfecting of reproductive processes has gradually broadened the possibilities of varying the mediums employed, until now many illustrations are practically paintings, in as full color as the artist wishes to use.

The larger public likes realism rather than suggestion, the obvious rather than the subtle, so that to place William Glackens very near the top in a list of illustrators will meet with little sympathy except among artists. Yet he is a master of the essentials of the art, and in a sense a realist, too, seizing, as it were, little pieces of life's panorama easily and rendering them in pen-and-ink in the most direct and expressive way. His work has no effects gained by use of "values," which are out of the province of point work, but it has a pleasant grayness of effect that makes it set well into the pages of light type used today. He gets suggestions of texture even with the least possible use of light and shade, and his color sense is noticeable in every slightest drawing. Much has been said

of his originality, more particularly, perhaps, in relation to his paintings. In reality he is a man of the strictest English tradition in illustration, more perfectly a successor of Keene than any Englishman now at work.

Born in Philadelphia only thirty-five years ago, he is one of the innumerable successes among students of art who received their early training in the Pennsylvania Academy. His years in Europe made him a painter of the reaction against *plein-air* ideas, and he is in his color work, as in his illustrations, a man who realizes fully that art problems are primarily those exercising power of choice, economy of means and intensity.

When it becomes a question of valuing a man for the so-called "originality," who can more quickly be singled out than Peter Newell? He certainly carved out his own way in art and made it lead as far as possible from academic paths. He has created "a school," one might say, of a humorous style, that is in his imitators dependent upon mere queerness as much as upon any other characteristic. The comic-grotesque talent is always rare, though never entirely absent in any art period, but it is not often manifested in conjunction with such delicate sentiments as Newell is so often able to express. He is at his best in pictorial accompaniments to gentle nonsense rhymes which range over the world of intimate children, animals and flowers. It is hard for any one brought up on the original "Alice in Wonderland" to forgive him for having re-illustrated that, but having

it to do, he did it in a most interesting way.

It is a question whether Newell should be considered an illustrator for children. There might be some nervous shocks in his mild monsters and the little ones might fail to enjoy the side of his art that is beautiful—the spotting out of his compositions and the pleasing pattern making in line and tint which make of his work delightfully good art. His con-

Benjamin Constant, altho little in his work would suggest that master's influence. In America this is conspicuously an age of experiment in architecture and in the manipulation of the contours of nature, to bring them into something better than the natural relation to buildings.

Mr. Guerin, more than any other illustrator, is able to realize this phase of our art development, and presents to us from month to month, in the magazines and

W. Glackens in His Studio.

tribution to the bag of Santa Claus this year is a new Mother Goose book. Mr. Newell was born in the backwoods in Illinois, in a cabin that stood out from among its neighbors thru the dignifying difference between clapboards and hewn logs. He studied a short while at the League and under painters like Dewing and Chase and Weir. He has been often abroad, but never for definite study in the schools.

Jules Guerin, in spite of his French name, was born in St. Louis, but his art training was received in Paris under

in the Architectural League exhibitions, the significantly new and beautiful "arrangements" in monumental line and mass with which our architects are transforming our cities. Perhaps no form of illustration at present in use is of more educative value than his accompaniments to the descriptive articles that are doing much to give us the sense of need of civic beauty so lacking in our earlier city building periods. So often he makes us feel vividly the glorious uplifting power of scenes from heights, the charm that lies in the curve of a well planned street,

The Pack Train. By Frederic Remington.

Copyrighted by Frederic Remington, 1905.
From the Collier Exhibition.

Howard Chandler Christy in His Studio.

the enduring power to please of a massive stone bridge, or the grace of a steel structure. Pleasant conjunctions of buildings with tree groups, and possibilities for effects of light and shadow in architecture studied by itself.

Two men who outrank all others as chroniclers of phases of American life and character are A. B. Frost and Frederic Remington. Frost is the older man, and tho he was born in Philadelphia only as far back as 1851, his career covers nearly the whole of our short epoch of good illustration. The Mark Twain of the illustrators, he draws for us the suburbanite, the farmer and the sportsman, in their most comical dilemmas and occasionally in serious moments of their lives, with a sensitiveness to characteristic incident and a sympathy with homely life of the most perfect kind. No one else drawing animals realistically can make them so truly funny. The pen-and-ink drawing of "Emily" on the run for that story of the hen by Wister, printed in a magazine and afterward incorporated into "The Virginian," is unforgettable,

and the "Stuff and Nonsense" book of many years ago was a contribution to humorous art worth reprinting. Then there are "Br'er Rabbit" and all the other characters in "Uncle Remus," more of whose tales are coming out for Christmas this year, all so delightfully illustrated by Mr. Frost.

His compositions are apparently done so easily, he realizes his scenes so perfectly himself and is so convincing in his placing of the accent, that one has no hesitation in saying that it is that of a cheerful, healthy optimism bred in sunny American country life.

Frederic Remington has made the West of the great cattle-raising days exist for the East. The wiry little mustangs and broncos, with their alert cowboy masters, the life of our army men in their conflicts with the Indians, the dramatic moments in the lives of the hunted men and beasts; the sombre grandeur of great skies, great wastes, great prairies, great hills; the wild life in the open, away from all major comforts and instinct with the thrill of struggle—these,

and the momentary pauses in which simple human occupations caught the artist's eye, have all served as motives in a very consistent series of truly historical records.

Mr. Remington's paintings and drawings are all of the same technical character. His color is never imaginative, always deals with hard, unbalanced facts, and his handling has become stilted at times, as does that of all men addicted to snapshot treatment of light and shade. It was Western life that seized him, not art in the abstract, and, as with Frost, no wish to have him different or regret that he had little influence from art schools in his training can be allowed to alloy thankfulness that at the right time he made the life of the ranchman his chance to perpetuate for us the vigor and picturesqueness and meaning of the conquest of the great West.

As a sculptor Mr. Remington is even more noticeably free from traditions, dealing freely in violent action and breaking every convention, often with results not altogether successful. The French

Exposition of 1900 gave him a silver medal for his groups of bronco busters and soldiers on horseback.

Of the same age as Remington, and like him in having made his early reputation by specializing, E. W. Kemble's art is more than a record of the negro life he draws, or used to draw, for lately he has turned cartoonist, and is exercising his humorous vein in political satire for *Collier's*.

Though his work was always a little uneven in merit, when at his best, as in his drawings for the *Century's* early dialect stories, and for Cable's beautiful Creole tales, he often did astonishingly delicate and beautiful pen-work, and in those days Abbey was in the field and Blum was doing his few but great pen-drawings like those of Jefferson as Bob Acres, and of the statue of Thackeray, so that the standard was a high one. Strong in characterization and perfectly sympathetic with his stories, Kemble's selection of darks and lights and the handling of his fine lines always spoke the love of the master for the delicate little implement.

Jules Guerin in His Studio.

Often merely a figure of a negro mammy or uncle and a pickaninny or two, the drawing was sure to be satisfying as pen-and-ink work.

"Kemble's Coons" were just pure fun, and Kemble's political cartoons are very serious indeed, so that the man has many sides.

It is astonishing that among all our artists who received their training in the Pennsylvania Academy it cannot be said that any one influence or style predominates. The cosmopolitan influences of the American world prevent that. Two more absolutely different modes of conceiving of art and beauty than those of

The Burning Ship. By Howard Pyle.
From the Collier Exhibition.

Glackens and Maxfield Parrish can hardly be imagined, yet both received the foundations of their art education in that ancient and honorable school in the Quaker City. Mr. Parrish, indeed, comes from an old Quaker family, and his work suggests that all the secretly accumulated sensations of the loveliness of color and form felt and suppressed by generations of Quaker ancestors had been passed on

for the observation and enjoyment of the other things that contribute toward pure beauty—the cool greens of summer woods, as in the cover for *Collier's* summer number; the riotous autumn reds and browns, the spirit of seasons—as in that most beautiful autumn picture reproduced this fall in *Scribner's*, in which there is all of the joy of the culmination and fruition of the passing summer; the

to him to use in his ever varying decorative compositions.

His work shows, too, how certain it is that the classic spirit is always alive. A calm completeness and faultless finality are in everything he does. His color schemes are as synthetic and clearly understood as his architectural settings, yet he adds to his classically perfect technique an invention rarely seen in the work of men of that school, and the delightful touch of humor, without which art is too remote from life. He seems to have been born with a talent for drawing perfect forms, and so to have had all the time necessary

inspiration to be had from fairy tales and all wonder books, from which he seems to have dreamed his "make believe" backgrounds of baronial castles and gnarled trees.

One scarcely realizes the amount of his knowledge because it is all presented so easily and with no obtrusive note of mere scholarship. Much of it must be intuitive knowledge, for Mr. Parrish in most of his thirty-five years has been so constantly busy with his hands that it is hard to see where he could have found time to acquire his lore consciously. He is a remarkable craftsman, can build a frame,

A. B. Frost in His Studio.
Courtesy of "Collier's Weekly."

or a cabinet, or a house with the same constructive perfection as that shown in his cover designs. The boxes in which he ships his drawings to the publishers even are things of beauty.

A wonderfully deep-toned picture, characteristic in motive and treatment, called "The Sandman," was shown at the Society of American Artists in 1897, and won his admission to that body. It made one wish that his energies would more often be turned in the direction of permanent designs for decoration. Think of the delight generations of children would have in a series of wall-pictures by Max-

field Parrish in the children's room in our own new public library! Absolutely brimming over with adventures and interests dear to childhood they would certainly be, and perfectly fitted to the classic detail of the building as well.

Mr. Parrish's accomplishment is amazing in quantity. Every month there appear covers for magazines, monthly and weekly, pictures and head-pieces and tail-pieces in the text illustrating stories and verses, and each year editions of such books as Grahame's "Golden Age" and Eugene Field's "Poems of Childhood," with many pages of beautiful drawings.

Mr. Parrish lives in the Vermont hills, in a house of his own building. Sometimes he goes to far quarters of the earth for change, and the result is always at once apparent in his work, as in the series of pictures illustrating "The Great Southwest," that appeared a few years ago, or in the series of Italian villas for Mrs. Wharton's book last year, and indirectly in the greater and greater variety and sureness of his color schemes and settings.

Another artist identified with art in Philadelphia is Howard Pyle, whose influence is perhaps the strongest one given there, and from closer personal contact with whom the group of students who gather about his home in Wilmington are helped toward sincere endeavors to find themselves. Parrish, Schoonover, Aylward, the strong young marine illustrator, and many of that group of clever women, of which Jessie Wilcox Smith, Miss Green and Miss Oakley are the best representatives, were started on their careers by Mr. Pyle.

He is a man of strong convictions, some of which, like his objection to foreign study for artists, are too much like prejudices. One cannot help feeling that

broader experience in Old World scenes would remove some of the appearance of strain from his own work, give greater spontaneity to his human beings, and make them exist in other than an archeological way. He knows history so well and so enthusiastically and is such a splendid craftsman, that his limitations never seem necessary ones.

He is a truly great creative illustrator, without having departed from the best traditions that the art has been accumulating since bookmaking began. He is both realistic in his way of seeing things and imaginative in his power of selecting both the points to be illustrated and the special treatment best fitted for the subject. In his earlier manner he imitated while studying the work of Dürer, the great German engraver, but in the pen and ink handling which was the result of this he produced pictures for some of his own books, "Otto of the Silver Hand," "The Wonder Clock" and others, which have never been equalled, though a large number of English and German illustrators have spent all their efforts on decorative work in pen-and-ink, with the same origin in the woodcut technique. Often he would thus produce in-

comparable little drawings, like those for "Flute and Violin," by James Lane Allen. His later work generally shows him the complete artist-writer, decorator, illustrator and spiritual thinker as in the imaginative "Travels of the Soul," in the *Christmas Century* of 1902, and in the

A Kemble Type.
From the Collier Exhibition.

"Fate of a Treasure Town," so different in character, in the current *Harper's*.

In his paintings and in a decoration shown at a recent architectural exhibition he seems to lose breadth by overloading with accessories, accurate details of

costume and furniture, etc., and he is never at his best in the creation of female figures, both faces and proportions usually having much unnecessary ugliness; but where beauty is a secondary consideration his types have splendid dramatic force. All carping against his methods ceases, however, if one looks about, either at home or abroad, for such another figure in the field of illustration.

Personally he is a lovable enthusiast, with the heart of a big, generous boy, intensely interested in living the fullest and healthiest life. His fifty-two years do not make us feel that he has nothing further to show us in his art.

Walter Appleton Clark has advanced more rapidly toward the best kind of work than any of the younger men of first rank in illustration. His first published work appeared about 1896, when he was only twenty and a student at the League. He had from the first a distinct sense of the color that can be expressed in black and white by careful observation of "values" or exact relations of tones, and in those days he made successful drawings with crayon. By 1899 he had reached almost the limit of expression by means of values, and showed also the true illustrator's instinct for the fitting point to emphasize in the story. His first published color work, a harvest cover for *Scribner's*, appeared then, and showed his ability to compose in line and mass for decorative effect and possibilities in the direction of mural work.

Up to that time he was still likely to show mannerisms of the life class in the over-accentuation of details, notably in hands, but he soon conquered that fault to a large extent, and some of the illustrations for "The Fortunes of Oliver Horn" and for Davis's story, "The Derelict," had wonderful simplicity. The illustration for Mrs. Wharton's ghost story called "The Lady's Maid's Bell," done early in 1902, was superb in composition and quality of line and tone, and is a fitting expression in black and white of the author's creepy idea.

Soon after that Mr. Clark married and went abroad, two moves that necessarily must have a profound influence on a man's life. He has been experimenting in several directions since his return last

winter, and his work is now in that interesting stage that promises much because of its plasticity. Some drawings in color for Percy Mackaye's "Canterbury Tales" were shown last winter at the Society. In them the decorative sense had become almost too conventional, but Mr. Clark has always tried a method to its extreme

ably the most generally popular among the numerous inventors of those types of pretty girls which the public has been assumed to be demanding since the Gibson Girl appeared upon earth. Mr. Christy is a great influence in New York sketch classes. His method is easy to learn, and requires neither genius nor much taste.

E. N. Kemble in His Studio.

limits, getting all possible good from it before leaving it for another. His most recently published drawings for the charming little reverie called "Black Care and the Horseman" in the Christmas *Scribner's* is a pledge of the beautiful work we are to have from him.

Mr. Howard Chandler Christy is prob-

It is hard to place him as an illustrator because he lacks so many of the characteristics that go to make an illustration a work of art. Such work as that in illustration of Mrs. Ward's "Lady Rose's Daughter" ought to ruin the reputation of any artist, and yet Christy is probably the most successful illustrator commer-

Walter Appleton Clark.

cially now at work. His cleverness in handling textures and a sort of general smartness in costume and character seems to make the public forgive him his rococo boudoirs with patterns jumping up from the carpets and impossible, tasteless mantels and furniture, as well as the absolute lack of character in his faces. He often does single figures of much charm, and if a careful selection of stories were made for him he need not so often be put beyond his depth.

His work as a war artist in Cuba was very promising, and he is still young enough for us to hope that he may yet abandon the facile for the art that holds interest to the end of a man's career.

American illustration is an interesting

subject, and one leaves out reluctantly such men as Smedley, who is more truly in the style of the years before 1900; Henry McCarter, who taught us so much of the value of the decorative page, and is more inventive than Guerin; Sterner, the most artistic of them all, who in spite of many weaknesses can scarcely produce a drawing that is not full of color and quality.

Most closely in touch with the whole public, the larger part of which never sees the painters' work, it is to illustration we must look for the strongest influence on the taste of the country, and with the men we have been discussing as leaders we can hope for a steady decrease in Philistinism.

NEW YORK CITY.

Two Heroes

BY RICHARD WATSON GILDER

Two heroes do the world's insistent work:
One rushes in the battle's blood and
murk
And, knowing the foeman flies,
In one rich moment dies.

The other, on a path he long has feared,
By bugle-blast and drum-beat all un-
cheered,
At duty's chill behest
Gives life to want and waste.

For him, the battle hero, high we pile
The sculptured stone; his ringing name, the
while,
In praises and in songs
Its lyric life prolongs.

For the other, we fashion a heaven of late re-
ward,
His life, all dark, and desolate, and hard,
Down to oblivion goes,—
Unless some great God knows!

NEW YORK CITY.

Fighting at Annapolis

BY A MIDSHIPMAN OF THE NAVAL ACADEMY

[This article is written by a midshipman personally known to us and we can vouch for his good faith and truthfulness. He naturally prefers not to be made conspicuous during the present investigation, and therefore does not wish to have his name used.—EDITOR.]

THE recent death of Midshipman J. R. Branch, Jr., of New York, at the Naval Academy, and the developments of the subsequent court martial have caused much curiosity thruout the country concerning the prevalence of fighting at the Academy, the sentiment of the midshipmen in regard to it, and the attitude of the authorities toward it.

Most of the newspaper articles, when referring to the fights between midshipmen at the Naval Academy, are inclined to call them "prize fights" and to sneer at what they call the "Code of Honor." The code that governs a man's honor at the Academy is the same as that which is understood to be in force at any of the large colleges. Under the Academy code, however, there are two distinct classes of fights: First, those purely personal and the direct result of personal disputes; secondly, those which result from the disregard of class privileges by lower classmen.

The first class need not be discussed in detail here, as personal fights at the Naval Academy take place under exactly the same conditions as at any outside college or school. The second, however, since it depends on a system of privileges

or "rates" which have been honored and respected from the time of Admiral Dewey down, requires a discussion of conditions existing inside the Academy between the upper and lower classmen.

Every year the First, or Senior, Class establishes the "rates" which all lower classmen are bound to respect. For instance, a Fourth classman, or Plebe, must keep to the side of the walks or the center of the corridor; he must always carry a ramrod brace, must answer an upper classman with due respect, and never speak unless spoken to. There are certain walks about the yard, such as Lovers' Lane, where the Plebe must never walk; certain benches he must not sit on and certain stairs he must not tread. All these rates are designed with the intention of early teaching a newly entered midshipman the respect due all superior officers from the moment the Plebe takes off his caps and dons Uncle Sam's blue.

If a Plebe sees fit to break these rates by refusing to keep to the side of the walk, or by attempting to sit on a bench especially reserved for members of the First Class, he is first warned of his "rateyness," and if he be stubborn enough to persist in disregarding the rates he is

reported to the president of one of the upper classes, who takes the matter in hand. A man of the same weight and height is picked from that president's class, and a fight is brought off with all due ceremony. If the under classman succeeds in winning out over every man who is picked to meet him, nothing more is said and he is allowed as much freedom as a First classman. But this kind of a fight is very rare, since a man who is too stubborn to take "running," as it is called, or too weak-kneed to take what every upper classman has gone thru before him, soon finds that he is becoming exceedingly unpopular, both among his own classmates and among the men of the upper classes. The personal affairs are more numerous, but are seldom serious enough to send both participants to sick quarters.

As to the sentiment of the midshipmen in regard to settling disputes at fisticuffs, it is safe to say that there is not one out of fifty who thinks that it ought to be abolished, and who does not think that if it were abolished the Academy would soon degenerate into a school that would be unable to put into the service men who would be worthy of wearing the uniform. And, indeed, this seems to be the only way either of controlling the lower classmen or of settling personal disputes.

Altho an officer will let nothing stand between him and duty, yet he would go the long way round if he thought that going the short way would necessitate his reporting two midshipmen for fighting. Every officer in the service has been a midshipman, and knows that it is necessary to uphold both his own honor and that of his class; also every officer knows that no two midshipmen would demean themselves by fighting over childish matters. Having gone thru it all himself, he does not care to meddle with their private affairs unless forced to do so in the performance of duty. Since medical officers are not connected with the Department of Discipline, they are not in duty bound to report any midshipman, altho it may be obvious that his injuries are the results of personal encounters.

During the summer practice cruise two or three years ago one midshipman reported another in such a way as to practically accuse him of lying. Upon hear-

ing of this the captain of the ship reported the second young man for not resenting a personal insult. On the practice cruise last summer, while two middies were settling a personal affair by rounds on the forecastle, an officer appeared on the bridge. Of course, the fight was stopped immediately, but the participants were merely reported for "creating disturbance." Later they were called aft and admonished to settle their disputes ashore, where they would not make a display for the amusement of the enlisted men.

The term "prize fight" has been applied in connection with the Code of Honor at the Naval Academy. This undoubtedly arises from the fact that the fights have been reported as of "so many rounds' duration," "fought to a finish," etc. But when the term "prize fight" is used it brings up suggestions of betting, of crowds cheering the contestants, and gloating over the bloodshed and display of brutality. This, of course, is mere fancy. All fights which take place among midshipmen are conducted in a quiet and orderly manner, as such affairs should be. Two seconds are provided, who take care that the contestants receive proper attention; a referee is present to see that there is no unfairness, and a timekeeper is appointed to time the rounds and intermissions. No one else is allowed to be present, and the affair is brought off in a spot as secluded as possible. In order to avoid interruption by any officer, it has become the custom for the participants to "skip" supper formation, as was the case in the recent contest between Branch and Meriweather, which took place in one of the rooms of Bancroft Hall while the officer in charge was at supper.

As this system has been in existence since the foundation of the Academy in 1845, it is only reasonable to suppose that it is conducted on a fair and manly basis. And it must be taken into consideration that, of all the hundreds of fights that have gone down in the memory of graduates of the Naval Academy, this last is the only one which has had such an unfortunate ending. And let us hope that as many more years shall have passed before there shall be another such sad occurrence to call into question the efficiency of the "Code of Honor."

The Retort of an Average Woman

[Many another woman, who has failed to satisfy all the ambitions and anticipations of admiring relatives and teachers, will sympathize with this spirited defense of one who has preferred to be "miscellaneously useful" rather than to be selfishly distinguished. To avoid exposing to public censure her over-critical and unappreciative family and friends we suppress the writer's name.—EDITOR.]

ALL my life people have been trying to make me discontented—they call it "rousing my ambition."

We, the people of the United States, are success-mad, and the present definition of success is to be "in the public eye," a distinction which falls alike upon the just and the unjust. Unless my name stands for splendor of achievement in righteousness of what avail is it that ten thousand or ten million men know how to pronounce it?

My friends urge and expect me to "do something," an indefinite and vague expectation, without detail or any real advice or help, even of sympathy; just as we tell a child to "be good" without explaining how, we implore older people to be "great, noble and distinguished" without indicating how they are to achieve distinction by being a "celebrity at large."

"Success" tries to estimate the value of a rose by using a tape-measure. The "biggest of its kind" may be far from the sweetest or most lovingly colored.

Just recall all the women you have ever loved; think of the two or three you have deeply admired; the one, perhaps, you would be willing or glad to resemble, and confess that they were not "successful" in the mob-sense of the term. The woman you remember as the ideally womanly woman, was she not enshrined in the old, fine word, "Lady," as a gentlewoman; one who considered others; who lived retired; who effaced herself, save for the pervasive fragrance of an exquisite personality; a human arbutus hiding under brown leaves its wealth of waxen bloom; whose manners were marked by the utmost refinement, and never degenerated into "a manner"; who forgot herself, only to be remembered by those whose high privilege it was to know her as their ideal of womanhood?

Or she was of the other type, the "motherly" woman, who spread her soft,

warm wings of protection and comfort over the heterogeneous brood of some small community, who rushed to her in sickness, sorrow or danger. She was a large woman, with comfortable curves, a plump neck, where babies loved to nestle; a voice like velvet, rich with caressing intonations; no harsh angles anywhere about her; a rosy, wholesome and benign being, yet with a clear intelligence, a strong will, power to see things in their right and sensible relations, executive ability of no mean order, so that she found time in her busy life to serve many people in numberless ways; yet, a woman who would look at you with limpid eyes of wonder if you talked to her of "success" as a personal ambition.

We are restless and unhappy, when we care overmuch for success, or have ambition thrust upon us. We scribble our puny names upon the rocks, or carve them on the trees, or print them on the title-page of a book, in the same vain hope of cheating oblivion.

I know all that you will say. I know that my life is a thing of shreds and patches, a tangle of conflicting claims, a snarl of small, indefinite, but exacting, duties, to none of which should one yield in supreme subjection. No doubt it is true that women lack a sense of proportion, that they squander themselves upon the little and the irrelevant; that they do not know how to eliminate the insignificant, nor how justly to economize time, strength and energy; yet I protest that it is not fair for those who have made many claims upon the average woman, and upon whom she has lavished largesse of life, to turn and taunt her with her resultant poverty. My life may be poor and meager, but never have I had a chance to live it unhindered by my critics.

It may be the result of unwise training or of the expectation of those about me, or

the pressure of social theories, or it may be the fault of my own unfurnished soul, but I have never felt free to turn a deaf ear to any call.

The sick must be taken care of; the unhappy comforted; the children washed, fed, dressed, taught and amused; the church, Sunday school, missionary society and "Ladies' Aid" attended and attended to; dinners must be given; guests for a day, a week, or a month entertained; neighborly services must be rendered; stupid callers must be talked with and "brilliant" ones listened to; a house must be kept either personally or by those who need oversight and direction. These are a few of the many things a woman must do, in addition to keeping herself sweet, serene and interesting, and, according to some higher critics, beautiful as well. And, then, her friends wonder why she has not "done something" to win distinction.

I do not mean that I have not had time

to read, to study, to help in social and municipal ways, for I have. I have had time to do a thousand things, but not to do "One Thing." I know bitterly well that I am a "Martha at all trades, and mistress of none"; that my life has as much unity and dignity as a scrap bag; that I ought to have "done something;" yet I am certain at the back of my miscellaneous mind that the first time the critic wants a button sewed on, or the baby tended, or a dinner prepared, or a recalcitrant cook discharged, or a new one caught and tamed, or a book read aloud, or a duty-letter written to any given relative, or any invalid in the family nursed, or a new neighbor called upon, or the janitor faced, or the grocer's bill disputed, or any other little item of life's business, agreeable or disagreeable, to be transacted, I am so sure that I shall be called upon to attend to it that I take what satisfaction I may in feeling myself miscellaneously useful.

One Ewe Lamb

BY SUSIE M. BEST

(I HAD one ewe lamb.)

And the King had flocks on a thousand hills.

And they browsed full-fed on their pastures
fair.

(I did not care).

I did not feel in my inmost heart

A pang of evil or envy start,

I was so content with my one ewe lamb

My soul went up in a joyful psalm,

And I blessed the Lord of us night and day.

(Ah, well away.)

(I had one ewe lamb.)

And the King had flocks on a thousand hills.

So many—yea—they were numbered not.

(I cared no jot.)

My heart was never disquieted,

"For rich are the poorest who love," I said,

And I knelt by the cote of my one ewe lamb,

And I cried to the Lord of us "Glad I am!

And never a mercy more I pray!"

(Ah, well away.)

(I had one ewe lamb.)

And the King had flocks on a thousand hills.

When they called for a sacrifice, why, oh why,

Was he passed by?

For oh, from the flocks that had multiplied

Death, the Destroyer, turned aside,

And sought the cote of my one ewe lamb;

And I grieve with a grief that knows no calm,

And I've turned my face to the wall for aye.

(Ah, well away).

CINCINNATI, O.

Editorials

All About Immigration

THE big national conference on the subject of immigration, that was held in New York last week at the call of the National Civic Federation, was full of interest.

Delegates represented the several States and Territories, including Hawaii, numerous learned bodies, colleges and universities. Among them were Governors of States, members of the United States Senate and House of Representatives, and not a few gentlemen of more national fame based upon intellectual achievement. In point of quality and representativeness the gathering was unusual.

No attempt had been made by anybody to force thru a cut and dried program. The convention organized itself, framed its own rules of procedure, and drew up its own program at the first session. It showed itself, moreover, possessed of much common sense when, after having imposed a twenty minute time limit upon speeches, it promptly voted down the first motion to extend a speaker's time, and thereafter consistently held to its rule. The result was that the convention turned out to be an excellent object lesson in the possibility of organizing methodical deliberation, getting thru with a good deal of real business, and finishing up on time, all without resort to machine methods.

Naturally, such an opportunity appealed mightily to every crank and windbag from Maine to California, and the program committee received requests from nearly a hundred individuals for permission to address the convention from the platform. From this large number of potential addresses the committee selected just enough to "occupy the time." We do not doubt that the selections made were the best possible; but the speaking of the first two days was disappointing. With the exception of Mr. Brandenburg, the men that talked had very little but rhetoric and platitudes to offer. They were unprepared to make any real contribution to our knowledge, their use of statistics was, to the scientific

mind, appalling, and they didn't get anywhere.

Not so the committee on resolutions, which was remarkably strong, including, as it did, men of such special knowledge and good sense as Prof. Jeremiah W. Jenks, of Cornell, whose experience in numerous Government investigations has peculiarly fitted him for a judicial view; Prof. John R. Commons, of Wisconsin, who knows the labor situation in America better than any other living man, and Dr. Albert Shaw, editor of the *Review of Reviews*, who, as chairman of the committee, brought to bear the broad view and the conciliatory spirit which secured the adoption of pertinent resolutions by practical unanimity in the committee, and afterward by unanimous vote in the convention.

The speaking on the last day, when the special topic of Asiatic immigration came under discussion, was of a far higher character than that of the session devoted to white immigration. It was by men who knew their subject at first hand, and who had definite points to make. As an intellectual effort and as a broad and strong presentation of his case the speech of the Chinaman, Mr. Poon Chew, of San Francisco, was the most noteworthy incident of the convention.

Interests demanding the further restriction of white immigration on economic grounds developed curiously little strength. The resolutions adopted were all in behalf of honesty, humanity, and race vitality. Congress was called upon to provide for examinations at ports of departure and to levy the one hundred dollars fine upon steamship companies—which is collected now whenever it is necessary to deport a diseased passenger—in all cases of deportation, for whatever cause. If this can be done it will put upon the steamship companies much of the responsibility for bringing over persons that must be sent back. An increase of the air space below decks for each steerage passenger to two hundred cubic feet was demanded, also eating space, provided with tables, outside of sleeping quarters. To prevent the mis-

use of naturalization papers a description of the rightful owners, in the papers themselves, similar to that included in passports issued by the State Department, was called for. Exclusion was extended to the feeble-minded. To further a better geographical distribution of immigration Congress was asked to make a larger provision for the landing of immigrants at Southern ports. Commissioner Sargent's crude proposition to establish at Ellis Island State bureaus, to capture immigration for their respective commonwealths, was trimmed down to a suggestion that the States be permitted to maintain at New York information agencies.

On the question of Asiatic immigration the conference, as was to be expected, stood for the general principle of exclusion, but called for a decent treatment of students, professional men and merchants, whom the present law theoretically admits, but who are often subjected to indignity and injustice.

Assuming that the conference fairly reflected the public opinion of all sections of the country, it was made plain that we are not prepared to convert the limitation of white immigration into a phase of industrial protectionism at the behest of the trades unions, or to enter upon a vast experiment of selection for the purpose of improving our population, by excluding the merely ignorant and underfed. Known criminals, imbeciles and feeble-minded persons, and persons likely to become a public charge, we do not intend to admit. On the other hand, the country appears opposed to taking any risk of a great inflow of Asiatics. In the last analysis this opposition, as reflected in the addresses, seems to rest on race prejudice. It expresses a feeling of danger, rather than of any clear demonstration of inexpediency. The position of such men as Mr. Gompers is more than unchristian, it is foolish. We need more labor, not less. Every man who gives labor gives good pay for the money he receives, and adds to the wealth of the country. The Chinese editor, in reply to Mr. Gompers, declared that the Chinese laborers were ready enough to join the unions if they would only be allowed. He said his journal was a white paper edited by yellow men,

while attacking them were yellow papers edited by white men. Why should our millions of white people be afraid of a hundred thousand Chinese. The admission of decent laboring men, whether Chinese, Japanese, Irish, Italians or Hottentots, ought to be welcomed from the side whether of political economy or humanity, and we regret the popular obsession on this subject.

The Nobel Awards

THE separation of Norway and Sweden makes a division in the Nobel Prizes necessary, since the Peace Prize is awarded by the Norwegian Storting, and the literary and scientific prizes by the Swedish Academy. Accordingly, on December 10, the anniversary of the death of the Founder, King Haakon bestowed the one in Christiania at the same time that King Oscar bestowed the others in Stockholm.

The result tends to justify the boast of Kaiser Wilhelm that Germany is the intellectual leader of the nations, for seven out of the thirty persons rewarded are Germans, and perhaps we should also include linguistically, tho not nationally, the Austrian Baroness von Suttner. Next in the roll of honor comes France with six names, and then follow Great Britain

Baroness von Suttner, Who Has Received the Nobel Prize for the Promotion of Peace.

with four, Switzerland and Holland with three each, Russia with two, and Norway, Sweden, Denmark and Spain with one each. No Americans are yet admitted to this contemporary "Hall of Fame," but our readers, at least, cannot complain of this, for when we asked them last March to suggest any Americans whom they thought worthy of such an honor, they were very chary with their nominations.

But it is really improper to consider the awards from the point of view of nationality when the administrators have

Dr. Robert Koch, Who Has Received the Nobel Prize for Medical Discovery.

so grandly carried out the instructions of Alfred Nobel in disregarding national lines. Science is thoroly international, literature of the highest type scarcely less so, while the direct object of the fifth prize is to promote internationalism.

For this last prize President Roosevelt's name has been frequently mentioned during the last few months, both here and in Europe, but it must be remembered that the nominations for these awards had to be made before February 1st, and at that time Mr. Roosevelt was not recognized by the world at large as a peace maker. The awarding of this

Henryk Sienkiewicz, Who Has Received the Nobel Prize for Idealistic Literature.

prize to the Baroness Bertha von Suttner will give general satisfaction, for her novel, "Die Waffen Nieder!" ("Ground Arms!") has been a powerful force for disarmament in Europe, and is popularly supposed to have influenced the Czar to call the Hague Conference. This book, "the 'Uncle Tom's Cabin' of the Peace movement," as it is called, would certainly not entitle her to the other Nobel Prize for a great work in pure literature, and it has not been so popular in the United States as in those countries where its lesson is more needed. She learned to hate war in childhood from the stories of his campaigns told her by her father, the Austrian Field Marshal Count Franz Kinsky. She was born in Prague in 1843, and in 1876 married the Baron von Suttner, whose father, curiously enough, was a great authority on weapons and armor, the author of "The Helmet from Its Origin to the Middle of the Seventeenth Century," and other works of that kind. She lives in Castle Harmansdorf, in lower Austria. Last year she was a delegate to the International Peace Congress at Boston. She is the **second**

woman to receive a Nobel Prize, the first being Madame Curie, for the discovery of radium.

There is an apparent incongruity in the fact that, while one prize is given for a peace novel, another is given to the author who has shed more blood on paper than any other living, Henryk Sienkiewicz. But Sienkiewicz did not write his immortal trilogy for the glorification of war, but, as he says, "for the strengthening of hearts," which, being interpreted, meant the arousing of Polish patriotism for struggle with Russia, in which he is now actively engaged. It is, therefore, unjust for us to have classed him as a Russian, when, as he said at Stockholm, he received the honor not as a personal tribute but as a recognition of Polish literature and a disproof of the assertion that Poland is a nation of the past. Rather let us class Sienkiewicz with Madame Curie, who, by naming her new element polonium, showed that she was loyal to her native land, both citizens of a country which exists in the world of literature and science, altho it has no name on the map. Henryk Sienkiewicz was born in Radom, Poland, in 1846. He came to this country in 1877 to seek his fortune, but did not find it, so returned home and devoted himself to authorship. In 1884 his first great novel, "With Fire and Sword," was published, which was followed at intervals of two years by "The Deluge" and "Pan Michael." These in the translation of Jeremiah Curtin attracted a small but enthusiastic class of readers in the United States, and it was not until his novel of Roman life at the beginning of the Christian era, "Quo Vadis," was published that he became popular. He well deserves the prize, for no other living author has produced work with so much of the epic movement and heroic quality.

The first Nobel Prize for the greatest discovery in physics was awarded in 1901 to Professor Röntgen for the new form of radiation which he modestly called "X-rays." This year the Nobel committee have gone still further back and given the prize for the antecedent discovery of the "Lenard rays." If it is their policy to thus work backward, we may expect them next year to reward Professor William Crookes, who in 1879 discovered the

cathode rays, the grandfather of the Röntgen rays. Professor Crookes found that when a current of electricity passed thru a tube from which the air has been almost completely exhausted, a glow extended from the cathode or negative pole. Such tubes, filled with greenish blue light, can now be seen in shop windows and photograph galleries. These cathode rays were very curious, but they could not be studied easily because they were shut up in a sealed glass tube. It was Professor Lenard who in 1890 found a way to get them out, and for this he now receives the prize of \$40,000. It was very simple. Anybody could have thought of it—only nobody else did. He put a window in the Crookes tube made of the lightest of metals, aluminum, and the cathode rays streamed right thru, like sunlight thru a window pane. These rays, which now they were outside were called Lenard rays, in honor of the man who had liberated them, behaved in the most remarkable manner. They were bent by a magnet, they made all gases good conductors of electricity, and they acted on a photographic plate even when it was covered. We now know that both the cathode and the Lenard rays consist of a stream of corpuscles of negative electricity, a thousand times smaller than the smallest atom, that they are shot out from the cathode at a velocity of some 50,000 miles a second, and that when they strike glass or some other substance they produce the Röntgen rays, by the aid of which most of us have seen the bones in our hand and how little money we had in our purse. Prof. Philipp von Lenard was born June 7, 1862, and studied at Heidelberg and Berlin, and taught at Bonn, Breslau, Heidelberg and Kiel.

The Nobel chemical prize goes to Prof. Adolf von Baeyer, of Munich, for his discoveries in theoretical and practical chemistry. He was born in 1835 at Berlin, the son of a Prussian general and mathematician. By his "strain theory" he explained what had long puzzled chemists, the paradox that the more bonds or valencies there are connecting two carbon atoms, the more unstable is the compound. From his laboratory have come thousands of new aniline dyes of more colors than there are in the rainbow, among the best known of

which are cerulein, which is green instead of blue; eosine, the color of the dawn, and indigo. By this one discovery of how to make indigo Professor Baeyer has given Germany a new industry worth millions of dollars a year.

Prof. Robert Koch, of Berlin, who receives the medical prize, is already well known to the public as the discoverer of tuberculin. He was born December 11th, 1843, at Klausthal, and educated at Göttingen. His first work was in the improvement of microscopic technique, such as new methods of staining mounts, which enabled him in 1882 to discover the tuberculosis and the following year the cholera bacillus. Besides these he investigated the causes of the rinderpest, the Texas fever and malaria, and has been foremost in the development of the new science of medicine.

The Nobel Committee of the Swedish Academy at Stockholm are now advertising for sealed proposals, accompanied by published books, for the prize to be awarded next year "for the most distinguished work in the field of literature of an idealistic tendency." National academies of literature and professors of literature, esthetics or history in universities are entitled to make nominations, which must be received before February 1st.

"A Stimulating Challenge."

DR. EDWARD EVERETT HALE, the Hon. John D. Long and Dr. Samuel A. Eliot, have signed a circular letter on the relation of the Unitarians to the late Inter-Church Conference on Federation, to which Conference no invitation was sent to the Unitarian denomination, of which they are members. It will be remembered—for it is the kind of a matter that is sensational enough to attract attention—that the officers of the Unitarian National Conference selected the three gentlemen named above, and asked that they be received as delegates from the Unitarian body; but the Committee in charge of calling the Conference declined to take the responsibility of adding other denominations to the list of those who had received and accepted invitations. In their circular letter these gentlemen say:

"The Unitarian churches of America, and all who desire to promote pure Christianity in our land, should be glad to be confronted by a stimulating challenge."

It is hardly true that they are confronted by any challenge. No challenge was sent them or has been received by them. They sent a challenge to the Committee in charge, and meant it as a challenge. There was to be a Conference to which certain denominations were invited, some thirty out of four times as many; the Unitarians were among the one hundred not invited. They felt that they ought to have been invited, but they suspected that the omission of their body was intentional. So they wrote a challenging letter to the Committee, mentioning that they suspected they might not be welcome, but urging that they ought to have been included, and selecting the names of the most distinguished Christian men in their body as delegates. Because they meant it as a challenge, "faith, they prented it." It made the disturbance they meant it should, and it got the answer they expected.

They further say:

"Our characters were not impeached, but our beliefs were condemned as heretical. In spite of the protest of a number of the most distinguished Christian scholars and leaders of other denominations than our own, this exclusion has now been confirmed by the action of the Conference itself."

This is rather surprising. These three excellent Christian gentlemen were not excluded. Any one knows that Dr. Hale, author of "In His Name," and Chautauqua lecturer and teacher, would be welcome personally in any Christian circle. Dr. Eliot is also a highly honored Christian teacher, and ex-Governor Long's praise is in the churches as well as in civil life. It was not these men, but the Unitarian denomination to which they belong, and of which they are the particular Christian glory, that was not invited, and which then, thru its officers, asked an invitation.

Not only did the committee in charge not exclude the Unitarians, when it declined to invite them and a hundred other bodies, but the Conference when it met did not exclude either these three gentlemen or their denomination. Indeed, the question came before them only indirectly in the discussion of the Plan of Feder-

ation. Amendments intended to commit the coming Federal Council to the admission of Unitarians were rejected, but it will be free to the Federal Council when it meets in 1908 to invite the Unitarians if it chooses. Not a word in the Plan of Federation, says *The Christian Register*, excludes them, or any other Christian body. Under that plan the Council will be at liberty to invite the Unitarians, or the Catholics, or the Dowie Church, or the Church of the Latter Day Saints, or any other body which can claim to be Christian. It could hardly admit the Jews, or the Buddhists, or the Ethical Culturists, no matter how good they may be. The circular letter signed by the three gentlemen says that "righteousness of life and spiritual efficiency" should be the test of Christian discipleship, and so of admission to this federation. Doubtless Jews, as an organization, meet these conditions, but this proposed federation evidently had in mind that the profession of "Christian discipleship" itself is to be added to "righteousness of life and spiritual efficiency"; and this the Jews do not add, and it probably was doubtful to the denominations represented whether Unitarianism adds it, sure as we all are that Dr. Hale and Dr. Eliot do add it.

Now, the Unitarian body has two wings, one of which moves toward Christ as Master and Lord, while the other moves from him. Which is dominant we do not know, but those who move toward or reach pure Deism have the louder voices. If really the Unitarians desire to join the Federal Council, when it meets, it will be an evidence that it is their desire to be one with the Christian world, and not to be chiefly a dissenting and protesting body, and we sincerely hope they will then be admitted.

Buying Books for Children

WE are not writing classics nowadays for children: we are doing in a milder form what novelists are doing in the grown-up world. The difference between a modern novel and a boy's book of adventure is only one of degree and not of kind. But there are certain tendencies that might be noted by every shopper to the advantage of each.

However much we may look askance

at the austerity of Puritan New England and its staid primers and catechisms of childhood, the book of long ago was given with a purpose; parents were sure of the dose. Today, we may say that the grip of education is assuming similar rights. One can hardly find a book where the imagination is not shackled with fact, where the story is but a thread to carry an historical character or the spirit of an historical age. It is all a sincere effort—but at best an effort. Scott's story was one with his history—but today the useful element in our juvenile books seems in most cases to be an injection prescribed by some board or some school system.

Peculiarly, the year's books, even as they are one tone in their excellence, seem to lack very much of an age-distinction. With all the theories regarding how a story should be told to a seven-year old, and to a twelve-year old, the volumes do not adapt themselves to such a classification. The buyer must say: Is it to be read *by* the child? Consider his schooling. Is it to be read *to* the child? Consider his understanding. For a young person is nearly always far older than his reading ability.

In another respect the Christmas books are sadly deficient; no distinctive Yuletide spirit, no breathless expectancy greet us. Santa Claus is a legendary figure, gone these ten years; Donner and Blitzen are become as naught beside automobiles. Living in an age of mechanical marvel, we have ceased to marvel; the element of mystery is peculiarly and guardedly used.

Yet this much the shopper may rest assured of: among the many books that have come to our table, the same care is evident to develop the noblest and healthiest part of a child's nature. But these very angles of vision which the present day writers of juvenile books exhibit prove to be their own undoing. The joy of story telling for its own sake is held in abeyance.

Two things are emphasized now. That youthful reader was correct when he complained of the sameness of his story books. So, too, was that psychologist a humanist when he declared that a child's taste for reading flourishes above method and exact science.

Therefore it is essential to consider your book list before December 24. Is there not excitement in the very drawing out from a child his heart's desire? Book buying should not be a lottery, nor should a child's one book upon the Christmas tree represent a grown-up's afterthought.

We take up a good deal of space in this issue with a comparative appraisal of some of the illustrated and juvenile books which appear in such large numbers at this season of the year. These book lists and composite reviews cannot be made very interesting the best we can do, but we hope they will be useful as a clue to the literary labyrinth. We had 212 new juvenile books sent to us by the publishers this year. Very few of these were deserving of condemnation, most of them were fairly well written and illustrated, and would amuse, interest or instruct the various classes of young people for whom they were intended. It was impossible to draw the line anywhere without excluding some books as worthy as some included, but we finally cut the list down to 120 titles, from which, we hope, parents and friends will be able to satisfy the most voracious of juvenile bookworms.

Dealing With Indians Individually

MR. LEUPP is the first Commissioner of Indian Affairs, we believe, since Grant made his first appointment, who was chosen because he was an expert on the subject. For this reason his first report may properly attract interest, and may indicate a new and better policy. The chief rule he lays down is, that we must deal with the Indian individually. This is the fruit, he says, of "twenty years' study of the Indian face to face and in his own home." The Indian's individuality must be respected, his avocations, his music, his art, his myths and the differences between him and those of other races. He must be measured by his own standards in his primitive surroundings; his racial characteristics of independence, endurance, grit, strong family affection and faith to a pledge must be preserved, and the effort must be not to transform him but to improve him, and to adapt him to

his changed and still changing environment.

The Indian service, with its eight million dollars of appropriations and fourteen millions of expenditures in a single year will cease only as the Indian tribe disintegrates and its merits are treated separately. It is as necessary to divide tribal funds as tribal lands into individual holdings, and it is hoped that the Lacey bill, for distributing the money held in common, will soon take its place beside the Dawes bill, which allotted the landed estate held in common. Cut the leading strings which have held the Indian an "economic nurseling" to the United States treasury, even tho his liberty will bring him into new danger and even disaster; and begin the work at once—a band, a family, or only one person, as the case may be, at a time.

As steps in this direction, the moneys which now come to Indians from sale and lease of allotted lands, mineral leases, cutting of timber, etc., are deposited to their personal credit and subject to their personal check (when countersigned by the agent) in designated banks, which are required to give bonds for the safety of the deposits. An employment agent is bringing together the waiting job and the Indian laborer, and to those who are employed by the Government as day laborers wages are now paid weekly instead of once a month. This lengthens the hours of the bookkeeper, but frees the Indian from the slavery of debt for daily bread.

In the Government schools Commissioner Leupp would confine the teaching pretty closely to the three R's, plus a thoro, practical training in farming and farm tinkering, all domestic affairs and the use of tools.

As to the contract schools, which last year enrolled nearly 1,000 Indian children, a history is given of the decisions of the Department of Justice, which declared that there could legally be paid over to sectarian schools "moneys belonging to the Indians themselves and not to the public." Hereafter, however, it is the Indian who sends the child to the sectarian school, and not the tribe in general, who must pay the bills. That is, he must agree in writing that the cost of the child's schooling shall be deducted from his own personal *pro rata* share in

the tribal fund out of which the school contract is to be paid. This is more individualism.

Tuberculosis and whiskey are the scourge of the red man. For the one the establishment of a sanitarium in the Southwest is recommended, both "for the protection of healthy children from perilous contact with those who have been stricken," and to "insure to the unfortunates the special care and the chance for recuperation which is their due."

The whiskey problem has become tenfold more difficult since the decision of the United States Supreme Court last April, in what is known as the "Heff case," that it is not illegal to sell liquor to an allotted Indian in a State when he is off a reservation. In a Territory or on a reservation the laws against selling liquor to Indians are still in force. It now rests with the States to protect themselves from the plague spots of besotted Indian communities. It is also harder than ever to keep liquor out of the reach of unallotted Indians, and the oft repeated request is renewed that Congress make an appropriation to defray the expense of procuring evidence and prosecuting the liquor sellers.

The new condition and status of the Indian in the Indian Territory is a separate and difficult question, complicated by the proposal of Statehood with Oklahoma, and is treated at length. It is pleasant to read a report on this subject by one who can speak positively and with knowledge.

A Warm Winter?

It is a mistake that we cannot greatly influence the weather, more especially in winter than in summer. We can modify the cold to the extent of a difference of two or three degrees from one side of a road to the other. While on the one side a frost sweeps over the gardens, the gardens only a few rods away escape the chill—by only a degree, perhaps. This not only makes the difference from comfort to chilliness, but allows a sort of horticulture which, two hundred rods away, is forbidden. Fruit growers prefer a southeast slope for hardy fruits, but for peaches, and some varieties of pears, a cold northern slope is better, as this

prevents thawing out in winter. Successive thawing and freezing make hardy fruits very susceptible, and destroy what one continuous freeze cannot. The secret, however, of a warm winter does not rest altogether with the exposure, but with provisions quite within the command of any one; first of all, with windbreaks and protective trees.

It is true, not only in a general way, that forests modify climatic conditions, but in a very small way a stout hedge of arbor vitæ or hemlock does the same thing. If these were generally planted they would become an economic factor of the most important sort. Each farm and homestead would then loan protection to every other. Nature attends to this by promptly sowing seeds of trees and bushes along every fence row, and she thickens up the frontage of every forest, so that behind it is comfort even in the bleakest of winds.

The very first thing to be done with our new country place is to study the exposure. Where does the wind most easily strike, and where does it sweep most roughly against orchards or garden? Let Nature have a free hand at once and plant her windbreaks. Our duty is to supplement Nature. In preference to her mixture of wild cherries and beech and evergreens, we may prefer a row of lindens fronted with shrubbery; or a wall of crab apples fronted with mountain ash; or mountain ash fronted with bush honeysuckle; or a close row of erect-growing Buffum pears. There are advantages either way, for Nature's artless selection cannot be surpassed for beauty, while our own may combine the beauty of arrangement with the utility of fruit. Nothing more solid and impenetrable can be had than Norway spruces, or hemlocks, or pines; planted close enough to interlock when ten years old. These windbreaks need never include the thorny and disagreeable and they need never involve the labor of shearing.

Warming up winter is, however, not limited to protective planting. Our comfort depends a good deal on what we see, as well as what we feel. Any one going into the country to live should plant his place for winter as well as for summer; that is, he should provide trees and

shrubs that give a summer look in January. The evergreens, almost all of them, are cheering, over the snow, with their perpetual green; but quite as valuable are some of the shrubs that carry red seeds or red bark all winter. One of the dogwoods changes its green bark for an intense crimson as the cold weather comes on, and sits on the snow-covered lawn, like a day of June. Eonymus is cheering about Thanksgiving time; but the glow of the highbush cranberry and the New England barberries extends into April. If you have these plentifully planted, so that you can look out upon masses of them in midwinter, the snow loses much of its chilliness. Into a natural landscape you will find these red berries are introduced with perspicuousness—and for a good reason. The berries are good for the birds that ought to be encouraged to spend their winters with us, and the rest of them serve those birds that get here too early in the spring—this in addition to enlivening the winter landscape. One may almost warm his hands in a big blazing barberry bush; at any rate, he may warm his soul, and kindle a kindly memory.

In another way we may make winter warm, at least rouse a warm sensation, by painting our houses with warmer colors. What can be more delightful than the old-fashioned red farmhouse of New England—seen at a distance, while our train plows thru the snowbanks? Why ever paint a country house white, as if there were not white enough already during six months of the year? And inside the house much may be done in the way of warming the tone. At least one room should be papered or painted a good generous red; not a flaring nerve-rasping red, but something warm and warming. There is a red that irritates, provokes, and disturbs; there is another red that gives a sensation of rest and peace. It is like the hues that Nature paints over the autumn trees. Provide also, of course, for soul-shine. A country house should never be thought of without a family room, where there can be daily gatherings of all. Such a room used to be the kitchen, but that is over with; for the kitchen, instead of being a gathering place for the family, is the

cage where we keep our alien help. The family room should be free from ornament, be provided with music, and possibly flowers. It is not the place for books and reading. It is the place for social games.

Let in the sunshine is a good rule at all seasons. Every country house should be built with this always in view, not to shut out the sun from a single room—if possible. Blinds and curtains suggest shadows, secrets and shade; they should be dispensed with just as far as possible. The sun kills germs, and sweetens thoughts, while it invigorates bodies. A room with a sunny window is as good as a family doctor. A sun-bath window is an indulgence that costs nothing but pays a fine dividend.

With all this, we should have at least one good, big fireplace in every house. This old-fashioned rallying place for winter should never have been given up. Coal furnaces are no compensation. The heat of the blazing logs was enlivening, while the flue was a ventilator, and the companionship incomparable. The language of the beech log and maple chips was almost human. In some things we have gone ahead too fast. To go back to the open fireplace will be a decided gain—not a petty grate, but a large, hearty place, where the fire may snap and crackle and glow and roar, as it happens to feel. Those were indeed days of real warmth, while the whole family gathered about the burning fuel, cut from the farm itself, and never dependent upon a strike.

And yet you have still one more resource for warming winter; to gather about you the birds. This can be done to an extent not appreciated by the majority of Northern people. No doubt the wise creatures of the air will still make their annual pilgrimages to the South in large numbers; but, if we will only provide for them abundance of food, they will flit about our windows and porches, and even come indoors during the winter months. A full dozen varieties of our feathered friends do not mind the cold weather, if they can only have sufficient to eat. Corn meal and meat are all that they ask for. But you will bear in mind that many of them dine heartily on the seeds of the shrubs

and trees that we plant because of their beautiful colors, the barberry and the highbush cranberry more particularly.

So it is we may make our winters far more cheery, and may warm the worst of climates. It does not depend on corn shucks and goose-bones whether the winter shall be severe; but it does depend very largely on our prevision and provision.

Amundsen's Feat

For the first time in the history of navigation a little vessel has sailed, by the aid of steam, along the polar coast of North America and made the Northwest Passage from the Atlantic to the Pacific. The passage eastward along the Siberian coast had already been made. Captain Amundsen, with his "Gjoa," has achieved what Franklin sought and others after him, and has won eternal fame. To be sure, there is no practical good gained for commerce; and, indeed, it was not the Northwest Passage that he was after, but the scientific investigation of the magnetic pole. There are two northern magnetic poles, and they are movable. Ross found in 1831 that at Boothia Felix the needle pointed straight down, but Amundsen finds that this pole has shifted to King William Land, a little southwest of Boothia; and from there he was able to move farther west till he reached the Mackenzie River and added the Northwest Passage to his other achievements. Also the study of the magnetic pole is rather a matter of pure science than of practical importance. Its position depends on the eastward and westward magnetic currents, which themselves depend mainly or entirely on the sun's relation to day and night, summer and winter. On this matter there is yet much to be learned, and Amundsen's is a great feat.

The celebration of Mr. Mark Twain Clemens's seventieth birthday follows hard after that of Mr. Garrison's one hundredth birthday. Of Mr. Garrison Colonel Higginson and Professor DuBois have spoken to our readers. Mr. Garrison was a remarkable man, a voice crying in the wilderness, and with no language but a

cry. His influence was that of the denouncing prophet, not of the constructive statesman, and has been much exaggerated by his admiring friends. The great work of emancipation was done by those who were not "Comeouters," but who remained in the Church and the State, who voted and who fought. Mr. Garrison was a writer of no mean literary power, developed by his intense emphasis of belief. A very different man is Mr. Clemens, whose main work has been to amuse the people. And yet we have found critics who believe that he ranks with the very chief of our authors, and that his "Huckleberry Finn" deserves to rank, as a work of art, with the best of Washington Irving. While we can hardly accept this view, and while we do not regard the very best of broad, exaggerated humor as a superior style of literature, one must admit that Mark Twain's wit, by its brilliancy and geniality and healthfulness, has added honor to our American literature and has deserved the immense popularity it has secured in all lands.

The New British Cabinet

It was not the bravest thing for Mr. Balfour to put on the Liberals the responsibility of dissolving Parliament and the appeal to the country, but it may have been fine political tactics. So Sir Henry Campbell-Bannerman takes office with a hostile House of Commons, and then has to make up the issue for the dissolution and appeal. He will present just one issue, Free Trade, leaving out Irish Home Government, altho the majority of his Cabinet are for this measure also. But on this question Liberals are divided, as Conservatives are on Protection, so that it is clear that the Irish Nationalists will hardly be satisfied. Something they may get, but not all they want. Sir Henry Campbell-Bannerman has got together a remarkably strong Cabinet. John Morley is Secretary for India, and that assures the real interests of India. Herbert J. Gladstone has charge of Home Affairs, and Earl Grey of Foreign Affairs. Asquith is Lord of the Exchequer, and James Bryce Secretary for Ireland, while John Burns is the first Labor man to get, as he deserves, a seat in the Cabinet. The Government

of Mr. Balfour has much to its credit in foreign affairs, and little in home affairs. What we most fear for the new Cabinet is the affairs of diplomacy and the colonies, but whatever its majority may be it will have sharp and merciless critics and very difficult questions to meet. In home affairs it will not make blunders, but the opposition it will meet in the policy of education and the Established Church may result in a short lease of power. Liberal Governments have been brief.

Other Tainted Money

"Tainted money" has broken out in the Socialist organization in this city, and, *olet*, it smells. Mr. Robert Hunter gave \$25 to their treasury, and they took it that he was a sound Socialist. But afterward he espoused the Municipal Ownership League and worked for Mr. Hearst when his brother-in-law, Mr. Stokes, had been put in nomination on that ticket. As soon as they learned that Mr. Hunter was supporting the Hearst ticket they returned him his money, as not clean enough for their use. Now their organ, *The Worker*, is in a hot discussion over the propriety of returning it, and the honesty of Mr. Hunter in leaving them and so tainting his gold. The heated nature of the feeling excited is shown by even so cool a man as Mr. W. J. Ghent, who says of Mr. Hunter:

"He had an undisputed right to see things differently in a critical time and switch over to Hearst. It was a piece of arrant folly, grossly inconsistent with his utterances, and he will have the good sense in time to repent it and make amends. If he does not I shall have less respect for his integrity and his intellect than I now have."

Evidently the sectarianism of Socialism is likely to become more intense than that of religious denominations.

Another Union Movement

Now that Church union is so much in the air, it will be interesting to note the position of the Free Baptists. They have differed from the regular Baptists in that their theology is Arminian and not Calvinistic, and also in their open communionism. But the regular Baptists have changed wonderfully during the past thirty years. Their close

communion is almost a thing of the past, insensibly melted away, and decrees and free-will are no longer a question of serious debate. Accordingly, their relation to the Free Baptists is very nearly that of the Presbyterians, since their new creed, to the Cumberland Presbyterians. There is very little, if anything, left to keep them apart, except the memory of old protests and conflicts. Even the Baptist practice of refusing to give straight letters of recommendation to their members who wish to join a Free Baptist church is coming to an end, and within a year or two this serious offense has, by action of many of their conferences, been changed. Meanwhile there is a quite general opinion among the Free Baptists that the time is near when there is no longer reason for their existence as a separate denomination, and a strong committee has been appointed to consider where they should go, if they unite. Already, in New Brunswick, the Free Baptists and regular Baptists have united very lately, and they are likely to do the same soon in Nova Scotia; and in this country probably the attraction is in the same direction. But the committee are also conferring with the Disciples and the Congregationalists. With the latter the Free Baptists have had fruitless conferences for twenty years, but the practice by the Congregationalists of infant baptism stands somewhat in the way, as the lingering close communionism of the Baptists is a deterrent in that direction. Probably the spiritual affinity is more with the Congregationalists, but their form of baptism takes them to the great Baptist body. The principle of generous liberty is slow to learn and fully to apply.

Bourke Cockran's Advice

Mr. Bourke Cockran possesses an eloquent flow of silvery sounds, but with them an unusual gift of unconsidered expression, of talking *per capitis tegumentum*. Seldom has he illustrated this errabundancy of his more notably than in an address the other day to a large gathering of Catholics of Chicago, in the presence of Archbishop Farley. His topic was his late visit to the Philippines, and his proposal was that the United States Government should sub-

sidize Catholic missionaries and teachers, and others also. The Government, he said, is bound to spread civilization, and this is the best way. We hardly credit the published report that he would have us take the same course in China. There is not the slightest chance that our Government will subsidize any missionaries of any Church. Yet we are not surprised that Mr. Cockran is ready to turn in the most hopeless direction, now that he must be so disappointed, if not indignant, that the millions paid by our Government for the land owned by three monastic orders was not left in the Philippines for the benefit of the Catholic Church there, but was selfishly taken to Spain and elsewhere, perhaps partly to this country. This was against the will of the Pope and against the understanding with Secretary Taft. Catholics are very sore over it, and well they may be. Now they will be called to give money to build churches in the Philippines, while the exiled orders carry off their millions. This is a strange way either to obey the law of poverty or to build up the Catholic Church there.

To End the Chinese Boycott

The Chinese boycott of American goods is shown to be a most serious injury to our commerce, when the American merchants in China have met the Chinese guilds and accepted, in principle, the recommendations asked as changes in the operation of our exclusion laws. Twelve points are agreed on, and every one of them just; and more would be proper. They do not ask that "laborers" be admitted, but that the term be interpreted by the usage of English dictionaries; that others than "laborers" be freely admitted, on consular and medical certificate, and that those admitted be treated as well as citizens of other lands. Other provisions agreed upon are equally right. It is a shame that we, a so-called Christian people, should have to submit to being taught the laws of justice and hospitality by these yellow men who do not call themselves Christians.

Let it be understood that the United States Government has withdrawn from sale about eighty-six million acres as for-

est reserves, and more will be reserved. That is to be our policy. This land will all remain public land after other lands are sold. Equally the United States will own and manage for the people vast systems of reclamation of waste lands, which will be sold as the irrigation systems are created. Many millions of dollars are going into these systems. And all this adds to the extent of the principles of public ownership. The people will own all this land and this irrigating plant. They will sell the extra timber and fuel and the right to water. Thus we advance, much as we lag behind Europe in postal banks, postal express, postal telegraph and telephone service, municipal gas and trolley service and national railways.

The students of Laval University, in Quebec, were brutes who attacked Sarah Bernhardt and two women and a man, members of her company, with rotten eggs and ice as they were leaving the theatre where they had been playing. While she escaped, her companions were struck and wounded. It is true that she is a Jewess, but that does not justify such an assault, whether in French Canada or in Russia. To be sure, she had in conversation spoken unfavorably in some respects of the people who had criticised her, but even if she had called them a mixed race of French and English, Canadians, Sioux and Iroquois, that does not justify conduct which only proves that those guilty of it are still Iroquois.

A correspondent of the *London Times*, returning to China after seven months' absence, finds a great change in the attitude of the Government and the people, and he grieves. Yet it is, on the whole, an improved attitude, one of more self-respect and firmness. Why should not the Chinese develop patriotism, resist aggression, and demand China for the Chinese? He finds that the victory of Japan has encouraged the Chinese. Naturally. He finds that the American expected concession as to our exclusion laws, following the boycott, has had an unhappy effect. On the contrary, the Chinese resentment is natural and creditable, and it is we that need to take the lesson.

Insurance

Federal Supervision.

It is quite apparent that President Roosevelt has read but one side of the discussion respecting the proposition to centralize the supervisory power over the insurance business. An intellectuality so virile and so well-balanced as his could not easily have dismissed the strong arguments presented by Mr. Vance in his minority report to the American Bar Association; Assistant Attorney-General Nash, of Massachusetts, before the Insurance Commissioners at Bretton Woods, N. H., last September; Senator Bulkeley, the President of the Aetna Life Insurance Company; and other able controversialists. In his message this year the President largely elaborates what he said last year on this subject—multiplying words rather than reasons. He even ignores the Supreme Court decisions, repeatedly referring to insurance as a part of our interstate and foreign commerce.

He insists that the business of "the great insurance companies" has grown so far beyond the boundaries of the States which created them "as to preclude strict enforcement of supervision and regulation by the parent States," the inadequacy of which, he observes, is conceded. He finds "there is need of a far stricter and more uniform regulation of the vast insurance interests of this country," and believes that we should, in this respect, emulate the examples set us by other nations "by providing adequate national supervision of commercial interests which are clearly national in character."

He recalls the diplomatic communications which were made under the administrations of Presidents Cleveland, Harrison and McKinley "to prevent unjust discrimination by foreign countries against American insurance companies"—alluding to the efforts of the Mutual Life and Equitable to force a change in the German insurance regulations—and cites them as an illustration of "the propriety of the Congress recognizing the national character of insurance." The following paragraph from the message bears an interesting resemblance

to Question 2 in the inquiry made by Senator Dryden, printed in THE INDEPENDENT November 9 last:

"I repeat my previous recommendation that the Congress should also consider whether the Federal Government has any power or owes any duty with respect to domestic transactions in insurance of an interstate character."

Senator Dryden wanted to know if insurance was not national in character "and properly entitled to the solicitude and care" of the Government.

The contention that national regulation is essential because State supervision is inadequate or ineffective is without merit. The weaknesses and defects characteristic of the supervision exercised by the National Government over banks, resulting in the periodical scandals like that in which the Central National of Allegheny, Pa., was but recently involved, are not calculated to reassure us that anything better in the way of protection can be devised for application to the insurance business. State supervision has proven to be inadequate and inefficient only when its administrators have been corrupted in greater or lesser degree. The present system is productive of entirely satisfactory results if the laws under which it operates are fairly and honestly enforced. That they have not been in the State of New York is already clearly made manifest before the Armstrong Committee, which, as yet, has not examined one individual connected with the Insurance Department. When an investigation of that branch of the State Government is made the public will begin to appreciate how completely it has worked in harmony with the able and unscrupulous men who, as the President observes, "exploit the companies in their own interest at the expense of the policyholders." If the President will take the trouble to investigate the matter he will find that he is in error when he says "there has been for many years a widespread demand for Federal supervision." He will learn that only a small contingent of life insurance managers desire it. The policyholders want the present system improved and administered by incorruptible officials.

Financial

Annual Treasury Reports

Not much in the way of recommendations for new legislation is to be found in the Government's annual financial reports. Secretary Shaw would impart elasticity to the currency when rates for loans on call at New York are high, as they have been for some weeks past, by permitting the national banks to issue additional notes, guaranteed by the Government, but not secured by bonds, up to 50 per cent. of their bond secured currency. This additional quantity would be subject to a tax of 5 or 6 per cent. until redeemed by the deposit of a like amount in the Treasury. The following passage might well have been omitted:

"By eliminating the words 'secured by United States bonds deposited with the Treasurer of the United States' from national bank-notes now authorized, the additional currency would be identical in form with that based upon a deposit of bonds, and its presence would not alarm, for it would not be known."

The plan proposed is substantially the one used by the Imperial Bank of Germany. We see no reason why it should not be tested here, but we are by no means confident that the result would meet Mr. Shaw's expectation. Our banks might not care to take the risk of some delay in availing themselves of such a privilege to meet abnormal conditions that might continue for only a very short time. We are glad to see that Comptroller Ridgely, in his report, asks for the repeal of the law which limits the retirement of national bank circulation to \$3,000,000 in any month. Freedom to retire would promote a natural increase of issues when it is needed, and this change would really give some measure of elasticity. Mr. Shaw repeats his recommendation of last year that the large Trust Companies be invited by law to accept the privilege of Federal incorporation, with Federal supervision. He suggests that the Government ought to establish and maintain at Washington a savings bank for the exclusive use of Department employees.

Mr. Ridgely says he is satisfied that a national bank could safely be permitted now to loan to one customer one-tenth of its unimpaired capital and surplus, instead of only one-tenth of its capital. It

seems to us that such a relaxation of restrictions imposed some forty years ago ought to take place. It is an open secret that these restrictions are frequently disregarded, because, under certain conditions, they are unreasonable. The Comptroller's report shows that there are now in the country 4,541 school savings banks, with 191,009 depositors, and that the balance due to these depositors is \$616,940. Of the world's stock of money, \$5,987,100,000 is gold, and we have \$1,348,200,000 of this, or more than is held in any other country, France coming next, with \$926,400,000. In holdings of silver, also, we lead all other countries, having \$685,100,000 out of a total of \$3,130,400,000.

ACCORDING to Dun's index number, intended to show the cost of living, commodity prices on December 1st reached the highest level known in twenty-two years.

.... Bank clearings in November exceeded by $1\frac{1}{2}$ per cent. the highest monthly total ever before reported.

.... The Lackawanna Steel Company recently sold 6,000 tons of steel rails for delivery at Melbourne, Australia, at about \$27.50, the company paying \$6 per ton freight charges from the mill. For American buyers the price at the mill is \$28.

.... In announcing the dividend of the American Can Company (preferred) last week, we inadvertently gave the date of the closing of the books as the date when the dividend is payable. The books close December 16th, and the dividend of $1\frac{1}{4}$ per cent. is payable January 1st.

.... Dividends announced:

Am. Car & Foundry Co. (Preferred), $1\frac{3}{4}$ per cent., payable December 11th.

Amer. Can Co. (Preferred), $1\frac{1}{4}$ per cent., payable January 1st.

Chicago Great Western R'way (Debenture), \$2.00 per share, payable January 15th.

Nat'l Sugar Refining Co. (Preferred), $1\frac{1}{2}$ per cent., payable January 2d.

Southern Pacific Co. (Preferred), $3\frac{1}{2}$ per cent., payable January 15th.

New York Co. Nat'l Bank, 50 per cent., payable January 1st.

Plaza Bank, 10 per cent., payable January 2d.

Manhattan R'way Co. (quarterly), $1\frac{3}{4}$ per cent., payable January 2d.

The Independent

VOL. LIX. NEW YORK, THURSDAY, DECEMBER 21, 1905. No. 2977.

Survey of the World

Appropriation for the Canal

The emergency appropriation bill, carrying \$11,000,000 for Panama Canal expenses, was passed in the Senate on the 16th, after much debate, in which the management of canal affairs was sharply attacked by several Democrats. They complained that the salaries paid to the chief officers were too high. Secretary Taft, Chairman Shonts and Secretary Bishop had appeared before the committee and been heard at length. Mr. Bishop explained that in addition to the work of keeping the minutes and preparing reports he gave news to the newspaper correspondents who asked for it, and sometimes prepared statements for their use. He also had supplied much material to persons desiring to use it in articles for magazines and in lectures. Reference to this testimony was made in the debate by Senators, who were unwilling that, as they said, a "press agent" should be employed. Mr. Hale said all the members of the committee thought that this part of the secretary's work should be discontinued. He promised that Mr. Bishop should not be required to do any more such work. Because of this promise Mr. Culberson withdrew an amendment providing that no part of the money appropriated should be paid for such service. Reference was also made to Mr. Bishop's testimony concerning a proposition made to him before he became secretary. He said to the committee that a combination of hostile interests, including the Nicaragua route, the Darien route, the Tehuantepec route, and, so far as he could make out, certain railway interests, had offered to pay him any salary he wished if he would take charge of a pub-

lication bureau in the interest of their opposition to a canal on the Panama route:

"I said: 'What is your object?' They said it was to 'create in Congress the impression that the canal will never be built at Panama. We do not expect,' they said, 'to defeat it, but we expect to delay it. That is all the object we have. We want to get such confusion in the mind of Congress about the possibility of building that canal at Panama that they will withhold appropriations.'"

It appears that Chairman Shonts is still President of the Toledo, St. Louis and Western Railroad Company, but it is explained that he gives all his time to the canal. Mr. Gallinger said his salary was too high. This was Mr. Bacon's opinion about the salary of Chief Engineer Stevens. Mr. Tillman asserted that the high salaries were graft of the worst kind. He also, while introducing a bill concerning railway rates, remarked that he didn't believe "we should ever get anywhere in this matter, so long as the President of the United States is willing to whitewash members of his Cabinet, as he did Paul Morton." Mr. Culberson turned aside for a moment from the Canal question to consider the New York life insurance companies. "I look upon the men who are managing these affairs," said he, "as the greatest aggregation of thieves and perjurers that this age of graft has produced." An amendment proposed by Mr. Bacon, and adopted, directs the Secretary of the Treasury to transmit to Congress quarterly a list of estimates of salaries and expenses to be paid to all officers and employees (laborers excepted) connected with the Canal Commission. In his testimony before the Committee, Secretary Taft said that 17,000 men were now employed on the

canal route, 4,000 of them in sanitary work and 13,000 in laying tracks, erecting buildings, making machinery and preparing equipment for the work of excavation.—Colonel Gorgas, chief sanitary officer of the Zone, in his report for October, says that altho the month was wet and hot, and all the conditions were favorable for yellow fever, there was only one case of the disease among the employees, 4,000 of whom were not immune. Health conditions will be further improved when the sanitary work is completed, but he thinks the sanitary problem is already solved, because it has been shown that a large force of laborers can work in the Zone without suffering from the fever, and that the general health of the same force can be as fully maintained as it could be if they were digging a canal in a healthful part of the United States.

Pursuit of Rebaters

In obedience to a letter of instructions from Attorney-General Moody, the District Attorneys at all the prominent railroad centers have begun a campaign against rebaters. This letter, dated on the 8th inst., directed them to search diligently for information upon which indictments could be based, and, when the evidence was sufficient, to procure the indictment of both the shipper and the railroad company, or its agent. The most interesting and significant part of the instructions is that which suggests that whenever the evidence warrants such action the attorneys should obtain indictments for conspiracy, instead of indictments for violation of the Elkins Act, because the only punishment provided by that act is a fine. The Supreme Court, Mr. Moody points out, has held that conspiracy to commit a crime, punishable only by a fine, may be punished by imprisonment. If an Attorney procures a conviction for conspiracy he is directed to ask the court to impose the penalty of imprisonment. On the 13th, in Philadelphia, a number of indictments were found, the defendants being the Great Northern Railroad Company, the Mutual Transit Company, their Eastern agents, and four members of the firm of R. D. Wood & Co. The rebates in question were paid in connection with shipments of iron pipe and other mer-

chandise to Manitoba. Other railway companies in the East were involved, but they avoided indictments by giving information. At a banquet given in his honor on the following evening, President James J. Hill, of the Great Northern, said that his company, like others, had been forced by large shippers to yield to the terms imposed by them in order to secure traffic. On the 13th, in Chicago, the Chicago & Alton Railroad Company, with two of its officers, was indicted for giving rebates to one of the great beef companies, the evidence having been furnished by the beef company's traffic manager. Two days later, in Kansas City, fourteen indictments were found against the Burlington, Alton, and St. Paul railroad companies, their agents, and several shippers. Here again the beef companies are involved, and it is noticeable that five of the men indicted are charged with conspiracy, for which the punishment may be imprisonment. The rebates to which these cases relate were given in July last.

Labor Questions

The American Woolen Company decided on the 12th to increase the wages of its 30,000 employees by 10 per cent. on January 1st. This means an addition of about \$1,000,000 per annum to the employees' receipts. Two or three days later several prominent independent manufacturers of woolen goods took similar action. Therefore the increase of 10 per cent. will be made in substantially all of the New England woolen mills.—As the associated employing printers of New York, the Typothetæ determined some time ago to oppose the Typographical Union's demand for an eight-hour day after January 1st, it is expected that a strike will begin on that date. In anticipation of it the associated employers are training one hundred young men and women in a school for the work of operating type-setting machines, and they expect to have two hundred of these pupils ready for service at the end of the year. They announce that the publishers of the leading monthly magazines have had the type set for their issues until March or April next. Notice is given by them that they will gladly retain union men who

are willing to accept a nine-hour day and the conditions of an "open shop." There are no indications that the union will recede from the position it has taken.—At last week's convention of the union coal miners of the anthracite districts a committee of union officers, President John Mitchell included, was instructed to confer with the operators as to a formal agreement concerning the terms of employment after April 1st. If such a conference is held it is expected that the committee will ask for recognition of the union, an eight-hour day, and an increase of wages. It is said, however, that the operators will decline to confer with the committee, but will offer in March, by posted notices, to renew the present agreement for a term of years, each company dealing exclusively with its own employees.

The New York Election

Last week, Wednesday, the Court of Appeals handed down a decision reversing the lower courts in the Hearst mayoralty litigation, and declaring that the ballot boxes could not be opened and the votes recounted by order of court. Four members of the court concurred with Judge Gray in the prevailing opinion, while Judges Bartlett and Vann dissented. The nub of Judge Gray's decision seems to be:

"That the courts may enforce provisions of the law and compel obedience to its commands may be true, but I do not believe that the Legislature intended that a Court, or a Judge, should sit in review of the ministerial work of the election officers, and I do not find any provision of this law that goes so far."

In the dissenting opinion Judges Bartlett and Vann say:

"If it is to be the settled construction of the election law that the ballots locked and sealed in the boxes for six months after an election cannot be recounted save in an action of *quo warranto*, which may drag for years thru the courts, a new election law cannot be too soon drafted and enacted."

Immediately upon the news of this decision the attorneys for Mr. Hearst announced that they would fight the case to the very end. They expect to introduce *quo warranto* proceedings after Mr. McClellan receives on the first of the year the certification of his election, and to introduce a bill into the Legislature which

will cause the ballot boxes to be opened and recanvassed. Mr. Ivins, the defeated Republican candidate for Mayor and now counsel for Mr. Hearst, says the ruling of the court simply means

"that the good of society demands that an unelected person should be seated provided the inspectors certify his election, rather than there should be a temporary vacancy in the office."

In the meantime the criminal end of the prosecution of the election frauds is being pushed vigorously, and so important a person as ex-Assemblyman Cahill has been convicted of perjury in connection with certain cases of fraudulent registration and sentenced to serve two years in Sing Sing. The Municipal Ownership League has changed itself into the New York city branch of the Independence League, which is a newly incorporated State party. It is said that Mr. Hearst will be the first president of the league.

—Other political topics in this city of interest are the resignation of Mr. R. Fulton Cutting from the chairmanship of the Citizens' Union. Mr. Cutting has long desired to relinquish his arduous duties at the head of the Union, but he had been prevailed upon to retain his office until the present time. Even now the City Committee of the Union would not accept his resignation, feeling that no one could possibly fill Mr. Cutting's place, and Mr. Cutting has accordingly withheld his resignation for further consideration. The new January Special Grand Jury expects to make a thoro investigation of the election system of this city with a view to suggesting reform, and already various non-official committees in the city for ballot reform are getting together and preparing to introduce a bill into the Legislature for the establishment of a ballot law founded on the Massachusetts model.

The Isle of Pines

Edward C. Ryan, who asserts that he is a Delegate to Congress from the Isle of Pines, has arrived in Washington and has sought there the aid of members who oppose the pending treaty of cession. Mr. Raynard, president of the association of Americans on the Isle of Pines, who recently received from Secretary Root a letter defining our Government's attitude

toward the movement for an American Territorial Government on the island, has forwarded to the Secretary a long argument in support of the American settlers' claims, and has also given to the public the following statement:

"The last mail from the United States brought additional guarantees of \$40,000 in cash from men, and all the ammunition needed to defend our rights and uphold the American flag in this isle. This makes over \$200,000 in cash, 6,000 men, and all the munitions needed should we elect to use force in maintaining the rights of Americans on American territory."

When this was shown to the Cuban Secretary of the Interior, he remarked that his Government would pay no attention to it, and that the United States doubtless could be depended upon to prevent the embarkation of men and munitions of war for the island. The Mayor of Nueva Gerona, which is the principal town on the island, has complained to the courts that at a recent meeting of the American residents an attempt was made to incite those present to overthrow the local Government.

The Philippine Islands

Opponents of the Payne bill for a reduction of the tariff duties on imports from the Philippines have been heard by the House Ways and Means Committee. Objection is made chiefly by representatives of the domestic beet sugar industry, who assert that sixty Republican members of the House are in sympathy with them. The Administration opposes the pending amendment, which provides for the reciprocal free admission at Philippine ports of all products from the States, except sugar and tobacco, because this removal of the Philippine duties would seriously reduce the revenue of the islands.—Bids were opened on the 15th for the railway concessions to be granted by the Philippine Government. Speyer & Co., of New York, offered to construct about 425 miles of road in Luzon without a guarantee of bonds. This offer was made in connection with the existing railway company, which owns and operates the only road in the islands, the line from Manila northward to Dagupan, with its branches, in all about 200 miles. Morris McMicken and others, of Seattle, offered to build 100 miles of road in southern

Luzon, from Pasacao to Legaspi, under a four per cent. guarantee for thirty years on ninety-five per cent. of the cost. This line was included in Speyer & Co.'s offer. J. G. White & Co. and two other firms, with whom are associated Cornelius Vanderbilt, R. T. Wilson & Co. and the International Banking Corporation, offered to build 100 miles on the island of Panay, 100 miles on Negros, and ninety-five miles on Cebu, under the proposed guarantee. It is stated that under the bid of Speyer & Co., if accepted, 633 miles of road in Luzon would be operated by one company.

The German Navy

In view of Emperor William's somewhat belligerent speech at the opening of the Reichstag and the heavy appropriations asked for increasing the strength of the navy, there was a general demand for an explanation from the Chancellor of the foreign policy of the Empire. Chancellor von Bülow's long speech in the Reichstag on that subject failed to satisfy public curiosity, for he dealt in vague generalities. He stated that there was nothing in the wording of the Anglo-Japanese treaty to interfere with Germany's policy in the Far East, as her aims were purely economic, and, following the ratification of the Portsmouth treaty, she had proposed to the Powers the withdrawal of all military forces from China. They had agreed to this, and the evacuation would take place in the spring. There was no intention to interfere with Russia's internal affairs. He considered that there was a strong feeling of aversion against Germany in England, but hoped that it would be counteracted. Herr Bebel, the Socialist leader, in attacking the naval bill, held that the anti-German feeling in England was not so great as the Government had implied. He thought Germany should withdraw immediately from Kiao-Chau. "We have spent there altogether a hundred millions and our trade is zero." He ridiculed the telegram sent by the Emperor William to the Emperor Nicholas, "The Admiral of the Atlantic greets the Admiral of the Pacific," adding that he hoped that "the Admiral of the Atlantic" will never be in the same plight as "the

Admiral of the Pacific" is now. The new appropriations asked for by the Government will require the raising of some \$60,000,000 more by taxation of some sort. It is proposed to raise this by increasing the tax on beer and tobacco, by a stamp duty on bills of lading and railway and steamboat tickets, by a tax on motor cars, and by an increase in the death dues.

A Revolt in the Baltic Provinces

The disorders in Russia have hitherto been of an industrial, political or racial character, and consisted of strikes, riots and mutinies, mostly in the cities, but now the situation is complicated by what appears to be a real territorial rebellion. The Letts, Esths and Lithuanians in the country districts of the Baltic Provinces have risen in mass, murdered or captured the German land owners, and established a provisional government. Outside of Riga the Provinces of Courland and Livonia seem to be completely in the power of the revolutionists, and the revolt has extended northward into Esthonia and southward into Kovno. The disaffected population numbers about 2,500,000, and among them are some 200,000 Germans and 65,000 Russians. The Germans have had political, financial and agricultural control of the provinces ever since the thirteenth century, when the Teutonic Knights were organized to keep the border of Christendom, and the peasants have been so oppressed by excessive rents and feudal exactions that violence now manifested against the proprietors is not to be wondered at. Bands of peasants, mutinous soldiers and outlaws are roaming thru the country, looting the estates, burning the houses, murdering the landlords, wrecking the trains and fighting with each other. August von Hennings, a prominent member of the Baltic nobility, and assistant chief of his district, was attacked at his residence near Riga by a revolutionary band, who demanded his sword. He replied that as an officer he could not surrender it, whereupon he was shot, his head hacked off and his body cut to pieces and fed to dogs. Seventeen of the landed proprietors, four of whom are German subjects, are held as hostages by the rebels,

who, in their negotiations with the municipality of Riga, offered to surrender them on condition that the independence of the Lithuanian republic be recognized and all arrears of rent and taxes be remitted. Their leader is Jansohn, editor of the *Deenas Lapor* and head of the federated revolutionary societies. The number of Letts under arms is estimated at 60,000. All the troops in St. Petersburg except the Guards will be dispatched to the Baltic Provinces, if necessary, to put down the rebellion. They will have to be sent by water to Riga, as the first detachments sent into the country by rail were captured by the insurgents, who wrecked the train. At the first news of the outbreak the Czar issued a ukase granting the people a zemstvo, including representation of the peasants, to have control over local affairs, and at the same time placing the Provinces under martial law, with a Governor-General having dictatorial powers. Apparently both the concession and the show of force have come too late. Riga, which is full of refugees, is practically besieged on the land side, and communication and supplies from the surrounding country are cut off. German ships have been sent to take away German subjects. In Mitau and Libau troops are barely sufficient to defend the towns. The country has been abandoned to the revolutionists, except for a few castles which are still holding out against their besiegers.

Elsewhere in Russia

Agitators succeeded in inducing the Rostoff Grenadier Regiment to mutiny on the grounds of bad treatment and poor rations on December 16th. They seized the arsenal, freed their arrested comrades and placed machine guns before the barracks. A committee of twenty was elected to take command, and the usual personal and political resolutions were adopted and presented to General Plavoffski, the division commander. On the following day, finding how extreme were the plans of their Socialist leaders, the soldiers repented, and sent a deputation to the commander, imploring pardon and offering to return to duty and to seize the revolutionary committee. Accordingly both the military and civilian agitators were arrested. The soldiers were

promised increased pay and better rations. The military court which has been trying forty-nine of the mutineers of Kronstadt has acquitted eighteen and sentenced the rest to imprisonment for terms of two to twenty-four months. On December 15 a revolutionist manifesto in the regular form of an imperial ukase was issued at St. Petersburg, attacking the Government on the financial side. It declared that the Government was bankrupt owing to the extravagance and incompetency of the bureaucracy, and charges the Government with confiscating the funds of the savings banks and planning to float a depreciated currency. Accordingly, it calls upon the proletarians to refuse to pay all taxes, to withdraw in gold their deposits in the savings banks, and to insist upon receiving their wages in coin. The manifesto was signed by the members of the Workmen's Council, the Committee of the Pan-Russian Union, and the Central Committees of the Social Democrats, Social Revolutionists and Polish Socialists. The League of Leagues, or Central Committee of the professional and industrial unions, was not asked to sign it, as this body is now regarded with some distrust by the other organizations. The manifesto was published in almost all the newspapers, in spite of the fact that the editors thereby made themselves liable to eight months' imprisonment and \$1,500 fine. All of the editors were arrested by the Government and released under bonds of \$5,000 each. The comic papers, which have been publishing caricatures and political cartoons, were suppressed. The only paper published on the following morning was the *Novoé Vremya*, which is under the protection of the Cossacks and police. The *Slovo* and *Novosti* could not appear, as the printers struck because these papers would not publish the revolutionists' manifesto. The whole Council of Workmen's Delegates, comprising 250 members, was arrested. It is said that two or three sets of duplicate officers have been elected by all the workmen's organizations, so they will not be without leaders in any case, and a general strike is expected. The Government has adopted two new repressive measures: one is a severe law against striking and inciting to strike, and the other gives all Governors and Prefects thruout the Em-

pire, whenever they are cut off from telegraphic communication with the capital, power to declare a state of siege, or martial law, and to take such measures as may be necessary for maintaining order.

The Martyrs of Lien-Chau

Details of the massacre of Lien-Chau on October 28th have now been received in letters from Canton, and these show that it was an outbreak of mob frenzy for which the missionaries had given no provocation. A booth for the worship of ancestors had been erected, partly upon mission grounds. Dr. Machle protested against it, as he had done the year before, when those in charge had promised not to repeat the offense. He called the attention of the elders to this violation of their agreement, and they admitted that it was not just, and promised to remove it after the next day, which was the last of the feast. Soon after a crowd of young men, armed with clubs, spears and other rude weapons, gathered, and Dr. Chesnut attempted to go to the officials to secure protection. She was attacked, and forced to take shelter in a guard-boat. After a little she insisted upon going back to the rest of the missionaries, saying: "If they are to be slaughtered, I shall go up and die with them." The Woman's Hospital was sacked and set on fire, and the mob, finding a skull and other medical specimens, carried them thru the streets, thus attracting a crowd of five or six thousand. The missionaries, who were in the residences on the hill above, were told by the officials to wait until a boat could be obtained, when they would be taken for safety to the yamen. While the officials were gone to get the boat, a man, pretending to be their messenger, came to the missionaries and enticed them out by telling them that the boat was ready. When they found they were betrayed, they took refuge in a temple, the keepers of which demanded money for the shelter. Dr. Machle stayed behind to close the doors in the face of the mob, and then hid himself, while Miss Patterson, Mrs. Machle and Amy went into a dark cave back of the temple. Here in the darkness and

confusion the party became separated. Miss Patterson squeezed thru a narrow place in the cave, but Mrs. Machle could not follow. Miss Patterson's life was saved by a Chinaman, who came to her and said: "It is not safe here. I am a Christian; follow me." In leading her thru the cave they both fell into a hole some fifteen feet deep, containing two feet of water. He hid her, and afterward brought Dr. Machle to the place. After dark they both escaped to the yamen, and were hidden by the officials for four days, and were then sent down the river under a guard. The man who rescued Miss Patterson from the fury of the mob at the risk of his life was not a Christian, but professed to be to induce her to follow him. Consul Lay, at Canton, recommends that he be awarded a Carnegie hero medal and pension. Mrs. Machle and her little daughter Amy, Dr. Chesnut and Mr. and Mrs. Peale were taken to the river and murdered. Mrs. Machle was calm and reasoned with the crowd till the last. Dr. Chesnut pleaded for the lives of Mr. and Mrs. Peale, saying: "If we have ever done you harm, kill us; but do not kill these new missionaries, for they have never done anything to you." The bodies of the dead were recovered by the officials and buried by two Chinese Christians. Dr. Machle will return to the field, and calls for volunteers. He hopes to see memorial hospitals and mission schools erected on the site of the burned buildings, in order that the work for which these brave men and women devoted and lost their lives may go on. The letter concludes: "Do not have too hard thoughts against the Chinese."

Anti-Foreign Riot at Shanghai

The boycott agitation in China resulted in a riot at Shanghai on December 18, which, however, was put down by the naval and municipal authorities before there had been any great loss of life and property. A public meeting of the local guilds had been held the day before, which doubtless stirred up the anti-foreign feeling, and a mob attacked the Mixed Court, stoning the German Consul and the American Vice-Consul, burning the police station and releasing

the prisoners. No Japanese were injured. The foreign warships landed marines and protected the lives and property of the foreign residents. The American Consul-General, Rodgers, telegraphed to the commander of the cruiser "Baltimore," then at Chingkiang, 250 miles up the river, and that vessel, together with the gunboat "Villalobos," went at once to Shanghai. The consular body will make a joint protest to the Chinese Government and demand the immediate re-opening of the Mixed Court and the arrest of the mob leaders. At Singapore the Chinese workmen refused on account of the anti-American boycott to repair the Standard Oil Company's steamer "Acme." The American Consul complained to the Governor, who ordered the Chinese back to work on threat of deportation if they refused.

The Manchurian Convention

The results of the convention held last week by the representatives of China and Japan at Peking is published by the *Asahi*, of Tokyo. The most important feature is the announcement that Port Arthur will be returned to China in 1923, as had been originally agreed by Russia. Japan will hold the peninsula until that date. The railway south of Chanchung, the northern limit reached by the Japanese armies, will be handed over to Japan. China, however, will have the right to repurchase it in 1906, should the Russians relinquish the northern section of the road. Japan will not construct any branch lines. A section in the agreement provides that Japan must evacuate Manchuria within eighteen months, but will be allowed to maintain railroad garrisons, and garrisoned consulates at Niuchwang, Mukden, Antung, Kirin, Changchung and a few other cities. The custom house at Niuchwang will be maintained, but the customs hitherto collected by Japan shall be restored to China. The Japanese military administration of Manchuria is to cease with the formal evacuation. China is making extensive plans for the occupation of Manchuria. It is planned to keep a permanent garrison of 100,000 men in the Shinking, Kirin and Amur provinces. Japanese officers have been

engaged to make the troops more efficient in expelling the bandits and maintaining China's sovereignty. The military activity in China is startling. Enormous financial sacrifices involving \$600,000,000, spread out over twenty years, are being made to create a force to hold China for the Chinese. The imperial army will consist some years hence of 1,250,000 men. By the beginning of the coming year China will have 400,000 men, all provided with magazine rifles, modern field guns and European equipment. This army will cost \$40,000,000 annually. The standing army of Japan will be increased by four divisions, for which the sum of \$5,000,000 is allotted. The Government has decided to make a loan of \$725,000 to Korea to relieve the tension of the money market. The firm stand taken by the professors of the Imperial University of Japan against the Government in its attempt to interfere with the right of freedom of teaching has resulted in a practical victory for the faculty. Professor Tomizu, who was removed from the chair of Roman Law by the Minister of Education because of his outspoken criticism of the Japanese administration in Manchuria, was immediately appointed by Professor Yamakawa, President of the University, as "lecturer" in Roman Law, as the President has power to appoint a lecturer without consulting the Minister of Education. The Minister of Education has lost his post.

The Chinese students in Japan were very much incensed at the action of the Japanese Government, and 8,200 of them resolved to return to China as a protest. In their manifesto the striking students declare their antagonism to the Manchu dynasty. The fear that the return of the Chinese students would increase the anti-Japanese feeling in China was possibly one of the forces which have brought the negotiations to a conclusion. The Sino-Japanese treaty is to be signed on December 21st. China has apparently conceded all important points. The official welcome of Field Marshal Oyama and General Kuroki took place in Tokyo on December 17th. The victorious armies from Manchuria were represented by 10,000 men, who marched in the field uniforms and with their guns and tattered battle flags thru the streets.

The Herero Rising Quelled

In January, 1904, the Hereros and other tribes of Damaraland, or German Southwest Africa, went upon the warpath, massacred the settlers and missionaries, and drove the few and inefficient German troops in the colony to the coast. After eleven months of guerilla warfare, in which the German troops made little progress, Hendrik Witboi, a Hottentot chief with a strain of Dutch blood, who had been an ally of the Germans, went over to the insurgents, and his experience and education greatly strengthened their cause. General von Trotha last May offered a reward of \$1,250 for Witboi, alive or dead. Recently Witboi offered to make peace on condition of being made again an officer of the German colonial troops on double pay, and that his men be supplied with 150 rounds of ammunition monthly, and that their land and cattle be restored to them. This offer was naturally rejected. Now it is reported that he died on November 3d of a wound received in an attack upon a German convoy on October 29th. His son Isaac succeeded him in command, but the Witbois were not able to hold out longer, and most of them have already surrendered. Lieutenant Colonel von Semmern, in the early part of November, found 400 natives under Morengo entrenched on the Orange River, near Hartebeestmund, and after some hard fighting dislodged them. Herr von Lindequist, the new Governor of the colony, reports that the backbone of the rebellion is broken. The Herero tribe is practically annihilated. At the beginning of the war their number was estimated at 60,000 or 80,000. Now only a few scattered bands are known, in addition to the 1,275 who have taken refuge in British territory, and the 2,054 men and 5,018 women and children who have been captured by the Germans. The rest are supposed to have perished in the Omakiki desert, as the number killed in action has always been relatively small. During the two years of fighting the Germans have lost 1,051 officers and men killed and 637 wounded. In addition, 221 civilians have been killed or wounded, and 750 officers and men invalided home. An appropriation of \$600,000 has been made to complete the pacification.

The World's Peace Makers

BY HAYNE DAVIS

[On account of his services at the St. Louis Session of the Interparliamentary Union, Mr. Davis was invited by Mr. Richard Bartholdt, President of the American Delegation, to attend the Brussels Session of the Union. There his services were so highly appreciated that several members of the Commission appointed to pass on the plan submitted by Mr. Bartholdt, invited Mr. Davis to visit them while they were considering the subject. He spent four months in this work and was present at the Paris Session of the Commission, when a report was adopted which opens the way for the early and full realization of the plan submitted by Mr. Bartholdt, and in advocacy of which Mr. Davis has published many articles in our columns during the past two years. Our readers have assisted, therefore, in bringing this movement to its present happy position, and we are glad to present to them articles by both Mr. Bartholdt and Mr. Davis on its present state. We will continue to keep our readers in the forefront of this, the greatest political movement of our times.—EDITOR.]

THE Peace of Portsmouth on the 29th day of August marked the transfer of the world's political capital from Europe to America, and this is its chief significance: Henceforth the political center of gravity is in the New World, or preferably in the world of *new ideas*. And on the very day that the Peace of Portsmouth was announced, the wires flashed out the glad news that the American plan for an International Parliament was approved in principle by the Interparliamentary Union, and that a Commission of seven eminent members of the various world parliaments had been named to consider all the details of the plan. So that on the same day, by the same nation, one war was brought to a speedy and timely end and a practical plan for perpetuating peace on a foundation of justice was presented to all the nations. Nothing like this ever took place before.

Of course it was inevitable that the United States would, in due time, exert pressure for the general acceptance of her principles. The remarkable thing is that pressure for this was powerfully applied on the very same day that the world awoke to the fact that hereafter America would exert the paramount influence in world politics.

Americans who were in Europe when the Peace of Portsmouth was announced became conscious that the Continent had passed to that attitude of mind which such political prophets as Gladstone foresaw and foretold several decades ago.

The day after the Peace was declared, Count Albert Apponyi, the great Hungarian, rose in a company of national

lawmakers, assembled at Liège, and declared in words that silenced and inspired every person in the vast audience that this peace was not merely or mainly a personal triumph for President Roosevelt, but for the great principles on which this nation is founded; that back of President Roosevelt was the mighty power of the American people, exalted by their enjoyment of and fidelity to the true principles of liberty! A thrill shot thru the audience, and thru Europe, as his words were flashed over the wires; and as he took his seat in the midst of a burst of inspiration rather than applause, this thought came to me: Not Hungary only but the world is safer because this man lives and labors in its political fields.

He had declared, in effect, that the principles of political liberty would win a complete victory thruout the world. And his declaration woke response thruout Europe. Seventy-five years ago all Europe assembled at Vienna and conspired together in an unholy alliance to kill with sword and spear the very ideas which were now announcing thru this man, their early and full conquest of the world. The day before he had been appointed one of the "Seven." And from this scene he returned to Hungary to mature his views on the proper form for an International Parliament, to which the world may wisely delegate the task of bringing the law of nations out of darkness and uncertainty into the clearness of a system, duly sanctioned by the Nations and developed by the aid of this International Parliament.

It was my privilege to visit him and all

Henri Lafontaine.

but two of the other European Members of this Commission while they were considering the American plan, and also to be present at the sessions of the Commission at Paris on November 18th and 19th, when the way was opened for its realization by the report of the Commission.

I had rare opportunity to see into the secret of their lives, and I found that by daring deeds, when it was necessary to make a stand for "Principle," they have all been prepared for places on this Commission, and to lead in this great work.

The world has a right to know these men well, and they have a right to be known well, because in this way alone can they be properly sustained and enabled to finish the work they have begun for the welfare of the world.

Americans are fairly well acquainted with Richard Bartholdt, the United States member of the Commission. THE INDEPENDENT has given its readers a slight sketch of him. But a man cannot be condensed into a magazine article. We can lift the veil and let the world catch a glimpse of him in action. The eye that sees must interpret the thing seen. And Americans owe it to themselves to under-

stand Mr. Bartholdt in order that they may sustain him properly in what he is attempting for their welfare and the welfare of the world.

He dares to grasp every opportunity to make a stand for progress and right, and

Albert Apponyi.

to look for support after—not before—he takes his position.

It was this quality which enabled him at Vienna, in 1903, to make a stand for America as the proper place for the 1904 session of the Union, altho he had no other Members of Congress to sustain him, no authority to speak in the name of the nation, and no assurance from any source that the Congress would appropriate the necessary funds. Because he dared to do this, the whole world has made an immense move forward.

When the session convened at St. Louis, he dared to propose the calling of a second Hague Conference, and to suggest that it should consider the advisability of establishing a Permanent International Congress.

Many were astonished at his boldness when he walked into the Conference at Brussels and laid on the table a plan for a Permanent International Congress.

Some voices were even heard to say, "This is revolution." Mr. Bartholdt replied, "We call it evolution," and he stood like a rock until every wave of opposition or even of doubt was stilled.

Henri Lafontaine, the great Belgian Senator, says that Mr. Bartholdt's action has given new life to the Interparliamentary Union, and has put into practical politics the ideas which will solve the world's gravest political problems. For ten years Mr. Lafontaine has been a member of the Belgian Senate. He is one of those bold intelligences which walk about the world with open eyes,

of Arts and Sciences in 1904, he declared that an International Legislature must come to develop the law of nations, an International Judiciary to apply it to controversies, and an International Executive to see to its execution. It was inevitable, therefore, that he should be an ardent advocate of the American plan. And he was its most radical champion. He desires to go even farther than Mr. Bartholdt suggested.

The Hon. Philip Stanhope, president of the British delegation, was appointed President of the Commission. He enjoys being used as a battering ram to break thro reactionary thought. He has attended every session of the Interparliamentary Union since its organization at Paris in 1889, and can be counted on to take a stand for every progressive idea. It was he who made the motion in the British House of Commons, which summoned Cecil Rhodes to the Bar of the House to explain Chamberlain's connection with the Jameson Raid. And when his party was running away with the na-

Philip Stanhope.

maintaining the same mental attitude to a king as to any other man, for he can always give and always calls for a reason for any position assumed. He looks at institutions in order to see where they may be improved, he considers conditions in order to change them. He is not to be changed by them. He is always going forward and upward. In an address at St. Louis, before the Congress

Baroness von Surtner.

tion on the South African question he fearlessly threw himself in the way.

When the storm subsided the Hon. Philip Stanhope was no longer a Member of Parliament. But as soon as the nation became clothed and in its right mind again he was found in his accustomed seat. When the Commission met at Paris he drew up the preliminary report, and in doing so, set the example of "preferring others in honor." He was first to suggest the idea of turning the second Hague Conference into an International Congress, with power to assemble periodically and automatically, as the first step in realizing the ideal proposed by M. Bartholdt. In drawing the report, he mentions that this idea was put forward in Marquis Pandolfi's (Italy) suggestions, the Marquis himself being prevented from attending in person by imperative national duties. All the members of the Commission concerned themselves to see that the suggestions of others were duly credited.

When the members of the Commission were appointed, it was decided to leave the naming of the member for France to the President of the French delegation, the venerable Senator La Bische. Considering that this must become a notable part of history, some ambition to take part in the work of the Commission would be natural. There was one man in the French Parliament, Baron d'Estournelles de Constant, to whom men naturally turned as France's representative. He was not at the Brussels Session, he was not even an active member of the group of which Senator La Bische was organizer and president. Indeed, he had organized an Arbitration Group of some 200 members, and was working independently of the regular group of the Interparliamentary Union.

And it was Senator La Bische who requested that Baron d'Estournelles be placed on the Commission for France. At every turn, every person engaged in this work has subordinated self, and considered only the finishing of the work

wisely and well. Baron d'Estournelles expressed to me the great joy he had found in working with men so devoted to the cause and so careless of the consequences to themselves.

And the Report of the Commission, signed at Paris November 19th, opens the way for the early realization of a Permanent International Parliament.

After the appointment of this Commission, I had the privilege of meeting Baroness Suttner at the fourteenth International Peace Conference at Lucerne. For many years she has been crying out to Europe that war was unnecessary. Her words have carried into many lands and have deeply moved many people.

She has not seen just how her hopes were to be realized, but however dark or apparently interminable the night, she has kept steadily to her premonition that the day of Peace must dawn some time and in some way. And tho many discouragements have been met she has never ceased to labor in this great cause. When I saw her she was laboring under a momentary sense of depression. After hearing what had been proposed at Brussels, and how this idea had been enthusiastically endorsed since January 1st of this year by over 100,000 people in America, in twenty-five States, she gazed long and silently at the Alps, which were shrouded in dark clouds. Mr. Felix Moscheles asked, "What are you looking at?" She replied, "The clouds, which this news from America makes radiant."

At that moment the members of the Norwegian Nobel Committee were scanning the heavens with their telescope in search for the greatest Peace worker of the world.

When they saw the light of Baroness Suttner's fruitful and incessant labors they ended their search, and all Americans who understand what she has done will rejoice in their award.

Without exception all these workers for Peace in Europe look to America for the realization of their hopes. And they do not look in vain.

NEW YORK CITY.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root is a member of the staff of THE INDEPENDENT, and has for years devoted close attention to the general course of financial and industrial affairs, as described in the following article.—EDITOR.]

IN 1903, an almost continuous decline of prices in the securities market was accompanied by a large and ominous reduction of the iron output and by falling wages in some industries. The first half of 1904 was marked by uncertainty; in the second half, with the harvesting of great crops (wheat excepted), confidence was restored and the market value of securities rapidly advanced. In the final month a sharp but temporary reaction was caused by Mr. Lawson's attack upon a top-heavy speculative market from which strong support had been withdrawn.

At the beginning of the present year, there was nothing in the condition of trade and the industries to cause disquietude. The crops had been abundant. Of cotton there had been 13,500,000 bales, the greatest quantity ever harvested. In the iron and steel industry, that unfailing barometer, the revival that had begun in August was steadily increasing the output of products and enlarging the earnings of the manufacturing companies. Money could be had at low rates. During the first quarter, the market for securities, following the wild speculation of December, was in no way sensational, although the volume of business was large—more than 75,000,000 shares. In the last quarter of the preceding year, nearly 90,000,000 had been sold, but that had been almost half of the entire year's business. These first three months of 1905 saw 5,300,000 tons of iron made at the furnaces. If that rate should be maintained, the year's output (more than 21,000,000) would largely exceed that of 1904 (16,500,000) or the 18,000,000 tons of 1903. The rate of the first quarter has been maintained, and even increased. In the industrial and financial record of 1905 there is nothing more important than the great crops and this enormous output of iron. Activity at the furnace and the steel mill was stimulated by the railroad companies' large orders for rails, cars, etc., and the companies' ability to buy was due mainly to the crops.

During this first quarter were seen the beginnings of large additions to the prices of what are called gilt-edged stocks, and a considerable rise of the shares of Southern iron companies was caused by negotiations for a consolidation of those corporations. Later, these negotiations were suspended, to be renewed at the end of the year. Railroads sold large issues of bonds with ease. Half of a Japanese loan of \$150,000,000 was allotted to this country, and was heavily oversubscribed in New York, which eventually will be the chief money centre of the world. Part of another Japanese loan was placed here in December.

Demand for iron and steel was noticeably strong in April and May. In each of those months the furnace output was nearly 2,000,000 tons, and there was evidence that substantially all of it went at once into consumption. In June, however, buyers were less eager, and the output fell away a little until September, when demand revived and sales became enormous. In April, collapse of a corner in wheat for May delivery, with the accompanying highly sensational defalcation of a Milwaukee bank president, affected the securities market. The bitterly contested strike of the Chicago teamsters exerted a depressing influence, and the election of Mayor Dunne upon a platform calling for the immediate municipal ownership of the Chicago street railways was used by some to the disadvantage of values. The condition of the Equitable Life Assurance Society began to excite public interest, but it is not clear that the life insurance scandal has affected the price of securities. Winter wheat was reported by the Government to be in fine condition (91.6). This was encouraging, because of the shortage last year, when 5,000,000 acres of the winter-killed plants were plowed under.

It was in the latter part of May that prices declined because the pace had been too fast. On the 22d, following an advertised prediction of Mr. Lawson, many stocks touched the lowest point of the year. There were signs that in the

iron industry production had passed the limits of consumption. But money rates were still low, bank clearings very largely exceeded those of 1904, and the increased earnings of railroads were providing funds for enlarged dividends soon to be announced. Peace in the building trades at New York had been restored by a new arbitration agreement. Japan's victories pointed to peace in the East, and in June Japan and Russia were to accept President Roosevelt's proposition for a peace conference. As the season advanced, the weather was most favorable for the growing of crops. But June was a waiting month. Only 12,500,000 shares were sold on the New York Exchange. Dividends on Reading common and Amalgamated Copper were increased, and in July additions were made by several other companies. News relating to the anthracite coal roads was of the most encouraging character, foreshadowing the large advance in share values which was to be realized before the end of the year.

Beginning with July, the market was affected chiefly by crop reports and railway earnings. For the first half of the year gross earnings showed an increase of about \$70,000,000. July's official crop report indicated 2,625,000,000 bushels of corn and nearly 700,000,000 bushels of wheat. But not until August was the revival of trade and speculation to be shown clearly by the record. In that month buyers turned again to the steel mills, and the iron output began to rise again, meeting a demand so great that in October the furnaces produced the enormous quantity of 2,053,127 tons. The world was also buying copper, and the rapidly advancing price of this metal was to stimulate speculation in the shares of copper companies. In August Mr. Lawson advertised for subscriptions to a pool capital of \$10,000,000. This was to be used in depressing the market values of copper shares and the metal. He obtained the money, and in the last month of the year he admitted that he had lost \$3,600,000 of it.

It is difficult to illustrate the course of this year's securities market by a brief table of prices. The figures given below indicate the very small gains of some railroads, the large gains of others, the

low quotations of May 22d, and the great advance (mainly in the latter part of the year) of the shares of coal roads, copper companies, and the corporations engaged in various branches of the steel industry:

In September, all conditions were favorable. Official reports on the 10th proved that the country's crops were the largest ever harvested. General business had never been better. On the railroads there was a congestion of freight. Earnings showed considerable increases, even when compared with the large totals of the corresponding weeks in 1904. But, if stocks were to advance, they must contend against the restraining influence of high rates for money.

Stringency in the money market has been a prominent feature of the financial history of 1905's closing months. From the beginning to the end of 1904 the rates for loans on call were very low. At the end of September, in the present year, the rate rose to 7 per cent., which was the highest since 1903. Eastern money was going westward to move the crops; at the same time speculators for the rise were bidding for it in New York. This rate of 7 per cent. was followed a few weeks later by one of 28 per cent. Reserves were low in the banks; they were also low at London, Berlin and Paris. All over the civilized world there

was an unusual demand for capital. The Bank of England's discount rate was raised twice, from $2\frac{1}{2}$ to 3, and then to 4 per cent. Germany's Imperial Bank increased its rate to $4\frac{1}{2}$, to 5, to $5\frac{1}{2}$, and then (in December) to 6. At the end of the first week in October the New York Clearing House banks' surplus above the required reserves was only \$4,200,000. A month later it had fallen to \$2,354,000, and on November 11th a deficit of \$2,428,000 was shown, the first since September, 1902. On the next business day, therefore, the rate in New York for call loans rose to 25 per cent. But the reserves were speedily replenished by a severe contraction of loans, and before the end of the month the surplus was \$9,000,000.

This lack of money, however, could not prevent a remarkable speculative rise in the prices of some securities, notably the shares of coal roads and steel and copper companies. In November, nearly 27,000,000 shares were sold on the New York Exchange, and November's clearings, for the entire country, were the largest ever reported in one month.

Money rates were high again in December, rising temporarily even to 28 per cent. On the 9th the banks' reserve was again deficient, but it was replenished a week later, with \$4,000,000 to spare. General confidence and the real strength of the situation have been shown by the large and even sensational advances on the Exchange that have taken place during this period of monetary stringency. On Monday, December 18th, it was announced that a national bank, a savings bank and a trust company, in Chicago, all controlled by John R. Walsh, were to wind up their affairs and go out of business, having been seriously embarrassed by their loans to their controlling owner. A disastrous failure appears to have been prevented by the prompt support of Chicago's other banks, and all depositors will be paid in full. This untoward event depressed prices on the New York Exchange for a few hours, but nearly all of the decline was recovered before the close of the day.

Below are shown the sales of stocks and bonds on the New York Exchange for eleven months of the present year. The total for twelve months will nearly

equal that of 1901, which was 265,944,000 shares. Last year's was only 187,312,000, and neither in 1902 nor in 1903 were more than 190,000,000 shares sold:

	Stocks Shares.	Bonds Par Value.
January	20,792,558	\$139,454,100
February	25,239,088	112,810,850
March	29,138,838	99,534,600
April	29,298,456	76,806,400
May	20,517,560	68,532,650
June	12,576,469	79,995,800
July	13,273,665	64,581,250
August	20,205,735	89,362,500
September	16,012,044	69,313,000
October	17,674,807	73,857,720
November	26,823,550	77,333,300

Those who review the year will see that first in importance have been the crops. One great harvest has followed another, for the agricultural output of 1904 was deficient only in wheat, while the yield of cotton was the greatest ever known. This year's crop of cotton is probably a little in excess of 10,000,000 bales (instead of 13,550,000), but the higher price will give the planter satisfactory profits. By the official final report, the corn crop of 1905 was 2,707,993,000 bushels, the greatest ever harvested, and the yield of all the other kinds of grain has been large. The beneficent effect of this abundance will be felt thruout the year to come.

A marvelous record has been made in the iron and steel industry. Since 1897, the iron output of the United States has been doubled, and the quantity produced here this year is equal to more than half of the entire world's output in 1904. Here is a table that shows what the furnaces have been doing since the beginning of last year:

	1904. Tons.	1905. Tons.
January	921,231	1,776,568
February	1,205,449	1,596,933
March	1,447,065	1,936,229
April	1,557,267	1,922,041
May	1,533,350	1,967,586
June	1,292,030	1,793,289
July	1,106,297	1,741,935
August	1,167,672	1,841,413
September	1,352,677	1,898,873
October	1,450,401	2,053,127
November	1,480,602	2,014,021
December	1,614,349	

Of course, the report for December is not yet available, but it is known that at the beginning of the month the weekly capacity of furnaces in blast was 474,500 tons, against a capacity of 460,000 on November 1st, and in November more

than 2,000,000 tons were produced. In 1904, the world's output was 44,804,000 tons, the greater part of which was distributed as follows: United States, 16,497,033; Germany, 9,944,261; Great Britain, 8,562,658; France, 2,952,377; Russia, 2,839,800; Belgium, 1,262,566. Our output this year will be about 22,500,000. In the following table is shown the growth of the pig iron industry in this country:

	Tons.
1896	8,623,127

Thruout the past year, except for a few weeks in the summer, the demand for manufactured products of iron was enormous. In the year's last quarter all records of production in the steel mills were broken. Orders already placed cover the capacity of some of the great mills for a year to come. It is predicted that 37,000,000 tons of ore will be shipped from the Lake mines next year. This year the shipments were 34,000,000. Of the ore available in 1906, 96 per cent. has already been placed. The price of copper has risen to 18 $\frac{3}{4}$ cents, apparently in response to a genuine demand for consump-

tion. This explains the intense speculation in the shares of copper mining companies.

A reaction in copper share prices may reasonably be expected, and Mr. Lawson may be able to take advantage of it. Thus far he has been unfortunate, and the experience of those associated with him in his \$10,000,000 "bear" pool has been depressing. It was at the end of August that he advertised his prediction that the price of the metal and of Amalgamated shares would sharply decline. Since that time the price of copper has advanced to 18 $\frac{3}{4}$, about 20 points have been added to the price of the company's stock, and his pool has lost \$3,600,000.

What are sometimes called underlying conditions have, thru the past year, continuously opposed any one who sought to depress values. They have also defied successfully a tight money market and the effect of such disclosures as have been made in the life insurance investigation. Great crops, unprecedented activity in general business, growing railway earnings, increased dividends, and leading manufacturing industries driven to the limit of capacity, have actually and steadily increased the value of securities. At the same time the cost of living has been rising, until now, according to the tables of measurement, it is higher than at any date in the last twenty-two years.

NEW YORK CITY.

Three Score

BY FRANCIS C. MOORE

*"Because he hath set his love upon me, therefore will I deliver him."—Psalm 91.
"Thou wilt keep him in perfect peace whose mind is stayed on Thee, because he trusteth in Thee."—Isaiah 26:3.*

UPON Life's summit here I stand,
Dear Lord, so near the promised land,
E'en as of old, from Pisgah's crest
Thy servant gazed ere laid to rest;
But not for me such vision clear;
I may not see the end, though near,
Nor would I ask—submissive still
In all things to thy sovereign will;
My only plea my love for thee,
My only hope thy love for me.

How can I doubt that love today
So helpful on my Heavenward way,
From planted grain to harvest yield,
On many a hard-fought battlefield;
Salvation's helmet on my brow,
I will not doubt deliverance now;
In perfect peace, come toil or strife,
I trust thee to the close of life;
My only plea my love for thee,
My only hope thy love for me.

Ere long in Christian armor bright
I'll gird me for my last great fight,
To fight alone, no comrade near;
With Shield of Faith I'll feel no fear
Nor blench when called to take my stand,
Thy Spirit-sword within my hand;
On that last battle turn thy face,
O Lord of Hosts, and grant me grace;
My only plea my love for thee,
My only hope thy love for me.

The Demand of the Hour

BY RICHARD BARTHOLDT

Member of Congress from Missouri and Ex-President of the Inter-parliamentary Union.

SINCE the blot of slavery has been wiped from the escutcheon of the American Union there has been no great, soul-stirring moral question before our people. That the human heart longs for such an issue, consciously or not, there can be no doubt, and this possibly explains the deep-going interest which all classes of our population—at least all thinking men among them—evinced in the progress of the peace movement. The problem of limiting the possibility of public war in the same manner as private war has been limited, and of thus conforming the status of international relations to the requirements of a humane and enlightened age, is evidently being regarded by the American people as a moral question of the high order just described.

It is no doubt due to this consideration that the editor of *THE INDEPENDENT* has kept his readers so exceptionally well informed as to the progress of that movement, whose well known object is simply to substitute international order for international anarchy, trial by court for trial by battle, judicial decisions for bloody war. The readers of *THE INDEPENDENT* are aware that in every part of the civilized globe there are moral forces at work to secure such wise substitution, and they are also advised as to the measures which the leaders of the movement are regarding as necessary to accomplish this purpose. In the matter

of bringing the question down from the cloudy domain of speculative thought to the solid ground of practical statesmanship and of concentrating the many divergent views upon concrete and well defined demands, great progress has been made during the last two years. This is largely due to the influence of the Interparliamentary Union, that organization of lawmakers which makes for in-

ternational amity and peace and which has formulated these demands in such a way as not only to make them acceptable to every well meaning government, but also to leave no valid excuse for their rejection by any nation. To appreciate fully the extent of the progress recently made, it is necessary to refer to the latest developments, which are not only new and most interesting, but, up to date, have not been mentioned either by the daily press or any other publication.

It will be remembered that at the recent conference of the Interparliament-

ary Union, held at Brussels, one of the American propositions was to create an International Congress to codify international law and secure to such law, thru the solemn forms of legislation, the sanction of all the nations. This is an old American pet scheme which Elihu Burritt and others advocated in European Peace Congresses as long as fifty years ago. But the same objections raised then were interposed this year,

Richard Bartholdt.

namely, that the plan would interfere with the principle of sovereignty. In spite of these objections, however, the American delegates stuck to their proposition so persistently that the plan, instead of being pigeonholed, was finally referred to a commission with instructions to report within three months. This was generally regarded as a significant American victory, but the more substantial part of the triumph was yet to come. A few weeks ago cable dispatches announced that the commission had met at Paris and practically decided in favor of the American plan of an International Congress, without stating, however, how the Congress was to be constituted. Mail advices have, in the mean time, supplied this information, and the news is of such a character as to justify the friends of peace to hail it with delight. The proposed solution of the problem will appear to them as what it really is: an inspiration. Listen how the commission proposes to constitute the Congress:

The next Hague Conference (which is to meet some time during the coming summer) is to be constituted into a permanent body, a sort of senate, which is to assemble automatically and periodically, and the Interparliamentary Union is to be reorganized so as to act as a parliamentary official adjunct or a lower house. In the senate each nation is to have the same voice or weight by vote, while in the lower house the representation will be proportional. Thus there would be two chambers: In the one the executive, in the other the parliamentary branches of national governments would be represented and carried up into the new International Parliament.

It will be noticed at a glance that in its results this plan will insure to the world, in the simplest and most practical manner possible, exactly what the writer, on behalf of the Interparliamentary group in Congress, had proposed at Brussels, namely, an International Legislature of two houses, one to be created and controlled by the executives; the other by the parliaments or, which is practically the same thing, the people. The first duty to be performed by that new international body is declared to be "to codify international law and keep it up to date."

The question naturally arises how this great international reform is to be brought about. In view of the early assembling of the new Hague Conference, it appears to be merely a question of inducing this body to proceed to the consideration of the plan. Its feasibility will surely be admitted by the delegates of the several countries as readily as the supreme necessity of an early compilation and sanction, by the nations, of what now passes under the name of international law. It would seem that the advocacy and presentation of the plan by so influential an organization as the Interparliamentary Union should in itself be sufficient to insure its respectful and favorable consideration by the Conference; but, in addition to this, the members of that Union will no doubt use their influence with their respective governments in favor of the proposition. To leave nothing to chance, however, and to guard, if possible, against the loss of a golden opportunity of advancing a great cause—too many of these have been lost in the past—the writer proposes to introduce a resolution in Congress authorizing and directing the President of the United States to instruct the delegates to the Hague Conference to favor this plan and to do all that lies in their power toward securing its adoption.

What favorable action, by the Conference, upon this magnificent scheme would mean to civilization and to the cause of humanity and international justice, is apparent to all. In addition to an international judiciary, now afforded by the High Court at The Hague, the world would be assured of the benefit of an International Legislature charged with the duty first of supplying the law which is to govern the judiciary in the adjudication of cases to be brought before it, and secondly of agreeing on a system of arbitration by which the possibilities of war will be reduced to a minimum. A reduction of armaments will follow without further agitation, and as naturally as ripe fruit falls off the tree, and this will be only one of the beneficial consequences of the proposed international organization. A permanent "Hague Conference," with the power to meet periodically and when it pleases, once assured, there will be no more need

of the friends of peace and arbitration to prevail upon Czars or Presidents to call such a body into being.

It goes without saying that the change here proposed will require the sanction of all the governments to give it force and effect, even after the second Hague Conference has pronounced in its favor. But no one need feel any concern on that score. If the people are given a

chance to pass judgment upon this reform—the greatest, most far-reaching and most beneficial to mankind yet undertaken—they are sure to rise to the full height of their glorious opportunity, and the moment they grasp the new dispensation in its full comprehensiveness, their majestic power will force all other “majesties,” great or small, to capitulate unconditionally.

WASHINGTON, D. C.

The Cathedral

BY THOMAS WALSH

(High in their groves of stone the ancient
Bells intone:)

Hosannas fling we on the midnight air!

The tongues of silver, lips of brass are
ours.

And far to sound their gladness or their
care

Men hung us here amid these carven towers—

In excelsis Gloria!

(Pulse with that joyous tone the Spires in
unison:)

We that are earth's last flowering up to
God

Bear to the stars the gladness of the land!

(The Gargoyles mouth and leer from every
spire and pier:)

We for earth's outcasts witness; in the sod

The worm and flower are equal in His
hand—

In excelsis Gloria!

(Then the Foundation Stone heaves forth its
joy alone:)

Brother to that bare stone of Bethlehem

Whereon His earliest pillow was—am I!

Let the glad chimes remember that for them

My shoulders prop their cyries in the
sky—

In excelsis Gloria!

(Then from the Organs pour their canticles of
yore:)

To God in utmost heaven what proud acclaim
Of Glory, Love and Sovereignty shall sound!

Oh, that the winds which over Bethlehem came
Were in our throats to make His praise
abound—

In excelsis Gloria!

(As their great chants arise the Baptistry
sighs:)

O Bethlehem in me each day renewed!—

(The Crypts where deep are stored monarch
and saint and lord:)

Hosanna from the Manger of the Dead!—

(The Altar Tapers fair burn out their souls in
prayer;)

There was a star upon that solitude

Wherefrom was Perfect Light on Juda
shed—

In excelsis Gloria!

(Then all the Townsfolk cry in one pure chant
on high:)

Flesh of our flesh unto the earth He came;

Soul of His soul to win us home again;

Wherefore let soul and body both proclaim

The Christ in us reborn this night to men—

In excelsis Gloria!

Et in terra Pax!

MT. ARLINGTON, N. J.

Peace Before the Angels' Song

BY WILLIAM HAYES WARD, D.D., LL.D.

HAD left Baghdad several days before and was going south with some ten men and twenty horses and mules to explore the almost unmap-ped sands, swamps and mounds

about the lower Tigris and Euphrates. We saw on one side the prominent mound of Zibliya, and I bade my caravan move on toward the distant Niffer, then unexplored, while my companion, Mr. J. H. Haynes, and my interpreter, Mr. Daniel Noorian, rode with me to the top of Zibliya, to examine the mound and take observations with the prismatic compass. From there I saw a smaller mound half a mile off, and I told my two companions to follow after the caravan, while I would ride rapidly to the mound and soon overtake them. It was a dreary waste, blown into lines of sand hills, and a war between the Arab tribes was said to have made it dangerous. I had just reached the top of the mound when I saw Mr. Haynes galloping toward me. He hastily told me that an Arab was stealthily watching us, and that we must get together as quickly as possible. So we galloped on and overtook our caravan several miles ahead; but all the time we would see the Arab horseman occasionally emerging from behind a sand hill and keeping abreast of us. Soon we saw directly in front of us a flag waving from the top of a far distant hill, and a man standing beside it in full view. Then there came another, till some twenty armed Arabs stood ready to meet us. We could only go forward and learn their purpose, as they evidently wished to know ours. Our interpreter and our Turkish soldier rode forward to meet them and cried, "Salaam," "Peace." "Salaam," "Peace," they replied, and on both sides, armed as we were and ready to defend ourselves, we felt relieved. We rode on toward Niffer, and as we left them the Arabs

formed in a line, dancing and singing: "O Beg, we are beating our niter; O Beg, we are beating our niter," a war refrain to indicate that their powder was being prepared and they were ready for war. I learned two things; one that the measure of poetry is dictated by the dance, and the other the meaning of *Salaam* and the value of Peace.

To the savage war is the natural condition. The only peace it knows is that of conquest. It makes a desert and calls it peace. A stranger is an enemy. In Latin the same word *hostis* means both *stranger* and *enemy*. When two strangers met it was necessary that they should make truce by calling out "Peace." We do not need to utter the Oriental greeting, because with us peace is the normal state of society. When Jesus was born the angels greeted the world with the Eastern salutation, "Peace on earth to good-willing men," the men of peace. What other greeting could there have been when it was prophesied that the Messiah should be the "Prince of Peace"?

In the Old Testament *peace* is one of the commonest words of blessing as well as of greeting. Jehovah's "covenant of peace" is many times repeated. The longing for peace is expressed in the description of the coming Messianic age, when they shall beat their swords into plowshares. The angels' *salaam* was the announcement that the Messianic age had come. Peace was thought of as the greatest of blessings. Said Jehovah to Moses, as his chief promise to Israel, "I will give peace in the land, and none shall make it afraid." In the Psalms the highest promise is "abundance of peace till the moon be no more." The petition is, "Pray for the peace of Jerusalem," and the answer is, "Peace shall be upon Israel." Israel's golden age was in the reign of Solomon, when there was no war, and Solomon's name means *Peace*. Because he was a man of peace he could build the temple to the God of peace. The Hebrew word which means *Peace* is

common in proper names; more than a dozen men in the Hebrew Scriptures are called *Shallum*, and there are other such names as *Shelemiah* and *Salome*.

Before the Prince of Peace came the world had always hungered after peace. The wisest of the Greek deities created the olive, and when the gods contended as to which had given the best benefaction to man, the honor was awarded to Athene, because her gift of peace was more precious than the war horse of Neptune. What the Greeks thought of peace is further shown in the fact that they made her a special goddess, Eirene, one of the Hours, in conjunction with Eunomia, Good Order, and Dike, Justice. Her father was the supreme lawgiver, Zeus, and her mother Themis, Right; and her son was Plutus, Wealth. On the other hand Bellona, goddess of war, was the daughter of Mars, and her companions were the Furies, and Fear, Terror and Dread. In her hair were flying serpents, her garments were stained with blood, and before her she swung the torch of conflagration. The Romans held it a rare and blessed year when, in times of peace, the temple of Janus could be closed. In such a time, says Horace:

"Now Peace, and ancient Chastity, and Faith,
And Honor dare return, and Virtue long
forgot,
And blessed Plenty, with her laden horn."

When Virgil wishes in his highest strain, which Pope has imitated in his "Messiah," to picture the coming Golden Age, he tells Pollio that the newborn child "shall rule over a world all at peace, by the ancestral virtues," and "cities shall no longer be protected by walls"; "the deadly serpent and the poisonous plant shall cease." And even in war-loving Greece Euripides feels the curse of the Trojan War, and the Chorus cries that, but for Helen and Paris,

"No tear had dewed the widowed bed;
No father mourned his children dead."

Still clearer did the Greeks recognize the preciousness of peace in their myth of the peaceful Island of the Hesperides, with its golden fruit, beyond the ocean, where day and night were equal, and where, undisturbed by war, Atlas holds up the heavens. Thither wended Hercules, and many another son of the gods, to find an Elysium on earth.

The Egyptians were an agricultural people, and so not naturally given to war. Accordingly, we have the most extraordinary fact that Egypt had no god of war, and, secluded as she was by the sea and the deserts, she was seldom in danger of invasion. Her gods were the Sun and the Heavens, and those that ruled the realm of the dead; gods of nature or the resurrection. The hostile god Set was god of darkness and cloud and desert, and fought only the good Sun-god, Ra. And when the soul of the dead stood for judgment before Osiris, judge of the under-world, and his forty-two assessors, to each of them the soul protests its innocence, while in life, of some special sin. This wholly negative confession declares the man in his lifetime to have been a man of justice and peace. "Hail," says he to one of them, "I have not made any man to be afraid." "I have not made my speech to burn with anger." "I have not made any person to weep," he says to another of the forty-two. Perhaps the most remarkable Egyptian document is a treaty of peace with the Hittites.

Babylonia and Assyria differed from Egypt in that half their gods were gods of war. They carried no emblems of life, no lotus or papyrus blossoms, but swords, axes, arrows and clubs. And yet the Assyrians had a god Shalman, Peace, and four Assyrian kings bore the name *Shalmaneser*, Shalman will protect. One of the oldest of the myths, that of Dibbarra, is devoted to the horrors of war and the blessings of peace. The god Dibbarra thus addresses a leader:

"Thou shalt fear no one, nor have compassion.
Kill the young and old alike,
The tender suckling likewise; spare no one."

It sounds like the words of Jehovah to the angels that watch over Jerusalem as given by Ezekiel:

"Go ye thru the city and smite:
Let not your eye spare, neither have ye pity.
Slay utterly the old man, the young man, and
the maiden,
And little children and women."

But another god protests against such slaughter, and he is appeased. And the story ends with the promise that he who worships the god shall dwell in peace; "he shall escape from the grasp of the enemy"; "sword and pestilence shall not

touch him; he shall dwell in safety." If it be true that the Babylonians and their gods were mighty in war, it is yet true that they felt the value of peace. The use of the salaam goes back to them. Their greeting was with this very word for peace, and their prayers of dedication were for the peace and life of the king. Their word for *peace*, the same word as appears in *salaam*, in *Jeru-salem*, City of Peace, and in *Solomon*, was from a root that meant *to be complete, perfect*, as if peace were the perfection of all blessing. Especially does Hammurabi in the prolog and the epilog of his Code, some 2200 B. C., dwell on the blessings of peace, which his laws were meant to assure and preserve. For his first blessing to his people, he tells us:

"I provided them with a peaceful country; . . . I brought health to the land; I made the people to rest in security. . . . In my bosom I carried the people of the land; under my protection I brought their brethren into security; in my wisdom I restrained them, that the strong might not oppress the weak, and that they should give justice to the orphan and the widow."

Such was the value set upon peace by Hammurabi, who calls himself "*Shar misharim*," "King of Righteousness," an exact translation into Babylonian of the

name of his contemporary, Melchizedek, who ruled the city of Jerusalem, City of Peace.

Of old China has been a land of peace, and has hated war. Confucius and Lao-tze equally taught that peace is the chief of blessings. Thus the latter, who wrote more than 500 years before our era, says in his "Ethics":

"Where armies are quartered briars and thorns grow. Great wars are always followed by famines. Even beautiful weapons are unblest among tools, and people should shun them. The superior man uses arms only when compelled. Peace and quietude he loves. To rejoice at a conquest means to enjoy the slaughter of men."

One need not quote further from Confucius, nor from the sayings and stories of Buddha and the sages of India.

The world has always longed for peace, and has always had a golden age of peace behind it, and has expected a second Eden yet to come, when "wars hateful to mothers" shall cease. But of all the ancient eulogies and prophecies of peace the most eloquent and beautiful was the salaam of the angels to the world, which announced the coming of the Prince of Peace and the Kingdom of God.

NEW YORK CITY.

The King's Own

BY LOUISE DUNHAM GOLDSBERRY

'Tis but a Jew-baby—"Nay, 'tis God's Son!"
'Tis but an outcast—"Nay, the King's Own!"
Naked He slumbers—"Kings' cover His."
Landless and houseless—"But His mother's kiss?"

'Tis but a Jew-baby—"Hark, the white wings!"
Manger-born, kine-keeping—"Wide heaven sings!"
Crownless His head is—"See, then, the thorn."
Out of night's black void—"Golden the morn."

'Tis but a Jew-baby—"Saviour and Son."
'Tis but an outcast—"Nay, the King's Own!"
Road-worn, barefoot—"But the loving waves part."
Houseless and homeless—"Here, then, my heart."

WASHINGTON, D. C.

The United States of America

BY KOGORO TAKAHIRA

Japanese Minister to the United States and Peace Commissioner at Portsmouth.

AT this season of the year the whole of Christendom should be dominated by feelings of peace on earth and good will toward men. Particularly should this kindly feeling permeate the length and breadth of this great country, stretching, as it does, from ocean to ocean and bounded on the north and south only by the extreme of latitude.

Your farmers are prosperous; your mines are yielding enormous returns, so far as they have been developed; your factories are working full time; your railroads are burdened with traffic, and every channel of commerce is at flood tide; and yet vast as it is in area and populated with over 80,000,000 of contented people, this nation is but in its infancy to what it will grow in the next fifty years. What will be its place among the nations of the world at the end of that period? It takes no prophet to predict what that position will be. Forecast the future with what has been accomplished in the past, and the question answers itself.

Less than half a century ago your frontiersmen were battling with marauding Indians and struggling at the risk of their lives to build homes in places now not so remote from the center of population. The only means of transportation were the flat boats of the Ohio, or the prairie schooners of the plains, while your foreign commerce was carried on fast sailing Baltimore clippers.

Today the emigrant from Europe travels in rapidly moving steam cars, and your sailing vessels have given place to steamships, so that the journey of months is now reduced to days.

At that time agriculture was the chief industry, and undoubtedly in the years to come the largest percentage of your population will be engaged in that calling. In this connection I learn that the prosperity of your country is said to depend upon the prosperity of the farmer.

When the crops are good, the factory runs full hours, and the storekeeper does not hesitate to order a full stock of goods. It would seem improbable, however, that in this wide country there should be in the future a universal failure of crops, so that either the farmers as a class or the other inhabitants of this country should suffer. This might have happened twenty years ago, but when one considers that since your great Civil War there have been developed the vast wheat fields of the

Kogoro Takahira.

Northwest; the far greater area of land in the corn planting belt in the Middle West; the enormous cattle and sheep ranches, and that all this vast territory is compactly joined together by your splendid systems of railroads, there should be but little chance of a universal crop failure, and financial depression among farmers. What is true as to the development of the great West is also true as to the South. The Southern States now have a larger acreage of cotton than

ever before, the character of crops is more diversified, and fortunes are being made in raising enormous quantities of fruit and vegetables for Northern markets.

Many of your eminent statesmen have confidently asserted in the past that the United States must always remain distinctively an agricultural country, and I am informed that there are millions of acres of land under cultivation; that many more have not yet been reclaimed, and also that the last census gives a large percentage of your population as engaged in tilling the soil. Nevertheless, I believe it needs no acute mind to discern that the wealth, strength and prosperity of the United States does not depend entirely upon agriculture. Prosperous it is beyond all doubt, but it seems to me there is greater prosperity enjoyed by the other industries of your country.

I am amazed wherever I travel to see the varied industries; the thousands of men employed, and the unostentatious display of wealth back of these teeming, bustling, successful enterprises. I have been told most of them have come into existence within the past thirty years, and that every year new enterprises are starting up.

In this period of great prosperity your country is now enjoying one becomes sanguine and fails to keep in mind that depression and adversity may come at the most unexpected time. Such is the history of trade, in all nations and all times. But it is well also to reflect that in this great country you now have a population which is increasing at the rate of about 1,000,000 a year, and that your home industries have made but a small tho keen impression upon the foreign commerce of the world. You are manufacturing to supply a home demand. The time is coming when your merchants and manufacturers will reach out and grasp their share of that foreign commerce; when your industries, varied and great as they look now, will be considered in-

significant. When that time comes Americans will compare the future with the present, and the comparison will be as striking as the present is with the past of ten to fifty years ago. With all these natural resources, which have barely been developed, the United States of America is bound to become the most powerful nation in wealth and influence in the world. And what strikes me most keenly is that even with the enormously rapid increase of population America will never be compelled to buy abroad her food-stuffs or any other articles of daily necessity, as most other countries do. This is the most important point where lies the great strength of this country. It may, therefore, be predicted that the position the United States will gain among the nations will be most prominent and powerful. It will not, however, be maintained by force, such as maintained in some countries, altho that force may be latent, for the traditions of your country are against it. It will, in fact, be maintained by pacific measures, fair treatment and dignified peace.

Such a code of conduct has controlled the United States in the past, will be potent in the future, and is characteristic of your people as the result of your education. It is true your population of 80,000,000 is not all native-born; but the power of assimilation peculiar to this nation, encouraging the foreign-born emigrant to quickly acquire the attributes of American citizenship, is an emphatic indorsement of those cardinal principles of the American people: to maintain law and order; and an unvarying adherence to the doctrine that the majority shall rule. Under such institutions, the solid and vigorous growth of this already great nation must be most assured and the power consequent upon it must be most telling in backing the position of the United States among the nations and in contributing to the peace of the world.

WASHINGTON, D. C.

The Magi

BY JOHN WARD STIMSON

The Magi came, at Christmastide,
Into the night, with gifts resplendent—
Coursers, camels, robes of pride,
Wealth of satellites dependent!

They came with pomp; they came from far,
And followed fast the "Morning" Star!

Low, in a cradle made of hay,
A monarch from the heavens lay!
Was it a king in glory dight?
No—'twas a cherub in pink and white!

It, too, had traveled alone from far,
And came in the arms of the "Evening" Star!

Which of the twain shall we worship most?
The Star with the train and the splendid host?
The Star of triumph? the Star of power?
Or the Star that twinkles at twilight hour?

The "Love Star" tender? Now, watch and see,
It is the Magi bend the knee!

Ah, glory of genius, pride or wealth!
Splendor of wisdom, knowledge, health!
Powers of busy brain and feet,
All of the treasures of earth complete!
Spirit of beauty and love, at last,
At Thy tiny feet, all crowns are cast!

NORDHOFF, CAL.

Charles Augustus Peabody

BY FISHER A. BAKER

[Mr. Baker, who contributes the following article on the new President of the Mutual Life Insurance Company, has been associated in the practice of law with Mr. Peabody for the past thirty years, and consequently writes with full authority and ample knowledge.—EDITOR.]

MR. PEABODY, who was unanimously elected President of the Mutual Life Insurance Company at a meeting of the Board of Trustees held last Wednesday, was born in New York city on April 11th, 1849. He was prepared for college at the Columbia Grammar School and was graduated at Columbia University with the class of 1869. Studying law at the Columbia Law School, he was admitted to the bar in 1871, since which time he has practiced his profession in this city with marked ability and success. For the last thirty years he has been a partner with me and is now carrying on business under the firm name of Baker & Peabody.

I have known Mr. Peabody from the time he was a boy, as I had known his father before him, and I bear cheerful testimony to his rugged honesty and high character.

In 1876 Mr. Peabody was nominated for and elected to the State Legislature from the old Eleventh Assembly District. He served only one term and refused a second nomination. The engrossing nature of his private business has since that time prevented his active participation in political affairs. He has always enjoyed good health and is now full of strength and vigor. He believes in reasonable economy in business and has but little patience with extravagant expenditure for purposes of show. He

is democratic in manner and easily approachable.

Mr. Peabody is a man accustomed to large affairs, and has for some years been the counsel and American representative of William Waldorf Astor. He is of calm temperament, transacts business easily, and the more it crowds him and becomes complicated the cooler he grows. He thinks for himself and does not borrow his judgments in business affairs from others. His mind acts quickly and his decisions once made are firmly held to. By principle and habit he says what he means and means what he says.

Mr. Peabody has set forth in the public press that he has but little knowledge of the scientific side of life insurance and that he will regard the problems arising in connection with his new position as head of the Mutual as in general administrative. He will not assume his new office until January 1st, when Frederick Cromwell, the Acting President, will retire from its administration.

The new head of the Mutual is pledged to honest management for the company and will not represent any faction. He will not be dominated by any one man or body of men, but will be absolutely independent. This fact is well brought out in the statement issued just subsequent to Mr. Peabody's election, as follows:

To the Policyholders of the Mutual Life Insurance Company:

I have this day been appointed president of the Mutual Life Insurance Company of New York and have accepted the position. I desire to communicate directly with the policyhold-

ers of the company, for whose benefit a great trust is being administered. No private interest controls this company, and I enter upon the discharge of my duties as the representative solely of the policyholders, chosen unanimously by their elected representatives, the board of trustees. The new administration stands pledged to economy, to lawful methods and to reform of existing abuses. Much has already been accomplished to carry out these pledges, and all will be done that is necessary to fully redeem them. The board of trustees is harmonious and united upon these matters. The company possesses financial resources far beyond its liabilities. Lapse and surrender of policies mean abandonment of accumulations and the savings of years of thrift. Policyholders are urged to continue their policies in the company and not to withdraw from it. I ask of our constituents that they will give me and the board of trustees a fair trial and judge us not in advance, but by results accomplished. I take the office conferred upon me with a full sense of the sacred nature of its responsibilities and of the obligations I owe to those who entrust to the officers and trustees of this company a provision for widowhood and orphanage.

(Signed) CHARLES A. PEABODY.

Mr. Peabody is a director of the Astor National Bank, the Farmers' Loan and Trust Company, the Illinois Central Railroad Company, the Gallatin National Bank, a trustee of the Bank for Savings and other financial institutions. He has actively participated in the New York club life, and has membership in the University, Union League, Down Town, Apawamis and Tuxedo clubs. His town residence is 224 Madison avenue. Mr. Peabody will have a salary of \$50,000 as President of the Mutual, which is conservative when compared with the \$150,000 salary paid to the former President.

NEW YORK CITY.

The Remarkable Growth of American Banks and Trust Companies

BY SERENO S. PRATT

Editor of "The Wall Street Journal."

EASTERN people have not begun even yet to realize the enormous prosperity of the West. Still less do they realize to what an extent the money of the West has become a factor in the markets of the East.

The South is beginning to enjoy the same wonderful revival, but to the present the West is supplying the great bulk of the nation's wealth and no small part of its financial power. The Western banker is invading Wall Street with his surplus capital to invest and to loan. It is the investing strength of that section that makes the chief demand for bonds. Read the recent report of the Secretary of Agriculture and learn the prosperity that a succession of rich harvests have brought to it. The Western farmers have paid off their mortgages, accumulated a surplus, bought more land, and making still more money and have paid it into their little country banks, and thru them are investing in securities. The Bank Commissioner of Kansas, in his report for 1904, says that it has been an era of small banks in isolated communities, and so many have been started

that today every hamlet in the State, where any considerable business is done, has a bank. This explains the disappearance of the West as a disturbing economic element. There is now no West or East in the true sense of the words. They have become one, so far as their financial interests are concerned. It is true, in no small measure, that the West is now able to finance the

movement of its own crops; that is to say, its banks are no longer obliged to borrow such large sums for crop purposes as in former years. What they do now is mainly to withdraw their own money reserves on deposit in the East, or call in the loans which they have made in New York. Such a movement as this took one hundred million in currency out of New York during the past fall.

While the deposits of Wall Street aid the Western farmers in their harvesting of grain, the money of the Western farmer, at certain periods of the year, actually makes the Wall Street market.

The country bank in which the farmer keeps his money deposits a part of its reserves, let us say, in Chicago or St.

Louis, and the big bank in Chicago or St. Louis, having in certain seasons more money than it can profitably employ at home, requests its New York correspondent to make call loans for it in Wall Street. So it may happen that the few hundred dollars to the credit of the little Kansas farmer may actually be included in the \$50,000 or \$100,000 loan made to a Wall Street broker, enabling him to carry his customers' stocks on margin.

Then later in the year there comes a time when the Kansas farmer has to harvest his crops. He employs a number of men, paying them in currency. The farmer draws on his deposit, and perhaps has to borrow until he can market his

wheat. The little country bank is obliged to draw upon its reserves in Chicago or St. Louis, and the big bank in Chicago or St. Louis calls in its loans in Wall Street, and directs its correspondent in New York to ship it so many thousands of dollars of currency. So that the money in the Wall Street banks is actually paid out to the farm hand in Kansas.

These two movements of money, one to and the other from New York, may affect the business of the whole country, and decide the rates of credit, the prices of stocks, the market for international exchange, the value of securities in London and Paris, and thus affect the financial situation around the globe.

The sudden growth of the West in

financial power constitutes one of the most striking features of the banking situation. Leading to an enormous increase in the number of banks, it has necessarily resulted in a larger appreciation of the value of banks. Just as the people have in recent years been studying

Shall the national bank note circulation be made more "elastic"? President Roosevelt and Secretary Shaw, in their recent message and report, say that it should.

Shall the trust companies, which have grown so rapidly in number, deposits

questions of money, corporations, transportation and insurance, so now they are beginning to give some attention to the question of banking.

The bankers themselves, in their conventions, their clearing houses, their financial papers and in their directors' rooms, are eagerly discussing many vitally important questions relating to their business. Some of these are:

and power, be compelled to keep larger cash reserves? Secretary Shaw in his annual report recommends that the trust companies of large capitalization be permitted to take out Federal incorporations.

Shall the banks themselves keep stronger reserves or, perhaps better still, make provision for more elastic reserves by gathering larger amounts of cash on

hand in July and August for use in the crop moving period beginning in September?

Shall the payment of interest, on deposits subject to withdrawal by check, be prohibited or materially reduced; particularly those deposits in the national banks of New York which repre-

What provisions should be made for a larger banking publicity, and particularly in New York, which is the chief money market of the country, for a comprehensive bank statement which shall report the condition of all the national and State banks and trust companies every week?

Building of the First National Bank of the City of New York, Corner of Broadway and Wall Street, New York.

sent the reserves of interior institutions?

Ought the commercial banks to invest largely in bonds, thus maintaining what is called a "bond reserve"?

Is it advisable that banks should conduct "bond departments" in which to buy and sell securities for their customers?

Shall the national banks be permitted to make loans on real estate?

Would a system of insurance for bank deposits be feasible or wise?

Some of these questions are bound, sooner or later, to become of general public interest. An account of the banking power of the United States will, therefore, be timely as a fitting introduction to the discussion of them.

The banking power of the world is es-

National Bank of Commerce Building, No. 31 Nassau Street,
New York.

timated at \$33,608,000,000, of which 41 per cent. is in the United States. The increase in this country is computed by the Comptroller of the Currency as having been 168 per cent. in fourteen years, against 82 per cent. in foreign countries. At this rate it will not be long before the United States will contain a larger banking power than all the other nations put together.

The total bank deposits in the United States in 1904 were \$10,110,000,000, as compared with \$4,535,000,000 in 1893, an increase of 123 per cent. In the same year the total amount of actual money in the United States was \$2,803,500,000, of which \$1,982,000,000 were in upwards of 15,000 banks; so that there were over

three dollars of deposits to every dollar of money in the country, and over ten dollars of deposits to every dollar of money in the banks. In this calculation the savings banks are included, altho they are institutions of safe-keeping and investment and not of discount.

These figures give some idea not only of the enormous power of banking in this country, but also of how the credit facilities of banks expand the exchange power of money.

Yet a stock market wrecker was recently advising people that they should all go to the banks at one time and draw their money out, pointing to the difference between the deposit liabilities and the cash reserves as proof that the banks

could not pay! Nothing worse could have been conceived than this scheme of playing on the fears of those who do not understand the function of banking. Of course, the difference between the sum of deposits and the sum of cash on hand represents commodities on which the banks have loaned their credit in order to facilitate the exchange of these commodities between producers and consumers. There is a dollar of wealth behind every dollar of deposits.

The recent growth of banking in this country presents these striking features:

1. The extraordinary expansion of the trust company business. 2. The growth

of the national bank system, especially in the small towns of the agricultural districts. 3. A notable development of banking power in the West, as already outlined. 4. The banking concentration which has gone on in the principal cities leading to the creation of banks and trust companies of immense size. 5. The inter-ownership or alliance of banks and trust companies, making what are sometimes called "chains" of banking institutions, subject, in general, to one or the other of great financial powers. 6. An eager and wasteful competition for deposits. 7. The introduction of "department store" methods in banking, many banks and trust companies under-

taking to transact, under one roof, every kind of banking, and in order to increase their deposits, advertising extensively, not only in the newspapers and street cars, but also by means of elaborate circulars, by erecting costly buildings, and

there are institutions which undertake to combine all of these functions.

Formerly the banker regarded his work as in the nature of a profession. Now the business is being rapidly commercialized. Formerly it was respect-

Bird's Eye View of Wall Street, New York, Looking from William to Nassau Street, and showing the Gallatin, Merchants, American and Manhattan Company's Banks.

by other ways of attracting public attention.

Formerly banking was supposed to be a highly specialized business, one institution acting as a place of safe keeping for savings, another as trustee of trust funds, another as an institution of general deposit and discount for merchants, another as underwriter and promoter of great enterprises, and so on. But now

able for a banker to do business in dingy and dark quarters, often inaccessible. Now he works in costly business palaces, amid marble, mahogany and gilt, and pictures and carvings.

The trust company, a few years ago, was an institution that served especially as trustee, administrator, executor, and in other trust capacities, and received time deposits, which it loaned out or in-

vested, thus acting practically as an investing agent for investors and persons of means. But now the trust company, while still performing this special and eminently useful service, has entered boldly into the general banking business

seven per cent. of the entire banking power of the country. Their deposits amount to \$2,847,000,000, as compared with \$4,735,000,000 in the national banks. Over one billion of the total trust company deposits are in Greater New York.

Banking House of The Farmers' Loan and Trust Company, No. 22 William Street, New York. The Cotton Exchange Appears at the Right and Delmonico's at the Left of Picture.

as an active competitor of the banks. There are still a few companies which remain in the old-fashioned trust business, and they are among the strongest in the field. But they are the exception.

Ten years ago there were only 569 trust companies. There are now 1,115. During this time their resources have more than doubled, and they now amount to \$3,802,000,000, or more than twenty-

where these institutions are relatively larger than in the rest of the country, and where their competition with the banks in general, as well as their affiliations with some of the banks, in particular, now constitutes one of the problems of the banking situation.

The national banking system has also had a remarkable development during this same period, altho the percentages

of growth in deposits and resources do not equal those of the trust companies. The national bank expansion has been especially notable since 1900, when, by the act of March 14th, national banks could be incorporated with a minimum capital of \$25,000. This has led to the organization of 2,666 national banks, or practically one-third of the total number chartered since the national banking system was established during the Civil War. Of the total \$4,735,000,000 of national bank deposits on August 25th, \$2,117,000,000 were in the country banks. This growth in banking in the country districts is a most significant development, marking, among other things, a

decline in the prejudice against banks and interest. As Secretary Wilson says: "One of the most notable outgrowths of savings by farmers is the very great multiplication of small national banks in recent years."

When it is said that there is in New York, Chicago and St. Louis \$1,342,000,000 of national bank deposits, while in thirty-five other banking centers there is \$1,275,000,000 and in the rest of the country \$2,117,000,000, one gets some idea of the wide distribution of this banking power. While nearly twenty-one per cent. of the national bank deposits are in New York city, there are two cities—Chicago and Philadelphia—

that hold over \$200,000,000; three others that hold over \$100,000,000—Boston, Pittsburg and St. Louis, and four others that hold over \$50,000,000—Kansas City, Mo.; Cincinnati, Cleveland and Baltimore.

The resources of the national banks of the United States are greater than the capital of all the railroads of the country. Their outstanding loans are larger than the public debt of Great Britain, Russia, Germany, Italy or Spain. They hold in securities two per cent. of all the stocks and bonds admitted on the New York Stock Exchange. They hold in actual money sixty-six per cent. of all the money in all of the banking institutions, public and private, in the United States.

Their circulating notes, amounting to five hundred and thirty-three million dollars, are twenty per cent. of all the money in circulation in the United States.

With all this diffusion of money in banking there has at the same time been a remarkable concentration. This has been especially noticeable in New York, but the same thing has also taken place in Boston, Pittsburg and other cities, and it has generally been accompanied with close alliances between the big banks and groups of trust and insurance companies. In New York there are fewer banks but larger increased banking resources than ten years ago.

A recent compilation showed that there

Building Occupied by the Union Trust Company of New York, No. 80 Broadway, New York. The Observer Directly Faces the Bank Building.

General View of Building on Dearborn Street, Occupied by The First National Bank of Chicago.

are 149 national banks in the United States having gross deposits of five million dollars or more. There are twenty-eight banks having deposits of over twenty-two million dollars. These include fourteen in New York, four in Chicago, four in Philadelphia, two in Boston and two in St. Louis, and one each in Pittsburg and Kansas City.

In New York the National City, the National Bank of Commerce, the First National Bank, the National Park Bank and the Hanover National Bank take the lead, their combined deposits making a total of six hundred and sixty-two million dollars. This is indeed immense, and yet there are five banks in Great Britain (not counting the Bank of Eng-

land) whose total deposits and current accounts make the imposing total of one billion and sixty million dollars. Yet the total deposits of all the joint stock banks in Great Britain, this time including the Bank of England, is over a billion dollars less than those of the national banks of the United States.

In Chicago there is one bank, the First National, having deposits of \$95,000,000, which ranks with the first five banks in the country. The Continental, of the same city, ranks among the \$50,000,000 banks. In Boston, the Shawmut nearly reaches the same mark. The Commerce, of St. Louis, the Fourth Street, of Philadelphia, and the First, of Boston, exceed \$40,000,000. The Commerce, of Kansas

City, has deposits of over \$32,000,000, and the Mellon, of Pittsburgh, of over \$27,000,000. While deposits are in reality liabilities, they are the usually accepted measure of the bank's standing.

Not a few trust companies have also attained great size. Last year there were twenty-nine trust companies, fourteen of them outside of New York, having assets in excess of \$23,000,000. While all bearing the title of "trust companies," they are in fact of different character and scope. Some of them combine savings banks with general banking and trust departments, like the Illinois Trust and Savings, of Chicago, and the Citizens Savings and Trust, of Cleveland. An-

The New Building of the People's Trust Company, 181-183 Montague Street, Brooklyn N. Y.

other, the Provident Life and Trust, of Philadelphia, is both an insurance and a trust company. A few confine themselves to the trust business and to receiving deposits on time, as, for instance, the United States Trust Company of New York. The great bulk, however, transact a general financial business. These twenty-nine companies represent 41 per cent. of the trust company power of the United States, which shows the high degree of concentration that has taken place. Among them are such companies as the Mercantile, The Farmers Loan and Trust, The Union and The Central, of New York; The Merchants Loan and Trust, of Chicago; The Girard, of Philadelphia; The

Illinois Trust and Savings Bank Building, on the Corner of La Salle and Jackson Streets, Chicago, Ill.

Mellon National Bank of Pittsburgh, Pa.

Industrial, of Providence; The Union, of Pittsburg, and the Union, of St. Louis. There are five trust companies in New York having combined deposits of \$280,000,000, comparing with \$662,000,000 in the five largest banks. It is a question of how far this process of concentration in banking will go. The *London Economist* recently observed that concentration there had been checked for the time being. Just now this is the case in New York, but the tendency is irresistible, and it will again begin to show its power in spite of the fact that the recent disclosures in the insurance field have brought out the striking truth that an over-emphasis has been put, in the financial world, upon the value of mere

growth in size. It would not be surprising if three or four of our leading trust companies should in a year or so be combined in one institution, rivaling our biggest bank in amount of deposits.

A big country like this needs big banking institutions; and expansion keeping pace with the growth of the country is not in itself to be feared. What, however, is to be looked after is the tendency among some of the great banks away from commercial banking into the general financial field.

Both departments of banking are legitimate, but there is less danger and more power when they are separated than when combined. Even the great house of the Barings was shaken when, to its

immense business in commercial paper, Lord Revelstoke began to add to it promotions and speculations on a world wide scale.

Banks and trust companies alike perform an inestimable service to the com-

munity, but there is danger lest commercial banks rush into the work of permanent capitalization without having the equipment therefor, and lest trust companies invade the field of general banking without adequate cash reserves.

NEW YORK CITY.

The Wars of the Last Decade

BY EDWIN A. GROSVENOR, LL.D.

Professor of Modern Government and International Law in Amherst College.

CHRISTMAS in this year of grace 1905 finds the entire world enjoying international peace. There are indeed burning political questions still unsettled. There is more than one sensitive spot not yet made normal in the relations of adjacent states. Mutterings may be heard from Macedonia. Discontent is rife in Hungary and Austria. Uncertainty and terror wrap Russia in gloom. Agitation and unrest are the lot of various other portions of the globe. But at least on this Christmas day no armies are marching and no navies speeding to meet other foreign armies and navies in desperate encounter.

Far different was the spectacle presented on December 25, 1895—just ten years ago. Seldom has a Christmas dawn revealed a more ominous horizon. The sky was black with wars already in progress; with wars not yet begun, but to any prescient eye inevitable and speedily to come on; and with wars possible, those possible wars in each case to be averted only thru complete change of attitude on the part of one or of both the powers which confronted each other.

That is, the gazer from his outlook seemed to behold on the world map everywhere wars. The wars he saw were grouped in three classes: Wars actual and then raging; wars sure and about to be waged; and wars contingent, the realization or prevention of which depended on future and unknown factors.

Nor were these wars, present or fore-

seen, confined to one continent or hemisphere. Regardless of latitude and longitude, indifferent to religion and race, they dotted Europe, Asia, Africa, and both Americas, and had for their comprehensive arena the globe.

Of these three classes of wars, those actually being carried on when Christmas morning broke in 1895 formed the smaller and least important group. Not one of them rose to the melancholy dignity of a conflict between recognized States. Still, collectively they were attended with unspeakable horror and shedding of blood. Three Afghan armies were crushing the independent mountain kingdom of Kafiristan. In the island of Formosa feeble armed resistance continued against the newly asserted Japanese rule. The Arabs of Yemen were indulging in one of their desultory campaigns against the Turks. In sudden frenzy the tribes around Mount Lebanon had come to blows, and the report was current that 12,000 Druses had just been killed. In Asia Minor, radiating from Zeitoun as from a center, the Turks were stamping out the Armenian insurrection with hideous atrocities.

In Africa, however, more severe and extended fighting was going on. The Christmas season of 1895 was noted in the west, east and north of Africa by spasmodic and savage efforts on the part of the natives to retain or repossess lands which from all time they had occupied as their own. Prempeh, King of Ashanti, had thus defied the British. His capital, Koumassi, was captured by

the Inspector General of the Gold Coast forces at the head of 1,400 men, one-half of them picked British troops. Among the British officers in the expedition were Prince Henry of Battenberg and Prince Christian Victor of Schleswig-Holstein. Prempeh placed his head in token of submission between the feet of the victorious commander, but was none the less sent into exile with his family and chiefs to Sierra Leone. He was in part avenged by the legacy which he left to his conquerors in the scandal of the Golden Stool.

In Portuguese East Africa, the Portuguese defeated Gungunhana, King of Gazaland, in a great battle, and burned his capital and kraal. Soon after the barbarous monarch was taken prisoner and sent with his wife and son in captivity to Lisbon.

In Madagascar the French, determined on the entire possession of the island, were carrying on a relentless war against the heroic Queen, Ranavalomanjaka, who, like her people, the Hovas, had some time before been converted to Christianity. After six hundred churches and chapels had been destroyed and immense tracts of country reduced to desolation and the people, thru hatred of the invader, had relapsed to savagery and more than 6,000 French soldiers had died from battle or disease, the annexation to France was declared accomplished. The Queen was banished to the French island of Réunion, and three years later to harsher exile in Algiers.

The attempt of the Italians to conquer or dominate Abyssinia was deplorable in its results for the invaders. Because of its costly failure it possesses a mournful distinction in the long story of European aggression. At Christmas time in 1895 it was close upon its ghastly climax and conclusion. The defeat by the Abyssinians of Major Torelli at Ambalaji on December 8, 1895, when the commander, sixty officers and nine hundred men were slain, and when all the arms and equipment of Major Torelli's force were captured, entailed the surrender of the Italian garrison at Shakaleh on January 1, 1896, and prepared the way for the terrible reverse at Adowah a few weeks later. On that memorable field the Italian army was crushed, losing all its guns

and 7,000 men. No Italian can speak of the battle of Adowah without shame and tears. It was the most overwhelming disaster in arms which united Italy has known. Its consequence was a treaty of peace between Italy and Abyssinia, based upon terms laid down by Menelek, the Abyssinian king.

The second group of wars embraced the inevitable, the irrepressible conflicts which—humanity being constituted as it is—it was not in the nature of man to avoid. Of these conflicts there were four. History calls them the Greco-Turkish war, the Spanish-American war, the Anglo-Boer war and the Russo-Japanese war. Racial instinct, national temperament, popular feeling, geographic circumstance, rendered each—the factor of human nature being given—as a determinate of fate. The Greek and the Turk, the American and the Spaniard, the Briton and the Boer, the Russian and the Japanese, as they clutch in the grim battle, seem like puppets of destiny. Profound and long existing causes, such as could not weaken, but must become more inveterate with time, had forged on the ultimate consequence. When the fiery spark in the burning fuse was to reach the powder no man could have told. But the spark of each determinant cause was as discernible and as distinct to the student of affairs on that fateful Christmas ten years ago as in retrospect it is today.

The determinant cause of the Greco-Turkish war was the ingrained antagonism between the Greek and the Turk. The Cretan question was the spark which flashed the explosion. For more than two centuries Crete had been a province of the Sultan. Its capital, Candia, had been forced to surrender to the Mussulmans in 1669, but only after a continuous siege lasting twenty-four years. The tradition of that unexampled siege was a ceaseless inspiration to the Cretan people. Despite the might of the Turks, in the recesses of the mountains bands of men maintained their savage independence. The whole story of the island since its conquest is one incessant struggle to throw off the Turkish yoke. In Southeastern Europe the tie of common blood and common faith is strong. More than once the kingdom of Greece

had perilled its own hard bought independence in desperate effort to assist the insurgent Cretans against their Mussulman masters. December 25, 1895, found the Cretan Greeks sanguine and determined in insurrection, and their brethren on the mainland in free Greece almost frenzied in sympathy. As against the Turk, it seems probable that this time the Cretans would have won. But the Great Powers sought peace at any price and shivered at the thought of possible conflagration in the Turkish Empire. They ordered the Cretans to submit.

They blockaded the island and discharged their cannon on the amazed islanders, who were fighting for liberty. They warned the Greek Government in no manner to assist the insurgents, who were to be considered rebels against their rightful lord, the Sultan. But the Greeks of the Greek kingdom could not be controlled. With utter recklessness, in a delirious burst which was the height of folly, but none the less sublime, Greece disregarded the mandate of the Powers and declared war against Turkey. After a conflict, hopeless from the start and of brief duration, she was compelled, by the treaty of September 18, 1897, to pay the conquerors \$20,000,000 as the cost of the war. Yet prostrate, seemingly defeated, Greece was the real victor. The autonomy or virtual independence of Crete was recognized by both Europe and Turkey; George, the second son of the Greek King, became its ruler under the title of High Commissioner, and the realization of the common dream of definite union with Greece is only a question of time.

The Spanish-American war is too familiar to recount. Of it the determinant cause is not to be found in hostility of religion or race. But, however long delayed, the conflict was sure to come between the democratic spirit of America and the medieval spirit of Spain. The continent itself was not broad enough for the permanent continuance of two so antagonistic systems, near each other and face to face. As in the Greco-Turkish war, so here, the spark was an island, Cuba. For years Spain had been despatching its ablest generals and draining its utmost energies to put down a sometimes quelled but constantly recur-

ring insurrection. On December 25, 1895, General Campos, the most chivalrous of Spain's commanders, at the head of 100,000 troops, was occupied in futile attempts to crush the insurgent chiefs, Gomez and Maceo, whose entire force, ill armed, ill clad, ill fed, was hardly one-fourth of his own. That Spain could ever conquer the obstinate resistance of her revolted colony no foreigner believed.

In the prosperity and welfare of Cuba the United States, far more than any other power, had a vital interest. The increasing disorder and the extending desolation in the island affected the American people more intimately than any other nation. Realizing the situation and reading the future, one could say even then, as did President Cleveland one year later, "A situation will be presented in which our obligations to the sovereignty of Spain will be superseded by higher obligations, which we can hardly hesitate to recognize and discharge."

General Campos in 1896 was succeeded by the sinister figure of General Weyler, and he in turn in 1897 by Marshal Blanco. Meanwhile, threats, persuasion, coercion, extermination, promise, had all been tried. The American Consul General reported that in four Provinces of the island 200,000 of the rural population had died of starvation and resultant causes. On February 18, 1898, in the harbor of Havana, occurred the never-to-be-forgotten destruction of the "Maine." The press and pulpit all over the United States were vehement and practically unanimous in the demand that the independence of Cuba be recognized and that an end be put to her intolerable condition. On April 13, 1898, the war began. It is distinguished by the brilliant naval victories of Manila and Santiago and by the dashing charge up San Juan Hill. On August 2 Spain formally sued for peace, which was concluded on December 10.

In consequence Cuba took her place among the nations as a sovereign State. Spain renounced all her possessions in that New World which her Columbus had been the first to reveal. These, with the exception of Cuba, were acquired by the United States. No pecuniary in-

demnity was demanded from the vanquished. Instead, Spain received \$20,000,000 in consideration of the cession of the Philippine Islands, including the Sulu Archipelago. The American occupation of those islands, after being opposed by a portion of the inhabitants, is now universally accepted.

Never did combatants enter the field with forces more disproportionate than those of the British and Boers in the Anglo-Boer war. On the one side loomed the vastest empire on earth, able to draw inexhaustible supplies from its almost 11,000,000 square miles of subject territory and from a population of more than 395,000,000 human beings. On the other side were ranged two insignificant republics, which together combined an area of 167,465 square miles, and whose entire population—men, women, children, infants—was less than a quarter of a million. More startling disparity of numbers was not presented when the Persians and the Spartans met at old Thermopylæ. A struggle so unequal would appear absurd, unless the weaker party was resolved on self immolation.

None the less, on December 25, 1895, it was evident to the most superficial observer that such a struggle was sure and near. The Jameson raiders at that very moment were already marching in the expedition which the farcical battle of Krugersdorf was to terminate on the New Year's Day of 1896. But Dr. Jameson's raid, bitterly resented on the one side and ingeniously condoned by the other, was only a symptom and not a cause. It did not precipitate the conflict and it counted little in the result. Before the British empire builders gleamed a vision of British rule, continuous from Cairo to the Cape. Those two Boer or Dutch commonwealths, then known as the South African Republic and the Orange Free State, blocked the way. The Boer, Puritan in faith and practice, of Dutch descent, with the blood of Leyden coursing in his veins, would not and could not yield. That he would fall he knew, but the price to be paid for his subjection should stagger humanity.

The war began on October 12, 1899. Despite the heavy odds, it raged with varying successes for two years, seven

months and twenty days. Not till May 31, 1902, was peace proclaimed. The republics, under the names of the Transvaal Colony and the Orange River Colony, had been made parcel of the British Crown. For their subjugation the British Empire had been forced to exert its most gigantic efforts. The victory had been won. The cost of its achievement was well nigh \$1,000,000,000 spent, 300,000 soldiers sent into the field, and 93,523 officers and men invalided or dead!

To rehearse the origin, progress and conclusion of the Russo-Japanese war is to tell a tale that all men know. Moreover, it is impossible to touch more than in outline a war, so recent, conducted on so colossal a scale and bringing in its train results so immense and far-reaching. Those results are not of temporary but of durable significance, of an importance that will increase and be more keenly felt as the years go on. The magnitude of the armies engaged in Manchuria, prodigious as they were, is a minor matter. No sea fight since Salamis, not even the battle between the Spanish Armada and the English ships in 1588, means so much to Asia and Europe and the world as the destruction of Admiral Rodjestvensky's fleet by Admiral Togo last May in the Sea of Japan. Unborn generations are to realize all that is involved in the overwhelming, absolute victory of the Japanese by land and sea more clearly than can the men of today.

The law of their natural development and necessary expansion crowded the two empires against each other where there was room only for one. Japan, ever since her victory over China in 1894, had been making ready with a foresight which astounds and a persistence which appals. It is to the American a matter of national pride that the treaty of Portsmouth, which closed the bloodshed and contention, was signed September 7th, 1905, upon our shores.

Were this paper a compendium of military and sanguinary events between Christmas of 1895 and the Christmas so near at hand, one would be forced to linger upon the Boxer horrors in China in 1900, upon Great Britain's changing fortunes from 1897 to 1904 with the Mad Mullah and with the dervishes and

clansmen of the Soudan, upon the British expedition to Thibet in 1903-04, and upon the political upheavals and commotions which, after intervals of increasing length, have racked the South American States.

It remains to discuss those wars which were contingent or possible, the specter of which threatened for a time. Of this class there were three; between the United States and Great Britain, between Chile and Argentina, and between Norway and Sweden.

At the distance of a decade it is impossible fully to realize the consternation and panic into which President Cleveland's Venezuelan Message of December 18, 1895, plunged English speaking peoples on both sides of the Atlantic. The subsequent course of events vindicated the wisdom of that vigorous message. Still, it cannot be forgotten that in three days American securities depreciated to the amount of \$400,000,000, and that all apprehension of war did not cease until, at the Guildhall banquet to Her Majesty's Ministers on November 9, 1896, the Prime Minister, Lord Salisbury said "A solution has been found by the Government of the United States. . . . I believe I am not using unduly sanguine words when I say that I believe it has brought this controversy to an end." The British Ministry had decided to accept the American contention.

For over forty years the boundary between the republics of Argentina and Chile had remained undetermined and a matter of constant dispute. The Andes mountains formed the indefinite line of separation and contact thru a length of almost two thousand miles. By December 25, 1895, the question had become so acute that an appeal to arms seemed imminent. A conflict between those well ordered and progressive states would have been a grievous calamity to themselves and to that South American civilization, of which Argentina and Chile are the worthiest representatives. Suddenly calmer counsels prevailed. A succession of arbitrations began, terminated on November 27, 1902, by the award of Edward VII., the final arbitrator. This award seemed to give to each party what

it had most desired in the dispute, and was surprisingly satisfactory to both. At the loftiest point in their common boundary a great cross was erected, attesting that henceforth, to the end of time, every difference between the two republics should be settled by arbitration.

Since 1814 Norway and Sweden have been bound together in what was declared to be an "indissoluble and irrevocable union." This union, always repugnant to Norway, had grown yearly more galling. It had been brought about and continued only by force. In March, 1895, Oscar II, King of Sweden and Norway, went to Christiania and did his utmost to placate the Norwegians. Insultingly received, he hastened back to Stockholm, where he was met by such an ovation as has never before been tendered to a Swedish King. On December 25, 1895, the independence of Norway, to be secured by a desperate war with Sweden, seemed only a question of time. It is useless to recount all the turmoil and dissension, happily without bloodshed, which make up the joint history of the two kingdoms during the last ten years. At last Norway has gained her end by peaceful means. On this Christmas Day of 1905 Prince Charles, formerly of Denmark, will be crowned King of independent Norway, under the title of Haakon VII. The last sovereign who reigned solely over Norway was Haakon VI, and he died 586 years ago.

Not yet can an affirmative answer be rendered to the fantastic query of Jean de Bloch, "Is War Now Impossible?" The millennium of a universally accepted and universally practiced brotherhood has not yet come. The rest and tranquillity of the present may be only a temporary lull in the world's strife. Yet each of those three wars, once possible but finally averted, marks a step in the progress of humanity. Today nation nowhere is warring with nation. The anthems which so soon hail the nativity of the Prince of Peace are nowhere mocked and drowned by roar of cannon and groans and curses from ensanguined battlefields. For this let us be thankful and rejoice.

The Village That Ran Away From Taxes

BY ERNEST POOLE

[The following story was told to Mr. Poole by a Russian country physician. It will be remembered that Mr. Poole has just returned from Russia, where he has had exceptional facilities for getting close to the life of the Russian people.—EDITOR.]

LOUD screams—now sharp and long—poured from Maria's hut. I had just driven into the village—a dozen log huts on either side the muddy, foul-smelling road. A score of men and women stood in a semi-circle round the closed door, listening and talking hard—some eager, some gloomy and tearful. One fat, sick-faced woman stood alone on the other side of the road, sneering.

I ran to the door, stooped and went in. A low, square log room, with dirt floor and black rafters above. A moldy odor. In the middle a tall, shaggy-bearded peasant was soberly, steadily beating a young girl, squeezing her against the table with his knee. The two thin peasants on the bench by the wall only grinned, but from the bed on top of the great square brick stove a wrinkled, white-bearded man looked down, cursing so hard that his head bobbed.

"Here! Stop!" I cried.

The big man kept on. I noticed by his official badge that he was the Starosta (village mayor). Suddenly he saw who I was—his arm dropped, he turned humbly and spoke in a low voice—cringing:

"What else can I do, my barin? I myself am beaten by the Ouryadnick (county official). Every month! And now he will beat me worse than ever, and then throw me into the village jail, then out for one day, then in again! Please—if you don't believe—look." He pointed to his own huge face, and even under his bristling yellow beard I could see the dark blue welts and livid bruises.

"Why does he beat you?"

"Why? For taxes of course! What else could it be? Heigh! Quit your howling!" He boxed the young girl's ear. "You've got me into this!"

"What has she done?"

"Oh, it's her family—the devils! They all ran away last night—fifty souls sneaked off and left the village half empty. Don't you see their game? They think they will move every year to a new

village just before tax time. The father of this girl—he got up the scheme. Off they rushed last night with women and babies and dogs and one pig. And now she—this devil's daughter here—she won't tell which way they went. And if I can't catch them I must be beaten fifty times—once for each peasant. Now, my good barin, please step out while I get to work again. My arm is so tired it aches, but I must keep on." He grabbed his whip and raised it. The girl gave a feeble shriek of terror.

"Leave her alone, you pig-devil!" squeaked the white old man from the top of the stove. "She stayed to take care of me. If you beat her any more she'll be too sick to hand up my supper. And I can't get down from here, so I'll starve to death. Leave her alone!"

"Only pay me their taxes," he cried, "and I won't touch her."

"Taxes!" yelled the old man, rising on his elbow and shaking his blue fist down over the edge of the stove. "Taxes! You mad dog! Do I look as if I had taxes up here to give you?"

"Where can we get money for taxes? 'Work! work!' bawls the Zunsky Natchalnik (Czar's representative). 'Work on my estate and you will be happy!' But how much does he pay? Ten kopecks (five cents) a day. Lovely work that is! Bare living costs more. So we just work our own land.

"But when the crop is ready and we load the wheat into our cart—then 'Hands off!' yells the taxman. 'This goes as taxes to the Czar!'

"But this year we had not even wheat for this tax devil! Just an empty hut, aching stomachs, a few cabbages over in that corner, and four big chunks of bread. And the taxman was coming! So my son whipped off with fifty others last night. And now these thirsty devils will come and bawl, 'Your son is a thief. He has run away from taxes. He is a traitor to his Czar!' Now, my good barin, tell

me, if they get caught, what punishment will they get for their crime?"

"Did they go without passports?"

"Of course, they did! They couldn't ask the police for passports, for these sly police know this old game of running away. It has been done all over Russia ever since my third marriage seventeen years ago. I remember how dozens of villages always keep running away every fall. Well—so they have no passports."

"Then they will all be put in prison for illegal traveling."

"Prison! Now devils to corners!"

"What do you mean by that?"

"Devils to corners! For men are worse than devils! But look here." The old man watched me slyly. "Suppose they could run fast enough to get to Siberia—the south part, where it is warm. They say that there the peasants get land free and pay no taxes, and are never hauled off into the army."

"Yes!" cried the girl eagerly. "We heard all about it in Ivan's letter!"

"What letter?" growled the old man, pinching her arm angrily. "We never had a letter! I tell you they never went toward Siberia—they went just the other way. Oh, you she-devil!" He put his face close to hers and made a frightful grimace.

"Look here," I cried—"trust me, won't you? Look at my face. I'm honest. I won't tell! I promise. Now show me the letter."

The old man peered anxiously down, blinking and licking his lips. At last he crawled back and got a dirty red handkerchief. From this he carefully picked out a yellow, musty, torn bit of paper and handed it down. The letter was in an enormous scrawling hand:

"I bow to my father—to my mother, and again I bow to Aunt Maria and to old Ivan—to young Feodosia and to Stepan Petrovitch—and then to my toes; I bow to my Grandmother Feodotchia. I am here in the army in Siberia, and here they say you can have as much land as your soul wishes and not a kopeck to pay—all the firewood you want—I tell you, you can burn fires day and night—you can eat, too—the Tobol River is here with lots of fishes—now if you want to come here just walk from your village till you come to the railroad—walk along the railroad—never leave it for a minute—you must walk many weeks or perhaps a few months—then you come to the town Nizhni Novgorod, where the big fair is—a river is there and you must go

along this river to Perm—then turn to your right and keep walking to Katerinburg, and after that rush for the River Tobol—come quick for there are no girls here except four fat, ugly ones—we fellows want to get married, but the girls are too square and ugly—one of them has only one good tooth and a broken one—so bring all the girls along—girls, if your fathers stop you, rush out of the hut at night and come anyway—now I bow to my father and to my mother—and to my Grandmother Feodotchia. I bow to my toes, and I hope she will not forget to send me a little money.

Soldier of the Czar,

IVAN.

I read this letter laboriously aloud. I finished. A deep, musing silence.

"Now," said the old man, "please read it again."

(This was done. More meditation.)

"Well," he remarked, I have not heard that read for ten months."

"Ten months. When did it come?"

"I will think." He scratched his old white head. "It came a year ago last Easter. My grandson wrote it. He is smart—yes, sir, smart. No one else in this village could read except him, and he was so far away that he could not come here and read his letter to me. So there it lay. But I am an old man, and my head is full of everything, so I watched it, and the more I looked the better I knew this fine writing was the same as my grandson's writing used to be."

"Ho! ho!" I said. "This is from my boy." But I was too sly to show it to the priest or the police. They are both too close to our God, and might make us trouble. So I waited.

"Well, just before Christmas there came to here the man who buys the linen that our women spin. Even in the next village he heard about my letter.

"So he came and said, 'I will read it for ten pounds of raw linen.'

"'Go out of the door,' I said, 'while I talk with my woman.' At last my third wife and I decided we could give him the linen if we ate no soup but only black bread and water for a week. 'Ho! ho!' laughed those ugly little brats—my grandchildren. 'How funny they will look, for they have no teeth to chew the bread. We must make the old horn chew it for them.' But my oldest son thrashed the brats, and then I felt better.

"'Come in and read,' I said. In he came and read all this. That was ten months ago, and the funny thing is that

you come now and read it exactly the way he did—the same words—only he stopped four times to spit and once he got coughing.”

At this point the other peasants began coming in—big boned, dull, with white anemic faces and heavy eyes. In vain I tried to warn them against following their outlaw friends.

“We might as well die there as here,” cried one short man with a red, stubby beard and hollow cheeks.

“Yes,” said the sick-faced woman, who had stood sneering in the street. “Our babies die here anyway. I tell you I have lost both my last ones. One got dead before she was born. I tell you she was a beauty—she——”

“We have no wood!” cried one old woman. “Not even enough to make a whip-handle with. That’s why the babies freeze and cough and die!”

“But why not send some one ahead,” I suggested, “to look for the best place?”

“Good!” cried several voices.

“Oh, no—we won’t!” cried the old grandfather, still on top of the stove. “We did that once long ago—just before my third marriage. And he stayed away with the money we gave him to buy land with. One fine night his wife and children disappeared, so we know he took them, and all of them are rich and happy with our village money—the fat, chuckling devils!”

“But little money the crowd took last night! They had no carts and no blankets—only the coats on their backs, and a big chunk of black bread for each. They will starve to death. They will never get to my boy Ivan. I wonder if he is married. Perhaps he has a baby and——”

“Oh, shut up!” cried the sick-faced woman. “Let’s stick to our own things! I hate all babies anyhow!”

Now we heard loud cries outside.

“What’s up?”

“The ousyadnick (police officer) is beating the Starosta!”

“Fine!” laughed the old man on the stove. “Big devils beat little devils! Funny! Very funny! Fine!”

In rushed the Starosta and seized my arm. “Barin—barin! Don’t let him take me off from my wife and my brats!

They will starve! Tell him I did my best to find out! You saw how hard I beat the girl! Tell him how hard I beat her!”

But the ousyadnick—resplendent in gray coat and brass buttons—seized the Starosta and led him off.

“Now devils to corners!” the old man chuckled.

* * * * *

One year later I came back. I went to the old man’s hut and found him still up on the stove. But now the rest of the hut was crowded with five men and women and seven children of all sizes down to crawling babies.

“Yes,” he said, “they all came back, and all they brought was holes in their clothes. Four had rolled up their eyes and were buried in the big forest. The others built huts of branches and piled snow over and tried to live. They had plenty of wood to burn, but nothing to eat. They ate the pig right away and then all the dogs—even the old one whose teeth were gone. So they came home last Easter.

“But now this place is ten times worse. I have never felt so bad as this—never since my second wife ran away with young Samson the miller.

“So now they think they will sneak off again and find some place where land is rich and given away. Then they will send for me. They will take me to my boy Ivan—the smart one. And after that I will eat all I want—soft food and soup, so my gums will stop bleeding. This is what I always think about.”

He turned, crawled back painfully along the top of the stove—grunting. In a moment he crept back with a scrap of paper—faded, crumpled, dirty. He handed it down. As he leaned over I was shocked to see how emaciated he was. His breath came in short, hot gasps, his thin blue hand shook violently, he nearly lost his balance, and when I pushed him back I felt his old body—just a frame of bones. His faded eyes betrayed unmistakably the intense pains from the stomach that “jumped up and down.” But now his eyes gleamed expectantly.

“Now, barin, will you read for me again my letter from my boy Ivan—the smart one?”

War and Race Decadence

BY DAVID STARR JORDAN

[War has usually been considered exclusively from a political or ethical point of view, but as President Jordan here shows, the biological argument against it is still stronger. In his little book, "The Blood of Nations," from which some of the following passages are taken, he has made a powerful plea for peace.—EDITOR.]

THE greatest blessing the twentieth century has in store for civilized nations is the permanent establishment of peace. Science made war too expensive, Christianity has found it too brutal, and commercial enterprise has made it too silly, and we must settle our disputes in some other fashion. We must find some better means of adjustment of differences national and international; we must perforce turn our attention to the extension of law over nations as well as over individuals. Just as the common law has taken the place of private combat, to the infinite advantage of every private human interest, so must war give place to international law to the equal advantage of every public interest.

In this paper I am asked to set forth one of the prime evils of war, one which has been generally overlooked because it lurks in the background, appearing only with the progress of the generations, the phenomenon of race decadence.

It is often claimed that certain nations or races are decadent. They are not living up to the high mark set in their own history. This is shown in lack of force, lack of initiative, physical weakness, reduction of stature, reduction of birth rate. That something of this sort existed in France is self-confessed, and a commission has been appointed to grope for its causes. They will not have to look far if they begin their investigation at the right end.

In the first place,

so far as race-improvement and race-deterioration goes, a nation or group of men is governed by precisely the same laws as a herd of cattle or a flock of sheep. Each generation is substantially like the one which furnished its actual parents, neither better nor worse. There is no such thing as a racial improvement (as distinguished from extension of civilization) except thru selection, the limitation of parentage to the best of the series. There is no such thing as racial decadence or racial slump except thru conditions which destroy or remove the best, leaving to the inferior individuals the responsibility for parenthood. The herd of cattle is readily improved in any line or all lines, by the preservation of those having the desired qualities and the removal of those who do not. If the best and fairest young bulls and cows are eliminated and the stock is bred from the

culls only we shall have rough calves, scrawny cows and a lower standard for the herd. Just so with a race of men. The future of the race remains with *the man who is left*, with the men who in the actual movement of history remain to furnish parentage.

Adversity does not destroy a race; neither does luxury; neither does any incident not fatal to the best individuals as such. The only race-decadence known in history is that produced by the destruction or removal of the best. Education affects the individual. It leaves no permanent

David Starr Jordan.

mark on the race. Each child is free born, born of what his father and mother ought to have been, and individual accidents aside, the child never ranges far above or far below the qualities involved in its parentage.

What influences tend to the destruction of the best in a nation? There are many of those which work in a small way, more or less overbalanced by the conditions which destroy the worst. Since the beginning of time, the way of the transgressor is hard, another way of describing the survival of the fittest.

One cause of local decadence is found in emigration. For example, on the coast of Kent in England, are two towns, Winchelsea and Rye, which are spoken of as decadent. Their harbors are filled with silt, their houses are falling to ruin, their population is small and feeble, their glory has departed. They are decadent towns, and their decadence is plainly due to emigration. Their best people have gone to better places, and the world, and even England is none the poorer. In like fashion, America has been built up at the cost of Europe. Emigration takes the more enterprising, and here and there in the Old World their absence can be felt. In like fashion the hill towns of New England are decadent. The young men have gone West and men of an inferior stock have bought up the old farms, developing an inferior breed.

The world as a whole loses nothing by this. It marks only a change of stress, a growth of one region in importance at the expense of another. But such removal means only loss, when the best are removed, not from one town to another, but from the face of the earth. That is the function of war, the one great destroyer of men and nations, the one great cause of race decadence.

Greece died because the men who made her glory had all passed away and left none of their kin, and therefore none of their kind. "'Tis Greece, but living Greece no more;" for the Greek of to-day, for the most part, never came from the loins of Leonidas or Miltiades. He is the son of the stable-boys and scullions and slaves of the day of her glory, those of whom imperial Greece could make no use in her conquest of Asia.

Why did Rome fall? It was not be-

cause untrained hordes were stronger than disciplined legions. It was not that she grew proud, luxurious, corrupt, and gained a legacy of physical weakness.

"The Roman Empire," says Seeley, "perished for want of men." You will find this fact on the pages of every history, tho few have pointed out war as the final and necessary cause of the Roman downfall. In his recent noble history of the "Downfall of the Ancient World" ("Der Untergang der Antiken Welt," 1897), Prof. Otto Seeck, of Greifswald, makes this fact very apparent. The cause of the fall of Rome is found in the "extinction of the best," and all that remains to the historian is to give the details of this extermination. In Rome, "Marius and Cinna slew the aristocrats by hundreds and thousands. Sulla destroyed no less thoroly the democrats, and whatever of noble blood survived fell as an offering to the proscription of the triumvirate." "The Romans had less of spontaneous power to lose than the Greeks, and so desolation came to them all the sooner. He who was bold enough to rise politically was almost without exception thrown to the ground. *Only cowards remained, and from their brood came forward the new generations.* Cowardice showed itself in lack of originality and slavish following of masters and traditions." Had the Romans been still alive, the Romans of the old Republic, neither inside nor outside forces could have worked the fall of Rome. But the true Romans passed away early. Even Cæsar notes the "dire scarcity of men." Still there were always men in plenty, such as they were.

Berry states that an "effect of the wars was that the ranks of the small farmers were decimated, while the number of slaves who did not serve in the army multiplied."

"The period of the Antonines was a period of sterility and barrenness. The human harvest was bad." Augustus offered bounties on marriage until "celibacy became the most comfortable and most expensive condition of life." "Marriage," says Metullus, "is a duty which, however painful, every citizen ought manfully to discharge."

So fell Greece and Rome, Carthage and Egypt, the Arabs and the Moors, be-

cause, their warriors dying, the nation bred real men no more. The man of the strong arm and the quick eye gave place to the slave, the pariah, the man with the hoe, whose lot changes not with the change of dynasties.

In his charming studies of "Feudal and Modern Japan," Mr. Arthur Knapp returns again and again to the great marvel of Japan's military prowess after more than two hundred years of peace. It is astonishing to him that, after more than six generations in which physical courage has not been demanded, these virile virtues should be found unimpaired. We can readily see that this is just what we should expect. In times of peace there is no slaughter of the strong, no sacrifice of the courageous. In the peaceful struggle for existence there is a premium placed on these virtues. The virile and the brave survive. The idle, weak and dissipated go to the wall. If after two hundred years of incessant battle Japan still remained virile and warlike, that would indeed be the marvel.

Other things being equal, the nation which has known least of war is the one most likely to develop the "strong battalions" with whom victory must rest.

It is a costly thing to kill off men, for in men alone can national greatness consist. But sometimes there is no other alternative. It happened once that for "every drop of blood drawn by the lash another must be drawn by the sword." It cost us a million of lives to get rid of slavery. And this million, North and South, was the "best that the nation could bring." North and South, the nation was impoverished by the loss. The gaps they left are filled to all appearance. There are relatively few of us left today in whose hearts the scars of forty years ago are still unhealing. But a new generation has grown up of men and women born since the war. They have taken the nation's problems into their hands, but theirs are hands not so strong or so clean as tho the men that are stood shoulder to shoulder with the men that might have been. The men that died in "the weary time" had better stuff in them than the father of the average man of today.

North or South, it was the same. "Send forth the best ye breed," was the

call on both sides alike, and to this call both sides alike responded. As it will take "centuries of peace and prosperity to make good the tall statures mowed down in the Napoleonic wars," so like centuries of wisdom and virtue are needed to restore to our nation its lost inheritance of patriotism—not the capacity for patriotic talk, for of that there has been no abatement, but of that faith and truth which "on a war's red touchtone rang true metal." With all this we can never know how great is our real misfortune, nor see how much the men that are fall short of the men that ought to have been.

It will be said that all this is exaggeration, that war is but one influence among many, and that each and all of these forms of destructive selection may find its antidote. This is very true. The antidote is found in the spirit of democracy, and the spirit of democracy is the spirit of peace. Doubtless one war will not ruin a nation. Doubtless it will not destroy its virility or impair its blood. Doubtless a dozen wars may do all this. The difference is one of degree alone. I wish only to point out the tendency. That the death of the strong is a true cause of the decline of nations is a fact beyond cavil or question. The "man who is left" holds always the future in his grasp.

If war is good, we should have it regardless of its cost, regardless of its horrors, its sorrows, its anguish, havoc, and waste.

But it is bad, only to be justified as the last resort of "mangled, murdered liberty," a terrible agency to be evoked only when all other arts of self-defence shall fail. The remedy for most ills of men is not to be sought in "whirlwinds of rebellion that shake the world," but in peace and justice, equality among men, and the cultivation of those virtues we call Christian, because they have been virtues ever since man and society began, and will be virtues still when the era of strife is past and the "redcoat bully in his boots" no longer "hides the march of man from us."

It is the voice of political wisdom which falls from the bells of Christmas-tide: "Peace on earth, good will towards men!"

Literature

A Few More Books on Japan

PROF. ERNEST W. CLEMENT, for years a teacher in Tokyo and at Mito, master of figures and student of both currents and surfaces, writes of *Christianity in Modern Japan*¹ with clearness, catholicity and accuracy. Map, index, tables, plenty of half-tone illustrations accompany the text. Orderly arrangement, historical development engagingly shown, philosophical insight, and a brisk luminous style make this a model handbook, pleasing and valuable. Rome did not fall in a day, nor will Japan's paganism, but it is weakening fast.

Modern manifestations of age-old specters of the brain go on in Nippon, despite geometry and physics. The author of "Japanese Girls and Women," already a classic, gives us in his new book, *In the Land of the Gods*,² ten true pictures of fairyfolk and phenomena set in the frame of a dainty English style. "The Peony Lantern" is a revelation. "The Blue Flame"—visible embodiment immediately after death of the freed soul—shows how a touching story of the modern man's real valor and sacrifice has its mystic counterpart in woman's imagination. This book is a "Japanese Fairy World" to date, but with something of Hearn's witchery of style.

Lafcadio Hearn not only buried himself in the Japanese world, but gave his ashes to the soil so often devastated by earthquake, typhoon, tidal wave and famine, but ever fertile in blooms of fancy which lies under the River of Heaven. The air of Nippon, poor in ozone, is overpopulated by goblins. No writer has ever excelled this child of Greece and Ireland in interpreting the weird fancies of peasant and poet in the land of bamboo and cherry flowers. In this his last volume³ we have some "Goblin Poetry" and three stories, all of them magic-mirror reflections of life among

the lowly. There are also reflections on the philosophy of Herbert Spencer—who, apparently, spoke to Mr. Hearn the last word on the subject of religion, or the science of it—and on the speculations of Percival Lowell concerning Mars. Hearn's life seemed crushed under "the horror of infinite Possibility." Hence, perhaps, the weird fascination of his work and style.

The two worlds of Buddhist conception are those of fixed law or cause, and the "floating" or passing (*ukiyo*) world of phenomena, including gods, mortals, buddhas, earth, heaven, men, women. Bound, printed and illustrated in Japanese book style, but written in excellent English, Dora Amsden's impressions of the Japanese color-print artists, from 1700 to 1900, make the best handbook on the subject.⁴ Accurate investigation of personalities, epochs and eras, and warm appreciation, expressed in highly rhetorical terms, of Japanese art characterize this informing volume.

At last we have a volume doing justice to Japanese architecture.⁵ On the principle that only a poet can translate a poet, Mr. Cram, an American architect, interprets for us the masterpieces of the Nippon builders' art. He enters into the spirit of those who upreared pagoda, yashiki and temple. No more is the Parthenon a true growth of Grecian genius or soil than is the Yakushiji pagoda at Nara, or the Kankakuji pavilion in Kyoto. Mr. Cram gives convincing reasons for his rapturous appreciation. Domestic interiors, allied arts, color prints and sculpture are also treated in masterly style.

Mr. Stewart Dick tells a bright story of *The Arts and Crafts of Old Japan*⁶ with all the *elan* of a man who has just discovered an Ali Baba's cave of riches. He talks entertainingly and correctly, and yet rather as a student and reader in Europe, than as an observer in Japan itself.

¹ CHRISTIANITY IN MODERN JAPAN. By Ernest W. Clement. Philadelphia: American Baptist Publication Society. \$1.00.

² IN THE LAND OF THE GODS. By Alice Mabel Bacon. Boston: Houghton, Mifflin & Co. \$1.50.

³ THE ROMANCE OF THE MILKY WAY, AND OTHER STORIES. By Lafcadio Hearn. Boston: Houghton, Mifflin & Co. \$1.25.

⁴ IMPRESSIONS OF UKIYO-YE. By Dora Amsden. San Francisco: Paul Elder & Co. \$1.50.

⁵ IMPRESSIONS OF JAPANESE ARCHITECTURE AND THE ALLIED ARTS. By Ralph Adams Cram. New York: The Baker-Taylor Co. \$2.00.

⁶ ARTS AND CRAFTS OF OLD JAPAN. By Stewart Dick. Chicago: A. C. McClurg & Co.

Now that war is over, the strictly economic era in the Far East has already begun.' Mr. Hatch, a British business man, who has had an eye (in 1902) upon coal, iron, minerals, textiles and things that make trade and fill pockets and furnish houses, has wisely written his impressions.' Copiously illustrated pages and a text rather too full of quotations but rich in solid proofs tell of the wealth waiting to be raised up or dug out of the earth and fished from the sea are within these covers. Maps, appendix and index enrich a capital book for the investor and fortune seeker.

Early in 1904, Mutsuhito sent Baron Suyematsu, a scholar in English, French and German, to Europe to hold the world to its moorings of sympathy with Japan. Russia lost by not doing likewise. *The Risen Sun*—so un-Japanese in the eyes of Bushido—is the publisher's choice of titles. Three books, severally entitled "Antecedent to the War," "A Nation in Training," and "Eternal Relations," contain the luminous text. How Russia brought on the war is told in cool, dispassionate style. We learn how soldiers are made. The chapters on ethics, hara-kiri and religions are trans-

A VISION OF FUJIYAMA.

Copyright, 1905, Baker & Taylor Co.

figurations and idealizations, rather than scientific statements of cool criticisms; but then the baron was on the defensive. Physical bravery may be moral poltroonery. To write of "the great change in Japan" as if it were wholly of interior and native causes or suggestion, and ignore foreign influences all the way from 1537 to 1900, is not history. The book is a superb piece of polemic, with a refreshingly cool and judicial temper like Franklin's and with eloquence that reminds us of Beecher. No critic or student of Japan, friendly or adverse, can ignore its sterling contents.

Mr. Kawakami,⁹ who wrote an admirable monograph on modern constitutional development in Japan, has collected a veritable literary mince-pie of alien opinions about his countrymen, who in critical eyes figure as demons, angels or men, according to the sanity of the tourist or resident spectator from lands afar. The quotations of title and author are accompanied with notes in Sinico-Japanese.

*All About Japan*¹⁰ is the ambitious title of a pleasantly written book on Japanese life and history, particularly intended and well adapted to interest children in the work of our missionaries there.

The Conquest of Canaan

The Canaan referred to in the title of Mr. Tarkington's latest novel* is a highly respectable country town in Indiana. It has just passed the board sidewalk stage when the hero puts on "long pants" and begins to slink down back alleys to play dominoes with the loafers in Louis Frabach's saloon. It is still owned body and soul by Colonel Pike, as towns of that age are usually owned and controlled by some whited sepulchre of a rich man. The hotel stands on the main street of the court house square, as it always does. And the rotunda of it is the roosting place of the sages of Canaan, doddering old men, whose gossip and philosophy

are features of this book. The author never showed more wit interpreting than he does in the conversation of these old window owls. And they are important factors in the tale, not only because they give a survey of the general situation, but because they prove to be the knights and standard bearers of a new order of things in Canaan. And it requires no small genius to change decrepit old men into stimulating heroes. Tarkington has the right faculty for creating heroes, any how. He understands that their substance is spiritual, beneficial, and, so far as he is concerned, boldly whimsical. Thus the real hero of this story is a bad man who had more virtues than any decent person in the town. He displaced Colonel Pike, befriended the poor, married the beautiful lady and made a conquest of Canaan generally because of his quality. In the beginning he was not above "shooting craps" with vagabonds, but he spent his odd hours figuring how to save three million dollars to the State in two years. At this period of his career the author makes the following appeal to the reader in his behalf: "He had the look of a puppy who thinks you would not have beaten him if you had known what was in his heart." Then he goes on to tell how often he was beaten and persecuted by the good people of Canaan, who sung "Rescue the Perishing" on Sabbath evenings, and counted it a virtue to shun the young scapegoat who whistled gayer tunes on the outside and perished with a fine Spartan courage.

Mr. Tarkington gives the impression of having himself an aching personal consciousness of how Loudens felt. The story contains the Ishmael note against the respectably good to be found in nearly all his stories. And doubtless there is much in life which justifies his point of view. No error is more firmly fixed in the popular mind than this, that the Devil is the peculiar companion of the wicked. It is when he enters into the hearts of the irreproachable members of society, takes on all the airs of honor and piety, that the worst happens. The Satanic conceit which causes the good people of Canaan to turn their backs upon Joe Loudens was as gravely wrong as that which infested the little brown jug in the young lawyer's office.

⁷ FAR EASTERN IMPRESSIONS. By Ernest F. G. Hatch, M. P. Chicago: A. C. McClurg & Co. \$1.50.

⁸ THE RISEN SUN. By Baron Suyematsu. New York: E. P. Dutton & Co. \$3.00.

⁹ JAPAN AND THE JAPANESE. As Seen by Foreigners. By Karl K. Kawakami. New York: Japanese American Weekly Co.

¹⁰ ALL ABOUT JAPAN. By Belle M. Brain. New York: Fleming H. Revell Co. \$1.00.

* THE CONQUEST OF CANAAN. By Booth Tarkington. New York: Harper Bros. \$1.50.

But the story would not have the proper ethical proportions if only the self-righteous deacons were overturned. Louden escaped the snake in the jug, too. This must be so. There is no compromising with the powers of darkness when it comes to creating a character assigned to attract and fulfil even the average reader's ideal, and no one has a keener sense of this artistic obligation than Mr. Tarkington. He has a most irreverent way of putting the right at the bobtail end of society, but he does not give up the design until every man and every woman toes the mark to it. He flaunts the sweetest virtues where other authors are accustomed to offer merely scandalous details. And this is not so sacrilegious as it sounds. The sooner we learn that the good have not nearly all the goodness there is, the sooner we shall have a proper sense of people.

Mr. Tarkington has a most tender-hearted imagination whenever a lady is in question. He blesses them this way and that with more sweetness than any real woman ever possessed, and he sets their little jewsharp spirits to luring everybody until even the poor reader wishes he could get into the printed page for ten seconds just to kiss her. He has been quite as successful as usual in making Ariel Tabor adorable in this story. To her he gives all the characteristics most to be admired in women. Gentleness, sweetness, and other lovable qualities make her a Tarkington type, radiating sunshine. But for pure humor in an author, we commend the conversations of the old window owls in the "National House." The timid, ingratiating manners of servility, the cackling shrewdness with which they cover up lapses of memory, has never been done more clearly. They are irascible, incoherent and occasionally disconcertingly keen in their challenges to intelligence and faith. The old pessimist exclaims:

"Tell me why ain't the Church and the rest of the believers in a future life looking for immortality at the other end of life? If we're immortal, we always have been; then why don't they speculate on what we were before we were born? It's because they're too blamed selfish—don't care a flapdoodle about what *was*; all they want is to go on living forever."

Ancient Legends of Roman History

"Of such labor was it to found the Roman name!"

Half a century ago we used to read in college the early chapters of Livy as gospel truth. Niebuhr had, it is true, laid rude hands on that imposing structure called early Roman history, and Mommsen was hacking away at its corners. But it was reserved for the present generation to tear down the whole building.

Professor Pais* has sifted the origins of Rome without fear or pity; but in so doing he has incurred the *odium archaeologicum* among his countrymen, who could not bear to see the Roman kings transformed into Etruscans, "brave Horatius" Cocles etymologized into a one-eyed Cyclops, and even Coriolanus treated as mythical. When he went so far as to declare that the *lapis niger* and the tomb of Romulus recently excavated in the Forum were not earlier than 350 B. C., instead of belonging to the sixth or even the seventh century B. C., he crossed swords not only with Boni, the great excavator, but with Italian pride. As a result he has lost the directorship of the Naples Museum. Those pieces of Pentelic marble and *giallo antico* mixed with chips of the *lapis niger* around the "tomb of Romulus" were to him such strong evidence that he said, "I will speak out, for I dare not lie."

His bold criticism of "sources" also reveals the legendary character of what has so long been presented to us as the history of the first four centuries of Rome. But Italians are not yet ready to believe that the authentic history of Rome begins just before the Punic Wars. He who maintains this is on the road to martyrdom. There is, of course, no good reason why the small beginnings of Rome should be denied from national pride or that "the vain and incapable effort of those scholars who endeavor to keep the vanities of nations" should be so persistent. Rome's glory is not to be dimmed by the fact that it started as a weak and struggling band in the midst

* ANCIENT LEGENDS OF ROMAN HISTORY. By Ettore Pais. Translated by Mario E. Cosenza. New York: Dodd, Mead & Co. pp. xiv, 336. Price, \$4.00.

of stronger and more developed peoples, like the Etruscans.

One contention of Professor Pais is obviously just, viz., that prior to the third century B. C. Rome had no ancient and authentic annals, and that the beginnings of literary Roman history were written by Sicilian Greeks and modeled on the history of Greece. The slaughter of the Fabii was made to accord with the battle of Thermopylæ in date and in the number of the slain, and this is only one of many similar cases.

We shall probably never know how much the Romans owed to the Etruscans, whose language is an enigma. A large slab covered with Etruscan characters found at Capua was declared on no evidence at all to be spurious, and was sold to a representative of the Berlin Museum for 200 francs! Some day it may be deciphered. Even now it is a token that Etruscan power once extended as far south as Campania. Etruria was strong in the sixth and seventh centuries B. C. That it early adopted Greek culture is shown not merely by the story of Demaratos, the Corinthian potter, but by the solid facts of innumerable Greek vases and by the Greek reliefs on the bronze chariot lately brought from that region to the Metropolitan Museum. Hammered on the north by Gauls and on the south by Syracuse, Etruria fell; and Rome rose, grew and prospered.

The book has faults. The style is not smooth. The lack of an index can only be excused by the consideration that such an index would have added materially to the bulk of the book. Names of persons and places are legion. The illustrations, about sixty in number, are good, even admirable, but they ought to be numbered for reference in the text. The maps are poor.

The Social Secretary. By David Graham Phillips. Indianapolis: Bobbs-Merrill Co. \$1.50.

If this book were anonymous no one could be convinced that it was not written by a woman. As it is published under Mr. Phillips's name, however, we have to accept the fact, and merely wonder how any man could find out so much about the workings of a girl's mind. The story is told by Miss Talltowers, a

girl of an established Washington family, who, on account of financial troubles, engages to pilot Mrs. Burke, a rich Western woman, thru the Washington season. Her schemes, defeats and successes are all charmingly narrated, not the least valuable feature of which are her own naïve opinions on life. Toward the end of the novel Mrs. Burke's son arrives from Germany, and after a stormy and turbulent friendship, he and the Social Secretary finally agree on some disputed points, and announce their engagement to the Washington circle. The illustrations by Clarence F. Underwood are excellent.

The Structure and Development of Mosses and Ferns (Archegoniata). By Douglas Houghton Campbell, Ph. D., Professor of Botany in Leland Stanford Junior University. 8vo, pp. v, 657. New York: The Macmillan Co. \$4.50.

The Fern Allies of America north of Mexico. By Willard Nelson Clute, author of "Our Ferns in Their Haunts," etc. With more than 150 illustrations by Ida Martin Clute. 12mo, pp. xiv, 277. New York: Frederick A. Stokes Co. \$2.00.

We have here two very different volumes covering in part the same ground. One is a microscopic study of structure for the classroom, and the other a description of plants from the fields; one for the histologist and the other for the collector. For the general reader we need say little more of Professor Campbell's volume than that it is a second edition of a work published ten years ago, but entirely rewritten and enlarged, and printed from new plates, so that the author had full liberty of revision. He concludes that of all the mosses and ferns, using the terms in the broadest way, the most primitive in structure are the liverworts, and that these are descended from sea-weeds, or Algæ. Of the ferns he makes the Ophioglossum family the most primitive; while flowering plants have developed out of something like the Isoetes or Quill-worts. He thinks there is a real genetic relation between the conifers and the Lycopodiums, which they resemble. Much less technical, and so admirable for the collector's use, is *The Fern Allies*. One cannot but admire the numerous careful drawings, and a few colored plates which

are more pictorial than minutely scientific. Not a few amateur botanists confine their study to flowering plants and the ever attractive ferns; they will find it very pleasant to add the horsetails (*Equisetum*), the club-mosses (*Lycopodium*, and the Marsilias. One could hardly ask a better guide than Mr. Clute's handsome volume.

Oriental Studies. By Lewis Dayton Burdick. 12mo. 150 pages. The Irving Company, Oxford, N. Y. \$1.00.

There are four essays gathered in this volume. One treats of the antiquity of our ethical ideals, especially gathering the moral adages from ancient Egypt and Babylonia. The second makes a comparative study from other similar stories of the birth of Moses. The third discusses the faiths and folklore of the moon, and the fourth describes the epics before the Iliad, especially the Pentaur of Egypt, which gives the story of the historic battle of Rameses against the Hittite king, and the other the Gilgamesh of Chaldea. The author has gathered from various stories an interesting collection of facts for comparative purposes. It is a good thing to call attention to the Ten Commandments before Moses. Perhaps the least familiar of the matters brought together in this volume are those which have to do with the folklore of the moon. Here he gathers not a few quotations from English poetry, but we notice that in speaking of the idea that the spirits of the dead find their habitation in the moon he does not quote Milton's denial that the moon is the habitation of the souls in Limbo—

"Not in neighboring moon as some have dreamed:

Those are argent fields, more likely habitants,
Translated saints, or middle spirits hold,
Betwixt the angelical and human kind."

The various facts and illustrations gathered are well selected and are from reputable and trustworthy sources.

The Heart of Lady Anne. By Agnes and Egerton Castle. New York: Frederick A. Stokes Co. \$1.50.

There are books like an old tapestry, where woven lords and ladies in brocade and velvet, lace-trimmed and quaintly garbed, curled, and powdered, start into

a sort of resemblance to life as a faint breeze stirs the folds of the arras. Periwigged and powdered heads bend in gracious fashion in the stately movements of a mimic minuet. It has a charm—all of this elaborate masquerade—and the taste for tapestry fiction is as respectable and comprehensible as the present mania for mural upholstery in decoration. Agnes and Egerton Castle know how skillfully to weave such fabrics, or fabrications, and the soft colorings and eighteenth century patterns are very pleasing to the eye. The people who are woven into their latest canvas, *The Heart of Lady Anne*, are very human folk, altho they fairly rustle in their stiff silks and heavy embroidery. Lady Anne is a beautiful shrew, educated in France to hate the country which her young English husband loves almost as deeply as he does his wife. The duel of opposing tastes which gives a sufficiently entertaining plot to the story moves on for many chapters, but finally merges into a harmonious duet of mutual duties and pleasures, as happy and wholesome as an English garden full of roses, but with a corner sensibly reserved for homely and not uncomely vegetables. It is another "Taming of the Shrew" in crinoline, patches and powder, and 'tis a beguiling tale of a most magnanimous husband and a pretty goose of a wife.

Pisanello. By G. F. Hill, M.A., of the Department of Coins, British Museum.

Constable. By M. Sturge Henderson. London: Duckworth & Co. New York: Charles Scribner's Sons. Each, \$2.

The scheme of that excellent series of monographs known as "The Library of Art," several of the volumes of which we have heretofore had occasion to commend, is one, according to the publisher's prospectus, in which all schools and periods will be represented, but only the greatest masters will emerge as biographies, the rest being treated in relation to their fellows and forerunners as incidents of a development. Now, Pisanello, as a painter at least, cannot by any stretch of imagination be accounted one of "the greatest masters," and one is surprised to find a whole volume devoted to him in a set of this kind avowedly de-

signed for popular enlightenment. It is chiefly, if not alone, as an important medallist that Pisanello deserves inclusion here, and along with some account of his life and art we should have something about the other eminent Italian medallists of his period. But Mr. Hill has chosen rather to construct an elaborate and ingenious critical essay on Pisanello as a painter, maintaining that tho he did not found a school in painting, the traces of his influence are to be found in widely distant places, in painters of widely different character; and that, while "the effect seems to have been to stimulate the artists who came into contact with him to further progress, rather than to overpower them by the force of his own personality, nevertheless, in the Northern Italy of his time (especially after the death of Gentile de Fabriano) there is no power in painting comparable to him, and his domination is supreme until the rise of Mantegna and of that Venetian school which he had helped to bring into being." This sort of thing serves far better to provoke controversy among the cognoscenti than to disseminate knowledge or arouse the interest of the general reader. The many interesting photographic reproductions of medals used as illustrations make it all the more regrettable that the other medallists have been relegated to the limbo of a final and very sketchy chapter. Mr. Henderson's *Constable* is a much more satisfactory, as it is a more readable, book. It is indeed an admirable short biography of the English landscape painter, who, by virtue of a naturalism that was unique in two respects—his "fearless adoption of 'unpicturesque' localities as subjects for his pictures, and his practice of using fresh, bright color"—pointed out to his successors "the way to a new kingdom." The bulk of Mr. Henderson's material has been drawn from the larger "Life" of the artist by his friend, C. R. Leslie, to which the last sixty years have added no incident of importance. But he has sifted, selected, digested and arranged that material with a deft skill that is rare in a condensation of any kind, and his critical comment, besides being sound, has the further merit of clear and concise expression. The book is such an excellent piece of work that we are puzzled to find the

author making the mistake (page 202) of bringing Corot into the world in 1776—twenty years too soon—and, as if to prove that the wrong date is not a mere typographical error, remarking that the poet-painter of Barbizon was already fifty years of age in 1830! The interest of the text is enhanced by thirty-eight good half-tone reproductions from Constable's paintings, sketches and studies.

A Concise Dictionary of the Assyrian Language. By W. Muss-Arnolt. 2 vols., pp. 576, 626. New York: Lemcke & Büchner.

It is a great work which Dr. Muss-Arnolt, of Chicago University, has accomplished in this *Concise Dictionary*, which covers 1,202 pages, and of which we receive the concluding part. It is more complete than any other attempt at a dictionary of the Assyrian language yet published in either English or German. Norris's dictionary of forty years ago reached three volumes, and the author left it unfinished; and in that early day Dr. Norris left out all the verbs as too difficult to deal with. Professor Delitzsch began a *corpus* of the language, but went only a few pages, leaving it to provide a dictionary much less extended than this. The present volume has the definitions in both English and German. It is extremely compact, and yet it gives us a considerable number of transliterated quotations. We should be grateful for a work of such enormous and almost thankless labor, which ought to be in the possession not only of the students of the Babylonian texts, but also of all those who are devoted to Semitic studies.

The Jewish Encyclopedia. Vol. XI, Samson—Talmid Hakam. 8vo, pp. xx, 679. New York: Funk & Wagnalls Co.

This monumental work moves steadily on, and its completion is promised in the next volume. We observe that the number of illustrations increases with each volume, as well as their value, over three hundred in this volume. Among the topics included are Samuel, Samson, Saul, Sanhallat, Solomon, the Tabernacle, Slavery, Semites, and Tables of the Law, and many another interesting topic and distinguished man of post-biblical times of whom none is more

important than the philosopher Spinoza, of whom we have a colored portrait. This encyclopedia will be essential in any well equipped library.

Literary Notes

A NOVEL method of advertising is being tried by a prominent English publisher, who offers a prize of \$25 for the best epigram on a recent book.

....An excellent sketch of William Lloyd Garrison's life, by Ernest Crosby, is issued by the Public Publishing Co. of Chicago. ("Garrison, The Non-Resistant." 50 cents.)

...."The Lewis Carroll Birthday Book," issued by the A. Wessels Co., New York, contains all the stock quotations from "Alice in Wonderland," etc., arranged by Christine T. Herrick. (Price, 75 cents.)

....John Godfrey Saxe is a poet whose poems deserve to be better known to the present generation for their rollicking humor and splendid swing. A selection of his best poems is published by Houghton, Mifflin & Co., Boston. (\$1.00.)

....The H. M. Caldwell Co., Boston, print a little pocket edition of Lord Byron's "Lara" and "The Corsair." It is handsomely bound in red leather, but the print is too small. (Price, 75 cents.)

....The same publishers issue "The Poems of Whittier" in their Red Letter Library series. An introduction by the Right Rev. W. Boyd Carpenter occupies the first seven pages. The edition is bound in red leather and contains 253 pages. (Price, \$1.00.)

....Admirers of Rev. Charles Wagner will be delighted with the "Simple Life Calendar" for 1906, issued by the A. Wessels Co. It prints as a heading for each month, attractively decorated, one of the passages from his well known book. (Price, \$1.00.)

....A first prize of \$500 and a second of \$300 are offered by a citizen of California for the best essay between 6,000 and 12,000 words sent in to Professor Dresslar, University of California, Berkeley, Cal., by June 1, 1906, on "Moral Training in Public Schools."

....The third of Judge Henry A. Shute's little books ("Letters to Beany," Everett Press, Boston, 50 cents), is fully up to the standard of the first two in humor and interest. These stories are almost unique, and their widespread popularity is attested to by the large number of editions struck off.

....E. P. Dutton & Co. have issued a beautifully illustrated series of over 200 Christmas Calendars. They range in price from the 5 cent miniatures to the large Hunting Calendar for \$2.50. Among the more attractive are "Gems From Shakespeare" (25 cents), and "The Nature" and "Phillips Brooks" Block Calendars, with quotations for every day in the year. (50 cents.)

...."The Foolish Almanack" for 1906, published by John W. Luce, Boston, contains startling astronomical and political predictions, unique marginal illustrations and many chunks of foolishness [or wisdom] such as the following:

"Where there's a will there's a way, but it's not always our way."

"Let your light so shine before men that they cannot see what is going on behind it."

"It's not what we tell people about ourselves that interests them; it's what we could tell and don't."

"Never write a compromising letter and never destroy one."

Pebbles

IF President Roosevelt succeeds in eliminating brutality from football, he might then attack the college yell.—*The Toledo Blade*.

....Yale University is to have a ton of fossils. Whether for the faculty or for the museums is not announced.—*The Atlanta Journal*.

....Faith is that quality which leads a man to expect that his flowers and garden will resemble the views shown on the seed packets.—*Country Life in America*.

....I wish I were a blade of grass
Beneath the sky so blue;
For then on every starry night
At least I'd get my "dew."

—*Harvard Lampoon*.

....I put my arm around her waist—
I drew her closely to me
And even as we had embraced
Ye Gods!—a pin ran through me.

—*Princeton Tiger*.

...."You say both his legs were shot off!"
"Yes."

"How did he ever get home—seven miles away?"

"Why, he said the shrieks of the wounded made his flesh creep so that he got home in very short time."—*Harvard Lampoon*.

....A month ago the stands were gay
With Christmas numbers in array,
With Yuletide cheer in stories terse,
And New Year's wishes writ in verse.

Now, just as Christmas comes along,
Long e'er the New Year's brew is strong,
There burst upon these merry scenes
The JANUARY magazines!

—*Cincinnati Commercial-Tribune*.

...."Mistah Middleman, I's got a question."
"Well, what is the question, Mr. Tambo?"
"Kin a man light a cigar wid a pair ob cuffs?"

"Certainly not."

"Um! he can't, eh? Well, jes' s'posin' dem cuffs am matches?"

"Mr. Crackvoice will now sing that sympathetic ballad entitled 'Since Nellie Took My Bank Account Away.'"—*Judge*.

Editorials

A White Christmas

PREVIOUS to 1895 the opinion was very commonly expressed that war had practically become extinct. Men were too civilized. Weapons were too destructive. The cost was too great. Commercial interests were too powerful. From any one of these causes, or all four in combination, it was thought improbable that great nations would ever again engage in warfare, and, altho strife with and between barbarous peoples could not be prevented, yet they would become increasingly impotent as the white race, armed with the new and terrible weapons which science had given, spread its irresistible and benevolent sway thruout the world.

The events of the last decade have chilled that easy optimism. During that time there have been but few Christmases when the snow was not stained with the blood of soldiers. No continent has been exempt. Italy, Russia, Turkey, Greece, Great Britain and her colonies, the United States, Spain and Japan have all been involved in formal and important wars, while Portugal, France, Germany and Holland, in addition, have been engaged in serious if not dangerous conflicts with savage races. If we should mark in red upon a map of the world where battles have been fought in the past ten years we should find also marked in Asia, Arabia, China, Tibet, Manchuria, Afghanistan, Formosa, Java and the Philippines, and in Africa, Somaliland, Abyssinia, Nigeria, the Transvaal, Orange Free State, Morocco, Madagascar and German East and Southwest Africa. Upon American soil, except in Cuba, there have been no international wars, but there have been revolutions of importance in almost all the republics south of us, except Chile, Paraguay, Argentina and Mexico.

What reasons have we, then, for hoping that the gates of the Temple of Janus will long remain closed? Not because the nations show any disposition to lay down their arms. More men are now being drilled and equipped for battle than ever before in the history of the world. More money is being spent for

arms and munitions, more and bigger battleships are being built. Military exploits are as much applauded as ever, and the military hero outranks all others in the popular estimation. No new arguments against war have been brought forward than those which have proved so futile to prevent it in the past. Tolstoy's "War and Peace," Zola's "Débâcle," Suttner's "Ground Arms," and Andreyev's "Red Laughter" impress us with the grossness, the cruelty, the suffering of war, but did not the chiseled walls of the palaces of Sennacherib and Rameses tell the same terrible story to all that had eyes to see? Heralds of the advent of the Prince of Peace appeared thru all the ages before the plains of Bethlehem heard the song—or was it the command?—of "Peace on earth."

Causes of war, centers of apprehension, are as numerous as ever. Defeated Russia has to deal with a greater social revolution than defeated France had in the Commune of 1871. Who can say that the fires of revolt will be confined within her boundaries? The enmity between Germany and England is constantly growing, and the wisest heads of either country cannot discern its cause or remedy. Austria and Hungary seem ready to fly at each other's throats at any moment. China has repudiated her traditional policy of peace and is arming herself for an anticipated conflict, but with whom the world does not know.

But in spite of the increase of armaments, the apparent futility of argumentation, and the grave international problems, there is much reason to be hopeful for the future. If the period 1895-1905 is remarkable for the number of the wars that have been fought, it is still more remarkable for the number of wars that have been prevented. The allies of Russia and Japan were not drawn into the conflict; on the contrary, France and England have become closer friends than they have been for six centuries. The provocative action of Emperor William in regard to Morocco, his demand that France dismiss her great Foreign Minis-

ter Delcassé because he had slighted Germany, was received with unprecedented coolness by the French people and complied with by the French Government, altho, as we now know, they had good reason to hope for the support of England in case of war. The arrest of Colonel Marchand at Fashoda, the Kaiser's telegram to President Kruger, the firing upon the Hull fisherman, and a dozen other incidents which might easily have aroused a belligerent spirit, were treated with admirable coolness. The peaceful separation of two nations like Norway and Sweden without ill will is unprecedented in history. Turkey, the seismic center of Europe, is being gradually brought under the control of the Powers, whose action has been remarkably harmonious, altho not very efficient. The partition of Africa has been completed and the boundaries of the different claims settled without bloodshed. Even South America is free from revolutions, and the peace statue of the Andes looks down upon two disarmed nations. It really seems as tho people were learning to keep their national temper better than they used to; that they are not quite so liable to be carried away by the mob spirit of insane wrath.

To this increase in rationality, if it can be assumed to exist, are now added many artificial hindrances to precipitate action. Almost all civilized nations, except the United States, are now bound together by network of arbitration treaties, the strength of which bonds no one knows, for they have not been put to strain, but which may prove very useful in emergencies. The next meeting of The Hague Court will doubtless do still more to render war less likely and more merciful. International visits, interparliamentary conferences, peace congresses and many other agencies are working in the same direction. In European countries, especially France and Germany, the growing power of the Socialists is a strong influence for peace, both because they oppose militarism in all its forms, and because it would have to be a very strong issue which could induce them to stop the "class conflict" to take part in international strife. So, tho it is too much to expect that the reign of peace on earth has begun, we have much to en-

courage us in the belief that we shall have many a white Christmas.

What Socialism Is Not

THE ignorance of the ignorant is never ridiculous, tho it may be tragic. The ignorance of the educated is seldom tragic, but it is unfailingly ridiculous. And the bigger the subject about which the educated happen to be ignorant the more absurd is their misapprehension. For a generation past the chief objects of well bred ignorance have been evolution and "the higher criticism." These topics now have lost their novelty and their place in the realms of intellectual darkness is being taken by socialism.

The other day a well known New York financier was denouncing socialism, when one of his listeners pulled him up with the question, "What do you think socialism is?" "What do I think socialism is?" was the reply. "Why, everybody knows what socialism is. It's the lunatic proposition to divide all property equally among all men." The questioner laughed, and the now angry financier clinched his demonstration with the crushing rejoinder: "That's just what socialism is. My daughter told me so. They taught her all about it at college!"

It so happens that the professor whose lectures the great man's daughter had attended is a political economist of international fame, whose clear thinking and lucid writing have made his books contributions to literature no less than to science. He will have to console himself as best he can with the philosophy of Dr. Johnson's reply to the man who complained that he could not understand the definitions in the Doctor's dictionary.

Now, of all the many things that socialism is not, this "lunatic proposition" to divide up the world's wealth is conspicuously first. No socialist can possibly advocate such a proposition, and no person, sane or insane, who does advocate it, can possibly be a socialist. The essence of socialism is the public ownership and control, not the distribution and private dissipation, of the means of production. Socialism, so far from scattering wealth, would collect it. It would make the public the supreme property owner.

Probably, however, there are not many men and women even in select "financier" circles and college classes quite so ignorant of the socialistic program as were the magnate and his offspring whose expositions we have quoted. A commoner misunderstanding of socialism relates to the attitude toward the individual.

Socialistic schemes have been put forward that have given occasion for criticisms like that of Herbert Spencer, which characterizes socialism as "the coming slavery." If all private property should be merged in public property, and all work should be organized and directed by a central board having all the coercive powers that governments now possess, the individual would undoubtedly be lost in the mass, and his status would for all practical purposes be that of the most helpless slave. The mere fact that he was one of some tens or hundreds of millions of voters would not help him in the least. The majority would rule as it pleased.

Whatever may have been true twenty-five or thirty years ago, there is at present in socialistic circles very little acceptance of such crude schemes of universal consolidation. When capital was owned and industry was managed by a multitude of individual entrepreneurs it was natural to dream of an organization that should absorb all private enterprise, because, apparently, any collectivism comprehensive enough to promise a general amelioration of the human lot would have to include practically all private undertakings then existing. The growth of great corporate enterprises has changed the situation and altered our prospectives. The broad distinction has been established between vast corporate undertakings and strictly private undertakings. No socialist with breadth of vision and a saving sense of humor can longer regard private property, in the strict sense of the word, and individual enterprise as inimical to the wage-earning population. He sees, as all men see, that the economic and the political life of mankind are controlled by incorporated capital and gigantic organizations.

The effect of these changes and of the altered aspect of industrial society is al-

ready noticeable in socialistic literature. Its writers and teachers see that control of economic opportunity does not in the least depend upon a comprehensive ownership of all wealth. Control of certain strategic forms and domains of wealth is quite sufficient. The multi-millionaires, combined in corporations, who own the mining lands, the railways, and the franchises to use public streets, own all that is necessary for their purposes. It does not worry them that individuals own farms and shops and houses. They can make these individuals pay tribute without going to the trouble and expense of buying them out. The socialists are beginning to see the same truth. They will not hereafter waste their intellects on dreams of co-operative commonwealths organized as Colonel Sellers might have organized a universal mill and intercontinental department store. They will be quite content to control, as the corporations control now, by transferring to the public the strategic domains of wealth that are now corporate property, and they will be quite willing to leave the field of private property and individual initiative as wide and untrammelled as it is today.

Socialism still has plenty of limitations, bigotries and vices to hamper and discredit it. But it is not a plan to dissipate capital, and as thus defended and defined it can no longer truthfully be described as the propaganda of a coming slavery.

Results of Secretary Taft's Visit to the Philippines

IT has for some time been apparent that the visit of Secretary Taft himself to the Philippine Islands the past summer was not merely for the purpose of making sentiment in Congress for the reduction of the tariff on Philippine products, important tho this object may be, but that the Secretary of War felt the need of interfering personally in the political situation in the islands. Information by mail from the islands since the departure of his party indicates that there were some immediate results of his visit.

Besides the suspension of the land tax, announced during his stay in the islands,

measures have already been adopted for curtailing the abuses of the constabulary of which the Filipinos complained. A new general order was issued in September by the chief of the constabulary, defining more explicitly the obligations of the constabulary officials to co-operate with the local Filipino officials of towns and provinces. This order has been supplemented by various specific instructions from time to time. There have been a number of transfers of constabulary officials, both superior and inferior, looking toward the reorganization of the corps more strictly upon a police basis, and taking away from it many of the attributes whereby it had made itself a military body, with a military *esprit de corps* and a tendency to assert the right to military privileges. The insular Government has also dropped the prosecution of the case for alleged aid to bandits against Señor Roxas, a wealthy resident of Manila, who is a proprietor of large estates in Batangas Province. The circumstances connected with this prosecution, when it was begun last May, were among the chief grounds for Filipino complaints against the Government.

Both the Filipino and the American press of Manila has also been busy, since the departure of Secretary Taft at the end of August, with rumors about prospective changes in the *personnel* of Government. Of course, these rumors were given added activity by the reports circulated from Washington during the first half of October that Governor-General Wright would not return to the Philippines after his present leave of absence is over, but would remain in the United States and resign his post in the Philippines. There has been a good deal of animus in some of this talk that has found its way into print in Manila, just as there was meaning in the attempt of certain American elements in Manila to give Governor-General Wright a greater "send off" at the time of his departure for home on November 7 than was given to Governor Taft when he left the islands at the end of 1903—an attempt which failed quite signally, because the Filipinos (who are, properly, "the people" of the Philippines) did not take hold of the matter with real enthusiasm.

The nearest approach to a plain ex-

pression of feeling, either in the American or the Filipino press of Manila, was made in the issue of *The Manila American* of October 14th. Under the headline, "Is an Attempt Being Made to Knife Wright?" there is reproduced, under the rumor from Washington of his resignation, an interview with a "Government official," said to be "one of the best known men in Manila" and a "staunch and consistent friend of General Wright." This gentleman wrote out a statement in which he said, among other things:

"He [General Wright] knows perfectly well what is going on, and he knows that he is being knifed by those in whom he placed confidence. . . . I want to mention something that seems to have escaped every newspaper man in town. Do you recall Taft's remarks at the Metropole dinner, to the effect that any member of the Government who does not care to associate with the Filipinos on a social equality need not hope for anything from the Government. I do not want to think that the Secretary of War had Governor Wright in mind when he made that statement, but there is more than one person in Manila who thinks he had. Roosevelt is acting very peculiarly in this matter, it seems to me. As a rule, he is only too ready to rush into print with a thing of this nature. . . . Americans out here who love Wright have been too prone to consider him without enemies. This is a mistake. He has enemies and plenty of them. The worst part of it is, tho, that his enemies are not the sort who fight in the open. They have been knifing him in the back. And it seems so different from Roosevelt's nature to listen to their tales. But seemingly he has done that very thing. . . . He [General Wright] is by far the most popular man that has ever been in these islands; and when the fact becomes generally known that he has been knifed, the Americans will rally around him in such a manner that it will bode no good to those who are handling the bolo. It is only a question of time until the whole story will be told, and then look out for several very sadly shattered political ambitions."

The American printed this innuendo next to an editorial headed "Has Taft Thrown Wright Down?" In it Taft is insinuatingly charged with

"attempting to discredit General Wright, who has faithfully carried out his instructions, better probably than he could do it himself, and whose only handicap was the fact that he was obliged to make the best of Secretary Taft's far from successful experiments in government."

Further, that Taft is trying to "place the blame for any failure of his experimental policy in the Philippines upon Governor-General Wright and clean his own

skirts, in order that he might pose before the American people as the successful Taft, who is not capable of making any mistakes."

It is perfectly plain what is the animus behind all this talk. It represents the views of that element of Americans who do not believe in the "Taft policy" and who have never sympathized with the pledge that Filipino rights would be safeguarded and given first consideration in ruling the islands, as implied in the motto "The Philippines for the Filipinos." The "leading Filipinos" of whom this editorial speaks as likely to resent any interference with Governor-General Wright are a certain few Spanish-Filipinos, or practically full-blooded Spaniards, who were identified with the former Spanish *régime* and who are not today, as they never have been, in sympathy with Filipino aspirations, nor really identified with the Filipino people. They are comparatively few.

The fact that the defense of General Wright comes from those Americans who are always more or less openly clamoring for a change of the "Taft policy" with reference to the Filipinos, and from a class of Filipinos who do not represent or sympathize with their own people, is a most unfortunate thing if, as his friends claim, he really is in sympathy with the "Taft policy" and has tried to continue it.

So far from proving that this policy is a failure, the Filipino discontent of the past year comes from governmental actions that would indicate a belief in the greater wisdom of the policy of a "strong hand," an impatience with Filipino political aspirations, and a belief in "white superiority." The receptions at Malacañan Palace, which used to be crowded with Filipinos on such occasions, have lately drawn but two score or so Filipinos, who came with their wives because they felt their official position made it more or less obligatory. Cavite and Batangas have been under strict military control since the first of this year, and criticism of the abuses of the constabulary and scouts in those districts, instead of leading to rigid measures of investigation and repression on the part of the Government, led instead to the display of irritation toward those who criticised and the prosecution of one

Filipino newspaper which told things perhaps untrue but which did not tell many worse things believed by all Filipinos, and in some cases supported by proof, against the constabulary. Last year the funds to be devoted to the extension of education in the islands were reduced, while the sums expended for purely repressive measures during the year must have greatly increased, if they were not doubled. This is hardly intelligent or loyal application of the "Taft policy," which, by the way, is the one to which our nation stands officially pledged in the Philippines, thru the declarations of two of its Presidents and of its Congress in 1902.

Causes and Prevention of Colds

Nor a few people have been congratulating themselves that the present mild winter is likely to bring with it less tendency to the contraction of colds and other serious disturbances of health characteristic of colder weather. It must not be forgotten, however, that it is not severe cold which is the most active factor in the production of what are called colds, but that, on the contrary, a mild winter in our latitude is almost sure to bring with it more of the pulmonary affections than seasons which are characterized by extreme cold. It will not be forgotten that two of the mildest winters in the last twenty-five years, those of 1890 and 1891, saw the rise and spread of influenza, with a very large mortality; nor was the mortality the most serious feature, since the weakness occasioned as a consequence of attacks of influenza proved the beginning of terminal deterioration of health in many persons. In fact, the definition of grip which declared it to be a disease from which you scarcely suffered at all, but didn't get over for six months, was a humorous but very precise description of the disease.

Already it has been announced by the New York Health Department that the present year is to be a "measles" year; that is, that the indications point to an especial prevalence of this affection among children. It is well known that measles is very frequently complicated by pulmonary affections of various kinds, and is not seldom followed by a lack of

resistive vitality in the lungs which encourages the development of pulmonary tuberculosis. There is no doubt that the sharp, cold weather which produces a distinct reaction would be much more wholesome than the rather damp, mild weather which has been the rule during the last few weeks. The old proverb that a green Christmas makes a full churchyard is not without its exemplifications in our modern experience, notwithstanding the important advances which have been made in sanitation and hygiene, as well as in the recognition and in the treatment of disease.

Since, then, the beginning winter season suggests the possibility of more danger than usual from the catching of colds, it appears worth while to discuss the present notion of physicians with regard to this bothersome affection, and the avenue by which it is acquired, its method of distribution, and the possible prophylactic measures that will prevent not only the annoyance, but the danger to health and even to life which is sometimes occasioned by so simple a thing as an ordinary cold. Its greater frequency during mild and damp winters shows that it is not due to low temperature. In fact, there is now a general recognition of the idea that a cold is an infectious disease, due to certain microbes which find their way to susceptible portions of the mucous membrane of the respiratory tract and there find a lodgment. There is no specific microbe of a cold; that is, there is no one micro-organism which causes all colds. Colds are very different affections in different individuals, which makes all the more absurd the usual custom of recommending to friends a remedy for a cold that has apparently helped us. It would be just about as sensible to talk of a remedy for a sore throat. There are at least twenty different forms of sore throat, from diphtheria, thru scarlet fever and other severer disease, down to very mild throat infections. There are at least as many forms of colds.

Three things predispose the mucous membrane to permit the microbes which produce a cold to gather and remain on its surface. Ordinarily there are minute whip-like processes on the cells of the mucous membrane called cilia, which, by

their rapid movement, cause anything that rests upon the mucous membrane to be moved gradually outward toward the orifice in communication with the outer air. These faithful guardians may be hampered in their action by over tiredness of the individual, by lack of nourishment and by sudden egress into the cold, which may absolutely paralyze their action for a time. If, then, a person would avoid catching cold, these little whip-like processes must be kept in active tonic condition. There must be no missing of meals, therefore, on days when one is likely to be exposed to contact with many micro-organisms; there must be no going into crowds, for microbes abound wherever many people are, when one is over-tired. There must be no suddenly going out into the cold from a confined room in which a number of micro-organisms have had an opportunity to light upon the mucous membrane.

There is no doubt now in the mind of the modern physician that the contraction of a cold is practically always associated with having been in close contact with a large number of persons. Very probably, the crowded cars of the evening hours, with their loads of tired, weary and often hungry working people, are responsible for more colds than anything else in the city. After the cars undoubtedly comes the ballroom. Unless these have been very carefully aired and cleaned, an immense amount of dust is sure to be jostled up into the air by the dancers, and as the exercise causes them to breathe deeply and rapidly, and often thru the mouth rather than the nose, a number of micro-organisms must find their way onto the sensitive mucous membranes of the larynx and bronchi which would ordinarily be filtered out in the devious nasal breathing passages. It would be an interesting experiment to let a ray of sunlight into a dance hall shortly after a modern rapid two-step; the number of dust particles that would be visible would deter even the most hardy from wanting to breathe such an atmosphere. It is evident that dancing as an institution should be carried on out in the open air unless special precautions are taken with regard to interior cleansing. After the dance hall, the most frequent source of

city colds is the theater, which unfortunately is so built, as a rule, in the heart of a city block that no sunlight ever penetrates it. Sunlight is the great bactericide, and where people gather nightly in large numbers, and there is no antiseptic sunlight to purify the air they have breathed, microbic accumulation is almost inevitable. Churches probably come next on the list, tho in modern times they are so little crowded that their danger has been greatly lessened.

In a word, colds must be considered as infectious diseases, to which it would be wrong to add the word *slight*, since often they are quite serious in their pathological significance. Microbes grow better in damp weather than in cold, sunny weather; hence the more likelihood of a mild winter giving rise to them than a cold, bracing season. It is probable, therefore, that more precautions will have to be taken this year than in the two previously severe seasons to prevent the development of these infections, which so often have unlooked-for consequences. New York's pneumonia commission emphasized, last spring, just these points with regard to the contraction of that increasingly fatal disease, pneumonia, and it is now that its advice may be expected to bear fruit.

An Orange Grove.

You are certainly entitled to look thru that wire fence and see all that constitutes an orange orchard. There are two hundred round-headed trees, about twelve feet in diameter. The fruit looks immensely as if it had been artificially put in place. Really those would pass for two hundred Christmas trees. Does Nature do this sort of work anywhere else? You forget the cherry trees in your Northern orchard. You have become so familiar with the scarlet globules that hang all over those trees, with orioles and robins shouting approval, and tanagers with indigo birds sitting in the apple tree overhead, that you cannot fully see and appreciate the charm. But you certainly have not forgotten the glory of a McIntosh Red apple tree, in October; or indeed a whole orchard of ripe Northern Spys, Spitzenburgs and Kings. Yet the orange has a glory all

its own. It is the gold of the orchard. You thought the trees grew in groves, "but here they are in long, regular rows?" That was a word borrowed from the wild oranges, that in Spanish days, came up where they might—and were seldom transplanted. They grew as those wild persimmons grow, at the edge of the orchard, or as pines and maples grow. But your modern orange trees are grown in long rows, to be cultivated with plows and horses.

The real orange tree should stand about twenty-five or thirty feet high, with a trunk of five or six inches. Its foliage is dense, and a rich green. It is a grand tree to sit beneath at midday, and drink the juices of the fruit, instead of water—it is distilled perfectly. But these trees are round and low-headed, and one must stoop to get beneath them. They are made of the grafted shoots that came up around the old trees, after the freeze of 1895. They are more convenient to spray; to protect from the blizzard, while the fruit is more easily gathered. You can walk all about that orchard, and reach half the fruit without a ladder. It is a good illustration of how good sometimes comes out of evil.

"Different shapes!" To be sure. There are quite as many varieties of oranges in this orchard as there are of apples or plums in most of your Northern orchards—fifteen or twenty, at least. The grower knows them all by name, and can tell them all by the shape and the quality. He does not go at random, and pick any fine big orange for his own eating, but he takes his selection—the King, or the Homosasa, or the Jaffa, or the Ruby, or Parson Brown, or Satsuma, or possibly the Tangerine. He fills his pocket with selected varieties, and then goes to that pine grove over there and peels them as he lunches. It is very much as we do with our Pippins, and Swaars, and Princess Louise, and Jilli-flowers.

What are those piles of logs, about six feet long, all up and down between the rows? They are to be seen in every well-kept orange grove in Florida. They are to be set on fire in case of a threatened frost. A very slight freeze will take the leaves from an orange tree; and a little harder will spoil the crop; and if the

thermometer gets down to twelve or fifteen, away go the trees. Fortunately it has only frozen three or four times in the orange belt during the last twenty-five years—that is frozen enough to defoliate the trees. One of these freezes ruined four-fifths of all the orchards, and drove nearly all of their owners out of the State, financially ruined. These fires can be made at small cost, practically no cost at all, by using the fallen trees collected from the pine woods. If the wind be not too strong, the fires are alone sufficient protection, and the oranges are saved.

You see from where you stand two or three orchards only, but there are plenty more of them all around, in these pine woods—you can come upon them in almost any direction. Follow any of the trails thru the forest, and they will lead you from one homestead or clearing to another. These clearings run from three or four acres to forty acres in the great, grand, sweet pine woods. Many of them are on the borders of the almost innumerable small lakes that fill the heart of Florida. They look much alike in their general features, only that some of them include a few lemon trees and more or less grape fruit trees. You are well warranted in exclaiming with delight when you see a tree hanging with grape fruits, each one of them as large as four or five oranges, growing in huge clusters and bending the limbs earthward. Apart from the fruit, the tree is not to be distinguished from an orange. The color is less golden, but the effect of size more than makes up in the charm of a tree in full bearing.

After driving half a day, from homestead to homestead, you are astounded to have found that at least three-fourths of the orange orchards are ruined, and nearly that number of houses and homes deserted. There is a general look of some old-time civilization blotted out. It is not a pleasant sight; but you note that the clearings are here, and ready for much more sure crops, and for those people who care to create homes. It was just as well that professional orange growers, mostly people with neither knowledge nor capital, should have been invited by Nature to withdraw. These are the homesteads where Northern farmers should

create winter farms. A huge cabbage palm stands at the gateway of a cottage and draws your attention. You observe within the enclosure a long bee-house—with more hives everywhere. The owner is just crossing his lawn with a huge jar of honey, and will answer your questions. He will tell you that in this country bees work all the year—and that his chickens do the same; and that while he has half a dozen orange trees, with some grape fruit and loquat trees, others may grow oranges for market, for all he cares. "There is no sense in chasing golden dreams. People here, sir, won't grow what they can, and will keep on trying to grow what they cannot. There is no sound sense, sir, in doing anything else, when you have a piece of land, but to establish a good home. That is the first point, sir, and after that you can send your surplus to market. You can't do that hereabouts with oranges, or with any other risky enterprise. A man can make a good living by obeying Nature most anywhere." Then he rolls over a bag of superb sweet potatoes, letting them tumble out of the bag, and saying: "There, sir, that's my gospel—honey, sweet potatoes, chickens and eggs, with vegetables and berries a-plenty, and all the plums and pears and apples that you want." You find he is a philosopher, and has a good deal of pithy wisdom. Now we will buy a pot of honey and go on. The world, after all, is not made up of oranges. And yet it is a fine thing, in January, to pick all that you desire of the golden fruit, and in March to smell new orange blossoms, with jessamine, while you are still eating last year's crop.

International Law for Peace

As we are looking forward to the good time coming when the law of nations shall be established by an international congress, we perhaps do not appreciate how far we have already gone in practical international legislation. Already such legislation controls artistic, literary and industrial property, hygiene, justice, transportation, postal telegraphic and telephonic communications, and, says Baron d'Estournelles, will soon control wireless telegraphy, submarine and aerial communications. It is beginning to regu-

late labor, and even production. There has been an international conference on sugar. Why, then, should not the regulation be settled internationally of the amount of money nations should spend on the navy, and the number of men who should be withdrawn from productive pursuits to be trained as an army? If this were done it would be exactly in the line of what has already been done, and, in a year or two, would seem the only natural course to be pursued. The nations have agreed, have passed laws for themselves, to limit their charge for carrying a letter from one country to another; let them now agree to limit themselves as to how many battleships they shall build, and how large a standing army they shall support. This is a chief lesson of this Bethlehem season of peace.

The Naval Academy

There is no good reason to find fault with the light sentence inflicted on the young man whose blow in a fist fight killed his fellow student at the Naval Academy, for he was not so much to blame as were those who allowed and encouraged the system by which "honor" was defended and "manliness" encouraged. It was the thing expected, what he was taught was right. To be sure, the rules were broken, but it was understood by teachers and students that they were a sham. At last there came a tragedy, and they understand that the rules were right and the practice wrong. And here comes another case of pure hazing, and another student's life was in serious danger by the cruelty, and this time it is punished as it deserves, and two students expelled. This case is further proof of great laxity in administration. It has not always been so. The Academy has reached one of its recurring periods of lax discipline. There have been times when the officer in charge has been strong enough to put down rowdyism and has held the students to healthy discipline; and again a period, which has now culminated, when an easy or lazy officer has been in charge. It is not military that there should be two authorities in rule—one that of the officers and one that of the young boys of the senior class who establish a

"code," and tell the boys in the under classes where they shall walk and what they shall do, as described by a student in our last issue. This is a development of the past dozen years. It is false morals, a lie to equal democracy, a vicious education that is taught to these young boys in such a "code" and such practices; and it is the officers that are most to blame who allow it.

A Monument to Mr. Gonzales

We have read with much interest the report in the *Columbia*, S. C., *State* of the dedication of the monument erected by the people in honor of its first editor, Mr. N. G. Gonzales, a brave and sound man, who was murdered on the street in Columbia by a man whom he had criticised for his political action. It was a shocking murder, and the murderer was tried and acquitted, on the ground that Mr. Gonzales had his hand in his pocket and the murderer thought he might draw a pistol. Pistols seem to be carried in that region much as in other places a man carries a penknife. We looked to see what would be said of the murder, and we observe that it is not mentioned in the inscriptions, which have room for an irregular sonnet, but they make no mention of the fact that he died a martyr's death. Nor was the fact referred to in Bishop Capers's prayer, nor in the speech presenting the monument to the city, nor in the Mayor's acceptance of it. The murder is, however, very briefly referred to at the end of the long oration by S. M. Smith, D. D., who in the story of Mr. Gonzales's life, avoids describing the circumstances of his death, but thinks it wise to satisfy himself by declaring that the monument will stand as "a protest of the people against the deep damnation of his taking off," and "an enduring protest against that spirit of violence which has threatened the very life of the State, and against which even the law has not prevailed." This is all there was in the three hours' ceremony. We are glad for this recognition of the fact that law has failed to give retributive justice. We know that the murderer had very high political relatives, but we should have expected a fuller statement of the chief lesson which the monument

teaches, "its protest against the spirit of violence"; infamy for the murderer as well as honor for a brave editor.

The End of the Concordat

We have read with care the French text of the law for the separation of Church and State in France, and, on the face of it, it is a very fair law, and does not deserve the criticisms which most of our Catholic papers seem bound to express to keep up the fiction that the French Government is ruled by atheism and free-masonry. We do not herein speak of the initial complaint that under the concordat between Napoleon and the Pope, France took the ecclesiastical property and bound itself to support the clergy as payment for the property taken, and that it is a breach of contract to cease to support the clergy. Whether after a hundred years the State can claim to have made full payment, or whether it is forbidden ever to separate State and Church, and how far eminent domain goes, are questions of argument. The present law is reasonable and American. It establishes boards of trustees for every church which shall occupy, without rent, all ecclesiastical buildings that have belonged to the State, and shall be responsible for the support of the care and continuance of worship. All clergy sixty years old who have served for thirty years shall receive for life three-fourths of their previous aid up to \$300; and those who have served twenty years, half of their aid from the State, while others will receive diminishing amounts for four years. All buildings and all ecclesiastical property passed over to the boards of trustees shall be inventoried, and no object of art can be sold out of the country. Religious education in the public schools is forbidden, but priests can arrange to teach religion out of hours. It is forbidden to disturb public worship, and equally to threaten any one for either taking or refusing to take part in any worship. Clergy are forbidden to defame officers of the law or to provoke resistance to law. The State will have nothing to do with nominations of archbishops, bishops or clergy, so that the Pope or bishops have full right to make their own free appointments; and "the

Republic assures liberty of conscience, and guarantees the free exercise of worship." On the whole, it appears to be a good, fair law, as things go in France. It makes no change as to religious processions in the streets beyond previous legislation. The most radical thing about it seems to be that the control of the church properties is put in the hands of these boards of trustees, called "associations," the majority of whom will be sure to be laymen; but that is quite reasonable, altho not the practice in the Catholic Church in this country. The law goes into operation with the new year, and we wait to see what the Pope will direct. We believe it will be a great blessing to the Church as well as to the Republic.

A New Church Council

It is not so much the kind of constitution adopted for the new representative Church Council which has been framed for the Anglican Church in Great Britain as it is the fact that it is being organized, which interests us on this side of the Atlantic. It is called for because coming events cast their shadow before. Not many years longer will the Anglican Church be established in England, even. Gladstone disestablished it in Ireland, where the overwhelming majority of the people were of another form of the Christian faith. The new Government will very likely prepare the way, at least, to disestablish it in Wales, where the same condition exists as in Ireland. In Scotland the Established Church is awaiting its release. It is time that the Anglican Church should get ready for its impending change. At present it is ruled by Parliament, by a Parliament elected by a majority who are not its members, even in England. It is divided into two provinces, those of Canterbury and York. It needs unification, and it needs a definite system of self-government, which can be put into effective operation when freed from control by a civil body consisting of Wesleyans, Presbyterians, Independents, Jews, and it may be Mohammedans and Hindus. So they have framed a constitution, with three houses, bishops, clergy and laymen, and with male suffrage. In matters of doctrine the plan adopted maintains the authority of the bishops.

but is good enough to allow full discussion in each of the two lower houses, which discussion may enlighten the bishops. The lack of such an opportunity has lately had illustration in the action of the Methodist bishops here in the Mitchell case. At present the new Church Council will have no legal authority; that will come later.

It is from one of the leading Catholic papers in this country, *The Western Watchman*, that we read the following tearful indictment on the friars in the Philippines, who took the millions of money our Government paid them back with them to Spain:

"What a terrible chapter of Church history will be written when it comes to tell posterity how the poor Church of the Philippines was despoiled by three religious orders. Far worse than the sack of the Church of England by the Tudors, or the plundering of the Church in Italy and France by the infidels, is this spoliation of the Church in the Philippines by the Church's most favored sons."

We observe that other Catholic papers talk in the same way. It makes credible some of the revelations in that famous "Senate Document 190."

We note an unusual suggestion in the Postmaster-General's Report. He speaks of 12 clerks killed while on duty, and 125 seriously injured, and he adds:

"The arduous and hazardous duties incident to the service emphasizes the desirability of some legislative action that will make provision for clerks worn out in the service and maintain the vigor and efficiency of the service by the gradual elimination of superannuated clerks."

It is a wise suggestion, but it opens the entire question of pensions for civil service officials. Congress is afraid of it, and clerks in Washington are forbidden to agitate for it, but it is right and deserves the attention which it will not get from Congress, we hear, till our military pension appropriation is materially reduced.

During the past year our country has been enriched by the accession of 1,026,499 residents who came to us from abroad in the year ending June 30th. No other country has ever had such added wealth. Of these, 275,693 came from Austria-Hungary, 221,479 from Italy,

and 184,897 from Russia and Finland. Next in order comes England, with 64,709; then Ireland, Norway, Scotland, the West Indies and France, and no other country has as many as 10,000. Next comes the task of assimilation, and it is not a long one. The next generation are sure to be full Yankees in appearance and largely in character

We sympathize with the Iowans who do not want a crazy ten thousand dollar picture for their State Capitol, by no matter how distinguished an artist, in which the oxen are driven by a farmer brandishing his whip, or "gad," on the off-side of the cattle. It is ridiculous, repulsive. It would corrupt the language of taurelaunics. *Gee* would become *haw*, and *haw* *gee*. It is far worse than the blunder of the lady angels at the Cathedral which the artist broke with his hammer when he found his error. We would commend Mr. Borglum's example to Mr. Blashfield.

We welcomed to our Metropolitan Museum Sir Caspar Purdon Clarke, the distinguished head of one of the greatest European museums. And now we are glad to welcome as his assistant director Mr. Edward Robinson, head of the Boston Museum of Fine Arts. He is a master in classical antiquities, and will give great strength to that department here. All roads lead to New York, and that is what the collectors of rare objects say in Europe.

Mr. Harmsworth, the leading British newsdealer in Great Britain, has been made a peer by the outgoing Premier. And what if he is a peer? Will it make him a bit better as a newspaper man? Will it assure that his children will be good business men? It is all nonsense, this giving of titles of nobility, an anachronism well worn out, of which England ought to be weary.

The very frank testimony before the Investigation Committee last week of Mr. George E. Ide, president of the Home Life Insurance Company, was exceedingly refreshing. Mr. Ide apparently had nothing to conceal, and his candor was in commendable contrast to some of his predecessors on the witness stand.

The Independent

VOL. LIX. NEW YORK, THURSDAY, DECEMBER 28, 1905. No. 2978.

Survey of the World

Railways Agree to Prevent Rebating

An important meeting of prominent railway officers was

held in Chicago on the 19th, and all the leading companies then agreed, by the votes of their representatives, to work earnestly for the prevention of discrimination by rebates or otherwise. This action is said to have been suggested by President Cassatt, of the Pennsylvania road. Some think it was hastened by Attorney-General Moody's new campaign against rebates (to which we referred last week) and by the indictments recently obtained as the first fruits of that campaign. A committee led by Mr. Stubbs, the Traffic Manager of the Harriman roads, and composed of the traffic Vice-Presidents of all the other prominent railway systems, was appointed at the meeting. This committee will meet the Interstate Commerce Commission on the 28th and give pledges binding the members and the companies which they represent to assist the Commission in all possible ways to prevent violations of the law. It is understood that the committee will not hesitate to give information against any company or any person who is guilty of unlawful discrimination, holding that the repeal of the former penalty of imprisonment should induce the companies to take this course. In a published interview, Mr. Stubbs says the companies' action is an admission that rebates are still given. Some roads, he adds, have been partly successful in preventing such discrimination, but the plan now adopted is the most effective one. "We ought to have come together for this purpose some time ago," he remarks.—Mr. Cassatt was in Washing-

ton last week, conferring with Senators Knox and Penrose. On the following day Mr. Penrose said to the press that he was heartily in favor of railway rate legislation on the lines laid down by President Roosevelt and Mr. Knox.—

In response to a resolution adopted in the Senate upon Mr. Tillman's motion, the Interstate Commission has sent to the Senate all the evidence which led it to report that the Atchison road had for five years continuously violated the law. The Senator is especially interested in the testimony relating to the case of Mr. Paul Morton.

The Senate and the Canal

Before the adjournment of Congress for the holiday recess, the Senate again expressed disapproval of the administration of Panama Canal affairs. It appears to have been expected by many Senators, after the recent debate, in which the acts and the salary of Secretary Bishop were subjects of severe criticism, that his work for the press would be discontinued, that his salary would be reduced by one-half, and, possibly, that his connection with the Commission would be severed. Therefore there was some disappointment when, on the 20th, the President nominated Mr. Bishop to be a member of the Commission. A Commissioner's salary is \$7,500, and it was understood that for performing the duties of Secretary he was to receive \$2,500 more, so that his present salary would not be reduced. In executive session some of the Senators showed signs of resentment. A few days earlier the recess appointments of Chairman Shonts and five other

members of the Commission had been confirmed. It was now shown that this had been done irregularly, because members of the Canal Committee had not been asked for a report upon the nominations. Therefore, by unanimous consent, the nominations were recalled from the White House, and action upon them was deferred until after the holidays. It is said that they would not have been recalled if Mr. Bishop had not been nominated to be a Commissioner. He is one of the President's intimate friends, and has been regarded as the President's personal representative in the Commission's offices. Some Senators say that he has not been fitted by his experience as a journalist to act as a Commissioner, and add that he has never been on the Isthmus. Complaint is made because Chairman Shonts retains the office of president of a railway company (with its salary), and has not complied with that condition accompanying his appointment which required him to spend a large part of each year on the Isthmus. Opponents of the President find ground for further complaint in the holding of three offices by Commissioner Magoon (who is Governor of the Zone and Minister to Panama), and the payment to him of a salary of \$17,500. The opposition to Mr. Bishop is due in part to the fact that in the past, as a journalist, he has sharply criticised Senator Platt, of New York, who is said to have prevented his appointment to be Secretary of the Walker Canal Commission. It is expected in Washington that, owing to the attitude of the Senate, the work of the present Commission will be the subject of a committee investigation.

Concerning Several Federal Officers

Reference was made in Secretary Hitchcock's annual report to the prosecution in Nebraska of two men, Bartlett and Richards, for illegally fencing in two or three hundred thousand acres of public land, and to the fact that upon conviction they were punished by being committed to the custody of the Marshal for six hours. Irving W. Baxter, the District Attorney to whose suggestions this inadequate sentence was due, has been summarily removed

from office. He declined to resign.—Frederick A. Busse was nominated on the 16th to be postmaster at Chicago, and the nomination was promptly confirmed. Mr. Busse succeeds F. E. Coyne, who is said to have made an excellent record. Washington correspondents of the Chicago papers say that the President, in accordance with a policy unofficially announced on the 6th, desired to appoint him for another term, and urged the Illinois Senators to agree with him. Mr. Hopkins, however, insisted upon the nomination of Mr. Busse, and after a time Mr. Cullom joined him in this. Senatorial courtesy, it is asserted, would have prevented the confirmation of the nomination of Mr. Coyne. Therefore, Mr. Busse got the place. Senator Hopkins is not a resident of Chicago.—Another case involving the policy unofficially announced, and supported in Postmaster General Cortelyou's recent annual report, is that of the postmaster at Kokomo, Ind. The newspapers say that Representative Charles B. Landis recommended the appointment of E. A. Simmons, chairman of the local Republican committee, to succeed J. A. Kautz, the present postmaster, who thought that under "the new rule" he was entitled to another term. They also say that Mr. Landis introduced Mr. Kautz to the President and commended his administration, but insisted upon the appointment of Mr. Simmons; that the President said he would appoint Mr. Simmons; that Mr. Kautz in good humor accepted the situation, saying that he had desired "to understand the scope of the new rule"; and that the President expressed his appreciation of Mr. Kautz's acquiescence.—William B. Johnson, District Attorney in Indian Territory, has not been removed, an order for such action having been withdrawn, but he will not be reappointed on January 14th, when his term will expire. Mr. Johnson procured the indictment of Messrs. Mosley and Johnson, prominent officers of the Chickasaw Nation, and of the tribe's attorneys, for conspiracy to defraud the Chickasaws by false accounts. Press reports say that, some time later, he was instructed by the Department of Justice to procure a dis-

missal of the indictment, and that he refused to do so, insisting that the accused men were guilty and ought to be tried. He has summoned his witnesses for a trial on January 17, but on that date he will be out of office.

Federal Control of Insurance

Several bills designed to provide for the Federal control of insurance companies have been introduced in Congress. The bill of Representative Fred. Landis, of Indiana, and the similar bill of Representative Ames, of Massachusetts, would establish in the Department of Commerce a Bureau of Insurance, and require companies desiring to do business in the District of Columbia, the Territories, or the insular possessions of the United States to make annual reports to this Bureau. These bills would also subject the companies to examination and supervision by a Superintendent or Commissioner, and would direct this office to cancel any company's license for failure to make reports or for doing certain things that are prohibited. The power of Congress with respect to the District, the Territories and the islands is unquestioned, and these bills avoid any constitutional limitation with respect to the States. In the course of debate Mr. Ames said that, with the approval of the President and the Attorney General, he had been preparing a code of insurance laws for the District on the lines indicated by the two bills. He had been assisted by the Massachusetts Commissioner, Mr. Cutting. The advocates of this plan hold that the companies would seek the Federal licenses and comply with the accompanying statutory requirements, altho they would not be compelled to do so if they should be willing to forego the transaction of business in the District, the Territories and the islands.

Washington Notes

Representative Longworth, of Ohio, has introduced in the House a bill authorizing the Secretary of State to acquire, at a cost not exceeding \$5,000,000, proper sites and buildings for the use of American Ambassadors and Ministers in foreign countries. The purpose of the bill,

he says, is "to remove the one (at present) absolutely necessary qualification, that of great wealth, for holding high diplomatic office under the Government of the United States." Our diplomatic representatives would no longer have to pay rent.—In a letter to Secretary Wilson, commending his policy concerning the use of grazing lands in the forest reserves, President Roosevelt says:

"The forest reserves are to be used as among the most potent influences in favor of the actual home maker, of the man with a few dozen or a few score head of cattle, which he has gathered by his own industry and is himself caring for. This is the kind of man upon whom the foundations of our citizenship rest, and it is eminently proper to favor him in every way."

—William G. Crawford was found guilty, in Washington, last week, of conspiring with August W. Machen and others to defraud the Government in the sale of supplies to the Post Office Department. Machen is already in the penitentiary. Crawford was formerly Deputy Auditor of the Department.

Labor Questions

At a meeting held in New York last week, the Periodical Publishers' Association voted unanimously to support the Typothetæ (an association of employing printers) in the approaching contest with the Typographical Union. In Chicago, the Federation of Labor voted to support and assist this union, which demands an eight-hour day after January 1st. The Federation also denounced the Western Methodist Book Concern for opposing this demand, and urged all union men to have no dealings with it.

—Dispatches from Pittsburg predict that the Steel Corporation and other manufacturers of steel in that city will increase the wages of their employees by ten per cent. next week, and that an increase of seven per cent. will be made by the Pennsylvania Railroad Company. On the other hand, a large reduction in the window glass industry is expected, owing to low prices, which are due to overproduction. It is said that the factories have been making glass at the rate of 1,000,000 boxes a month, altho the demand for consumption calls for only a little more than half of that quantity.

—Labor Commissioner Sherman re-

ports that the law limiting the work hours of children and women are violated by nearly all of the factories in New York city.—Judge Kohlsaatt, of Chicago, has sentenced Daniel Garrigan to be confined three months in jail for disobeying an injunction issued during the teamsters' strike in that city last spring. This indicates, it is said, the sentences to be imposed in the cases of nearly sixty persons, two of whom are President Shea, of the Teamsters' Union, and Charles Dold, President of the Chicago Federation of Labor.—Under a new statute two members of a plumbers' union in New Orleans were appointed to examine applicants for the new office of Inspector of Plumbing. Their union ordered them to recommend a certain candidate, and expelled and boycotted them when they refused to do so because the man was not well qualified. The Supreme Court of Louisiana now decides that the union must reinstate the two men, abandon the boycott, and pay them the full amount of damages suffered.—It is expected that all the Metal Trades Associations of the large cities will unite in a national association to oppose a movement for a "closed shop." The proposed national association, if completed, will have about 5,000 member, who employ 350,000 men.

Philippine Tariff Bill

The Payne bill was reported to the House on the 19th by the Ways and Means Committee, the vote having been 7 to 5. In the minority were Messrs. Babcock, of Wisconsin; W. A. Smith, of Michigan, and three Democrats. It is provided in the bill that all Philippine products shall be admitted at our ports free of duty, sugar and tobacco excepted, on which the duties are to be 25 per cent. of the Dingley rates. Mr. Hill had at first proposed that the same rule should be applied to imports into the islands from the States. This not being acceptable, there was added to the bill, on his motion, a provision that sugar and tobacco from the States should be admitted free, and that Philippine duties on other products should not be disturbed. The old duties are to be collected upon about 40,000 tons of Philippine sugar now in bonded

warehouses at New York. Democratic members of the committee asked for absolute free trade with the islands. Their minority report says that their party desires to get rid of the islands at the earliest practical moment, and that it welcomes the protest of protected interests in the States against Philippine competition as a moving cause to promote Philippine independence. In the majority report it is stated that Philippine sugar cannot be delivered at New York for less than 3 8/10 cents a pound, without payment of the proposed duty, while the cost of beet sugar at the factory ranges from 3 7/10 in Colorado to 3 9/10 in Michigan. It is expected that American wrapper tobacco will be exported to the islands. The Protective Tariff League will oppose the bill, asserting that it would wipe out the domestic beet and cane sugar industries. In the coming debate, Democratic amendments relating to our tariff on foreign goods will be excluded by a ruling that the bill does not relate to imports from foreign countries. Governor Wright, testifying before the committee, said the opposition to the bill seemed to him to be pig headed selfishness.—All the bids recently submitted for railroad construction in the islands have been rejected, owing to their deviation from the specifications and prescribed terms. The Government will advertise again, so modifying the terms that such deviation will be within the rules.

Cuba and Porto Rico

To assist the cigar makers now on strike at Key West, the Cuban House of Representatives has appropriated \$10,000, the Havana Provincial Council \$5,000, and the Havana City Council \$1,000.—The death rate in the yellow fever epidemic at Havana is high. Of the 59 persons attacked by the disease, 19 have died.—A fertile district in the La Maya valley is to be opened for the production of sugar by the Cuba Eastern Railroad Company (controlled by New York capitalists), which will build a railroad fifty miles long, from San Pre to San Luis. This is in the province of Santiago, where the company already has fifty miles of road, from the Guantanamo naval station northward to Concepcion.

It is expected that \$5,000,000 will be expended for sugar factories at points on the projected road.—Dr. José C. Barbosa, leader of the Republicans in Porto Rico, has written a letter in which he asserts that the law restricting the acquisition of land by corporations has had a beneficial effect. Free trade with the States, he says, has drawn American and foreign capital to the island, and the law has caused corporations to assist the native owners of land. Therefore the people engaged in the sugar and tobacco industries are now paying their debts, and sugar land that could have been bought six years ago for \$30 or \$40 an acre is now held at \$150 or even \$200. The law might safely be modified now, for corporations would have to pay full value for land. But the lands used in the coffee industry are mortgaged for \$18,000,000 to Spaniards or Spanish banks, and the price of coffee is too low for producers carrying such a burden. A change in the law might induce Americans to buy coffee plantations, and thus be beneficial. Concerning the general situation, Dr. Barbosa says that wages are steadily rising, new railroads are approaching completion, and conditions are rapidly improving.

Italian Cabinet Resigns

The Fortis cabinet has resigned, but is still holding office pending the King's acceptance. The resignation was brought about by the adverse vote in the Chamber on the proposed commercial *modus vivendi* with Spain, under which a reduction in the import duty on Spanish wines was made. In the new cabinet Baron Edmondo Mayor des Planches, now Italian Ambassador to the United States, will probably be made Foreign Minister.—The report of the Italian budget shows an excellent condition. A surplus of \$15,000,000 for the year is reported. This fine showing continues to have the best possible effect upon the situation of the treasury and every department of Italian finance. In his report, the Minister, in congratulating his hearers on the growing prosperity of Italy, exhorted them not to relax their vigilance over the expenditure or to jeopardize a position so hardly won.

—The Pope, at a public consistory, accepted four new cardinals. He remarked after the ceremony that he intended to create a second American cardinal in the near future. The Pope has also had President Roosevelt's message translated into Italian and circulated.

British Politics

The new Premier, Sir Henry Campbell-Bannerman, outlined his policy in an address before the Liberal Federation in Albert Hall, December 21st. Fifteen members of his cabinet were upon the platform with him, of whom Mr. John Burns, the labor representative, was most warmly applauded. Sir Henry announced his opposition to the increase of armaments and his intention to administer the Government with the greatest possible economy. The relations of Great Britain with foreign Powers were satisfactory. He saw no reason whatsoever for estrangement with Germany, and he welcomed the recent unofficial demonstration of friendship. The Premier declared that the fiscal question was the prime issue of the campaign against a Government whose ministry "made a midnight flitting on a murky December evening." The announcement that the new Government would put a stop for the present to the further importation of Chinese coolies into South Africa was greeted with cheers lasting ten minutes. The Premier said:

"In this connection, I may state that Lord Elgin, Secretary for the Colonies, today telegraphed Lord Selborne, High Commissioner in South Africa, saying that the importation of Chinese labor must be regarded as an experiment adopted by the late Government to meet the serious shortage of labor. His Majesty's Government now considers that the introduction of Chinese laborers should not be extended until it can learn the opinion of the colony thru 'an elected and really representative Legislature.' The Government accordingly has decided that the recruiting, embarkation, or importation of Chinese coolies shall be arrested pending a decision concerning the grant of a responsible Government to the colony."

No mention was made of Home Rule for Ireland by Sir Henry, but it will nevertheless figure in the coming campaign, for the Conservatives and the Nationalists will not let it drop. John Redmond, in his speech at Belfast, announced with

confidence that before long an independent Parliament and executive would be established in Ireland.—The problem of the unemployed continues to attract public attention. The relief fund started by Queen Alexandra with \$10,000 from her private purse has now reached \$600,000, and is expected to amount to a million dollars before long. Great difficulty is being experienced in the distribution in such a way as to satisfy the claims of different localities and needs, and yet not aggravate the misery it is aimed to remedy. Grants for immediate use have been made amounting to some \$300,000 to local committees and charitable organizations in those districts of London where there is the greatest distress. There has been thruout the year a large increase in the number of paupers in London. More people have been in the receipt of pauper relief from the Government than at any time in the last forty years except the period 1867-71. The ratio of paupers to the total population is higher than any previous year since 1874, and the workhouses contain a greater population than ever before.

Inter-Protestant Problems in Germany

A positive innovation has in recent months been introduced in the struggle between the conservative and the advanced clans within the Protestant State churches in the land of Luther for the control of the pulpits and the pews of the country. Hitherto, especially, the protagonists of the advanced theological teachings had abstained from bringing the debatable problems before the churches at large, but now this is changed, and the official program calls for a promulgation even of the most radical views in the churches at large. The most active agents in this regard are perhaps the *Freunde des Christliche Welt*, organized associations of advanced religious thinkers, calling themselves after the name of the chief liberal organ in the country, the brilliantly edited *Christliche Welt*, of Marburg, over which the versatile Dr. Rade, of the University, presides. The ablest agency for the spread of these advanced views is a set or series of religious works,

under the general title, *Religionsgeschichtliche Volksbücher* (i. e., Popular Expositions of Religious Problems, According to the Religico-historical Method), edited by W. M. Schiele, of Marburg. These brochures, which discuss in popular style the leading theological problems, cost but a trifle and appear in enormous editions. The first issue of "Jesu," by Professor Bousset, of Goettingen, giving a "modern" picture of Christ, appeared in 5,000 copies. The series is proving to be very popular. The change in the program by the advanced clans was mostly caused by the demand of Dr. A. Stöcker, formerly the special adviser of the Emperor, and a Berlin court preacher, and still the most influential pulpit orator in Germany, who demanded that the Radicals should leave the State churches, the confessional status of which they no longer share and the fundamental doctrines of which they deny, such as the Trinity, the Divinity of Christ, the Atonement, and that they should organize churches of their own. Stöcker and other conservatives were willing to give the advanced men their share of the church property. The latter accordingly are attempting to demonstrate that they are the legitimate sons of the Reformation, and that they have a right to remain in the Church. In order to counteract the influence of the *Volksbücher*, the conservatives have also begun to issue a series of popular expositions of the fundamentals of Christianity, under the general title of *Biblische Zeit- und Streitfragen*, edited by Boehmer and Kropatscheck. Of these perhaps a dozen have appeared from the pens of leading conservative professors in the universities, including Dr. B. Weiss, of Berlin; Seeberg, of Berlin; Nösgen, of Rostock; Koenig, of Bonn, and others. Both series are excellent condensed presentations of the opposing views.

Fighting in Moscow

The storm center in Moscow has passed from the Baltic Provinces to the city of Moscow, where what seems to be a decisive conflict between the authorities and the revolutionists is being fought out, and may prove to be the turning point of the revolution. The

issue is at present doubtful, for the news from the seat of war is fragmentary and unreliable, but so far as can be judged the revolutionists have failed to hold their own against the military. In consequence of the recent repressive acts of the Government in making strikes criminal and in arresting the leaders of the unions, it was decided by the central committees at both St. Petersburg and Moscow that a trial of strength was inevitable, and a general strike was ordered to begin at noon December 20th thruout the Empire. The call was approved by the Union of Unions, the Peasants' Union, and the General Railway Union, but according to the reports it was not welcomed by the workmen, particularly the railway employees, and they have not succeeded in tying up the railway service of the Empire, nor in causing serious disturbances, except in Moscow. There the factories and mills were all deserted, and railway men left their trains at the station. Plans had been made for an armed revolution, which was to seize strategic points in the city, and declare a provisional government. The workmen were to capture the railroad station and prevent the communication with St. Petersburg, while the student revolutionary societies were to seize the municipal buildings and the State Bank. Governor-General Dubasov learned of the scheme at the conference at the Palace on Friday night, and made plans for its suppression. The troops were stationed at strategic points and Prince Cherbatov, a reactionary noble, was authorized to organize a militia composed of people loyal to the Government. Twenty-five thousand troops were massed at the Red Palace under the walls of the Kremlin, machine guns were posted on the old wall and artillery placed to command the Tverskaia Boulevard. Searchlights were put in the towers and rockets were used for signalling to the scattered troops. At the first appearance of the strikers carrying red flags and singing revolutionary songs they were fired upon with grape-shot and cavalry charged thru the streets, attacking the revolutionists wherever they were found. The Fidler School, where the student militia and other revolutionists, who were expected

to lead in the revolt, were meeting, was surrounded by troops during the night before the rising was planned to take place. The revolutionists were called upon to surrender within an hour, at the expiration of which they fired upon the troops, killing several soldiers. The troops returned the fire, when a white handkerchief was waved from a window; the troops entered, but were greeted with rifle fire. They retired and bombarded the house, which soon after surrendered. Two officers and eight soldiers were killed and five of the revolutionists. The workmen erected barricades in the suburbs and in the square surrounding the Arch of Triumph, and here made a brave stand, altho they were armed only with revolvers, while the troops used machine guns. In spite of the barricades and barbed wire entanglements erected across the streets, the mob was beaten at every point and forced to take refuge in the suburbs, which are yet said to be under their control. The strikers and students made desperate charges against the troops and were repulsed with great slaughter. For five days there has been constant street fighting, and the loss of life is known to have been very great, being estimated at 5,000. Detached police officers and soldiers were attacked and killed with great brutality, and on the other hand the Cossacks and other troops showed no mercy to the people in the streets or in suspected houses. The loyalty of the troops was a great disappointment to the strikers, and was probably the cause of the failure of their plans. It does not appear that there was any mutiny among the soldiers.

The Russian Crisis

In spite of the efforts of the revolutionists to secure a concerted uprising against the Government thruout the empire, the disorders, tho numerous, are apparently as sporadic and objectless and fruitless as ever. The situation in the Baltic Provinces does not seem to have changed materially during the past week. The Government, on account of the strike at St. Petersburg, has not been able to send troops enough to the dis-

affected provinces to restore order in the country districts, and the attacks by the peasants upon the buildings of the landed proprietors have not been checked. The towns of Windau, Friedrichstadt, Franeburg, Goldingen, Kandau and Doblen are under the control of the insurgents, who have organized provisional governments and taken charge of all branches of the administration. The military have been expelled or imprisoned and the police have been replaced by citizen militia. It is proposed to bring these local governments into a federation and elect an assembly, which will establish an autonomous state under Russian sovereignty. Half of the territory of the Baltic Provinces is now under the control of the insurgents. Tukum or Tukkum, a town of about 7,500 inhabitants, 38 miles west of Riga, which was seized by the insurgents on December 12, has been recaptured, after a severe fight lasting thirteen hours. The town was surrounded by entrenchments and defended by machine guns. Most of the insurgent leaders escaped. At Riga and Libau the regular authorities are in control and the troops are maintaining order.—The strike order was obeyed in St. Petersburg by about a third of the workmen of the capital, tho with apparent reluctance, and there have been no serious disorders. The street railways were not stopped, and except for the strike of the waiters, which caused a closing of the restaurants, there was little interruption of the ordinary affairs of the city. In Warsaw the striking railway, postal, and telegraph employees, after a few days, accepted the terms offered by the Government and returned to work. The Socialists made strong efforts to start an armed rebellion, like that in Moscow, but the people did not respond. There is a serious conflict of opinion between the Jewish Socialists and the Polish Nationalists. The Nationalists insist upon the Jews dropping Yiddish and learning the Polish language. In Odessa the strike was only partial and temporary, tho the strike of the bakers caused the price of bread to double. Batum and Tiflis are in a State of anarchy. The Armenians are reported to have killed hundreds of Tartars and Mussulmans. The Sultan of Turkey

has protested to the Russian Government against this massacre of his coreligionists.

The Shanghai Riots

The disturbances at Shanghai seem to be but a further evidence of the anti-foreign spirit that is pervading the whole Chinese Empire. The growing feeling against all foreigners includes even the Japanese. At Shanghai, the American cruiser "Baltimore" landed 150 marines, and the gunboats "El Cano," "Villalobos" and "Quiros," which are on their way to that port, can, if necessary, bring this force up to 600 men. When the English, German, Japanese and Austrian ships arrive there will be 2,000 foreign sailors in the streets of Shanghai protecting the allied interests of the various Governments. Order is being maintained only thru the presence of foreign troops, which seems to indicate that the situation has been in no way alleviated and that there may be further outbreaks at any time. The only developments feared are anti-foreign riots or massacres in the interior, where forces could penetrate only with great difficulty and danger. The American missionaries at Soo-Chow, Hoo-Chow and Hang-Chow have been recalled to Shanghai. The Dowager Empress has ordered Viceroy Yuan-Shi-Kai to proceed to Shanghai, to investigate the disturbances, secure the punishment of those implicated, and impeach the civil and military officials responsible for the maintenance of order. The mixed court has reopened, and is transacting business without disturbance.—Another indication of the effort to get rid of foreign influence is the rapidity with which the Chinese have taken over the control of the Canton-Hankau Railway, which was purchased recently from American stockholders. There were many American employees on this line, but all except a few have been dismissed and Chinamen have been put in their places. The few who remain understand they will stay only until they have taught their trade to the Chinese. Discipline in the conduct of the road has sadly deteriorated under native supervision. The cars are unclean, the stations in bad shape and the schedules uncertain.

Are We "Re-Barbarized"?

BY PROFESSOR GOLDWIN SMITH

WE hope not. But unquestionably there has of late been a certain revival of the spirit of violence which, let Mr. Balfour say what he pleases, is always threatening us with war. Mr. Balfour himself owes his position as Prime Minister to a too successful appeal to that spirit, while by the increase of armaments he has been feeding it to the utmost of his power.

Of the ease with which the blind passion for war is roused in a nation supposed to be highly civilized, and the constant temptation thus offered to a bellicose government, we have had in England three fatal proofs within the last half century.

The first case was that of the Crimean War. England had no quarrel with Russia. They had been the best of friends. In the Sheldonian Theatre at Oxford, where honorary degrees are conferred, hung and still hangs a portrait of the Czar, who had been the partner of England in the last desperate struggle for the independence of nations against Napoleon. The Czar Nicholas was not only a friend, but an intense admirer of England, regarding it as the great conservative power. To show his amity he visited England and amused us by his Spartanism, using on board ship a truss of straw for his bed. The war was brought about by three men, each of whom had a special motive. Palmerston was committed to an anti-Russian policy. He had, in 1841, caused Afghanistan to be invaded for the purpose of counteracting the intrigue with Russia in which he supposed Dost Mahomed, the ruler of Afghanistan, to be engaged. A whole army perished, and Palmerston, when called upon by Parliament for explanations, had been fain to mutilate the despatches of his envoy, who had lost his life in the rising. He was, moreover, willing to supplant Lord Aberdeen, the head of the coalition Government, and a minister of peace as Palmerston was of war. Lord Stratford de Redcliffe, who unluckily was Ambassador at

Constantinople, the storm center, had been nominated to the Russian embassy and rejected on personal grounds by the Czar. Louis Napoleon, who made up the trio, needed a halo of military glory for his usurped throne and a better footing for himself in the circle of royalties into which, as an adventurer, he had been but coldly welcomed, especially on the part of the Czar. These three, if they did not directly conspire, practically pulled together and drew the British Cabinet to the brink and at last over it. Such at least was the impression of one well qualified to judge. The ministry, a coalition of Whigs and Peelites, still jealous of each other, was ill cemented, weak and wavering, its head, Lord Aberdeen, being always for peace, while Palmerston, its strongest member, was for war. The Czar Nicholas, by the violence and impulsiveness of his temper, played into the hands of the war party. Settlement was quite feasible and would probably have been made had any one been Ambassador at Constantinople but Sir Stratford Canning, who was credibly reported, when the first gun was fired, to have cried, "Thank God; that's war!" The stock of bellicose temper in the English breast had no doubt been replenished by the long peace. But about the immediate cause of quarrel people in general knew little and cared less. It signified nothing to them which of two sets of fanatical monks held the keys of apocryphal holy places. The Turkish Empire, if its integrity was at stake, was a scandal, and, saving Palmerston and Layard, had few partisans. Perhaps there should be added Disraeli, who, as a Hebrew, was partial to Islam, and when in power pursued an anti-Russian and pro-Turkish policy, of which the present state of things in Macedonia, re-enslaved by him to Turkey, is the fruit. Certainly before the first shot was fired, whatever feeling there might be against Nicholas, nobody expected or desired war. To war, however, Turkey having rejected the joint note of the Powers,

we went, and at once a frenzied war feeling seized the nation. Bright, having pleaded for peace, was burned in effigy. Anybody who betrayed or was supposed to have betrayed pacific tendencies became an object of suspicion and abuse. Sydney Herbert, loyal and chivalrous if ever man was, became an object of suspicion because he had Russian connections. The Prince Consort did not escape. That Odessa was not bombarded was supposed to be a symptom of treason, though the War Minister afterward told the writer that the decision against bombarding Odessa was due to the Emperor of the French. Any mention of peace provoked a storm of rage. One journal went into mourning when peace was proclaimed. A monument of that war fever is the well known passage in Tennyson's "Maud," rapturously hailing the advent of war and proclaiming that the justice of God was to be done on a giant liar, the most gigantic of all liars being his own ally, the Emperor of the French, who had waded thru multiplied perjuries as well as massacre to his throne. Tennyson believed and embodied his belief in splendid verse that the mean vices would be cast out by those of violence. Of the amount of truth in that theory we had abundant evidence at the time, and we have now some further evidence in the peculations detected the other day in South Africa and those just now discovered in Japan.

The only fruit of the Crimean War was a limitation of the Russian navy in the Black Sea, which Russia, before many years were past, took an opportunity of throwing off. Scarcely had the grass had time to grow on the graves at Sebastopol when everybody said the war had been a mistake, and that, to use the jaunty phrase of Lord Salisbury, our money had been laid on the wrong horse. The preservation of the Turkish Empire in its present state will hardly be deemed a gain or an honor to any one concerned.

The next case was that of the Lorch War. Palmerston, the father of Jingoism, was by this time in the ascendant. The war arose out of an incident in the opium trade forced upon China to replenish the exchequer of the Indian Government, which monopolized the manufacture of the drug. A vessel called a lorch

engaged in the smuggling trade at Canton was boarded by the Chinese authorities of the port, who hauled down a British flag which she was flying when her warrant had expired. The British Resident at Canton, Sir John Bowring, a philanthropic disciple of Bentham, having a quarrel with the Mandarins, embraced the opportunity of applying the principle of his great teacher, "the greatest happiness of the greatest number," by flinging bombshells into Canton, the most densely peopled city in the world. The excellent and sensible Lord Elgin, sent out by the British Government with warships to coerce the Chinese, evidently shrank from his task and the policy of which it was a part.*

A vote of censure was passed upon Bowring by the House of Commons. The mass of the people in England were totally ignorant of the case, perhaps hardly knew what the name *lorcha* meant. But when Palmerston appealed to their lust of war, telling them that "an insolent barbarian had trampled on the honor of the nation," we had another tornado of passion. Palmerston and opium carried all before them. Bright and Cobden lost their seats in Parliament. The Lorch War would now find few defenders. The game of bombarding China on fictitious pretenses and then levying on her a huge fine under the name of indemnity is happily at an end.

The last case was that of the Boer War. Probably not one in a thousand of the English people knew anything about the South African republics or about the alleged justification for the war. But no sooner was war declared than they seemed to be possessed by a demon. On the Mafeking Night London presented a scene of drunken frenzy and brutality such as might have been thought impossible in the very center of civilization. At the general election the Government which had made the war had an overwhelming majority, including, there can be no doubt, a great number of artisans, who reveled in war as they do in the spectacle of football matches, or in betting on horse races at taverns. Oppo-

* The writer of the article on Sir John Bowring in the "Dictionary of National Biography" says that Elgin indorsed Bowring's policy. He can hardly have had before him some passages of Elgin's letters in Waldron's "Life."

nents of the war were treated with violence, to which Mr. Balfour, then Prime Minister, by excusing, morally incited. The savagery of language both in Great Britain and Canada was shocking to humanity. In the Canadian Parliament a member who had the courage to open his lips against participation in the war was overwhelmingly howled down. People even of high cultivation and gentle tempers seemed to revel in the burning of the Boer homes and all the atrocities of the war. The Premier of New Zealand hardly went beyond the general feeling when he proposed the employment of cannibals. Now comes the revelation and the revulsion. It is now clearly seen that the war was made, not to extend British liberties or to make South Africa a white man's country, but to enable the cosmopolitan Jews of Johannesburg, who got it up thru their hireling press, to increase their enormous gains by the introduction of slave labor. We were warned of this from the beginning. But passion turned a deaf ear.

In this case we had a notable example of the ease with which an unscrupulous government can mislead the people. The justification for the war alleged by the British Government, or rather by Mr. Chamberlain, then Colonial Secretary, and actually recorded in the journals of the Canadian Parliament, was that the Transvaal Republic was under British suzerainty, and that the British Government had the right of interfering for the enforcement of justice in its domestic institutions. The fact was that the word "suzerainty," which had been introduced in the first of two conventions, but exclusively with reference to external relations, had in the second and only binding convention been marked for deletion by the Colonial Secretary's own hand. "Suzerainty of England over the Transvaal abolished; England only reserving the right of veto on treaties with foreign powers, except with the Free State and the Northern Kaffir tribes"—thus does the *Annual Register* describe the convention of 1884. Minister after minister, including Lord Salisbury, and some of them in answer to questions, acknowledged the independence of the Republic. The Jameson raiders were tried under the Foreign Enlistment Act for fitting out an

expedition against a foreign State at peace with Great Britain, and the Lord Chief Justice on that occasion defined the Transvaal as a "foreign State with which Her Majesty was in friendly treaty relations." He said, "The position of the South African Republic . . . is determined by the two conventions of 1881 and 1884. The result is that under these conventions the Queen's Government recognize the complete independence and autonomy of the South African Republic, subject only to the restriction contained in the convention of 1884, to the effect that that State should have no power to enter into any treaties without this country's consent, except as regards one or two minor States, one of which is the Orange Free State." It seems almost incredible that a British Government should have committed so manifest a breach of covenant under a pretence so plainly untrue. But England, at least the character of her public men, is greatly changed since the days of Pitt, Grey, Canning, Wellington and Peel. The sensitiveness of honor is no longer the same.

We had a warning the other day of the perpetual existence of this danger when some Russian sailors, panic-stricken or drunken, fired on a British trawler which they took for a torpedo boat. Nobody could have imagined that either the Russian Government or the Russian nation had anything to do with the outrage. Yet the temper of the nation at once showed itself in the assumption of a fighting attitude, and had the Russian Government not been prompt in its tender of reparation, or had the British Government yielded to the cry for a demand of the immediate punishment of a Russian officer, there would have been war.

The writer happened to be in the United States on the eve of the war with Spain. The American people evidently sympathized, as they were sure to do, with the Cuban struggle for independence. But there did not appear to be the slightest excitement, much less a desire for war. Spain apparently was offering all that she could offer short of actually hauling down her flag. She was offering the Cubans a constitution on the Canadian model. Negotiations were going on and the American Ambassador at Ma-

drid was apparently hopeful of peace. Then came the blowing up of the "Maine." In an instant the country was in a flame, and the Government was impelled to war. It appears to be now admitted that the "Maine" was blown up by spontaneous ignition in one of her coal bunkers—a not uncommon accident, and one which has happened several times since. A moment's reflection would have shown that nothing would be more improbable than that the Spanish authorities should, by blowing up an American warship, provide the Cuban insurgents with an invincible ally.

Spain offered arbitration in the case of the "Maine," but the President made no reply. The Transvaal Republic asked for arbitration on the question of the su-

zerainty and was told that this would be giving away the whole case, as undoubtedly, if the arbitrator had been fair, it would. Arbitration is a good thing, but, there being nothing to enforce it, it has its limits as a preservative against war. We have yet to see that The Hague Tribunal, an Amphictyony of great powers, regards the rights of the weak. Peace will be secured by reduction of armaments, and by reduction of armaments alone.

"We don't want to fight, but, by Jingo, if we do,
We've got the men, we've got the ships, we've got the money, too."

When a man goes about with "the big stick" in his hand, temptation to use it is pretty sure to come.

TORONTO, CANADA.

Are Not Life Insurance Premiums Too High?

BY MILES M. DAWSON, F. A. S., F. I. A

[In our issue of November 30th, we printed an article on the Cost of Life Insurance by Mr. Rufus W. Weeks, the Actuary of the New York Life Insurance Company, which took a somewhat different view of the situation from the article that follows. Mr. Dawson is the Consulting Actuary of the New York Legislative Committee now investigating the insurance companies.—EDITOR.]

A LEADING mutual life insurance company offers life insurance to the public at the following rates of premium for the ages named:

Age.	Participating.	Non-Participating.
20	\$18.40	\$15.01
25	20.14	16.46
30	22.85	18.74
35	26.35	21.70
40	30.94	25.62
45	37.08	30.90
50	45.45	38.14
55	56.93	48.10
60	72.83	61.94

In this particular company the same surrender values are given under each of these forms, though that is not the common rule; but the offer of participating and non-participating insurance by the same company at different rates of premium is so common as not to excite comment—so common, indeed, that the

inconsistency of it is wholly overlooked; but it contains an answer to the question: "Are not life insurance premiums too high?"

Under the foregoing scale of non-participating premiums the company in question maintains the highest reserves known to life insurance in America—higher, also, it should be noted, for five years at least, than it can put up out of the premiums after meeting the mortality cost and the expenses, including cost of procurement; but that applies to its participating rates as well, dividends being annual.

The non-participating rates must, therefore, be amply adequate. Yet they are fully 20 per cent. lower than the participating premiums.

These non-participating rates are believed by the officers of the company to

be large enough to cover all necessary expenses, meet all the mortality costs, make good and provide this high reserve after about the fifth year and afford a good margin of profit. What more is desired or desirable in a *participating* premium?

Of course, everybody is conscious that if he were going to purchase life insurance at a fixed premium without the expectation of dividends he would want a lower rate; and it may be acknowledged that this variance in premium rates is intended to accommodate that view.

But why should not a mutual company, for instance, sell the insurance at as close margins as possible consistent with safety, thus giving a rate as low as a stock company can, and then underbid the latter by giving in dividends whatever profit is realized?

Historically that was what was done in the beginning. The lower rates of the Old Equitable of London, for participating insurance than the rates of the London Assurance and the Royal Exchange for non-participating, gave the former the preference in the market. In this country the lower rates of the New England Mutual drove the Massachusetts Hospital Life out of business; the lower rates of the Mutual Life was the occasion of the retirement of the New York Life and Trust Company from the life insurance business; and in Philadelphia the Penn Mutual with lower premiums displaced the Girard Trust and Life Insurance Companies and other stock companies.

Why, then, these changed conditions?

Chiefly because even the lower premiums of the early days of the mutual companies were too high, and experience showed that the policyholders appreciated big dividends more than low rates with small dividends. The president of the Mutual Life Company, supported by its actuary, recently testified that the complaints concerning dividends of holders of policies which were sold 15 per cent. under the usual participating premiums, are the most frequent and irrepressible. In other words, the public does not appreciate lower premiums as it should; and, therefore, is offered what it hankers for. The Mutual Life Insurance Company, in instance, held out for years against higher premiums and deferred

dividends, during which period it steadily lost ground in comparison with its principal competitors, which were offering tontine policies at high rates.

Yet by the theories of the "contribution plan" of apportioning surplus, which are generally espoused by American life insurance men, it is impossible satisfactorily to account for participating premiums being larger than non-participating. Those theories are that the premiums provide for mortality, expenses and contingencies, mortality being, according to a certain table and interest, at a certain rate; and that dividends are merely the return of the salvages upon the estimates of mortality costs, expenses and contingencies and the additional interest, if any, realized upon the fund. The non-participating premium must, of necessity, provide for all these in order to be safe and must yield surplus, derived from all these sources together if not from each. Then why is not also the participating premium, with whatever margin it affords returned in dividends?

In Great Britain and in some other countries they have answered this question in another fashion, for there they "load" the premium with the design of furnishing a certain rate of dividend. This they find more conformable to the wishes of purchasers of life insurance than lower premiums would be; and while they do not guarantee these rates of dividends, they do very generally maintain them, having provided for them in their original computations, and then having conducted the business within those limitations. These dividends take the form most frequently of additions to the sum payable at death, and their best advertisements are the large accumulations of such additions under old policies.

These considerations lead us to say that either participating premiums should be as low as non-participating, and should yield merely the small incidental dividends to be expected under those conditions; or that every dollar in addition to that rate, embraced in the larger participating premium, should be religiously reserved to be given back in dividends and, in short, that a high dividend standard should be set up and worked to?

Has that been done in the United States? It has not. The "contribution

plan" idea has prevailed. The whole of the excess over non-participating rate has very generally been dealt with as money to be treasured upon for expenses, and out of which what was left could be given back as a dividend. The company from the rate-book of which the premiums quoted were taken is unusually virtuous in its treatment of participating policies. It pays the same percentage of commission, computed on the premium, it is said, for participating and non-participating. That charges the former with 25 per cent. larger cost of procurement per \$1,000 of benefit than the latter, because the premium is 25 per cent. higher; but is, indeed, decent compared with the almost universal practice of paying a much lower percentage of commission for non-participating.

So far are our companies as a whole from realizing that in a mutual company a higher premium does not warrant a penny more of real cost, whether in mortality or expense; that the avowed primary purpose in computing these "loadings" is to provide for expenses; and in several instances companies have actually used it all, under the cover of dividends being deferred, and thus have virtually denied the policyholders' participation while charging them smartly for it.

Yet, singularly enough, while pretending—honestly, no doubt—to "load" for

expenses, they utterly fail to do so in most cases, except in an absurd manner, which also tends to increase the rates of premium. It does not require rare discernment to know that much greater expense is incurred the first year under every policy than in every succeeding year. Yet most of the companies both calculate their premiums and compute their reserves as if the expense were the same each and every year. In consequence, even on the most economical basis, the company cannot and does not keep within this expense provision the first year. Instead, in two ways this condition tends to wrong the participating policyholders. First, it conduces to high premiums, the company desiring to put on a large loading in order that it may cover as much of the expense as possible the first year, and also may make it all good in as few years as possible; and, second, it holds back dividends at least, and often permanently diminishes them, as the deficiency in the early reserves of all policies, participating and non-participating, must be covered by what would otherwise be divisible surplus.

The full answer to the question, then, is: Either rates of premium are too high or certain reliable rates of dividends should be provided for and be maintained.

NEW YORK CITY.

A Truce

BY ELIZABETH GRINNELL

Once when the soul of God was weary with the clashing
 Of tongues, and hearts' ache, and the bitter spite
 Of envyings, and murder, and the awful flashing
 Of swords that made the days one blood-red night,
 He turned a little Child's face toward the nations, crying:
 "For love of this child let your wranglings cease;
 Heart of the Father-heart, the living for the dying,
 Take now for truce My Son, the Prince of Peace."

PASADENA, CAL.

Present English Foreign Policy

BY THE RIGHT HON. SIR CHARLES W. DILKE, BART., M.P.

AUTHOR OF "PROBLEMS OF GREAT BRITAIN," ETC.

I AM asked to write for foreign publication on a subject of which the settled portion is easily dealt with. There never was a time when British foreign policy was more clear or the subject of a more general agreement in the United Kingdom. Whatever suspicions may be entertained of us abroad, we have the satisfaction of a good conscience—at all events as to the present moment. We are all resolved on peace; the more firmly, perhaps, because we have recently burnt our fingers in war. We are everywhere, as we had formerly been in places, firm supporters of the *status quo*. The Conservatives are pleased with themselves because the Liberals, as a rule, support their foreign policy. The Liberals are pleased with themselves because, as we believe, the Conservatives are following a Liberal line of foreign policy. Lord Salisbury at one time made the country, without its consent, for certain purposes a virtual member of the Triple Alliance. The Triple Alliance has now become a name. The relations of Italy with France are at least as close as those which bind her to her nominal allies. Mr. Chamberlain at one moment advocated an alliance with Germany: an appeal to which there was no national answer. Our hands are now completely free from entanglements, for our virtual guarantee of the recent treaty of peace does not in fact extend our responsibilities, and all nations are interested in not disturbing a settlement in which they had, as is now known, a confidential voice. The basis of our foreign policy at the moment, in addition to the maintenance of the *status quo* in the East, is friendship with the American and the French Republics.

Our relations with Germany are

no doubt less cordial, but offer, I am convinced, no element of present or immediate danger. Nobody in the United Kingdom has or has had the slightest intention of joining in an attack on Germany, and I very much doubt whether there have been responsible Germans who in recent months have wished to attack England.

To state this is, as I began by saying, easy. What is, of course, more difficult, is to anticipate developments which may involve fresh and future relations or any departure from or modification of the *status quo*. One move which has been made by our Government, also with universal concurrence, has been in the direction of an arrangement with Russia, not a reinsurance of the Bismarck type, effected behind the back of Japan, as

Sir Charles Dilke.

was his reinsurance with Russia behind the back of Austria, but a frank arrangement made openly in the sight of the world and with the cognizance and support of Japan. Russia has shown willingness to meet us upon our own lines, and no difference of opinion has arisen. She has, however, naturally made delay, and little else under present circumstances could have been expected to follow from a discussion which has been friendly and useful.

It may be remembered that some favor shown by our Government to a German scheme of a railway to the Persian Gulf thru Baghdad caused a protest in Parliament, in which, indeed, I took part. It is, therefore, the more incumbent on me to point out that the objection was to the particular scheme and to the apparent non-recognition of our virtually privileged position at the head of the Persian Gulf. We were expected to consent to changes in the Turkish customs detrimental to our trade, and to facilitate the making of a railway in regard to which both English and Russian interests had been insufficiently considered.

Any agreement between ourselves and Russia with regard to trade and railways in Persia will, I hope, be accompanied by an international settlement of the Baghdad railway question. Merely to make a railway without at the same time promoting irrigation, on a gigantic or Indian scale, of the once fertile plains of Mesopotamia and of the sites of the empires of Nineveh and Babylon, would be an unimportant matter as compared with those which ought to be dealt with in the international arrangement. That to which I should look forward would not interfere with Turkish sovereignty in Asia Minor nor cause political disruption of the *status quo*, with all the risks to peace of any change. It would be commercial, and subject to the principle of the open door. France was already to have been brought into the German scheme, as was some English private capital. The waters to be utilized for irrigation take their rise in Russia, and the consent of Russia to their use ought to be properly asked for and obtained, and Russian provincial finance assisted by the payment of large rents. The horse-breeding establishments of the

Russian frontier would also stand to gain by the development of the valley; but the chief of such stud farms are upon the Turkish side of the frontier. The forests of the Caucasus might hope also to find a market for their produce, and large local trade from the Russian side be aided by the renovation of the most valuable province of the East. The position which we occupy at the head of the Persian Gulf, Turkish opposition to which has now been withdrawn, is one which makes us able to wait for its recognition. There is no hurry, so far as we are nationally concerned. On the other hand, there is not the slightest political or strategical reason why, given that position—and it is inexpugnable—we should play the part of dog in the manger. If our views were met, as they easily might be met, by the German promoters of the scheme, our Indian water engineers, whose experience infinitely transcends that of any other irrigators of the modern world, would necessarily be employed, our trade interests at Baghdad would receive expansion, and the Persian Gulf trade to Karachi and Bombay thrive, to the advantage of our Indian merchants.

With the details of the scheme it is for the engineers to concern themselves. But the whole should be under the management of an international commission, such as the Danube Commission, on which Germany, the United Kingdom, Russia and France should be represented; and such joint action in such a country, so remote from wars and rumors of wars, could not present the dangers of international action, such as that successfully taken by France and Great Britain in the Lebanon, or, with results less completely happy, in Egypt before the Arabi *coup d'état*.

Down to this point I have written for the well-informed. Is it necessary to add a word addressed to those whose condition is still benighted? There were newspapers on the Continent of Europe which, on the publication of our new treaty with Japan, found in it elements of danger. Whether there still are any who now think so I know not. That our first or original treaty with Japan should have been the subject of difference of opinion was inevitable. There is still great dif-

ference of opinion in regard to it here. That is a matter of history. As it existed, there was not increase but diminution of risk to peace or of disturbance of the *status quo* in the second treaty; that which alone exists. The President of the United States found a general if not a universal disposition to facilitate the resettlement of the Far East and its reopening to peaceful commerce. All the nations, though none could speak openly for fear of seeming to take sides, secretly favored the immediate conclusion of a moderate peace. The conclusion of such a peace was made possible by letting the Japanese statesmen exhibit to their disappointed people the new alliance with the first naval power of the world. Russia has recognized the situation and has avoided an irritation which, on the surface, might have been natural, though it would not have been justified. The position of Russia, and it is an element of consolation to her people, has in one large measure been improved by recent events. Before these circumstances happened there were vast numbers of people in all countries who were oppressed by a nightmare about Russia. Every one now recognizes that Russia is necessary to Europe.

It is difficult now to find in any quarter an immediate menace to peace. If it exists it is connected with rival ambitions of Austria and of Italy in the country behind Albania. The relations, however, between these two nominal members of the alliance of the central Powers, which were highly strained in 1904, are now improved. Austria is unlikely to make a sudden or dangerous move, and Italy will think twice before she takes any step outside her frontier. The joint action of the Powers at Constantinople is not dangerous, but it is to be regretted that they did not take the opportunity which it afforded to put an end to the somewhat disgraceful state of things arising out of their occupation of Crete. That liberal governments such as those of my own country, France and Italy, should be joining the Russians to fight against the Christian population is intolerable, and altho there is a temporary

improvement, it cannot be trusted to continue.

The danger of the present is, then, the old danger—"The Balkans." But it is not more urgent than it has been for a generation. The danger of the future is the other old danger—the eventual boiling over of the Austro-Hungarian caldron. Both these dangers to Europe have their root in a state of things which is beyond remedy; the intermixture thruout South-eastern Europe of races, languages, and religions. Such is the violence of many that each welcomes the foreigner against his neighbor. The smaller races are themselves divided between the Eastern and the Western Church, and those of the Eastern Church are broken by the results of Russian policy in Church matters into fragments which detest one another as much as they do "Rome." It is impossible by any changes and by any wisdom to confer upon these broken peoples national government which can content them. The distribution of the Wallachians, of the Greeks, and of the various fractions of Albanians illustrates my meaning. The Germans themselves are scattered in Southeastern Europe. There is the well-known case of their distribution in Bohemia among the Slavonic people, and that of the Saxons in the mountains neighboring on Rumania. If there be a spot outside Germany on which German eyes are sometimes cast as a desirable possession it is Trieste, an Italian city held by Austria, but surrounded by an Italian sea, for the Austrian naval ports of the northern Adriatic are as Italian as is the opposite coast; and even the Austrian fleet is largely Italian in language, tho loyal to the Austrian Crown. There is no solution of such difficulties. Much will depend on the opinion held by the German Emperor. I hope and believe that he will desire, not the disruption of the Austro-Hungarian monarchy, but the preservation as near as may be of that which diplomats style an "improved *status quo*." Where national government cannot be given, good government is all that can be wisely sought.

LONDON, ENGLAND.

The University and Business Methods

BY PROFESSOR J. McKEEN CATTELL

[Professor Cattell is most widely known as editor of *Science* and of *The Popular Science Monthly*. His researches have given him, however, a leading place in psychology, which science he and Professor James represent in the National Academy of Sciences. The following article has been written at our request.—EDITOR.]

THE recent vote of the corporation of the Massachusetts Institute of Technology to withdraw its acceptance of a plan to affiliate with Harvard University may be only a temporary check to the commercialization of higher education; but we may hope that it is the first step in a return to saner methods of academic control. It will be remembered that after the bequest of the McKay millions to Harvard for the endowment of applied science, a movement was initiated by the president and corporation of the Massachusetts Institute to make such a merger as would enable them to secure part of the funds. President Eliot had earlier attempted to form a union, but the proposal had been rejected by the institute. On the present occasion a committee representing the corporations of Harvard and of the institute drew up an agreement, according to which the institute was to move to a site adjacent to the university, where the joint work in industrial science was to be conducted under the control of a committee representing both institutions and supported by three-fifths of the income from the McKay bequest. The plan was submitted to the faculty of the institute, which on May 5 adopted by a vote of 56 to 7 a resolution protesting against its adoption. The alumni also opposed it by an overwhelming majority. In spite of these protests and of the known opposition of the faculty of the Lawrence Scientific School of Harvard and of the trustees of the McKay foundation, the corporation of the institute on June 9 adopted the agreement by a vote of 23 to 15. It looked at that time as tho the scheme would also be adopted by the corporation and overseers of Harvard, and that the methods of industrial trusts would be definitely applied in higher education. There are undoubtedly valid arguments in favor of an

affiliation between the Massachusetts Institute and Harvard, but in the main it was an affair of bigness, control of the field, diversion of funds and other phases of modern business methods.

The courts have now decided that the Massachusetts Institute may not sell its present site for business purposes. This has served as a reason or excuse for the corporation to annul its acceptance of the merger. It has, however, in fact been forced to take this action by the faculty and alumni; and we thus have, perhaps for the first time in our educational history, a successful challenge of the autocratic powers of presidents and trustees. This may be the beginning of a movement to limit absolutism and commercialism in educational administration, and may indeed represent a protest against these tendencies in our whole civilization.

The waning of democratic ideals has been one of the most marked symptoms of recent decades. The regression may be attributed in large measure to the developments of modern science. No doctrine since the distinction of body and soul by Descartes has had such wide influence as Darwin's exposition of the origin of species by the survival of the fit. This theory is said to justify the exploitation and extermination of the weak, to exalt brute force and chauvinism; when in fact it only explains their survival. We differ from the brutes exactly in having to a limited extent substituted intelligence and morals for the tooth and claw as factors in evolution. It is in any case doubtful whether conduct is much influenced by a theory of this sort. But the applications of science—which in the first instance made democracy possible by supplying the means of subsistence with possible leisure and education for all—have in their recent developments enor-

mously complicated modern civilization. Our methods of communication, transport and trade, of manufacture, mining and farming, have led to the doing of things on an immense scale. The individual has once more been subordinated, crudely commercial standards prevail, and control has been seized by the strong and the unscrupulous. Those of us who are not ashamed to profess faith in democracy regard all this as a temporary phase, which will only last until intelligence has developed equal to the complexity of the environment. The only real danger is that instincts may become atrophied before reason is ready to take their place.

The trust promoter and insurance president, the political boss and government official, the university president and school superintendent, have assumed powers and perquisites utterly subversive of a true democracy. The bureaucracy is defended on the ground of efficiency; but efficiency is not a final cause. To do things is not a merit regardless of what they are, and bigness is not synonymous with greatness. There is no ground for hopelessness. Of the things done the good may last and the rest may be eliminated; bigness may become greatness. The organizers of our huge corporations have in a way made history prematurely; these vast combinations were inevitable; the trouble is that they have come before we are ready to manage them. We have no evidence that people are less competent, honest and kindly than they were; it is the difficulties and the temptations that have increased.

There is ground for maintaining that the methods of the business corporation and the political machine have been somewhat wantonly applied to educational administration in this country. On the one hand, educational institutions are not and need not become so big and complex as to require the sacrifice of freedom to supposed efficiency, and, on the other hand, those who are the university—the teachers and the students who are or have been under their influence—have far more than average intelligence. There is nothing corresponding to the board of trustees and the president in the organization of any foreign university. The fellows of an English college

form the corporation, choose their officers and elect their successors. The Continental universities are supported by the government and are of course subject to it, but the professors have almost complete control of educational matters, including appointments. The Czar of Russia has restored to the professors the right to elect their rectors and deans at the same time that the trustees of one of the largest American universities have taken the vested right to elect their deans from the faculties without even asking their opinion or communicating to them their fiat.

The administration imposed on universities, colleges and school systems is not needed by them, but simply represents an inconsiderate carrying over of methods current in commerce and politics. The private institutions of the East, with Chicago and Stanford, have been dependent on gifts from the modern knights of industry, and the State institutions have been dependent on legislative appropriations. It is no wonder that the methods of commerce and politics have infected them. We have an absolute and absentee board of trustees, with sometimes a small group that takes an active interest in the situation, but usually an almost complete delegation of legislative, judicial and executive functions to one man, the president.

When the wisdom of letting a man lord it over an aggregate of employees instead of conferring with a company of scholars is questioned, the answer is the efficiency with which the autocrat can get things done. The president gets money and students and builds marble palaces. He can dine with rich men or legislators, as the case may be, and can make himself generally prominent in the community. The president probably increases the riches of his institution, tho not to as considerable an extent as is claimed. The vast gifts and ever increasing legislative appropriations would have come, tho perhaps not quite so quickly, to a republic of scholars. The president may draw students from one institution to another; he does not create them. The marble palaces may be mausoleums for the preservation of the corpses of dead ideas and monuments erected to the decay of learning.

At the conference of trustees held in connection with the recent installation of President James at the University of Illinois, Dr. Draper, formerly president there and now New York State Commissioner of Education, read an address on the university presidency. He painted the duties and powers of this office with such glowing colors that it seems strange that he or any man could think himself worthy to assume them. He said nothing of the members of the faculty except to explain that it was one of the president's duties to keep them at work, to employ and discharge them.

The university president can not do the impossible; but he is usually a man of intellect and character, having generally been taken from a professorship. But it may be urged with plausibility that the benevolent and efficient despot is the worst kind; the cruel and incompetent despot soon disappears. And it is probable that there will be a deterioration. A month ago none would have foreseen that one of the most powerful school superintendents would today be in prison, charged with theft and forgery. The role of "Uebermensch" is dangerous to the actor as well as to his creatures.

It is by no means certain that the administration of our educational institutions has been competent even on the financial side. According to President Pritchett the annual cost of educating each student at Harvard, is \$306, at California, \$279; whereas it is at Berlin, \$64; at Vienna, \$76; and it can scarcely be claimed that we supply the better education. Our professors have a financial, social and intellectual position below that of their German colleagues; their time is more occupied with trivial details; they are less satisfied with what they have and with what they do. We do not produce great men at or for our universities, and there are not enough moderately good men to fill the chairs. It is said that such are diverted into business or politics, but it is difficult to discover them there. Opportunity will give wealth or notoriety, as manure will produce big cabbages. It is not likely that our racial stock is degenerate; and the lack of great men is a serious indictment against our universities.

We are told that the president must

run the university because faculties are poor legislative and administrative bodies. In so far as faculties are incompetent, the system is to blame for not producing able men and giving them opportunity. The faculties have not been permitted to shape educational policy or to work out a plan of administration. Under existing conditions, if the professor does not become a bureaucrat in his small way, he is likely to revert to quietism. The fact that a faculty is somewhat conservative and slow to act is not altogether a fault. We should be none the worse off if legislatures enacted fewer laws and physicians administered fewer medicines. One of the chief functions of the president is to try to correct the mistakes that he has made. A faculty must work thru committees and executive officers; but they should be of its own choosing. Democracy does not mean that we should not have leaders, but that we shall follow our leaders because we accept them as such.

In stating frankly views that are shared by a larger proportion of my colleagues than is generally supposed, I by no means wish to adopt the attitude of a pessimist. I know well from personal experience with what unfailing courtesy and ceaseless effort a university president may conduct the affairs of his difficult office. Much has been accomplished for higher education in the United States. As the industrial trusts will in the end be directed by the world's greatest democracy for the benefit of the people, so our educational system may give the material basis for an efflorescence of creative scholarship springing from a free and noble life. Liberty of speech in our own field we now have and shall retain. As we regret that the trustees of the University of Virginia have sold its birthright for a president who can secure a few thousand dollars from Mr. Rockefeller and Mr. Carnegie, so we rejoice that the faculty of the the Massachusetts Institute of Technology has defeated a scheme of the president and trustees, which would have bent its scholars to their caprice and have further subjected our higher education to current commercial methods. And these feelings it is our right and our duty to express.

GARRISON, N. Y.

Medal Presented to Mr. J. P. Morgan by the Italian Academy.

Italy and Mr. Morgan

SOME time ago, the Italian Government, wishing to show the nation's appreciation of Mr. J. Pierpont Morgan's generosity in restoring the cope of Pope Nicholas IV, stolen from the cathedral of the ancient city of Ascoli and sold to him in Paris, proposed presenting him with a large gold medal to be specially designed to commemorate this act. Signor Barnabei, the learned member of the Italian Chamber of Deputies, was invited to compose the inscription, which was to be engraved on one side of the medal. It runs as follows:

OB MERITVM LIBERALITATIS
QVA
JACOB. PIERPONTIVS MORGAN
DOMO EBORACO NOVO
CIMELIVM INSIGNE
ASCVLANAE ECCLESIAE IN PICENO
MISERE SVBREPTVM
MAGNO SVMPTV REDEMIVT
ET IMPENSA REMISSA
CIVITATI ASCVLANAE ITALIAEQVE
MVNIFICE REDDIDIT
SVMMVS IN ITALICO REGNO
STVDIORVM CVRATOR
VIRO EXIMIO BENEMERENTI.

In the meanwhile, the King of Italy conferred, *motu proprio*, on Mr. Morgan the Grand Cordon of the Order of St. Maurice and Lagore. But the Government moved so slowly in the matter of the medal that the celebrated Italian Academy of the Twenty-four Immortals decided to act promptly, and probably be-

fore the end of the present year, Mr. Morgan will receive from this distinguished body of scholars, men of letters and artists, of which he himself is a member, a gold medal, a facsimile of which accompanies this article. The obverse represents Mr. Morgan seated, and in the act of handing over the famous cope to Italy, represented by a female figure, who grasps his hand with gratitude. In the border, on the left, is the date when the garment was stolen, and on the right, the date when it was restored. On Mr. Morgan's breast is seen the star of the royal order mentioned above.

On the reverse is this inscription:
JACOBO PETROPONTIO MORGANIO

QUI
SACRAM CHLAMYDEM ASCULANAM
ABLATAM
PERMAGNI EMIT MUNIFICE REDDIDIT
ACADEMIA
XXIV IMMORTALIUM VIRORUM DECREVIT.
AN. MDCCCXV.

The wreath of conventional violets which surrounds this inscription symbolizes, says the author of the medal, "the modesty of the American millionaire, who returned the valuable cope without making any parade about it."

Mme. Lancelot-Croce, who writes the foregoing lines, is an artist of established reputation, and is the designer of the medal.

Ward McAllister on Golden Weddings

[The following article is compiled from the note-book of a friend of the late Mr. Ward McAllister, and is here published for the first time. The interviewer and author is a member of the so-called Four Hundred.—EDITOR.]

WARD McALLISTER was, beyond gainsay, the greatest genius America has produced for planning social functions and for ranging society into a judiciously blended upper stratum.

Fiftieth anniversaries come to few married couples, and when they do occur, one has never or so seldom been present at an occasion of this kind that he does not know the correct, or rather the affected, thing to do to make a golden wedding attractive. Happening one time to be master of ceremonies for a golden wedding, and given practically *carte blanche* for its arrangements, without, however, having attended such a function, I found myself somewhat in the plight of the Englishman who went over to teach the Dutch English, without himself knowing a word of Dutch.

Wishing, then, to have the decorations and other appointments of this golden wedding an exponent of the fine art of social life, I betook myself to the counsels of Mr. Ward McAllister, who was occupying as a town house No. 16 West Thirty-sixth street. And to that conversation with Mr. McAllister is due the credit of the happiest hints and suggestions of this little monograph, which are as helpful today as when they were imparted to me by the social dictator in 1891.

To begin with one or two details as to the form of the invitations: Mr. McAllister said: "Have the dates," which chanced to be 1841—1891, "done at the top in golden figures, and also the wording of the invitation in light lettering of gold. Underneath the pair of dates at the head have the family coat of arms embossed in white, but not in gold, as the dates at the head of the invitation are to be its show feature." Anent the form of invitation, Mr. McAllister also added: "It is always good form and a graceful tribute to filial affection for the invita-

tions to be issued in the name of a son or daughter of the venerable couple, provided one of them lives at home and visiting lists do not clash, etc.

"The decorations of the house," Mr. McAllister proceeded, "should consist of golden-hued flowers and palms." That the palm has been time out of mind the emblem of victory was probably beyond Mr. McAllister's symbolic ken, but in view of the alarming prevalence of divorce in the ultra-fashionable set of to-day, the rounding of a cycle of fifty years of happy married life means indeed a notable victory.

"A golden wedding is in the past tense, and if the clergyman who tied the nuptial knot can be present and read the original marriage certificate a happy feature will be added. The family clergyman can of course act as substitute. Should it be the good fortune of a family to have literary or other national celebrities connected with or intimately acquainted with it, but who cannot be present, it will add much to the brilliancy of the event to have a few brief literary tributes from these notables, composed expressly for the occasion, read immediately after the marriage certificate.

"As I said before," Mr. McAllister continued, "a golden wedding is in the past tense, and if it can be brought about, a group of the old-time bridesmaids, ushers or guests would also help to fill out the historic setting. If the original bridal costume can be worn, this aspect will also be much enhanced. It is an exceedingly pretty idea for a little trousseau to be made in honor of the golden wedding honeymoon.

"As a fiftieth anniversary is a dignified function, owing to the advanced age of the host and hostess, too often meaning a bidding farewell to society, an element of stateliness is infused into it if the venerable couple comes down into the drawing room with their ushers and attend-

ants in a sort of processional, after the guests are assembled. The pretty and simple bridal chorus from 'Lucia' and 'The Wedding Bells Are in the Air,' from 'Pauline,' sung by a quintet of professionals, I found lent a special charm."

Mr. McAllister, who certainly did not in this interview have to fall back on the plea of one of the characters in Molière's comedies, that he made his best impromptus at his leisure, amazed me by his fertility of resource. For instance, he laid down with emphasis: "The basal idea of a golden wedding, which must not be lost sight of, is that it is primarily intended for the relatives and more intimate circle of friends of the high contracting parties who thus renew their marriage vows, so that it is ordinarily not a crush reception, and it is not at all germane to its purpose for it to be veered into any of the channels of social promoting. Nothing is more vulgar than to invite people with whom one is not on terms at least approaching intimacy to one's golden wedding. It is the cherished friends of years who can enter into the spirit of the anniversary. In short, a golden wedding, as I said before, is in the past tense."

In the next breath the social dictator, who had told me earlier in the conversation that he was worn out with the jealousies between the Ogden Mills and Willie K. Vanderbilt factions in society, and was ready to get down and out himself, gave another direction which might provoke a smile in these days, when the basements of New York city houses have been almost universally turned into the laundry or billiard rooms of a family. He said: "Have your house thrown open entire and have it impress your guests by its size. If it have a basement dining room, have that used as the supper room."

But the observations Mr. McAllister made on golden wedding presents were more helpful. "Golden wedding gifts, much more than those of ordinary weddings, form an integral part of the program of entertainment and peculiarly tax the ingenuity as well as the purses of the donors. They should by all means be kept on view in the library, or in one of the apartments of the drawing room suite of the house. Golden wedding gifts

are seldom so numerous as to bore guests to inspect them, as in the case of the motley exhibits of ordinary bridal gifts in the days when they were not kept out of sight at wedding receptions. For persons who are at a loss what to give for a golden wedding present, or have not the time to select one, a basket of golden-hued flowers, either real or artificial, is always good form. A basket of yellow flowers is also a graceful way of sending one's regrets. On the other hand, there is always a preponderance of matter of fact, dead letter people in this world, so that a goodly quota of congratulatory tributes in real gold will not be lacking. I omitted to say at the outset that a golden wedding should be given in the evening, and never be of the commonplace flippancy of an afternoon tea, unless the health of the venerable couple is too precarious to admit of an evening function. At all events, the collation should be of prime quality and importance. No expense should be spared, in keeping with an event of such dignity and so rare in the annals of human lives, and as it is so often the host and hostess's farewell to society, their last opportunity of extending hospitality to their friends on so large a scale."

Following the supper, a Virginia reel, or any of the old-time square dances or the minuet, led off by the host and hostess, if it suits their mood, makes a graceful finale. But according to Mr. Ward McAllister, the really crowning ceremony of a golden wedding should be the passing around of the loving cup, accompanied by the singing of early English glees and madrigals of courtship and plighted troth.

A suitable color scheme which I would suggest on my own account, without borrowing from the late social dictator, both for the table and the other house decorations for a golden wedding, would be a symphony of white and green and gold, "the Heavenly colors"—white as emblematic of the purity and chastity of the old-time, original wedding; gold, of its fiftieth anniversary, its golden sunset; and green, of its spirit of perpetual youth, of those divine ideas solemnized in holy wedlock, "which always find us young and always keep us so."

The Tenement House Family

BY ELSA G. HERZFELD

[The author of the following article has just completed an exhaustive investigation of twenty-four average tenement house families, which she has published in book form. We were so struck by the monograph, that we asked her to give this composite photograph, as it were, of a typical tenement house family. The article forms an admirable complement to the preceding picture by Ward McAllister of Golden Weddings—a scene from the opposite extreme of society.—EDITOR.]

A STUDY of the tenement house family will at once suggest a close resemblance between primitive and tenement house man. Lack of capital, migratory habits, high birth and child mortality rates, maternal ignorance, uncontrolled parental affection and sense of proprietorship, sex taboos, lack of "self determination" in matrimonial choice, and matrimonial instability are circumstances or characters common to both. In the inefficiency, lack of initiative, naïve animistic habits of thought, and a sense of preternatural interference at a time of good or evil fortune there is also a close resemblance.

Even the members of the family who have had a fair amount of schooling possess small reasoning powers. They show little curiosity or skepticism. If they are unable to understand a thing in the beginning, they show little desire to comprehend its meaning. Their frame of mind is unreflecting and often complacent. They never argue and are seldom persuaded that their course of action has been wrong. A mother will tell you that she has never thought of a given subject since her childhood, just as she has forgotten how to write.

Most of the men read daily or Sunday papers. The women have little opportunity to read. When they do buy a paper they discuss the latest murder, the last automobile accident or the fashionable wedding with their neighbor. Few books are read, except, perhaps, "penny family papers" or "ladies weekly journals." The children of school age usually belong to a public, church or settlement library. The younger children have no books. Sometimes a family does possess a few books. Among them are books of conundrums, jokes, magic, parlor tricks and fortune telling. Every

family has its bible, with a registry of births and deaths. The marriage licenses or baptismal certificates are put safely away or framed and hung on the wall.

Everybody has crayons and chromos of parents, aunts, uncles, brothers, sisters, cousins, etc. The pictures are copied from photographs, or they are crayon drawings made by the instalment artist. Occasionally there is found a "hand painting." The crayon is paid for in coupons given by the grocer, or it is given "free" by the photographer. Sentimental and heroic pictures, picked up at a sale on the avenue, given away by a Sunday paper or acquired with cigar coupons adorn the wall. In the Catholic home the colored religious print, the crucifix and the china figure representing the Virgin Mary are always found. There are few examples at original decoration.

Memory cards, which express the sorrow of the family, and give date of birth and death of the deceased, are sent to the friends of the family. A variation of the memory card is the wax wreath ornament with silver, framed in glass and wood.

In the Italian home, however, there is usually some attempt toward artistic expression. The daughter of the house takes piano lessons "for to finish her education." Her teacher guarantees perfect playing within the year. The mother sometimes goes to the church concerts. The children take pride in singing in the choir. The German parents know the German folk songs. The Italians also have a natural love for music. Oftentimes they are familiar with the well known opera melodies. The Irish like the music of the organ grinder, the street singer and the loud shrieking in the music halls. The chief event of the week

in the young girl's life is the "racket" to which she is taken by her "gentleman friend." The dance is either a "plain affair" or a "masquerade." The girl spends her week's wages or her mother's hard earned dollars to be "attachéd."

Amulets are worn for good luck. A scapula wards off disease. The things blessed by the priest have healing power. A heart worn as a charm will bring a sweetheart.

The mother's belief in prenatal influences is not to be questioned; a fright is to be avoided as far as possible. "Altho it is God's will and not man's that the child comes to us," frequently the women unduly prolong the lactation period. Almost all mothers complain that they have to bear too many children. Great emphasis is laid upon an early christening in the Catholic home, as an unbaptized child will die much more easily. In case of sudden death any one may rescue the child from the Evil One. The warnings of approaching death are many. The belief in the Banshee is widespread among the Irish residents. Ghosts are likely to deceive persons by deceptive allurements. Dreams speak true.

Many of the residents who are church members do not attend regularly. The mother has too many home duties to go except on high church holidays or at times of religious crises in the family. The men go even less than the women do. Husband and wife rarely attend church together. Shabby garments or lack of proper clothes are a frequent excuse for non-attendance. The chief reasons given by the family for attendance at church are adherence to church tradition and custom; a sense of duty; "it's everybody's duty to go to church to pray for the heathen," and to set a good example to the children. Frequently the family goes because the minister or Sister is "good to us there at Christmas time." There were residents who were being supported both by Protestant and Catholic institutions. Families went to a particular church because it was convenient or the neighbors went there also, and chiefly because of the Christmas gifts. Little thought is given to the fact that they may be Methodists and still be attending an Episcopal or Baptist

church. Cases of intermarriage between Catholic and Protestant are not uncommon. The ceremony is usually performed in the Catholic church. Sometimes the Protestant becomes a "turncoat." Altho questions of marriage and parenthood are tabooed, there is in such instances an understanding about the religious education of future children. It is made privately beforehand or it is mentioned in the marriage ceremony. You attend the funeral of all your kinsfolk, "they expect it." The family buys new mourning clothes, sends flowers and hires its own carriage, if possible. The "fine funeral" is all important. To the neighbor it is the index of the family's social status. All the family possessions, even the wedding gifts (altho this is extremely unlucky) are sold in order to avoid pauper burial.

The minister, the priest, the Sister and teacher, just as in the primitive cults, are looked upon with awe and classed by themselves. This is even more true of the attitude toward the physician, who is sought to conciliate supernatural evil agencies. The Irish frequently speak of the doctor as a "charmer." The men do not call in a physician unless it is absolutely necessary. If they go they do not tell "the women folks, as they do not understand, any way."

Usually a "pay doctor" is preferred as a matter of pride. Occasionally there is a family doctor. His choice is purely fortuitous. Numerous patent medicines are used. A large amount of fraud is practiced by "quacks," who advertise a sure cure within a specified time or "your money back." Oftentimes "lady doctors" are consulted by the women if they are "ashamed" to go to a "man doctor."

The physician is not engaged many weeks before confinement. Midwives are employed more frequently than physicians. Few of the mothers go to maternity hospitals. Their husbands do not allow it. "Those is for them that don't know better." There is a tendency to change hospitals frequently. The word hospital is often tabooed. If you say clinic or dispensary the patient will go more willingly.

When a man is out of work or when

times are slack, he frequently refuses to work for lower wages or at another job. Frequently he becomes discontented after a little search and loafs. He does not know where to go to find work. Then the mother "takes a hand" herself. She goes out to clean or wash.

About one-half of the family income goes for food and one-quarter for rent. Less than a quarter is thus left for clothing and recreation. There is little saving because of the small wages and high rent. In spite of the complaints about the rise in rent, the residents are singularly indifferent to bad housing conditions. The families live from hand to mouth. They consume almost immediately what they earn. Life, or rather burial, insurance is an invariable item of expense. Every one in the family over a year old is insured. Sometimes the children are actually starved in order to pay the premium. The father and mother are usually insured for fifteen to twenty-five cents a week; the other adult members pay ten cents; the children five.

The tenants are nomads. They move from tenement to tenement, drifting from poorer to better quarters and back again, according to the rises or falls in their fortunes. The average length of residence is about a year and a half. Sometimes the mother herself does not know the reason for moving. There is a desire for change, or to live near a relative or friend. The landlord does not suit—the housekeeper will not keep so large a family—or "there is a low crowd come into the house," etc.

The husband is the chief wage earner. Almost all the earnings are brought to the wife and mother. The husband comes home at the noon hour, or for his dinner at night. The wife goes to "the store" only a short while before. She usually pays in cash. After the evening meal the husband frequently goes to his "pals," or to the saloon or club. He does not seek the companionship of his wife, even if he stays at home. She keeps house for him and bears his children. He does not ill-treat her, unless he is a brute or habitual drunkard; but there is little spiritual companionship. He does not help his wife in the duty of child rearing. He does not heed her physical weariness. She just has to have

more children. There is little respect. They refer to each other as "Him" and "Her," or "my man." They do not hide their feelings when speaking of each other, not even before their children. The women speak of marriage as a necessary evil, and yet most of them marry at eighteen. Sometimes the husband and wife separate, and then live together again after a number of years. In this case the wife calls herself "widder" to protect herself from her neighbors' gossip. There is a singular lack of self-determination in the choosing of mates. A young girl meets a young man. He becomes her gentleman friend. "She gets presents off him." They keep company for a short or long period. Later on they marry. A visit to the the-âtre or a holiday at Coney Island follow. Then they "set up" a home.

The women remain at work up to confinement. They return to the hard work of scrubbing or washing at the end of a fortnight. The child is nursed irregularly—whenever it cries or the mother thinks it necessary. Nursing lasts from one year to sixteen or eighteen months. Frequently the child dies on account of the mother's lack of knowledge. The mother thinks "the first one has to go." Sometimes she does not know the cause of the child's death. The child that is weaned during the first year is invariably badly fed during the second year; usually overfed. There is no regularity about sleeping, bathing or outing. The same irregularity exists in the care of the older children. Their poor physical condition is due to lack of a suitable dietary. Ill-cooked cereals, fried meats, canned and pickled vegetables, and condensed milk do not develop bone or muscle.

The mother rarely visits the school. Frequently she takes no interest in the child's improvement. The Catholic parents send their children to parochial schools, even tho they may feel that the public schools "teach 'em more, but the Scripture comes first." The mother needs her daughter at home "to mind the baby" or to "clean up."

Blood kinship is a strong factor in the tenement house dweller's life. When possible he goes to a relative for aid. In cases of serious illness the kinsman is

notified. Attendance at the funeral of even a distant cousin is a matter of etiquette. On the other hand, there are cases in which the relations between the kinsfolk are very distant. Especially is this the case where the family has been "dropped" because of lack of sympathy or a growing difference in the economic prosperity of the family.

†

The readiness to give and take seems to be one of the chief traits in the relation of neighbor to neighbor. The aid given is always simple, immediate and spontaneous. As a rule, all the families know one another, either intimately or at least by sight. They know each other's needs to the most intimate details, for there is little privacy in a house.

NEW YORK CITY.

Baroness Bertha von Suttner

BY FREDERIC PASSY

[It is scarcely necessary for us to tell our readers—for he has contributed several times to our pages—that the author of this little biographical notice is the veteran French peace leader, and recipient of the Nobel Peace Prize, who, tho now in his eighty-third year, is still an active worker.—EDITOR.]

WITH Baroness von Suttner the Nobel Peace Prize is given to a woman for the first time; and it is not the men who have labored with her in the same cause nor her male competitors for the honor who will be the slowest to approve of the action of the distinguished Christiania committee. No one, in fact, among those early workers for peace and arbitration, who did not wait before giving their time and strength to the welfare of humanity till a royal recompense could some day award their efforts, has served this cause with greater zeal, talent and success than this valiant Austrian lady, whom I named, some ten years ago at Budapest, our commander-in-chief.

Her contribution to this agitation has not been limited to the publication of an admirable book—"Lay Down Your Arms"—which, translated into all the principal tongues, has had the rare merit and good fortune to popularize a horror of the useless and evil slaughter occasioned by war. Baroness von Suttner has also labored as a lecturer, has journeyed far and wide, has written in the periodic press, has made personal appeals in the very highest quarters, aided, until his death three years ago, by a worthy husband who shared all her views. Thus, this descendant of a noble military family—her father was Field-Marshal Count Franz von

Kinsky—showing due respect for all the glories of the past, but filled with an enthusiasm for a century of labor and liberty, has carried on for years, and is still carrying on, filled with hope and energy, an ardent campaign in favor of the ideas of peace and arbitration.

Baroness von Suttner has been seen at all our congresses. She was conspicuous at The Hague during the celebrated Peace Conference of 1899, and in her drawing-room was exerted an influence that aided not a little in the good work accomplished at the Dutch capital. She was at St. Louis and Washington in 1904, and I feel sure that President Roosevelt did not consider the time lost that he spent in conversation with her. And at this very moment she is completing a hard round of lectures, during which she has visited not less than twenty-six different German cities, having been received everywhere in a most cordial manner, thanks to her remarkable oratorical gifts, her charms of manner, and her lofty and liberal mental and intellectual capacities.

It was this apostolate, as benevolent as it was disinterested, that attracted the attention of the Swedish philanthropist, Nobel; and it is an admirable act that she who, without ever thinking of herself, decided him to institute such a prize, should to-day be the laureate of this grand foundation.

PARIS, DECEMBER, 1905.

MUSIC ART AND DRAMA

The Opera

At the dinner given the other evening at the Liederkranz to Engelbert Humperdinck, one of the speakers welcomed him as an ally in the fight to prevent the Metropolitan Opera House from becoming a "Carousel." The New York public certainly does "merrily go round" to the box office in greater numbers when Caruso sings than at other times. When a great tenor is popular he is even more run after than a favorite prima donna, and no tenor (not even Jean de Reszke) has ever been more popular in our metropolis than Caruso is at present. Yet he is far from being as great an artist as Jean de Reszke, who, it is sad to relate, will probably never appear on the stage again. Caruso takes liberties with the music he sings; he even mars the "La donna è mobile" in "Rigoletto" by introducing an insipid run at the close. Jean de Reszke never committed such crimes; and while he was equally great in French, Italian, and German operas, Caruso has so far sung Italian operas only (tho he is to appear in the French "Faust" in January), and is afraid of even some Italian operas—"Il Trovatore," for instance, which Mr. Conried has for two years tried in vain to induce him to sing.

However, with all his faults, we love Caruso still, and we even submit patiently—some of us gleefully—to such antique novelties as "La Favorita," "L'Elisir d'Amore," and "La Sonnambula" (which is "the limit," as one young man remarked at its revival), for the sake of hearing the luscious voice of the greatest of living Italian tenors, especially since he nearly always appears in company with the incomparable Madame Sembrich, the true successor of Patti in *bel canto*. Then there is Scotti, the mellifluous baritone, and the great Plançon,

who, tho a Frenchman, has as agreeable a voice and as smooth a style as ever any Italian had. Yet one has to be very much enamored of solo song to escape boredom during an evening of "La Sonnambula." In that opera, as in others of its date, the orchestra might as well be replaced by a piano or a few banjos. As a matter of fact, these operas were never intended to be listened to from beginning to end. The Italians of Bellini's day paid no attention to the plot or the dialogue; they sat and supped and smoked and chatted most of the time, stopping only to listen to the show arias introduced here and there. It is therefore amusing to see an American audience listening politely and quietly to all this rubbish that was never intended for ears polite. However, it would never do to suggest a revival of the supping, smoking, and chatting, for fear of these practices being indulged in on evenings when operas are given that are worth listening to from start to finish.

The continued interest in the revival of Italian operatic fossils is the first point that strikes one in reviewing the first weeks of the grand opera season. The second is the ambition of altos to become sopranos. Miss Edyth Walker began it by appearing as the Queen of Sheba in Goldmark's opera, and Miss Olive Fremstad followed suit by doing the high *rôle* of Brünnhilde in Wagner's "Siegfried." Altho Madame Schumann-Heink has made a name for herself second to that of no prima donna, it cannot be denied that, on the whole, a soprano has larger opportunities to win fame and fortune than a contralto. In the case of Misses Walker and Fremstad it must be remembered, moreover, that Mr. Conried had to make a virtue of necessity. He had planned for a full complement

of dramatic sopranos, but Madame Morena, of Munich, whose *début* was looked forward to with much interest, is suffering with serious throat trouble, and cannot come this season. This has given the contraltos their opportunity. It must be said for both of the artists in question that altho the parts in which they appeared did not suit their vocal "tessitura" (technical jargon which means that they did not "lie" sufficiently low for them), they nevertheless did surprisingly well and raised the critical opinion of their technical skill to overcome difficulties.

The loss of Mme. Morena has thrown the burden of the dramatic work on Mme. Nordica, but she is amply able to bear it. In the plenitude of her power, she has given of her best both in Italian and in German music. Another American (it is noteworthy that most of the fair sex singers at our opera house are Americans) has won golden encomiums. Mme. Rappold, of Brooklyn, made an instant, a surprising success as Sulamith in the "Queen of Sheba." Her voice has a peculiar girlish quality (tho she has a daughter of sixteen, it is said) and an agreeable timbre that took every one

captive at once. It has been well trained, too, and she showed some talent as an actress, altho there is room for improvement in that direction. There is reason to believe that frequenters of the opera may witness another successful *début* of an American—Miss Bessie Abott, a pupil of Jean de Reszke, who has sung Juliet to that tenor's Romeo in Paris, and will perhaps be heard in the same rôle here. Early in January, furthermore, the American Emma Eames returns to the Metropolitan for a series of nine

performances, beginning as Marguerite to Caruso's Faust. That will be a gala night! Certainly, America is giving a good account of herself so far as women singers of high rank are concerned. But where are the men? The echo answers "Blass." He is a good bass, but he must feel lonesome. He will, of course, be heard again in "Parsifal," which is announced for four performances, at regular instead of double the usual opera prices.

The first Nibelung cycle is being sung this week. It enlists the services, among others, of Germany's two best singers—Knote and Burgstaller. For tenors we still have to go to Germany and Italy.

The revival of Goldmark's "Queen of Sheba" (which, when first produced, was all the rage here) did not create such a stir as had been expected in view of the scenic splendor with which Mr. Conried lavishly invested it. However, the audiences gradually got larger, and at the third repetition the house was full. A more interesting production has been that of "Hänsel and Gretel," by Humperdinck, who crossed the ocean specially to superintend it. A man of extraordinary modesty, he did not

Madame Rappold, at the Metropolitan Opera House.

even bring along the score of his new Berlin success ("Married in Spite of Themselves") to show to Mr. Conried. But if Herr Humperdinck is a poor business man he is great as a composer. It is rather late in the day to praise his fairy opera (of which his sister wrote the libretto), for "Hänsel and Gretel" is almost as familiar abroad as "Carmen" or "Lohengrin." Mr. Conried, however, deserves praise for presenting this lovely and truly inspired work in a way that

makes it possible for everybody to understand why it has been, in Germany, the most successful opera produced since Wagner ceased composing.

Boston Symphony Orchestra in Modern French Music

For the first time in its history the December concerts of the Boston Symphony Orchestra were presided over by another than its regular conductor. The visiting conductor was M. Vincent d'Indy, of Paris, the recognized leader of the latest "movement" in French music, as Mr. G. W. Harris told our readers two weeks ago.

M. d'Indy's visit was the most interesting and important event of the present "music season." He came not as a "star" conductor to exploit his own virtuosity, but as a composer and as the bringer of good and worthy new music by other composers of the school he represents. The Boston Symphony Orchestra is just about as nearly perfect as any to be found the world around, and the performances in which M. d'Indy took part were all on the high plane of dignified artistic endeavor with which its ministrations have long made us familiar. Most of the music he played, despite many strange new elements in it, was extremely interesting and admirable.

The most important work on his programs was his own Second Symphony, in B flat, opus 57—a big thing, in the best meaning of that term; replete with learning, wrought out with consummate skill in orchestral writing, almost forbiddingly difficult in parts and at times austere to the verge of harshness; yet, as a whole, noble, impressive and compelling in its appeal.

M. d'Indy's "Saugefleurie" (Wild Sage) Legend for orchestra, after one of Robert de Bonnières's dainty little fairy tales in verse, proved to be an altogether happy piece of musical narration, as pretty, graceful and dainty as the poem it illustrates. His "Istar" symphonic variations, a work which a Bordeaux professor has styled "an inductive symphony" (because in it the composer "by degrees unfolds from initial com-

plexity the simple idea which was wrapped up therein, and appears only at the close, like Isis unveiled, like a scientific law discovered and formulated") is again a tone-poem of beauty, originality, imagination and power.

Alberic Magnard's "Chant funèbre" was a very doleful dirge indeed, and much too long. But the rest of M. d'Indy's offering—Gabriel Fauré's "Pelleas et Melisande" suite, Ernest Chausson's B flat symphony, César Franck's "Psyche and Eros," Claude Debussy's fascinating "Nocturnes," and "The Sorcerer's Apprentice," a jocund scherzo by Paul Dukas—is all music that will bear repeated performance here. M. Vincent d'Indy will be cordially welcomed, should he ever care to come again to America.

Other Orchestral Concerts

The Russian Symphony Society began its third season auspiciously with a concert in Carnegie Hall on November 18th, when its able and enthusiastic young conductor, Mr. Modest Altschuler, gave a fiery reading of Tschaikoffsky's Fourth Symphony, and also brought forward two novelties of the present-day Russian school. The first of these, Rimsky-Korsakoff's suite, "The Snow Maiden," was a disappointing thing, not to be compared to the other works by that clever composer previously heard here. The second, Rachmaninoff's second piano concerto, was far more interesting. This contained some strong music, rich in harmonic treatment and orchestrated with no mean skill. The solo part makes the pianist work too hard ever to become popular with virtuosos, but the versatile and always excellent M. Pugno played it in dashing brilliant fashion. The Russian orchestra has been enlarged this year to ninety players, and its tone has been improved. It lacks the finished grace of some of our older orchestras, but it is a good band and deserves the encouragement it is receiving.

The New York Philharmonic has given two concerts this month, each devoted to music long familiar to this public, but none the less welcome for that. On December 1 and 2 Mr. Victor Herbert wielded the baton and made his concert

notable for the best performance of Dvorák's E minor symphony, "From the New World," that has been heard in New York since the untimely death of Anton Seidl. Mr. Herbert conducted the other numbers on his program very well, too, but that program was lacking in variety and contrast. It was all sugar—a surfeit of sugar.

The concert of December 15 and 16 was presided over by Herr Max Fiedler, of Hamburg, an excellent conductor, an authoritative commander and a thoro musician, who played a Beethoven symphony, a Wagner overture and Strauss's early tone-poem, "Don Juan," and interpreted each equally well in a masterful manner, without eccentricity. He is a conductor the Philharmonic's patrons will be glad to hear again.

Mr. Walter Damrosch, with his New York Symphony Orchestra, continues his wise and enterprising policy of presenting, along with plenty of good old familiar compositions, at least one interesting musical novelty at each of his concerts. The orchestra with its infusion of new blood steadily improves by practice, and is now certainly the best orchestra Mr. Damrosch has ever had. At his third concert (December 10 and 12) the novelty was an "Italian Serenade," by Hugo Wolf—a delightful bit of orchestral color. At his fourth concert (December 17) Mr. Damrosch, with the able co-operation of M. Raoul Pugno, gave the first performance in New York of Vincent d'Indy's "Symphony for Orchestra and Piano on the Song of a French Mountaineer." This is a perfectly charming work. Built upon a simple melody, it is beautifully harmonized, most ingeniously constructed thruout, and filled with rich orchestral sonority. It is much quicker in its popular appeal than any of his later compositions, which M. D'Indy himself performed on his recent visit here, and was received with an unmistakable demonstration of popular approval and enjoyment.

The soloist of this concert was Miss Bessie Abbott, an American girl, who has been studying with Jean de Reszke in Paris, and has sung in the Grand Opera there, but who was known here as a pleasing singer in "musical extravaganzas" before she went abroad. She has a

beautiful soprano voice, not large, but pure and sweet. Miss Abbott has a future.

Mr. Fritz Scheel, the conductor of the Philadelphia Orchestra, which gave a concert in New York on December 11, is a first-class musician, and he has drilled the eighty men under his control into a fine, capable organism. While the orchestra is not to be compared with the Boston Symphony for precision, delicacy and polish, and while it lacks the tonal balance and power of the New York Philharmonic, it yet plays with dash and spirit—even with brilliance in the brass choir—and it is sure to improve under the masterly hand of Mr. Scheel. Its maintenance is a credit to the Quaker City.

The Oratorio Society

For the opening concert of this thirty-third season (December 9) the Oratorio Society of New York chose to perform one of the most difficult and trying works it has ever attempted—Beethoven's colossal "Missa Solemnis" in D. This solemn mass has been perhaps more lavishly praised than any other single composition by the mighty master. It is a monumental work of extraordinary dimensions and of extraordinary merits and demerits. Beethoven surpassed all the orchestral composers before his time, but he never learned to write vocal music with complete understanding of or sympathy for the human voice and its qualities and limitations. To him the singer was simply another instrument in his wonderful orchestra. This is the reason his choral works are so seldom heard. The Mass in D had not been performed in New York since 1882. Dr. Frank Damrosch and the Oratorio Society's chorus had devoted much painstaking care to its preparation, and the performance they gave was not only adequate but splendid.

Chamber Music

The Flonzaley String Quartet, formed and maintained by Mr. Edward J. de Coppet, a wealthy New York amateur, gave its first public concert in Carnegie Chamber Music Hall on December 5th. It

is made up of foreign artists, Messrs. Adolfo Betti and Alfred Pochon, violinists; Ugo Ara, violist, and Iwan d'Archambeau, 'cellist. They play together in an admirable fashion, with grace, refinement and taste, yet with much warmth and tonal beauty. They easily rank with the best quartets to be heard in this country.

In the Adele Margulies Trio New York has an organization that ranks in its field with the Kneisel Quartet in a closely allied branch of chamber music—that is to say, the very best. Miss Adele Margulies is the pianist, Mr. Leopold Lichtenberg the violinist, and Mr. Leo Schulz the 'cellist—three of the foremost among our local musicians—and their ensemble work is as admirable as their individual playing. Their first public concert, given in Mendelssohn Hall, on December 8th, and devoted to music by Brahms, Grieg and Tschaikoffsky, was a joy without alloy. The trio deserves the fullest encouragement.

Pugno and Kubelik

Capable concert pianists we have always with us in goodly numbers. But this month we have been more than usu-

Jan Kubelik.

Raoul Pugno, Pianist.

ally fortunate in having M. Raoul Pugno, the French pianist, who is visiting America again after an interval of several years. For M. Pugno towers head and shoulders above the average piano virtuoso. He is more than a virtuoso. He is a cultured musician of wide sympathies as well as a learned player of great abilities. His technic is well-nigh perfect, and he plays an astonishing variety of works, from those of Bach, Handel, and the early Frenchmen and Italians to those of the modern French, Norwegian and Russian schools.

When Jan Kubelik, Bohemian violinist, first came to America four years ago he was a very young man who astounded and dazzled his hearers by a display of phenomenal technical proficiency. He returns to us now matured in his art as well as in years. His first concert, on November 30th, showed at once that he had indeed grown in musical stature. He is still the master of a wonderful and brilliant technic—is probably as great a violin virtuoso as has ever visited this land. The difficulties, tricks, pyrotechnics that appal most violinists do not seem to exist for him, so easily does he

Vernis Martin Fan,
in the Bonaventure
Exhibition.

surmount them all. And this is enough to assure him an immense popular success. But it is a pleasure to record that he is on the highway that leads out of the virtuoso class. His playing of the lovely Mozart D major concerto—exquisite in tone and phrasing, and his work in the later concerts at which he has appeared disclosed temperamental energy, sound musicianship and self-effacement. Such violin playing is not often heard even in this musical metropolis. Mr. Kubelik is making steady progress. He bids fair to become one of the greatest musical artists of his time.

The Bonaventure Exhibition and Some Others

The Bonaventure Exhibition this year included many rare art objects, articles of *virtu*, clocks, fans, books in fine bindings, and many high-class paintings. Included among a notable showing of objects pleasing to the eye and attractive to the collector were a number of books with painted fore-edges. Among these were *Cowper's Poems*, in two volumes, London 1810; *Specimens of the Early English Poets*, 1790; Roman Gety Boek, a fifteenth century MS., the edges of which were both gauffered and painted. The Bonaventure exhibition also contained many missals and incunabula in contemporary silver and other bindings.

At the Photo-Secession Galleries on Fifth avenue there was an attractive showing of members' work. The catalog contained one hundred numbers, and the exhibition included the work of those who protest against the conventional conception of pictorial photography. Notable

prints were contributed by Alfred Stieglitz, Alice Boughton, Gertrude Käsebier, Clarence H. White, and Jeanette Peabody.

A very encouraging exhibition of Ye Handicrafters' Club was held in Brooklyn at the organization's clubhouse this month. The striking feature of this exhibition was the high quality of the metal work shown. Silver and copper were the chief mediums employed, which were handled with more than average feeling for art.

An exhibition at the Grolier Club from December 7th to 23d included an unique collection of 130 selected French almanacs from a complete collection (1694-1883) illustrative of French binding during this period.

The Philadelphia Portrait Exhibition

The present month celebrates the centenary of the foundation of the Pennsylvania Academy of the Fine Arts, and as a fitting commemoration a "Gallery of National Portraiture" was brought together for exhibition from November 18th to December 23d. The catalog contained 146 entries, of which fifty-five portraits belonged to the Academy and the remaining number were loaned by individuals and institutions. In 1887 the writer, as Chairman of the Committee on Exhibitions of the Academy, projected the first loan exhibition of historical portraits held in this country, when upon the walls were hung 503 portraits. This exhibition has been followed many times in New York, Boston, and elsewhere, but this is the first time it has been repeated in Philadelphia, and

100 of the portraits then exhibited were re-exhibited. Its success and the wide interest shown in such collections all over the world point to the desirability of forming in this country a great national gallery of original life portraits similar to the famous National Portrait Gallery in London, that shall show not only the true portraiture of the men and women who have made this country what it is, but also show the power and importance of our great portrait painters.

In this exhibition there were hung thirty-nine portraits by Gilbert Stuart, including the original of his whole length portrait of Washington, signed and dated "G. Stuart 1796," which, together with seventeen other examples of this great American master, is the property of the Academy. Other American artists represented by interesting works were, among the older men, Pratt, Copley, Feke, West, Charles Willson and Rembrandt Peale, Sully, Neagle, Jouett, Jarvis, Leslie, Inman and Healy, while among the British painters were Kneller, Ramsay, Wilson, Pine, Hoppner and Lawrence. Among the known men of today Sargent, Chase, Vonnoh, McLure Hamilton and Benjamin Constant were represented. The most important portraits were of John Penn and of Richard Penn, the eldest and youngest sons of the Founder of Pennsylvania; George III., a whole length in his robes, intended as a gift from the King to the proprietary government, but not sent over owing to the turbulence of the colonies preceding the Revolution, and purchased nearly a century later and placed, where it was originally intended to hang, in the old State House, better known as Independence Hall; William Pitt, Doctor Franklin, by Duplessis and by Peale; Doctor Rush and one of his wife, Bishop White and of his grandparents, attributed to Kneller; Francis Hopkinson and Thomas McKean and of their wives, a whole length of David Garrick, John Philip Kemble and of his sister, Mrs. Siddons; George Frederick Cooke as Richard III., Lafayette, Commodore Barry, General Dearborn, Robert Morris, the financier of the American Revolution; Jefferson, Madison and Monroe, David Rittenhouse, Chief Jus-

tice John Marshall, the poet Wordsworth and the historian Macaulay, Gladstone and Cardinal Manning. This brief survey will show the wide range covered by the collection and the primal importance of making such a collection permanent.

The Drama

The visit of Madame Bernhardt, which she carefully avoids calling a "farewell tour," is especially interesting as showing the remarkable versatility and vigor of this woman of sixty-two. During her first week in New York she played nine different star *rôles*, and most of them better than they could have been played by any other living actress. In her repertory she includes only one play of the new school, Sudermann's "Magda"; the rest were all of the style of Sardou, Hugo and Dumas, a form of the drama which, fortunately, is dying out to give place to a less artificial and more purposeful style. We have, then, an exceptional opportunity of seeing these great plays of the past as given by their chief exponent. One of them, Hugo's "Angelo," is rarely given now, altho Hugo, in a preface as egoistic as any of Shaw's, extols it as the typical drama of human nature for all time. In this, as Tisbé, Bernhardt has a part with more of womanly sweetness and self-sacrifice than any other she presents, and the tones of her voice and her gestures carry every shade of meaning even to those whose understanding of French is slight.

Popular taste is evidently running strongly toward the "Wild West" melodrama. We have upon the stage now four of these, all creditable and all successful—"The Virginian," "The Heir to the Hoorah," of last year, and "The Squawman" and "The Girl of the Golden West," of this. If one could combine the best parts and the best actors from all these he would have a really great American play. For example, the Indians are very much better in "The Squawman" than in "The Girl of the Golden West," and Mr. Faversham is a far greater actor than Mr. Hilliard. In meaning and sentiment, too, "The Squawman" is superior. But on the other hand none of the other plays can boast of an actress so natural and effec-

tive as Miss Blanche Bates as "The Girl of the Golden West," and Mr. Belasco as stage manager is incomparable. In this play he has utilized all his arts to deepen the impression, from the first curtain, with its glowing sunset behind the range between giant trees and cacti, to the last scene, looking over the plains from the mountain top. Even between the acts he keeps the audience from lapsing into the twentieth century by means of a quartet singing "Clementine" and other songs of '49. By the use of moving scenery we are carried down the cañon to the saloon kept by the "Girl," and she wins all our hearts as she did those of her miners. Thruout the play she acts with a sincerity and emotional power which keeps us from being offended by the forced situations and fallacious sentiment. Mr. Frank Keenan has also created a great part in the ex-gambler sheriff.

Those who question the possibility of using the stage as a moral force should see Mr. E. S. Willard in "A Pair of Spectacles" at the New Amsterdam. This bright and amusing comedy certainly sends everyone in the audience home with a decided impulse to look upon the bright side of things and to rid themselves of the habit of over-suspicion. The fantastic idea that the genial and optimistic nature of Mr. Goldfinch is clouded whenever he puts on the blue spectacles of his brother is delicately suggested, and Mr. Willard's swift changes of expression are a delight to behold. In the second piece of the same program, an adaptation of Kipling's "The Man Who Was," he shows a still more remarkable, almost incredible, change in his looks and manner. The appearance of the refugee

from the Siberian prison in the midst of his scarlet-coated messmates is not calculated to increase the good feeling between England and Russia.

Playing Shakespeare to "standing room only" is an unusual experience, yet Mr. Robert Mantell, who started the season with the Garden Theatre only half-filled, has steadily increased his audience as he progressed thru his Shakespearean repertory until finally he ran "King Lear" for two weeks to crowded houses. "King Lear" is not

a popular play, in fact it has been many years since New Yorkers have had an opportunity to see it, but Mr. Mantell does better work in it than in any of his other parts. Next to this is his Othello and poorest of all his Hamlet. To the perplexing first act of "Lear" he gives a very consistent interpretation. The curse of Goneril is, perhaps, his finest passage, as it was of Garrick's presentation. In the storm scene he is aided by some very realistic thunder and lightning, which, we believe, would have

delighted the soul of Shakespeare, the stage manager.

In "The Toast of the Town" we have a play by Mr. Clyde Fitch, designed, cut and made to suit a star, and it is an excellent fit, with no wrinkles visible. Miss Viola Allen as Betty Singleton, at first the popular actress, afterward the ill-used Duchess of Malmsbury, and finally sick in a garret, plays these various rôles with a genuineness and feeling that touches the whole audience and brings tears to many eyes. It is a pretty sentimental comedy of the eighteenth century, which affords an opportunity for brilliant costumes and beautiful stage pic-

Sarah Bernhardt, as Adrienne Lecouvreur.

The Tempest Scene in King Lear, as Given by Robert Mantell.
From Left to Right, Edgar, Kent, Lear, Fool and Gloster.

tures. There is no villain, unless the Dowager Duchess mother-in-law is to be counted such. It is unusual to find a "star play" in which the whole cast is so even and excellent. Miss Irving is the pert and pretty Roxana to the life, and Miss Wilson succeeds in the difficult task of making a good woman attractive.

It is a curious illustration of the difference between the position of the stage in France and America that Paul Hervieu's "Le Dédale" ("The Labyrinth"), which was written in defense of the high church position of the indissolubility of marriage, is here patronized by people for other purposes than the improvement of their morals. This is partly due to the fact that Miss Olga Nethersole, who now gives it, is notorious for choosing vulgar parts and accentuating their vulgarity. Both she and her company are intolerably stagey, and the play quite loses its meaning in this "adaptation" and their interpretation. Doubtless theatergo-

ing New York needs lessons on the evils of divorce such as M. Hervieu intended to give, but they will not get it from Miss Nethersole. She has not improved in her four years' absence from this country.

"La Belle Marseillaise" is a play adapted from the French in which Virginia Harned in the star. Its chief interest seems to be the fact that it introduces Napoleon and all the famous French generals and celebrities of the Napoleonic court. The play is rather an ambitious historical melodrama, but wordy and occasionally bathetic. Miss Harned has been seen to much better advantage in other rôles, while Mr. Serano, who plays the part of the "Little Corporal," might be taken for any one else in the world, save for the lock of hair on his forehead. The play has some elements of popularity, but will not appeal to those with the finest dramatic discrimination.

William Collier has revived Augustus Thomas's comedy "On the Quiet,"

When we say it is one of the funniest pieces that has been put on the stage in recent times we are in no sense exaggerating. The dry humor of Mr. Collier never shone to better advantage, and his cast is about as good as he is.

Charles Klein's new play this year is entitled "The Lion and the Mouse." It is a palpable satire on modern *frenzied* finance. The leading male character is an almost libelous caricature of John D. Rockefeller smoking J. P. Morgan cigars, and the heroine occasionally suggests Miss Ida H. Tarbell, as her lover does John D. Rockefeller, Jr. The play is not really great, nor will it last. Yet being but another one of those manifestations of the popular interest in financial matters, it takes on a very great present interest, and is bound to make a hit. If Mr. Lawson should write a conventional love story, embroidered with the fumings of *frenzied* finance, and then have it dramatized by a yellow playwright, something like "The Lion and the Mouse" might be obtained. The play is well staged and acted.

Opinions will differ widely about the enjoyment of "The Marriage of William Ashe," a dramatization of Mrs. Ward's novel of the same name, where Grace George takes the part of Lady Kitty. Miss George has talent and has caught the indefinable and elusive nature—some think charm—that Lady Kitty was cursed with. How the play would strike a person who had not read the book is not easy to imagine, as there is no explanation of the abrupt changes from scene to scene. The dramatic author follows the lead of Carlyle, whose books were written only for the initiated. The scenery is picturesque and suggestive, and the various parts are in general well taken. Davenport Seymour looked a more attractive Mary Lyster than the playwright wished her to appear. Lady Kitty is a creation that does not

highten the reputation of Mrs. Ward any more than the dramatization of the book adds to the glory of the stage.

Cyril Scott, in "The Prince Chap," takes the leading part in a play at all times interesting, and changing widely in tone from the amusing to the pathetic. In the humorous parts he is well supported by Marcus Runion, the butler, and by Phœbe Puckers, whose boisterous fun lends a good deal to the swing of the play. Perhaps the most interesting feature is the character of Claudia, taken by three different girls representing the ages of five, eight and eighteen. The general resemblance of the three and the gradual evolution from child to woman are excellently carried out.

A play with original humor and action is "Before and After," at the Manhattan. Dr. Latham invents a powder, which, taken in a glass of water, or, as more frequently happens in the play, in champagne, produces a veritable *ne-penthe*, a happiness that no dull care can dissipate. The difficulties and complexities into which this artificial gaiety leads the characters affords an evening of un-mixed amusement. The author, Leo Ditrichstein, appears in the caste in the person of Colonel Larivette.

"Wonderland," as produced at the Majestic Theater, is notable for its tuneful music, its superbly trained and pretty chorus, its skits on current topics, and its wealth of stage setting. The production is based on one of Grimm's fairy tales, set to music by Victor Herbert, with the book by Glen MacDonough. One of the most amusing things of the many included in this fantasy is Rollo, Dr. Fax's horse. He rises far above the ordinary and commonplace, but must be seen to be fully appreciated. Even a blind man would laugh could he see him. Those who enjoy musical comedies will see in this production something superior.

The Rat Family

BY BOLTON HALL

AUTHOR OF "THINGS AS THEY ARE," ETC.

MRS. RAT had a nice little daughter—Ratlet. Now Mrs. Rat, altho she was a sweet person, was not without her faults, and she expected that little Ratlet would be perfect. One day she said, "My dear, you have a strong smell, which I do not like." Now of course you know that all rats, no matter how clean they keep themselves, have a very strong smell, and Mrs. Rat could not smell it on herself, but she smelled it on her little daughter. Ratlet said, "Well, mamma, I wash myself every day," and burst out crying. She said, "I think it is horrid and—and mean of you to say things like that to me. You are always just finding fault with me, and I don't like you any more, and I don't want you to come into my hole. You go away." And Mamma Rat said, "Ratlet, you are not to speak that way to your mother. It isn't respectful." And Ratlet said, "Well, I do wash myself, so you needn't say I don't. I lick myself all over, and then I rub my face with my wet paws."

Just then Papa Rat came in and they both began to tell him, and Mamma Rat said, "That is a most unmanageable child. The moment you speak to her she flares up and gets angry." And Papa Rat said, "Well, dear, perhaps she was not spoken to quite as gently as she might be." Mamma Rat said, "There, that is just like

you—all day long somebody is jumping on me, and when I come and talk to you, you just find fault with me. I think it is very unkind, and I don't think you have any right to treat me so, and I won't have it—so there!" and she stamped her hind foot. Then Mrs. Rat sobbed and said, "I don't see where Ratlet gets her unreasonable ways and her temper from."

Poor Mr. Rat, seeing that no more could be said, went off to find Ratlet, and when she saw him she ran and put her paws around his neck and began to cry again. Mr. Rat cried, too—and Mrs. Rat was crying at the bottom of their hole.

Then Papa Rat quieted them both and tried to teach them to remember that they loved each other, and that if they did not neither of them would care very much what the other did or said.

So after that Mr. Rat and all began to think what was the kindest and wisest things to do to show their love, and after that of course all their troubles went away, and they lay one on top of each other at the bottom of their hole or up in a corner—papa and mamma and Ratlet, and the sisters and brothers and cousins and aunts and grandfather and grandchildren, and all the neighbors. They lay as happily and lovingly as possible, all in a big pile, which is the way that rats like to do.

NEW YORK CITY.

A Little Carol

BY EVALEEN STEIN

Welcome, little Brother!
Lowly, holy One!
Hail thee, Virgin Mother,
More than any other
Blessed in thy Son!

Child, since the poor manger
Once thou didst not scorn,
Rest thee, little Stranger,
Folded from all danger,
In our hearts, newborn.

Nestle thus, we pray thee,
In our love's caress;
Fain we are to pay thee
Worship, and obey thee.
Babe, and Prince no less!

LAFAYETTE, IND.

Copyright, 1905, by Charles Scribner's Sons.

tent by training, and this fact accounts in large measure for his trips into the wilds in search of sport, and altogether for what he gets out of those trips and tells to other people. The chapters which make up this volume have been written at various times within the last dozen years, and are brought together and revised for publication here.

It would be hard to put one's finger on another writer on sport who is so keen an observer as President Roosevelt, or who gives us in his chapters on hunting so many interesting and good observations on natural history. His papers on the cougars show well the bent of the President's mind. He was not content merely to secure his quarry, but he made notes on the habits of the species, took measurements of the specimens and then brought back and turned over to an eminent zoologist all the material that he had collected. As it happened, these specimens and these notes served to clear up certain doubtful questions about these big cats, and were thus most useful from the point of view of science.

The last chapter in the volume, entitled "At Home," possesses an unusual interest, and should teach a useful lesson. It is full of observation and information about Nature as she appears about the President's home in Long Island, and full of suggestion of the pleasure of nature observations and the gratification and helpfulness that come from this study. It is a good thing for the people of this land that their Chief Executive possesses an interest in these common things of nature so keen that he desires to interest his children in them, and it would be a good thing for all the children of this land if their parents could do for them in this particular regard what the President does for his children.

The volume is handsomely printed and abundantly illustrated. Many of the pictures are beautiful representations of wild animals and birds, others are simple, homely scenes of everyday life in the wilderness. The frontispiece is a capital picture of Mr. Roosevelt in riding costume.

India is a vast country full of strange inhabitants and abounding in sharp con-

trasts, and Mr. Caspar Whitney, in traveling through its wildernesses for many months has seen much that was worth recording. What he saw and what he did are pleasantly set down with many illustrations in this handsome volume.²

Mr. Whitney went to India to hunt, and with this in view he traveled in Sumatra, Malay and Siam, and saw strange beasts and curious people. As a hunter of experience he writes of things actually done, not setting down an undue amount of killing, but telling of many a failure to each success. The opening chapter in the book, in which is recorded the method practiced in capturing wild elephants in Siam—elephants which in truth do not appear to be very wild—is exceedingly interesting; perhaps the best in the book; but there are other chapters hardly less attractive, and among them are those which deal with the human dwellers in the jungle or on its borders.

The illustrations of the volume are from capital photographs, but there are several pages especially interesting from the side of nature rather than from the pictorial standpoint. These show the heads of a number of closely related species in several groups of mammals, and are "the eastern deer," the "wild boar and his pugnacious cousins," and "the large and formidable Oriental wild cattle family." This last caption is extremely clumsy, but it seems to be the fashion now to tack on the word "family" to any specific or generic term in natural history, in the belief that it means something.

The Two Rider Haggards

WHEN Queen Victoria read "Alice in Wonderland" she was so much pleased with it that she sent to "Lewis Carroll" for some other of his books, and received a work on the calculus. Mr. H. Rider Haggard has a similar duplex literary personality, for we receive in the same week two books from his pen, one the most fantastic of romances³ and the other a very serious sociological study.⁴

² JUNGLE TRAILS AND JUNGLE PEOPLE. Travel, Adventure and Observation in the Far East. By Caspar Whitney. New York: Charles Scribner's Sons. \$3.00.

From Whitney's "Jungle Trails and Jungle People." Scribner.

The reviewer must confess that he took up the lighter volume first, not, of course, because he was not interest-

³ *AYESHA. The Return of She.* By H. Rider Haggard. New York: Doubleday, Page & Co. \$1.50.

⁴ *THE POOR AND THE LAND.* By H. Rider Haggard. New York: Longmans, Green & Co. 75 cents.

ed in the poor, but to see if *Ayesha* would fascinate him as "She" did nearly twenty years ago, and, if not, why not? The first question was quickly answered in the negative, but the second he has not yet been able to answer.

"She" in her new incarnation is as beautiful and powerful and inscrutable as "She" was before. Tibet is as mysterious as Africa. Leo and Holly have as many hairbreadth escapes from fire and flood and fight as they used to. But all in vain. The heart of the reader did not thrill as it once did. If the reviewer had not been such a conscientious critic that he felt it his duty to read the romance thru, he could have stopped before reaching the point where Ayesha, the symbol of the eternal feminine for a second—no, a third—time brings disaster upon herself and her lover thru her desire to gratify him.

It occurred to the reviewer that he had grown older and this might explain why the magic of "She-Who-Must-Be-Obeyed" had lost its power over him. Accordingly he gave the book to his son, who is now nearly of the age when the reviewer fell under the spell, but he read it with comparative indifference. Evidently it is not alone we who have grown old, but our children are older than we were at the same age.

Mr. Haggard's other volume is an abstract of the "Blue Book" containing his report of his investigations into the workings of the Salvation Army colonies in the United States. His study of the industrial and social conditions of rural England has made him an authority upon the subject of *The Poor and the Land*, and he was sent last spring as a special commissioner to this country. He visited the colonies at Fort Ramie, Cal., and Fort Amity, Col., and was very favorably impressed with the workings of the plan of Commander Booth-Tucker "to put the waste labor on the waste land by means of waste capital, and thus convert this trinity of waste into a unity of production." He found that the colonists, starting some four years before with almost nothing on raw land, had accumulated on an average \$2,000 of property, in one colony, and \$1,000 in the other, and were much more prosperous and happy than they would have been in the cities from which they were taken. The Salvation Army has lost some \$50,000 on the experiment, but Mr. Haggard thinks this could be avoided by better management.

As a result of his recommendations, the Canadian Government has offered 360 square miles of territory for settlement by the poor of London in the same manner. The plan is for the state to advance the money for starting the colony, and to sell the land to the settlers in twenty annual instalments at a sufficient price to pay all expenses and a low interest. He thinks it would be impossible to carry out the plan by Government agents, because they would be too expensive and inefficient; so he recommends the employment of the excellent organization and philanthropic zeal of the Salvation Army. He does not regard the plan as a panacea for all poverty, but merely as a practical palliative, making useful farmers out of the poor and oppressed of the great cities, where industrial conditions result in homicide and "domicide."

New Philippine Discussion and Exposition

In addition to the recent book of Mr. Allegne Ireland, another general and sweeping arraignment of American Government in the Philippines has recently appeared from the pen of Prof. H. Parker Willis.* This is the gentleman whose charges, it will be remembered, were circulated in the 1904 campaign by Judge Parker, and were promptly and categorically denied by Secretary Taft and Governor Wright. Professor Willis, like Mr. Ireland, spent a brief period making investigations in the Philippines, his journey there being timed, as it would appear, so as to procure "thunder" for the 1904 campaign. Under whose auspices, if any other than his own, he went he has never told, and it might be interesting to know. It would be quite as interesting to have him tell who were his personal sources of information in the Philippines, tho one familiar with conditions and persons there can quite readily tell where most of his information came from. But note the insinuatory mysteriousness of the preface:

"Owing to the kindness of friends in this country and of others who wished to facilitate my inquiries, I was able to gather, before leaving the United States, a set of letters of

* OUR PHILIPPINE PROBLEM. By H. Parker Willis. New York: Henry Holt & Co. \$1.50.

introduction to persons living in the Philippines who were in position to know the true state of insular affairs. . . . Conditions in the Philippines are such that no individual acknowledgements would be desirable, and a general statement of obligations is therefore all that can be offered."

Like every serious and painstaking discussion of the Philippine problem—and Professor Willis is certainly serious, and generally painstaking—this book merits public attention. Many of the criticisms made therein, while by no means original, are stated freshly, or with added forcefulness, and are worthy careful attention by our governing officials in the islands and at home. But no one really conversant with the history and the actual status of the Philippines and the Filipinos, even were he in sympathy with the political program of this writer, could conscientiously recommend his book to the general reader sincerely desirous of light upon our Philippine difficulties. It is not fair criticism, it is carping criticism; the tone of faultfinding is maintained till it becomes wearisome, and would raise with the most ill-informed reader a query as to the validity of even the solid criticism there is in the book; and there creeps in not infrequently a note of bitter partisanship, revealing that this is polemics, not well-balanced criticism. In particular, it is plain that Professor Willis has a touch of bias against William H. Taft, while yet he is neither bold enough nor frank enough to speak out his criticisms of the man.

So, while there is much in this book, especially in the chapters on Civil Service, Local Government, Legal and Judicial System, Economic Legislation and Income and Outgo, which is of very considerable import, it is so intermixed with errors, half-truths, misinformation of one sort and another, and political insinuation, as to make the book an altogether unsafe guide for him who is not already expert in Philippine matters. It would be very easy to catalog some scores of errors and misstatements, small and great. It may perhaps be sufficient to cite a few typical cases showing Professor Willis's manner of working and giving test of his general accuracy in criticism.

In the chapter on Rural and Agricul-

tural Conditions there are repeated the same badly overdrawn statements which were circulated on Professor Willis's authority in last year's campaign. Were he at all acquainted with former conditions in the Philippines, or even reasonably familiar, as a library student, with the Spanish bibliography of the Philippines, he could not make such assertions as the following, which are in plain contradiction with the actual facts:

"The food of large masses of the population has been curtailed to a bare subsistence minimum.

"It is generally conceded that [the roads and trails] are today very much worse than they were in Spanish times, and that our expenditure in repairing them cannot compare with the outlay of our predecessors."

On pages 343-344 he returns to insist upon "the disproportionate number of women and children" in the Philippines, having already accepted, on page 23, an entirely unsubstantiated newspaper interview in which an American general was quoted as saying that one-sixth of the Filipinos of Luzon died as the direct or indirect result of American military operations. Professor Willis made a few trips into the provinces, and, the men being at work in the fields, the hills or the forests, he thought he noted, what he desired to note, viz., a noticeable lack of adult males. But why did he not take the trouble to consult the census of 1903? There he might find that there were, of 6,931,548 civilized natives of the Philippines, 3,487,732 females and 3,443,816 males, or 50.3 and 49.7 per cent., respectively. A little calculation based on the census tables would have shown him there were 1,777,189 males of eighteen years of age or more, as compared with 1,919,004 females of the same adult years. Allowing the largest possible figure for adult males of European, American or Chinese birth above counted, still at most the discrepancy between adult Filipino males and adult Filipino females would not be over 190,000. Surely this is no startling disparity as between adult males and females, following so closely upon a period of warfare and disturbance dating back to Spanish times.

In Chapter XVI the author has juggled the figures (even if he had quoted them correctly) to make a most amaz-

ing comparison of the cost of government to the Filipinos. He appears to have counted Philippine *pesos* as United States gold dollars in many places in his table of receipts and expenditures under American occupation. On the other hand, he has counted the *pesos* of expenditure under Spanish government for 1894-5 at fifty cents each, thus carefully halving the Spanish total, while doubling the American, even were his comparisons accurate otherwise. Really this is hardly creditable for a "professor of economics and politics."

On pp. 41-45 he has led himself into some great exaggerations as to the supposedly arbitrary power of the Governor-General in the Philippines thru an error made on p. 31. In quoting the instructions to the Philippine Commission of April 7, 1900, he has failed to note that these instructions were addressed by President McKinley to Secretary of War Root, and that in the phrase giving legislative power to the Commission to be exercised "under such rules and regulations as you may prescribe," the *you* refers to the Secretary of War (representing the "war power" of the President under Congress acting in 1902), and not to Governor Taft, as Professor Willis edits it to mean. This is the chief basis for his carefully constructed theory as to Governor Taft having been a virtual dictator. Such mistakes as these are both too willingly and too frequently made in this book, and they quite fittingly characterize it.

Two other rather bulky volumes have also lately been added to American bibliography of the Philippines, one the random and indiscriminating observations of a visitor in missionary interests,* the other the carefully arranged volume of the first General Superintendent of Public Instruction in the islands.† The latter is both valuable and interesting where it presents the author's own observations and opinions, but is often inaccurate where sources of encyclopedic and historic information which should now be discarded have been relied upon in the work of compilation. Dr. Devins's

chapters on the Protestant campaign in the islands are of contemporary value. His book is dedicated to President Roosevelt, and has a foreword by Secretary Taft.

Sons o' Men. By G. B. Lancaster. New York: Doubleday, Page & Co. \$1.50.

Just when a new field for novelists and short story writers seems an impossible discovery, some iconoclastic new author brings out a volume to prove that all things are possible. Here come a lot of stories, *Sons o' Men*, out of New Zealand, a country not often written about, in truth, not often thought of except by political enthusiasts. The stories are of the inhabitants of this land—of the natives and of the men who go there to make their fortunes and usually sink to perdition in the attempt. Loyalty and unselfishness are told of, and friendships stronger than more refined friendships. Of course, hatred and rivalry are mixed in, lest there be no stories. But woman is only occasionally involved—because of which the tales are perhaps truer. Realism is one of the best points of the stories, if one excepts the convincingly strong and original descriptions, done after Kipling. They leave, too, the impression of a reserve force, the certainty that the writer has many more stories to tell. Of the faults, the most noticeable are in the form of grammatical errors. But the author's ability is unquestionable and the stories are good, particularly the semi-psychologic "Story of Wi," which shows what evils may come to a heathen thru the good intentions of a civilized man.

The Sunset Trail. By Alfred Henry Lewis. New York: A. S. Barnes & Co. \$1.50.

As the cowboy of the Western plains rides away into the past—a past as near us as the '80's, yet incredibly far from any present conditions of the cattle country—his mounted figure fading in the middle distance grows increasingly picturesque. We cannot affirm his perfect reality as presented by Mr. Lewis in *The Sunset Trail*, but if Mr. "Bat" Masterson is not authentic he ought to be. He is a type of the Sheriff in the earliest days of some attempt at law and order in the city of Dodge; a most unconventional officer, as needs must be,

* AN OBSERVER IN THE PHILIPPINES, OR LIFE IN OUR NEW POSSESSIONS. By John Bancroft Devins, D.D. Boston, New York and Chicago: American Tract Society. \$2.00.

† THE PHILIPPINE ISLANDS. By Fred W. Atkinson. Boston and New York: Ginn & Co. \$3.00.

with no precedents to guide his erratic decisions, but working out a rough sort of justice from unpromising materials. Cool and steady Mr. Masterson proves himself to be, thru many a perilous adventure, and that is why we like him and others of his type; not because of a fondness for tales of bloody conflict and hairbreadth escape, of crime, cruelty and sudden death; but because strength and courage, wherever displayed, never lose their appeal to the heart of the world.

Paths to Power. By Frank W. Gunsaulus. Chicago: Fleming H. Revell Co. \$1.25.

An orator is at a disadvantage when he must address his audience thru the colder medium of printed words without the help of voice, gesture, and presence. Dr. Gunsaulus is preëminently the orator, and his first book of collected addresses must be read with that thought in mind. They are not bookish nor cloistered, nor do they appeal to the scholarly reader in his quiet room with the force which the speaker's virile personality gave them when they were delivered before hushed and admiring thousands of listeners. But that is not to say the book is not good reading. It is, and worth careful study by all public speakers, in order to learn one path, at least, by which the author has attained power as an orator. The power sought is unselfish and lofty—the power to serve, not to be ministered unto; the power to help others, not to be helped; “of self-conquest”; “for ministry”; for “nation-building.” Such themes as these discussed earnestly and eloquently with no touch of self-seeking explain much of Dr. Gunsaulus's popularity, and of his own personal power.

Life's Dark Problems; or, Is This a Good World? By Minot J. Savage, D.D. New York: G. P. Putnam's Sons. \$1.35.

Dr. Savage on the problem of evil and the mystery of suffering is to be preferred to Dr. Savage on immortality and spooks. He and his readers are alike to be congratulated that he has come up again from his descent into the occult, and has found a field where his assertive optimism is more likely of sane control. The title of his book and the subjects

considered suggest help and comfort to the sorrowful and perplexed; but if that be the author's purpose, he has marred his work by slashing doctrinal controversy. A distinguished Princeton divine is said to have followed his announcement of the death of Herbert Spencer with the advice to his theologs: “Now, for Heaven's sake let up on him!” One would think Calvin and Edwards were entitled to the same consideration. Aside from vigorous hitting of doctrines which are down, Dr. Savage has to say on the problem of suffering and evil very much what was said in better spirit by Bushnell in his sermon “On the Moral Uses of Dark Things,” and especially by that classic on this subject, James Hinton's “The Mystery of Pain.”

The Ward of the Sewing Circle. By Edna Edwards Wylie. Boston: Little, Brown & Co. \$1.00.

The reader who depends for his interest on a strong plot or charm of style will hardly think *The Ward of the Sewing Circle* worth his while. The whole plot of the story consists in a single situation, the pathetic adventures of five-year-old Johnny Beal, the little orphan, who for two months at a time is given a home by each member of the Smithfield Sewing Circle in turn. The spirit of perfunctory conscientiousness prompting this charity is epitomized in Mrs. Bluett's reply to the vote of appreciation given her by the Circle for offering to first undertake the charge:

“Somebody has to start the ball rolling, and the Smithfield Sewing Circle began its live game of handball with little Johnny.”

The characters are vivid, natural and consistent; characters that any one living in a small town will recognize as typical. Perhaps they are a little too typical, a little too much the regulation, stock kind. Tom Budlong, the hired man and friendless little Johnny's Prince of the Golden Castle, is, however, an exception. He is the best drawn and most original character in the book. The humor which crops up every now and then is compensation enough for the absence of the element of suspense. As for the style, while the description of the characters and much of the action is

very aptly worded, very often the author spoils the effect by adding a stilted or self-conscious phrase. This is no book for grown-ups, who have lost the ability to get the child's point of view, for herein lies its real charm. It is only by looking at Mrs. Cressman thru Johnny's eyes that you can appreciate how—

"In one sweeping scrutiny he formed an opinion of Mrs. Cressman. How her glasses must pinch her nose, and was it because they did that her eyes had that pulled look? He could almost see thru her ears and there was a mole under her chin. Her apron strings were tied on one side and she had carpet slippers on."

The Soldier's Trial. By Gen. Charles King. New York: The Hobart Company. \$1.50.

In presenting this his latest addition to his already long list of army novels, frankly labeled in large type on the cover as well as on the title page "An Episode of the Canteen Crusade," General King has in a measure warned the reader what to expect. One has an inkling that the book has an avowed purpose the moment one picks it up. And so it has; most decidedly so. In every chapter the author has directed his heaviest artillery against "the well-meaning society," as he terms it, which succeeded in pushing thru Congress the edict that banished the canteen from all army posts. Against this point of view we have nothing to say here. But we do take exception to him most strenuously when he hangs so many tracts and arguments on such a slender, well-worn thread of a story. The scene of the tale oscillates between the Philippines and a Western army post on the plains, and as *dramatis personæ* we have given a young, heroic, but rather goosey lieutenant; a fine major papa and a nice mamma of the lieutenant; a beautiful, dark-eyed siren of Spanish extraction; another fine, high tempered, middle-aged major—a widower; the major's small son; a Puritan maiden with a deep purpose in her kindly, misguided heart; a mildly villainous young captain; a semi-villain in the shape of a private soldier, and a catty Italian-Swiss maid. But the good are mediocre, the villainous highly melodramatic; the reader either yawns or smiles faintly, and doesn't care particularly what becomes of any one of them. There is very little action for a King

novel, and the interest is nursed along by very slender means. Even a characteristic battle with the Sioux, with the young lieutenant for the hero of it, is a little too cut-and-dried to quicken the pulse much. The *dénouement* concerning the siren and the minor villain is a bit surprising, still it doesn't save the day for the book.

The Rhymers' Lexicon. Compiled and edited by Andrew Loring. With an Introduction by George Saintsbury. 12mo, pp. xlv, 879. New York: E. P. Dutton & Co. \$2.50.

The introduction to *The Rhymers' Lexicon* by Mr. Saintsbury has little to do with rhymes, and much to do with prosody and feet, and it promises us an important work on the history of English Prosody, which is needed, notwithstanding much discussion of the subject. We turn from that to the author's preface, which is instructive, and partly in the fact that it indicates an English ear for sounds different from the American. Thus he calls the *a* in *draft* a closed sound, and in *quaffed* an open one. We hear no difference. We are surprised to hear the *o* in *horse* called short. The reader will be interested to learn that there are some sixty monosyllables, and words accented on the last syllable, that have no rhymes. Such are *avenge, bulb, doth, film, gulf, month, mouth, of, sylph, with* and *wolf*; and besides there are six ordinals like *fourth*. *Vase* is permitted to be rhymed with "ace," "praise," "Shiraz" and "pause," but the editor draws the line at rhyming it with "Mars," as does the present Poet Laureate. We commend this volume heartily to those who need such a book, and how innumerable are our poets our daily mail shows.

Comparative Religion. Its Genesis and Growth. By Louis Henry Jordan, B. D. With an Introduction by Principal Fairbairn. 8vo, pp. 668. New York: Charles Scribner's Sons. \$3.50.

One is impressed by the enormous scope of this work, and yet it is not at all a treatise on comparative religion, but simply an introduction to the study. Its purpose is, as fully as possible to indicate what is the scope of the science, and who are the men of various designated schools who have developed it, and what they

have written, and what instruction is given in the various universities, and what are the museums, etc. This makes the work a more or less critical survey of all that has been done in anthropology, ethnology, psychology, and other sciences that bear on comparative religion, and a running commentary on a thousand books by as many writers. It is a tremendous task, and is a sort of bibliographic index to the subject. It must be admitted that so great a task, beyond the first-hand knowledge of any one man, is on the whole well done. We observe that American writers are not neglected. Indeed, we would be inclined to think the writer an American, notwithstanding his Edinboro degree. There is a fair statement of the reasons for the importance of the study, and the definition of religion is not amiss—that “it signifies the conception of a superior authority, whose potency man feels himself constrained to acknowledge and invoke.” Yet this definition would probably include fetishism and animism as religions, which the writer is not ready to allow.

✱
The Mystery of June 13th. By Melvin L. Severy. New York: Dodd, Mead & Co. \$1.50.

Admirers of Sir Conan Doyle will find this detective story replete with the inductive reasoning of Sherlock Holmes, while missing the highest artistic finish of their favorite. There is noticeable loss of effect in the constant use of the present tense, and, at times, the long drawn-out threads of the plot, which, however, is in the main consistent. Those who have read the “Darrow Enigma,” by Mr. Severy, will be greatly perplexed here by the same cumulative mysteries and the suspicion cast alike upon the good and the bad. The scenes are laid among the Maoris of New Zealand and in New York City and Jersey City, the motive being the vengeance with which the Maoris follow a supposed American murderer and his male issue. The fears of the latter are constantly excited by a hieroglyph similar to that of the modern “Black Hand,” and the mystery is complicated by the alienated mind of one of the supposedly injured characters. A source of interest in the story is the glimpse into the customs of the Maoris,

who, like the Indians of the United States, are rapidly disappearing before the white man. A New York atmosphere is secured by the fleecing of a wireless telephone inventor by the exponents of “Frenzied Finance.” The uninitiated is at first startled by the large June calendar on the front cover, with a red circle drawn around the fatal “13.” The story is excellently illustrated in half-tones by “The Kinneys.”

✱
Old Lim Jucklin. By Opie Read. New York: Doubleday, Page & Co. \$1.50.

Lim Jucklin is the wisest man in the little Southern town of Purdy, and is eagerly sought for by those desirous of counsel. Parting the tails of his brown jeans coat and sitting on the fence, the village oracle is presented enlightening his neighbors with much sound philosophy, given in a droll and fascinating fashion. When Mrs. Jucklin is near, however, Lim exercises great care to temper his remarks, for his spouse is often obliged to call him to account. Some of his philosophy follows:

“Many a wise man has done a fool thing simply because the fool got to the smart thing first. The trouble with preachers of today is, they make the Bible a threat and want people to read it with frightened eyes; but when a man’s scared he can’t learn anything to speak of.”

Mr. Read causes Lim Jucklin to philosophize also on “First Love,” which he does in an especially humorous manner. The dialect throughout the 262 pages of the book is not so marked as in the usual rural story, but there is just enough to give it a rustic air without endangering its lucidity.

✱
Salve Venetia. By F. Marion Crawford. 2 vols., with 225 illustrations by Joseph Pennell. New York: The Macmillan Company. \$5.00.

Anything written about Venice is interesting, and anything Mr. Crawford writes is interesting; therefore it is not necessary to say anything further as to this quality. Mr. Crawford does not exploit the melodramatic sides of his subject, but sticks to safe and sober history wherever that can be found, sketching with a rapid hand, sometimes in mere outline, sometimes in detail, the story of the Queen of the Adriatic from the time

when the fishermen first settled on her sandbars to 1797, when Bonaparte took the bronze horses from the basilica of St. Mark's. He weaves in brief biographies, picturesque incidents, bits of archeology, references to pictures, and descriptions of manners and customs so ingeniously as to make the book very readable as a narrative, altho very bothersome to the student who wishes to find some particular thing. Venice, he admits,

"was a government of suspicion and precaution, which took it for granted that every man, from the Doge down, would do his worst, and provided for the worst that any man could do."

But he defends it in a way by saying that it succeeded while communities that reckoned on the good motives of men have failed.

"In plain fact, Venice revived, and grew great, and was a power during four hundred years after she adopted her ultimate formula of existence, and in the end she died, not by the hand of the enemies at home or abroad whom she had successfully baffled for centuries, but of sheer old age and marasml decline after a life of eleven hundred years, during which she was never at any time subject to a foreign power, or a foreign prince, was never once occupied by a foreign army—and was never bankrupt."

Literary Notes

A LITTLE booklet by Henry Van Dyke, "The Spirit of Christmas," contains two prayers and three short papers appropriate to the Christmastide. (Scribners, 75 cents.)

....A Bible, with all the verses bearing upon the theme of Salvation marked in red with cross references, edited by Rev. Jesse Lyman Hurlburt, is issued by the Winston Co., Phila. The numerous cross references and maps will be found very useful for Bible readings.

....A novel by Arthur Newell, "A Knight of the Toilers," deals with the labor question. In this novel the strikers with the redoubtable Trevor at their head have the magnates at their mercy in ideal fashion. (Philadelphia: Marsh.)

...."The Joys of Friendship," edited by Mary A. Ayer, contains selections from verse and prose to prove that "To be rich in friends is to be poor in nothing." A book of this character, however, loses much through lack of an author's index. (Lee & Shepard, Boston. \$1.00.)

...."The Music Lover's Treasury," edited by Helen P. Patten, contains the great productions of famous poets on musical subjects. The selections range from Milton and Schiller to Browning and Lowell. It is very attractively

bound and illustrated. (Dana Estes, New York. \$1.20.)

...."Facts and Fancies For the Curious" will keep a man of average intelligence supplied with a fountain of miscellaneous knowledge, for its 647 pages are not easily exhausted. The collection is very comprehensive and well arranged. (Lippincott, Philadelphia. \$3.00.)

....That a popular edition of important scientific discoveries is well received by the reading public is attested to by the appearance of a second and enlarged edition of William K. Brook's "The Oyster." This book is interestingly written and well illustrated. (Johns Hopkins Press. \$1.00.)

Pebbles

THEY say the prisoner was very much interested in the jury's verdict.

Yes—He actually hung on their words.—*Harvard Lampoon.*

....*Mamie:* I believe in woman's rights. *Gertie:* Then you think every woman should have a vote? *Mamie:* No; but I think every woman should have a voter.—*The Woman's Journal.*

....Roast turkey hot,
Roast turkey cold,
Roast turkey in the hash,
Nine days old.

—*Yonkers Statesman.*

....There was a young man from the West,
Who proposed to the girl he loved best,

But so closely he pressed her

To make her say, yes, sir,

That he broke two cigars in his vest.

—*The Tobacconist.*

....The automobile rushed down the road—huge, gigantic, sublime. Over the fence hung the woman who works hard and long—her husband is at the cafe and she has thirteen little ones. (An unlucky number.) Suddenly upon the thirteenth came the auto, unseeing, slew him, and hummed on, unknowing. The woman who works hard and long rushed forward with hands, hands made rough by toil, upraised. She paused and stood inarticulate—a goddess, a giantess. Then she hurled forth these words of derision, of despair: "Mon Dieu! And I'd just washed him!"—*Literally translated from Le Sport of Paris.*

....Art sympathies for me?
Fear not feathy sarbit
I groggles for you
Have thy cropt at my door-step
At quarter past, too,
And there I shall meet thee
And kill him for you.
When the waggle was ripe
And the furtle set sail,
Across the Sertarpis,
And weathered the gale,
Of a thousand fed fountains
In imptish and gree—
What calls thee, my darling.

—*Pelican.*

Editorials

Political Reform in New York

THOSE who are interested in the condition of the Republican party in the State of New York may have noticed the action taken last week at Oswego by Hope Grange, Patrons of Husbandry, which has 3,000 members, nine-tenths of whom are Republicans. By unanimous vote, the representatives of Oswego County in the Legislature were asked by this Grange to introduce resolutions calling for the resignations of United States Senators Platt and Depew. Such an incident points to a condition of public sentiment in the party's rank and file that will strongly support the efforts of President Roosevelt and others to place the leadership of the State's Republicans in clean and honest hands—to get rid of unworthy representatives and exposed bosses and the beneficiaries of political corruption, whether these be in the Senate or elsewhere.

Republican factional quarrels of the past in New York have temporarily so affected the party's strength at the polls that the sure approach of another one is naturally regarded with some misgiving, even by those who clearly realize the magnitude of the evils which now demand reform. But those quarrels, as a rule, were due to political competition, to personal ambition, or to selfish controversy over the spoils of office, and not to a popular protest against conspiracies for the corruption of legislators and the confessed contempt of leaders for moral principles. It is in obedience to such a protest that the party in New York now seeks to cleanse itself. Therefore, if the work be well done, if the unworthy men cast off into outer darkness be not replaced by others only a little less objectionable, the party will retain its strength and even increase it.

A good beginning has been made in the great city by the election of Congressman Herbert Parsons, a competent man of high character, to be chairman of the Republican County Committee. This was the first defeat for ex-Governor Odell, State boss and chairman of the State Committee, whose compulsory retirement in the near future has been fore-

shadowed by the testimony in the life insurance investigation. But this victory for reform was won only after a sharp contest and by a small majority. It is difficult to obtain possession of the committee strongholds of a boss because he has taken pains to man them largely with men of his kind. The division of votes at the election of Mr. Parsons did not justly represent the party's attitude.

In this movement against the rule of unworthy leaders in the greatest of our States the next step was the selection of a clean and competent candidate for Speaker of the Assembly at Albany. Here, as in the case of Mr. Parsons, the advice of President Roosevelt was sought, and the chosen candidate has such support from him, or such approval, as he could with propriety give. Mr. Wadsworth, at the age of 28, has had little experience in the Legislature, but he is an educated man of good antecedents and surroundings, and when he takes office, restrained in no way by the relations attending long service, he will be perfectly free to follow his impulses and to work for the public interest alone. If the Governor, who excited some hostile criticism by suggesting Mr. Wadsworth's name, will then promptly get rid of Insurance Commissioner Hendricks and some other officers who ought to go, Albany will be much less attractive than it has been in the past to the Andy Hamiltons and other "watchers of legislation," and to the open handed managers of insurance companies' Houses of Graft.

Another step, which should not be delayed, will be the removal of Mr. Odell from the important office of chairman of the Republican State Committee. Of course, he must give up that place. Foreseeing his retirement, he is now bitterly denouncing the President, the Governor and all others who oppose him. To permit this man to retain his office would be to invite disastrous defeat for the party at the next election. But his successor should be chosen with much care. He should not be ex-Governor Black, who "took the starch out of the civil service law," nor should the party's choice fall upon any of the former lieu-

tenants of Senator (and Boss) Platt, many of whom, to assist in compassing the downfall of the man who thrust their old leader aside, are crying loudly for reform.

In all this housecleaning, the two Senators at Washington will not be overlooked. Hope Grange's unanimous vote at Oswego shows what the Legislature at its coming session will be urged to do. Mr. Odell, in his more or less trustworthy accounts of conversations at the White House last year, asserts that the President said: "The State of New York should not be represented in the Senate of the United States by two senile old men." We do not think these were Mr. Roosevelt's words, altho he may have said that New York ought to be represented by men of a better kind. It is not on account of their age, or of the feebleness, physical or mental, of either of them that these Senators should be displaced. Mr. Platt is seventy-two years old; Mr. Depew is seventy-one. Look across the boundary to the admirable records made by Connecticut's justly honored Senators, the late General Hawley and the late Mr. Orville H. Platt, who so ably represented their State for nearly a quarter of a century and were thus representing it when they were several years older than the New York Senators are now. No; it is not on account of their age that Mr. Depew and Mr. Thomas C. Platt misrepresent their State and should retire to private life. From the beginning of his term of service at Washington Mr. Platt has been notoriously unfit for the office. Mr. Depew's unfitness has recently been made known by his own testimony and the records of the life insurance investigation. Both of these men should be asked by the Legislature to resign.

Far reaching has been that investigation which was suggested by James W. Alexander's demand for the retirement of young Mr. Hyde from his office in the Equitable Life Assurance Society. None of the disclosures caused by it has been more important or disquieting than the evidence that money has been profusely, continuously, and wickedly spent in the State of New York to create and support the power of political bosses and to control legislation not only by the

direct corruption of legislators, but also by procuring the election of them. By such a housecleaning as has now been undertaken by the dominant party in the State the situation can be greatly improved, but measures must be taken to prevent, if possible, the corrupt or otherwise improper use of money in politics and in the Legislature by corporations and by capitalists whose consciences have become paralyzed. Only in this way can enduring betterment of conditions be obtained. It is an inviting field of labor for good citizens and for organizations whose aim is to promote the needed reforms by new laws or by the enforcement of old ones.

A Look Backward

THE American has but one grand passion, that of progress. No person in this country is thoroly happy unless he can be doing something a little better than it was done by his predecessors. Naturally, to take a backward look is occasionally a relief. The whole nation has its periods of eagerly studying history, and the present is one of these periods. It is a wholesome exercise to look over the achievements of the past; but the secret of our present development of historical writing seems to be a desire to secure rest and recuperation. On the awning over a store we have often seen a half-dozen spinning wheels, such as our mothers kept pace with, seventy-five years ago. People who live in the finest houses eye those mementos with great interest, and for a time there was a fashion for buying them to place in Queen Anne windows. There was a sensation of rest in looking at the relics of more pastoral days.

Those of us who are full of years find a deal of comfort in dreaming of the old roadsides, where, as bare-footed boys, we chased thru bull thistles, and caught white-faced bumblebees. Why not let our own boys go bare-legged among thistles and burdocks? The first break with brute life was kindling a fire with flint; yet less than a hundred years ago civilization was still knocking flints together in tinder or in powder. How carefully, in the big fireplace, at night, our mothers covered the coals, to keep

them alive until morning. And if, by chance, the fire went out, the oldest boy or girl must run to a neighbor, with two pieces of bark, to borrow coals. Our mothers were adepts at bringing even threads off the spindle, while they reeled small talk and neighborly gossip; but the newspaper came only once a week, and every letter sent three hundred miles cost twenty-five cents postage.

The average of human life was not much over twenty years, and such diseases as cholera, plague, smallpox, and typhoid fevers were set down as visitations of Providence. Now our average age is over forty, and increasing. If anything is certain it is that the most dreaded diseases will all be hunted down, their causes discovered, and then removed.

In no respect is the frontage of evolution more surely beneficent than when we consider our private homes. The ancient house was not superior to a modern hovel—without glass or carpets or sub-division. All of art belonged to the cathedrals and the gods; enough for the individual to anticipate golden palaces hereafter. Today there is no one thing so perfect as the common man's house. Its spring-bed has more comfort than the state couches of Louis le Grande. Base-burners and furnaces keep him warm. A dozen books cost the price of a quarter of lamb or a roast of beef. Ten square yards of news, printed in clear type, come to his door each morning for two cents.

You may measure the common man's evolution at his table. Descended from ancestors whose struggle for existence made them devour the vilest food, we find our tables spread with luxurious variety, gathered from every quarter of the globe, or the direct products of our experiment stations and our Burbanks. The pride of America is once more in her agricultural achievements. "Every weed contains undeveloped wealth, and blessings for mankind; and man will yet find them all out."

There is much to be improved in our judicature, but no longer ago than 1837 the "wager of battle" was a legal custom in some of our States. Trial by jury was considered a gross innovation, and denounced by the church as profane.

It left to man the decision which the duel left with God. Duelling was thus an appeal to Heaven to settle the quarrel. It was a religious art, to show by the success granted to the sword the innocent party. It was a matter of common law in every code in Europe. The parties interested were held in prison, with cords around their necks; and whoever was adjudged guilty through the defeat of his champion was forthwith hanged. But if the party was a woman, she was buried alive—in capital cases.

Our politics are scandalous; are they? Go back to the political conditions of 1805, and read a few pages of the history in which Aaron Burr and Alexander Hamilton were actors. English, French and German nobles were rare who did not carry on treasonable correspondence. English kings were in the pay of France. Even our own Major-General Wilkinson received an annual pension from Spain for revealing to that Government our political secrets. As for bribes and bribery, there is indeed too much of it; but is there a hamlet in America where a candidate for office would dare to set a table in the street and publicly buy votes? Yet such was the custom 100 years ago in England. In political morals we are unquestionably making steady gains. Secretary Bonaparte says right, that there is a drawing together of religion and politics.

How are we getting on socially? A few pages taken from any history that covers the seventeenth and eighteenth century will tell us some things that we will do well to remember—or perhaps will prefer to forget. Kings' courts were invariably less decent than the houses of courtesans in our modern cities. The history of the Church had many a passage that we prefer to print in the Latin. Archbishops and bishops went to the great councils with clowns and courtesans in their trains. The remedies for vice were as vicious as the evils they undertook to cure. Among the capital offenses of our own colonies was "a solemn compact or converse with the devil." Witchcraft and conjuration were punishable by death. Bringing playing cards into the Plymouth Colony subjected the offender to a fine of forty shillings, and for using them the penalty

was public flogging. Blasphemy was punishable with death—so also cursing and disobedience of parents. The Massachusetts Colony imposed death for idolatry, witchcraft, blasphemy, kidnapping, adultery, perjury, and on children who struck their parents.

We are accustomed to hear severe arraignment of our public men. It is not probable that the United States ever produced so many Governors of the highest intellectual and moral power as today. It is questionable whether Daniel Webster, with the habits which he indulged, could now secure the Senatorship from Massachusetts. Gouverneur Morris, speaking of the second Congress, said: "What a set of ——— rascals there were gathered together there." The historian is compelled to remove a good deal of the glamor that surrounds many of the notables and leaders, not only of that era, but of later dates. The episode between Senator Benton and Senator Foote, in our Senate during the fifties, would be inconceivable in these days. On the whole, we must conclude that evolution is a force that never ceases to carry us forward—and never will. Looking backward, however, does us no harm. As a comparative study, it is stimulating and helpful. The historical student is best equipped to lead the forward lookers. Thomas Jefferson and John Adams built well, because they knew well what had been built. We act collectively as we act individually. The people turn to historical writing and reading at intervals. It is not the literary aspect of such work that interests us so much as the social. It indicates that we need rest, and a social house cleaning.

A Look Forward

BERNARD SHAW recommends that fortune-telling be made a required study in all the public schools. None of the studies now in the curriculum, he says, is so useful for giving one a knowledge of human nature. This suggestion should receive the attention of those who are always arguing that the schools should prepare their pupils for some gainful occupation or profession. Now, the profession of fortune-telling seems to be a very profitable one, judging by the ad-

vertisements in the newspapers, and the tents on the beaches. There is a demand for reliable prophets that much exceeds the supply in the financial, political and literary world. For example, it has become customary at this season of the year for editors not only to present a summary of the events of the past year, but also to exercise their prescience in outlining the future. Not having had the opportunity of attending such a school of the prophets as Mr. Shaw proposes, we have felt ourselves at a disadvantage in this matter. However, we are determined not to be behind our brother editors any longer, so we have invented a system of forecasting for this occasion. It is impossible to explain its details here, but it is sufficient to say that it is based upon certain historical data, and is similar in principle to the method used by mathematicians in the calculation of the continuation of a curve of which part is known.

In applying this method, however, we obtained results so startling, in some respects apparently so incredible, that we hesitate to give them, notwithstanding our confidence in the method. It would seem that all the seven planets pulling at cross purposes could not produce so mad a world as ours will be next year. Its strange events seem still stranger the more one thinks of them, and the most surprising thing about it will be that they will excite little astonishment.

It appears that owing to some inexplicable cause the earth will be projected thru space at the rate of over a thousand miles a minute, nevertheless all life upon the globe will not be destroyed, nor, indeed, affected, unless we can lay to the dizziness produced by this rapid motion some of the curious psychical manifestations mentioned below. The meteorological phenomena of the year will be very interesting. The almanacs mention several eclipses, but they do not note some still more remarkable appearances, for example, that the sky will on some days be of an intense blue, at other times varied with red, yellow, white and black, exceeding in beauty any pyrotechnic display. The climate in many localities will undergo a complete change, as will be noted by the papers of those sections. It will be a matter of common observa-

tion that it rains or snows on all public holidays. In fact, it may be said that the weather for 1906 will be different from that of any previous year in the history of mankind.

That the weather produces an effect upon the minds of human beings is well known. But the curious mental processes which will prevail next year no psychologist will be competent to explain. Many persons will be found to believe two, or even three mutually contradictory theories. People who will find themselves in this state of mental incompatibility will not be aware of their unfortunate state, even when told of it by others, and they will seek no relief from the divorce courts. In many cases there will be no discoverable connection between a man's acts and his professed beliefs. Staid and respectable persons will often advocate ethical and sociological beliefs which, if adopted, would be destructive to civilization.

It will be an era of distorted ethics. People will repent of their good deeds and boast of their bad ones. Some will even take pride in sins they never committed. Altruistic persons will cause great distress to their friends by trying to make them happy. Affection will frequently be manifested by cross words and scoldings. Those who in 1906 devote themselves exclusively to the pursuit of pleasure will not succeed in attaining it. Rich men will extol poverty, and fashionable women will praise the simple life.

Political power, instead of being placed in the hands of elected officials, will be mysteriously exercised chiefly by one or more comparatively unknown men in private life, whose wishes will often overrule the laws. Exposures of political and financial corruption and mismanagement will arouse great popular indignation, and result in a continuation of the same practices by other persons. The laws against mayhem and rioting will be strictly enforced except in educational institutions. The legislation will have a marked socialistic tendency, at which the Socialists will be surprised and disappointed.

The literature of the year will be disappointing to many people. The most popular books will be condemned by the

best critics. The great American novel will be written, but will not find a publisher. An absurd fad will prevail of spelling words by letters that do not indicate the sound or derivation. All the statues and buildings erected in conspicuous places by municipalities during the year will be such as to excite the ridicule and scorn of many of our foremost artists. Many influences will combine to elevate the stage, which, notwithstanding, will continue to decline, as it has for five thousand years.

The advance in theological lines will be great. Thru the industry and ingenuity of scholars, creeds and texts will be found to contain meanings altogether unsuspected by their authors, and indeed quite contrary to the way they were originally understood. In the scientific world the belief will be prevalent that the ancestors of the human race descended from trees. The theory that the coming man will be toothless and hairless will receive confirmation by such specimens as appear upon earth during the year.

Thruout the year 1906 people will not be allowed to choose their own costumes, but will obey the dictates of a mysterious power. A gentleman will regard himself as well dressed when he is most uncomfortable. Fashions of acknowledged inappropriateness and hideousness will be adopted by the ladies and admired by the gentlemen. It may be said with some positiveness that the hats of the ladies will not be any more bizarre than at present.

During 1906 a curious fungus will grow in the city of New York and spread everywhere with such rapidity that it will be impossible to keep the streets free from it with scythes and steam lawn-mowers. The plant will be of peculiar shape, rather tall for the width, more of the shape of a fence post than of a bush. It will multiply with astonishing swiftness; a single patch will produce over two billion new plants in twenty-four hours. It will be so poisonous that when eaten or otherwise taken into the system it will be liable to produce a fatal illness. Over 7,000 persons in New York city alone will be killed by it during the year, perhaps more than will die from any other cause.

But we will not venture upon further prophecy, lest we tax the credulity of the reader. From what little we have said (for the most remarkable things in the horoscope we have not revealed), it will be seen that 1906 can truly be called *Annus Mirabilis*. Still, stranger things have happened.

The Eulogies of Garrison

THE centennial of William Lloyd Garrison's birth has done something to corrupt history. Just as the history of the Reconstruction period following the Civil War has been perverted by interested parties, who have, by their exaggerations and falsehoods, come pretty near to deceiving the whole American people, so, on the other side, by the exaggerated or false statements about the work and influence of Mr. Garrison, many people are coming to believe that he and Lincoln abolished slavery. That comes, in good part, from depending on his partial biographers.

Let us take for example the article on Mr. Garrison in the *Colored American Magazine*, by Roscoe Conkling Simmons. He says, and we take him as an example of other eulogists:

"The birth of *The Liberator* (in 1831) was the beginning of the death of American slavery. Its voice . . . shook the foundations of the oligarchy at the South . . . and broke the strongest link in the chain about the limbs of the slave."

This is pure nonsense. It was not the beginning, and it did not shake or break anything. Arthur Tappan, an older friend of the slave, before that had bailed Garrison out of a Baltimore prison.

The writer continues: "He moved John Brown to strike for liberty." Not at all. Garrison was a non-resistant, quite opposed to John Brown's ways, learned in Kansas, not in Boston. Even more amazing, our writer says that "Abraham Lincoln was moved to throw his fortunes against slavery by the convincing appeals of the great reformer." Abraham Lincoln learned his lessons of liberty in an utterly different school, and probably knew and cared very little about Mr. Garrison. Equally baseless and historically absurd are the statements that "Harriet Beecher Stowé was driven to 'Uncle Tom's Cabin' by his fervor,"

and that Sumner "yielded to this man's call for men." They both learned war in another camp, and were not to be seen on his platforms.

It is enough to praise Garrison for what he was and did, but the overthrow of slavery was not his work, and he was very far from being the chief actor in it, nor was he the first. Slavery was not overthrown on his lines, but on the lines of wiser men. Denunciation is fine, but it is less than half the work of reform. Other men before him, and contemporary with him, denounced slavery, but they also did something to limit the extension of slavery and to free the slave. The only way to abolish or limit slavery was by political action; and that way Garrison refused to take. Because our Constitution and Government recognized slavery he would take no part in the Government. He and his few followers—for they were never many—would not vote, and equally would not fight—they were non-resistants. Because so many in the Church defended slavery he came out from the Church and denounced it, and even joined in a crusade against the Bible because it recognized slavery. He made the immense tactical blunder of being a "come-outer" when he ought to have been a stay-inner, and to have fought where he could accomplish something. As it was he was an Ishmaelite, attacking friend and foe, no less the men who fought against slavery in politics, the men who really did the work and elected Abraham Lincoln, than the men who held slaves. For this reason he had a small following, a clique who shut themselves out of the great movement, who had nothing to do with the Liberty Party, or the Free Soil Party, or the Republican Party. How could they? They did not vote. The great work went on, led by John Quincy Adams, and Joshua R. Giddings, and John P. Hale and, later, Charles Sumner, and a multitude of others, till Abraham Lincoln was elected President, and millions of men were called to the field and slavery was abolished. And while this great flood of power was gathering its resistless current, Mr. Garrison and his little company were following it on the bank, and crying aloud: "A covenant with death and an agreement with

Hell!" If the Constitution was a covenant with death, it was only those who stayed with it that were able to amend it.

It has been the burden of the addresses, especially those by negroes in their centennial speeches, that there was no one else to speak for the slave when Garrison began his campaign in 1827. This they gather from his biography. He says:

"There was scarcely a man in all the land who dared to peep or mutter on the subject of slavery; the pulpit and the press were dumb; no anti-slavery organizations were made; no public addresses were delivered; no entreaties were uttered in the ears of the people; silence, almost unbroken silence, prevailed universally."

This statement is not true. There had been multitudes of meetings, multitudes of societies, even if Mr. Garrison had not been interested in them. He says:

"In 1827 I went to Boston and edited a paper called *The National Philanthropist*. It was devoted to the cause of temperance. Up to that hour I had known little or nothing of slavery. . . . I was almost wholly ignorant in respect to it."

And yet while he had previously been editing a paper in Newburyport there were public anti-slavery meetings in that town. Be it remembered that the Missouri Compromise, with the admission of Missouri as a slave State, was in 1820, and the country was hot on the subject. There were meetings everywhere in the North. To show this it is enough to read Henry Wilson's "Rise and Fall of the Slave Power." Six State legislatures outside New England passed resolutions asking Congress to forbid the extension of slavery. In the Pennsylvania Legislature there was not a dissenting vote to the resolutions which denounced the attempt "to spread the crimes and cruelties of slavery." Henry Wilson says:

"Never before had the anti-slavery sentiment of the North been so quickened and aroused. Popular meetings were holden in which Federalists and Democrats enthusiastically and cordially united. Public addresses were made and petitions and memorials were sent to Congress."

It was in this period in 1824 that the attempt was made to introduce slavery into Illinois, and very hot was the discussion which ended in making it a free State. At this time there were more than a hundred abolition societies in

Delaware, Maryland, Virginia, North Carolina, Kentucky and Tennessee, and hundreds in the North, and the churches took the lead. In 1818 the Presbyterian General Assembly had condemned slavery as

"A gross violation of the most precious and sacred rights of human nature; as utterly inconsistent with the law of God which requires us to love our neighbor as ourselves; and as totally irreconcilable with the spirit and the principles of the great Gospel of Christ."

We have said enough to correct the false history which has been repeated. Mr. Garrison was a voice crying in the market place, and with no language but a cry. Whether he did more good than hurt, whether he helped or delayed emancipation, is a mooted question. This is certain, that he was neither its morning star nor the principal influence for emancipation. On the other hand, he fought those that did the work. His method was a blunder, radically and not merely tactically wrong. In his way slavery would never have been abolished. Ishmaelism does no work. He had a noble purpose, and made many noble utterances, and many absurd ones. A class of men who follow him in their hostility to churches have tried to idealize and almost canonize him. When the public begins to accept radical errors of history it is well that the real facts be occasionally told.

The Moscow Battle

WHEN the Russian Czar consented to the establishment of a representative government, with a parliament elected by the people, the world rejoiced, and believed that a better day was dawning for that mighty but oppressed empire. We said then that such a revolution could not go backward. Surely enough it has not gone backward; but now the Duma and the Zemstvos are almost forgotten. It is already a question whether the Empire of the Romanoffs shall give place to a republic, perhaps a Socialistic republic.

That is what the uprising in Kurland and Livonia and Esthonia almost up to the gates of St. Petersburg means. That is the meaning of the battle that has been raging for several days in the streets of Moscow, where thousands are

reported to have been slain. Those revolutionists and the mysterious committees behind them are no longer concerned with a constitutional monarchy; they would dethrone the Czar and abolish all the Princedoms and Grand Dukedoms that have settled and fattened on the people. The boasted love and loyalty of the common people to their Father the Czar has proved to be a myth, or to have suddenly vanished, transformed into hatred.

It is not for us or for any man to forecast the issue of this mightiest conflict of the people against their rulers since 1848. It may be that the army will remain sufficiently loyal to quell this uprising; but even so things cannot be as they were. The old order has passed away, not to return. The people have learned something of their power, and the autocracy of birth will never again dare to rule by mere divine right, which means their own arrogant self-will. Much more likely is it that an internal revolution will put the common people in the saddle, and that something like the French Revolution will give them liberty and equality, with a period of anarchy. The world now looks with anxiety to Russia as the scene of the most important revolution in our memory; even more important than that of Japan—perhaps less important than that which seems ready to develop—we hope peacefully—and give us a new, self-conscious, assertive and proud China.

And the rest of the world will look on to see the outcome in Russia with some little concern as well as interest. The provinces now in revolt and setting up a republic are on the borders of Poland. And Poland was split up between Russia, Austria and Prussia, and has never been satisfied with the division. Will there be a resuscitated Poland? Not if Germany and Austria can prevent it. But there are Socialists in these empires as well as in Russia, Socialists who hate the rule of Emperors, and who may yet be ready to measure their strength. We remember 1848, and how the spirit of revolution spread over all of Continental Europe, from the Danube and the Rhine to the Seine. The itch of liberty is catching. Norway has just chosen a king, out of deference to the

will of Emperors and Kings. Should the people conclude to rule in Russia, the tenure of kings would be weak and short over the western border. Already the Emperor of Austria is placating the rising storm by offering universal suffrage, the least compromise which democracy can accept, and which is accepted readily, at present, in Great Britain. About once in fifty or sixty years the revolutionary tide seems to rise.

Inauguration Day

The scheme of changing the date of the inauguration of the President from March 4th to some later time—say the last Thursday in April—has again been brought before Congress. The only object of the proposed change is to secure more favorable weather for the inaugural parade at Washington, a matter of no importance compared with the necessity of having an elected candidate seated as soon as possible. The interval between election and inauguration is altogether too long now, and it would be much better if the new President took office immediately after the votes are officially counted. In case the election has thrown the Government into the hands of the opposite party it is highly improper and even dangerous that the will of the people should remain ineffective for four months, during which period the discredited party remains in power and could, in times of bitter partisan feeling and important issues, do much to “queer” the incoming administration and commit the country irrevocably to a policy which had been repudiated at the polls. Besides, there is the danger that the President and Vice-President may die or be killed. The final session of a Congress has no real right to legislate, for its members are not the elected representatives of the people. As for the spectacular side of the inauguration, it must be admitted that there is a popular demand for that sort of thing to which churches, colleges and societies are inevitably succumbing. The best way to satisfy it without injury to the Government would be to adopt the plan of European countries, where the new king at once takes the oath of office and the coronation is postponed to a convenient season, some-

times years ahead. Let the President be installed without ceremony in December, or at least in January, and let the inaugural parade, ball, fireworks, etc., be given on the next Fourth of July or any other time that will suit the Washington weather and hotel managers.

Congressman Loud's Record Perhaps the most important fact in the Report of Postmaster-General Cortelyou is that the Hon. Eugene F. Loud is appointed sole delegate to the Universal Postal Congress to be held in Rome, April 6th, 1906. It may have been natural to appoint him, because he has been Chairman of the House Postal Committee. But he is the last man that should have been appointed, for the reason that he is the long and persistent enemy of the extension of the benefits of the post office, and indeed of the post office system itself. Three times has he attacked the cent-a-pound publishers' rate for newspapers. He would prefer to have the Government give up the business entirely, thus setting his judgment against that of the whole world. He says:

"The post office is an accommodation to the great mass of our people, but not an absolute necessity; private means could as well or better be adapted to the transmission of our mails and, in the opinion of the writer of this report, could be so done much more cheaply, with quicker despatch, and better satisfaction to the people."

Then note this further statement of Mr. Loud, made to Mr. M. G. Cunniff and quoted by him in the issue of the *World's Work* of December, 1903:

"Such business as the post office now does in carrying fourth class mail—merchandise—should be done by private enterprise. If I had my way, the post office would give no more facilities than it gives today. It would give fewer."

Then observe the reason for his hostility to the Post Office, in his extreme opposition to public service by the Government. He says:

"But it is not our intent to now advocate so radical a change, for our people can more peacefully bear those ills they have than fly to others they know not of. For the *principal wrong* in the continuance of the present system to our people is in that it encourages the growth of an agrarian sentiment that points to the Post Office Department and exclaims: 'See how well the postal service is managed in the

interest of us all, and how cheaply it is operated; this is our strong bulwark of defence, and illustrates in golden letters that the true course for the Government is to become the parent and owner and operate all means of transportation and transmission.'"

What can be the standing of a nation at the Universal Postal Congress that allows itself to be represented by a man holding such sentiments towards the Post Office? It is on the face of it an appointment unfit to be made, and public sentiment ought to require the President to withdraw his commission.

Hampered Progress, Like Christian in "Pilgrim's Progress," we are bearing a great burden. The people of the United States do not realize the extent to which they are hampered by their antiquated system of weights and measures. The extent of the burden would be realized if the metric system were in use and we were compelled to revert to our present system, or if the English coinage of shillings and pence were forced on us. Any one who has worked with both systems will admit that there is no comparison in the facility and speed of calculation. Herbert Spencer made probably the strongest attack on the metric system that has been put forth. If these arguments, from the most intelligent supporter of the cumbersome system, could be disproved, it would mean victory for the metric system. One of Herbert Spencer's main points is, that if the metric system were adopted the Centigrade notation, admitted by all as inferior to the Fahrenheit, would have to go with it. This is a surprising error. Neither the Centigrade nor the Fahrenheit notation has the least connection with the metric system, and no change in that direction would take place. In reviewing his case, Spencer makes the startling announcement that any one who has figured with both the American and English systems of money will admit that the English is the easier of the two to handle. On this point we will let our readers judge. The great benefit of the change will come to the next generation, who will have nothing to unlearn, and all the advantages of a simple and sensible system. We, at least, will have the satisfaction

of seeing our children point off and run out to play, instead of growing old trying to figure out how many square yards there are in an acre.

A Bison Society To the list of societies for the preservation of birds and fishes, and for the protection of dogs and horses, may now be added the Bison Society, of which President Roosevelt is the Honorary President. Europe keeps one or two parks for the special purpose of saving the wild cattle of that continent from extinction. The most noble beast on this continent is the bison, now almost extinct. Its destruction would be a great loss to the world. We should keep one or two large reservations where they can be at liberty to go wild and increase, besides numerous experiment stations where they should be domesticated for use, and crossed for their hides or for work with other breeds. That other splendid bison of Transylvania and the Caucasus might well be crossed with our own, not to speak of the true buffalos and other cattle. There is a world of possibility in the matter of domestication of wild animals and plants which our men of science have hardly touched; and we would have this Bison Society do something more than merely keep up a bison reservation, as we raise bears for the delectation of visitors at the Geysers.

Benevolent Institutions. Never since the world began has so much been done for the care of the needy and unfortunate; and it is not true that the Church has given up that duty to the State. By a late Census report there are in this country 4,207 institutions for the benefit of the sick, aged and needy—which do not include local poor-houses. Of these, 485 are supervised and maintained by the Federal Government, States and inner civil divisions, while 2,359 are managed by private corporations, of which 1,363 are supported by religious bodies. The orphanages are almost wholly of the latter class, while the blind and the deaf and dumb are supported by the States. The public institutions cost \$16,263,958, the ecclesiastical \$15,150,576, and the private

\$24,163,099. It will thus be seen that the State and National Governments pay less than a third of the cost of these institutions. Possibly in the good time coming it may be thought best to have the public pay all these expenses; but at present it appears that the education of the people individually in the care and good will of the unfortunate is a help to character which collectivism will fail to supply.

"Absolutism and Commercialism" These are bad words, which Professor Cattell applies to the proposal to unite the Massachusetts Institute of Technology with Harvard University, but the ordinary looker-on can see in the merger proposed no more absolutism or commercialism than there exists in either institution separately. Each has a president and a board of trustees, which are the excrescent evils against which the Professor, who is the son of a successful college president, protests. He describes the usual condition as "an absentee board of trustees," and "an almost complete delegation of legislative, judicial and executive functions to one man, the president," who "lords it over an aggregate of employees instead of conferring with a company of scholars." Professor Cattell's article is a vigorous attack on the universal system of superintendency in education in this country, and we judge that it will find not many to accept its conclusions. The policies of our institutions are usually worked out in the college faculties, and then brought before the trustees, as a conservative body, to approve and carry them out. It is the investment and expenditure of money that require expert business men as trustees, and they are the men, with the president, to give or get the money required. This is too much of a burden to put on the professors. Professor Cattell says he does not "wish to adopt the attitude of a pessimist." And yet he says:

"We do not produce great men at or for our universities, and there are not enough moderately good men to fill the chairs. It is said that such are diverted into business or politics, but it is difficult to discover them there."

That is sad, and yet in Europe they have been saying very pretty things of a cer-

tain man produced at our oldest university who is at the head of American politics. There is something to be said for college trustees and presidents. Professor Cattell mentions that "one of the most powerful school superintendents" has lately been sent to prison for theft and forgery. We can recall a college professor or two hanged for murder.

We published a short poem a little while ago, found in the effects of a workingman of literary tastes in Springfield, Mass., which his executor thought was probably of his authorship, but we were careful not to vouch for it. The poem seems to have been an adaptation by some one of lines by the late J. Boyle O'Reilly, in whose volume it is thus found, as we are courteously informed by *The Sacred Heart Review*:

"What is the real good?
I asked in musing mood.
'Order,' said the law court,
'Knowledge,' said the school,
'Truth,' said the wise man,
'Pleasure,' said the fool,
'Love,' said the maiden,
'Beauty,' said the page,
'Freedom,' said the dreamer,
'Home,' said the sage.
'Fame,' said the soldier,
'Equity,' the seer—
Spake my heart full sadly:
'The answer is not here.'
Then within my bosom
Softly this I heard:
'Each heart holds the secret,
Kindness is the word.'"

The opposition of the people of Arizona to Statehood with New Mexico deserves serious consideration. The argument that they do not wish to be allied with the "Greasers" of New Mexico does not so much influence us, for we have found human beings much the same, when you get acquainted with them; and, so far as they are ignorant, they can be educated. Arizona and New Mexico combined have a territory as large as California with all the New England States added, and 10,000 square miles to spare. Arizona has great possibilities in its mines, producing more copper, probably, this year than any other State. A single reservoir will in two years irrigate 200,000 acres. There are 12,000 square miles of forest and 14,000,000 acres of grazing land; and the

people, by an overwhelming majority, oppose Statehood with New Mexico, and ask to remain a Territory.

President Eliot, in a late speech, called attention to the limitation of liberty that necessarily follows a fuller civilization. He said:

"There is now in Massachusetts no liberty for adulterated or spoiled foods, drinks or drugs; no liberty to spread contagious diseases; no liberty for public service corporations to issue stocks and bonds at their pleasure; no liberty to conduct in secrecy the business of banks, savings banks, insurance companies, trust companies or transportation companies, and no liberty to vote on any voting paper which the voter or his party prefers. Many businesses once unregulated by the Commonwealth are now closely regulated. Even the suffrage, source of all governmental power, must be exercised in a severely prescribed way."

All this is true; but so is every law a limitation of liberty, ever since the commandment, "Thou shalt not kill." Much more limitation will be required to protect the people.

Now that civil service examinations have relieved our Congressmen of so much anxiety and have left them more time to attend to legislation, would they not favorably consider a further proposition that they be also relieved of the burden and jealousy arising from the patronage they have for the Military and Naval Academies? Some Congressmen already appoint boys to these institutions after examination. Would it not be well for a law to be passed still distributing the candidates by Congressional districts, but requiring of them a competitive examination? It would probably secure a better class, and fewer would have to be dropped.

We do not need to go into any discussion of the matters, so largely personal, that have led to the resignation of Dr. Gordon as President of Howard University. With questions of tact involved we are not concerned. But two things are to be noticed. One is that the President of such an institution should not be justly chargeable with supporting caste or racial distinctions; and the other that the rudeness of the students in their expressions of their lack of confidence was as improper as it was unpolitic.

Financial

Crops of the Year

THE final report of the Department of Agriculture as to the size of the year's crops (issued last week) enables us to make the following comparative statement:

	1905, Bushels.	1904, Bushels.
Corn	2,707,993,540	2,467,480,934
Wheat	692,979,489	552,399,517
Oats	950,216,197	894,595,552
Barley	136,651,020	139,748,958
Rye	27,616,045	27,234,565
Buckwheat	14,585,082	15,008,336
Flaxseed	28,477,753	23,400,534
Rice	12,933,436	21,096,038
Potatoes	260,741,294	332,830,300
Hay	*60,531,611	*60,696,028
Tobacco	†633,033,719	†660,460,739

* Tons. †Pounds.

New York City's Railways

THE chief financial event of the year in the railway field was reserved for the closing month. On the 22d it became known that the controlling interest of Thomas F. Ryan and his associates in the surface street railway system of New York city had been acquired, thru August Belmont & Co., by the Interborough Rapid Transit Company. In other words, competition in New York city's street railways, and with respect to bids for future subways, had been eliminated. The surface roads, the elevated roads, and the subway, were to be controlled by Mr. Belmont and his associates. Brooklyn's elevated and surface lines are thus far excluded, but the addition of them to the combination is expected. It is understood that in this movement Mr. Morgan and Mr. Rogers (representing Standard Oil capital) are interested with Mr. Belmont, and that Mr. Ryan will in some way be associated with them. Owing to the relation of these men to great financial and fiduciary corporations, their power in the city will be enormous. It remains to be seen how this power will be used.

Nineteen new subway routes have been planned by the Rapid Transit Commission. It was expected that the Ryan and the Belmont interests would compete actively for the franchises. Now the Commission must deal with only one bidder, and it can be seen that to this bidder several of the routes will not be

attractive, because they would compete with lines now in use. The Commission's plans will be upset, and it is not surprising that the Commission's counsel regards the new combination as one unfortunate for the city. It is plain to him, as it is to many others, that the combination gives new force to the arguments of the advocates of municipal ownership and operation. The details of the transaction are not yet known, nor has the attitude of various neighboring transportation interests been disclosed. When the whole story is told, an interesting relation between the new combination and the great steam roads and tunnel projects will probably be shown.

THE North River Savings Bank, of this city, has just removed to its new building, 31 West Thirty-fourth street.

....The recent troubles of the Chicago National Bank have not in the least affected the trust business of the Equitable Trust Company of Chicago.

....The Bankers' Trust Company has declared a quarterly dividend of 2½ per cent., payable January 2d, an increase of 1 per cent. since the last quarter.

....Control of the Tennessee Coal, Iron and Railroad Company has been purchased in the open market by John W. Gates, Grant B. Schley and their associates, who already controlled the Republic Iron and Steel Company, and it is expected that the two companies will be combined.

....The Brooklyn Bank, which was organized in 1832, when Brooklyn was a village, publishes a neat pamphlet of a novel character, illustrated by interesting views showing the appearance of well known Brooklyn localities at remote early dates, some of them more than a hundred years ago.

....The Western Union Telegraph Company's report for the quarter ending on December 31st, accompanying the declaration of the usual dividend, shows (upon returns partly estimated) that the surplus (which was \$16,433,481 on September 30th) will be increased on that date to \$16,785,160.

Your bathroom equipped with
"Standard"
 Porcelain Enameled Baths
 and One Piece Lavatories
 Means Comfort and Health to your Home

To woman particularly—the maker of the "home ideal"—the perfection, beauty and comfort of "Standard" Enameled Baths and One-Piece Lavatories appeal with intense interest. The installation of "Standard" ware is the most economical aid to your own comfort, the safest guarantee of health to your family, and the cause of greatest pride in possession. Its white, smooth, one-piece surface makes it alone sanitarily perfect, and a constant pleasure to the sight and touch of the owner. No home can be modern, healthful or comfortable without it. The cost of installing "Standard" fixtures is low enough to satisfy the most economical.

Our Book "MODERN BATHROOMS" tells you how to plan, buy and arrange your bathroom, and illustrates many beautiful and inexpensive as well as luxurious rooms, showing the cost of each fixture in detail, together with many hints on decoration, tiling, etc. It is the most complete and beautiful booklet ever issued on the subject and contains 100 pages. FREE for six cents postage, and the name of your plumber and architect (if selected.)

The ABOVE FIXTURES, No. P-33, can be purchased from any plumber at a cost approximating \$94.75—not counting freight, labor or piping—is described in detail among the others.

CAUTION: Every piece of "Standard" Ware bears our "Standard" "Green and Gold" guarantee label, and has our trade-mark "Standard" cast on the outside. Unless the label and trade-mark are on the fixture it is not "Standard" Ware. Refuse substitutes—they are all inferior and will cost you more in the end.

"Standard"

PORCELAIN ENAMELED
Baths & One Piece Lavatories

Your House is not Modern Without a Bathroom Equipped With "Standard" Ware

It is sanitary because its snowy surface is non-porous without crack or crevice for dirt to lodge. Each piece is perfect, no matter how inexpensive. The complete equipment can be bought and installed at a very moderate cost. A bathroom equipped with "Standard" ware adds a cash value to your property far in excess of the expense of installation, and brings more comfort and satisfaction than any room in the house.

Our Book, "MODERN BATHROOMS," tells you how to plan, buy and arrange your bathroom, and illustrates many beautiful and inexpensive rooms, showing the cost of each fixture in detail, together with many hints on decoration, tiling, etc.

The ABOVE INTERIOR No. P. 36, costing approximately \$84.00 — not counting piping and labor — is described in detail among the others. FREE for six cents postage.

CAUTION: Every piece of "Standard" Ware bears our guarantee "Standard" "Green and Gold" label, and has our trade-mark "Standard" cast on the outside. Unless the label and trade-mark are on the fixture, it is not "Standard" Ware. Refuse substitutes—they are all inferior and will cost you more in the end.
